The Literary Digest

VOL. XX., No. 1

NEW YORK, JANUARY 6, 1900.

WHOLE NUMBER, 507

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE STANDSTILL IN SOUTH AFRICA.

THE first effect of the British reverses in South Africa upon public sentiment in this country was to call out hearty praise, even from the pro-British papers, for the "embattled farmers" who could put up so gallant a defense. But as the apprehension grew that every Boer victory means a blow to England's prestige among the nations, and that the loss of South Africa may mean the future supremacy of some other nation. Russia perhaps, in world politics, the pro-British press of America have been again urging that our sympathy go out to England as the world's greatest civilizing power. The pro-Boer press, however, continue to believe that the best interests of humanity and justice will be served by British defeat; or, if British victory be inevitable, hope is expressed that it be so costly as to teach the great nations more caution in forcing the smaller ones to the wall.

General French's victory at Colesburg by a well-executed flanking movement is commented upon in London, according to the London correspondent of the Associated Press, "as an example of sound tactics and as an illustration of what may be done when the right methods are employed with the Boers." It should be borne in mind, however, the correspondent continues, "that General French has only 2,000 men, and so far as the important points of the campaign are concerned, the situation is virtually unchanged."

A despatch from Pretoria saying that a Boer commandant has defeated a force of Kafirs near Dedoort again arouses the fear of a native uprising to add to the gravity of the situation. The *New York Times* thinks, from the location of the fight, that the natives must belong to the Barolong tribe, and believes that the news "would seem to indicate that the whole tribe, and possibly other tribes, have determined to take the opportunity offered by the war to be revenged for past abuses on the part of the burghers. The Basutos are allied to the Barolongs, and they also

would welcome the opportunity of attacking the Boers. A spasmodic raid by a single tribe is hardly likely, as all the Kafir tribes are well organized, and would not take such a step as attacking any of the whites without deliberation. The natives, despite all attempts to prevent them from obtaining arms, are nearly all equipped with rifles, and outumber Boers and British combined by at least half a dozen to one."

Comments on strategy, modern guns, and the various phases of warfare fill the columns of the press, the main point on which all seem to agree being that, as M. Bloch in his famous book on "The Future of War" predicted, the nation on the defensive has an immense advantage over the attacking party. The defenders of Kimberley, Ladysmith, and Mafeking have held out longer than their most sanguine friends predicted, and the Boers have won nearly all their successes by beating off British attacks. The South African correspondents report that the Boer entrenchments at the Tugela and Modder rivers are now practically impregnable. As the Boers are expected to act on the defensive throughout the war, few believe that the end of the struggle is in sight.

The unconfirmed report that England has arranged for the purchase of Delagoa Bay from Portugal has aroused considerable comment both in Europe and America. As Delagoa Bay is the seaport through which the Transvaal communicates with the outside world, and is only 350 miles from Pretoria, it is generally conceded that "as a base for military operations against and for the invasion of the Transvaal," as the *Philadelphia Ledger* says, "the acquisition of the Portuguese territory would be of immense assistance to Great Britain."

The Victory at Colesburg.—General French appears to have achieved what may turn out to be an important success, if he can follow it up and seize the Boer positions between Colesburg and Norval's Point, before the force he is reported to have outflanked and driven from the former place has time to recover itself. It is said that on their right flank being turned the Boers abandoned Colesburg and moved off in disorder to the eastward. As usual, the Boers seem to have neglected their outpost and patrol work, and so were caught napping. General French is now in dangerous proximity, for the Boers, to the Orange River, their base of operations on the north side of it being at Donkers Poort, a short distance from Norval's Point. From this last place there is a road going eastward to Venterstad, not more than twenty miles in a direct line from the railway between Burghersdorp and Bethulie on the road to Springfontein, the junction in the Free States of the railways coming from Port Elizabeth and East London. Should General French be in a position to follow up his reported success vigorously, drive the Boers across the Orange River to Donkers Poort, and move a strong detachment to the eastward, while General Gatacre was holding the Boers under Generals Swanepool and Duploy from Sterkstroom and Dordrecht, they would find themselves in a dangerous position, with only one line of retreat open to them, namely, that through Aliwal North. The possible results of this successful movement which seems to have been carried out without any loss, the despatch making no mention of casualties, are highly important."
—*The New York Sun.*

Britain Deserves Our Support.—"The reverses with which Great Britain has met in her war against the Boer republics can not be lightly viewed on this side of the water. Not only our nearest kin and our friends in need are stricken, but the work which the English have done in the tropics is threatened. We can not face this fact with a light and careless heart. Whether we think the war against the Boers was unjust or for the welfare of

civilization, what sympathies we have to express to-day should be for the sufferings of the mother-country. We may deplore the attack as one upon the essential principle of self-government; we may question the motive of the statesman who compelled it; we may point out that in general the evils of bloodthirstiness are, in this stage of the world's progress, those of the victim's own needless making; we may dwell philosophically upon this new evidence, underscored by Boer rifles, that in a land ruled by the highest civilization and the most intelligent righteousness, and where reign justice and fair dealing, the aptitude for war is disappearing; but we can not lose sight of the stupendous fact that British prestige is in mortal danger; nor can we fail, if we have a proper pride of race, or a decent sense of gratitude, or a consciousness of what the English have accomplished in the homes of the savage races, to mourn over these disasters. . . .

"Without discussing the political questions involved in the war, without offering an opinion as to what should be the future of the Dutch republics, we sincerely trust that English honor and English prestige will recover from the sad blow which has been inflicted upon them. For English rule in the tropics has been the rule of a just, law-obeying people. Greater far than any glory that has been won by English arms are the triumphs of English justice and order and arts of peace. Wherever England has gone she has carried the majesty of the law. Men live in Egypt, at the Cape, and in India under a jurisprudence which recognizes no caste. The adventurer goes to Cape Town, but the magistrate goes also. The Dutchman remains under English rule, but becomes the political equal of any Englishman. It may be true that the rule of England in her crown colonies has been unfruitful to the mother-land, and that English statesmen would not favor a renewal of the experiment if they could begin anew; but under that rule life, liberty, and property in savage countries have been secure, and the world is better for the object-lesson in fair dealing and even and exact justice which has been taught by England's example. No American who loves his country's institutions can rejoice in the humiliation of Great Britain."—*Harper's Weekly*.

The New Warfare and the Small Nations.—"It is obvious that the defense can not be greatly strengthened without increasing very materially the military power of resistance in small nations. When they take pains to arm themselves thoroughly with the most improved appliances of war, and learn how to use them, they can with more impunity resist the pretensions of the great powers, since, in acting on the defensive and choosing carefully their positions, they can render very costly attempts to overawe them. One result of the Boer war, which is illustrating the new forces in the defense in modern times, should be the stimulation of small nations in providing means of resistance, and the discouragement of aggression upon them by the rapidly extending empires of the day. The small state may have more of a chance to exist and have its rights respected if its war strength is thus amplified at the expense of the maraud-

ing powers. And especially significant is such a development to any great nation that is inclined to peace rather than war. The improvement of the defense renders a progressive power like the United States absolutely impervious to attack within its continental boundaries, and stamps a great standing army as inexcusable except for purposes of criminal aggression."—*The Springfield Republican*.

"The last war in which Great Britain was engaged, in which her opponents were white men, was the Crimean War of 1854 against Russia. That was forty-five years ago. Of the leading officers engaged in that war all are now out of the service. The majority are dead, while the few survivors are superannuated. Among England's oldest officers to-day there may be some who served as subalterns in the Crimean campaign, but they must have been very young at that time and could not have held any high command. The fact, then, remains and can not be refuted, that among all England's more or less famous generals, on the active list, there is not one who ever conducted a campaign or set even a brigade in the field against a civilized foe."—*The Alton (Ill.) Republican*.

THE HOUSE COMMITTEES.

ALTHO our national law-making is supposed to take place on the floor of the House and Senate, in plain view, through the press, of the whole country, yet, as every one knows, the most important questions are virtually settled in the party caucus or in the committee-rooms, after which the actual voting becomes largely a formality. The make-up of the House committees, therefore, is a matter of no little moment, and the leaders of the more important ones, whose pictures are given herewith, even tho their voices may not often be heard in debate, exercise great influence on our laws. The Republican papers express satisfaction with the Speaker's appointments. The *Philadelphia Press* says: "The composition of the House committees insures conservative legislation and as rapid work as is consistent with the interests of the Government." Of the most important committee and its chairman the *New York Sun* says:

"The designation of the Hon. Sereno E. Payne, of New York, as chairman of the ways and means committee is a sufficient pledge of the devotion of the Republican Party to the great commercial and financial interests of which New York is the capital. Mr. Payne is a man of sound judgment, of experience, and of competent parliamentary skill. We look to him to do credit to the high post to which Speaker Henderson has assigned him."

The *Chicago Record* notes that "the Central West is very well represented." It says:

"Illinois leads in the number of chairmanships, having eight.

CHAIRMEN OF SIX IMPORTANT HOUSE COMMITTEES.

Ohio comes next, with seven. Iowa has six chairmanships, the same number as New York. Pennsylvania men head five committees and Michigan men four. Wisconsin has only two chairmanships, but one of those is the headship of the newly created and important committee on insular affairs. The aim seems to have been to secure for this committee the men best qualified to cope with the different problems of colonial administration, with little regard to geographical distribution of the members."

BRITISH SEIZURE OF AMERICAN CARGOES.

THE seizure by the British fleet in Delagoa Bay of one Dutch and two British ships, with cargoes of American flour, has started a general discussion on the question whether flour and other food-stuffs can be taken as contraband of war. Some American papers are very strenuous in opposition to the seizure. "England will make the mistake of her life," says the *New York Journal*, "if she lets her little troubles in South Africa lure her into declaring food contraband of war. . . . She may rest assured that if she induces us to consent to the capture of food cargoes meant for the Boers we shall not patch up the broken rule of freedom again for her benefit. We shall not make one law for a great country and another for a little one. Contraband

food now, means contraband food when England, besieged, is fighting for her life."

That the captured flour was intended for the Transvaal was not admitted by the New York shippers when a representative of the *New York Evening Post* approached them on the subject, but he found that in private conversation they made no attempt to deny it. The investigation, however, disclosed the fact that the principal shippers are not complaining. The greater part of the seized flour was shipped by the New York agent of Arthur May & Company, a British firm, and all the shippers had been paid in full before the cargoes left New York, so that not many on this side of the globe are the losers by the capture. Complaint has been entered at the State Department at Washington, however, and Ambassador Choate and our consul at Lorenzo Marques are investigating the case.

British as well as American papers think that England has made a blunder in declaring food contraband, because she is herself so dependent upon the outside world for provisions. The *New York Journal of Commerce*, to show in what condition England would find herself if cut off from outside supply, says:

"Mr. R. F. Crawford has just been showing to the Royal Statistical Society that of 351 pounds of wheat consumed per capita per annum in the United Kingdom 276 pounds were imported;

of the meat consumption of 130 pounds 50 pounds were imported; of milk and milk products equivalent to 60 gallons a head, 24 gallons were imported. In addition to these items, 40 per cent. of the barley, 20 per cent. of the oats, 50 per cent. of the beans and peas, and 4,500,000 tons of feeding stuffs for live stock were imported."

"It would be inadvisable," says the *London Times*, "to create a precedent which might some day be invoked against us."

The *Louisville Courier-Journal* sees another interesting phase of the matter. It says:

"If a dealer of the United States has no right to send provisions to the Transvaal, he has no right to send them to Great Britain, except in so far as the different situations of the two countries may justify the claim that it is contraband of war in the one case and not in the other. But if it becomes contraband by reason of being intended to supply the land or naval forces of the belligerent, we have already violated neutrality by supplying beef to the British forces. It is true the Boers can not inflict the usual penalty of contraband trade, which is by seizing the goods in transit. But is not a nation, as well as an individual, bound to do equity before it can claim equity?"

One of the principal authorities cited in this case is Lord Granville, then Secretary of Foreign Affairs of Great Britain. In 1885, in the war with China, France declared all rice shipped to any port north of Canton to be contraband. Lord Granville officially protested in the following letter:

"I regret to have to inform you that Her Majesty's Government feel compelled to take exception to the proposed measure, as they can not admit that consistently with the law and practice of nations, and with the rights of neutrals, provisions in general can be treated as contraband of war. Her Majesty's Government do not contest that under particular circumstances provisions may acquire that character, as, for instance, if they should be consigned direct to the fleet of a belligerent, or to a port where such a fleet may be lying, and facts should exist raising the presumption that they were about to be employed in victualing the fleet of the enemy. In such a case it is not denied that the belligerent would be entitled to seize the provisions as contraband of war, on the ground that they would enable warlike operations to be carried on. But Her Majesty's Government can not admit that if such provisions were consigned to the port of a belligerent (even tho it should be a port of naval equipment) they could therefore be necessarily regarded as contraband of war. In the view of Her Majesty's Government, the test appears to be

whether there are circumstances relative to any particular cargo, or its destination, to displace the presumption that articles of this kind are intended for the ordinary use of life, and to show, *prima facie*, at all events, that they are destined for military use."

The question came up between this country and Great Britain when the latter, in 1793, in her war with France, claimed the right to seize and confiscate provisions shipped to French ports. Jefferson's objections resulted in a clause in the Jay Treaty of 1794, providing that such goods, when they become contraband under the laws of nations and are seized, shall not be confiscated, but the owners shall be indemnified. In an editorial in the *New York Times* (December 27) the assumption is made that this clause of the Jay treaty is still in force. This brought out the following letter from Theodore S. Woolsey, professor of international law in Yale:

"The first ten articles in Jay's treaty were permanent; the rest, including that which regulates the treatment of provisions, expired by their own limitation in 1806.

"Thus we have no treaty list of contraband articles to-day which Great Britain is bound to regard.

"Of course, it does not follow that her search officers can call anything contraband which suits their book. Contraband articles must (1) relate directly to the carrying on of war; (2) they must have a hostile destination. The American flour loaded on a German ship, you will notice, complies with neither requirement. It is true that under exceptional circumstances provisions may be 'occasionally' contraband. It is also true that if contraband were sent to Delagoa Bay, with the ultimate destination of the Transvaal clinging to it through any form of sale, the doctrine of continuous voyages might be applied by a prize court. But to apply both doctrines, of occasional contraband and continuous voyages, to a single cargo is simple absurdity.

"The control of the British Government over the other two ships detained, which you say were English, and which had a partial cargo of American flour, is another matter, upon which one must reserve opinion until the facts are made clearer. But in no case can either our own Government or the British Government afford to have flour bound to a neutral port held contraband."

The Sun (New York, December 27) gives the following account of a case similar to the present, in which our own Supreme Court was called on for a ruling:

"During our Civil War the town of Matamoras, in Mexico, on

A CHRISTMAS ANTHEM.

But the accompaniment was a little too loud for the voice.—*The Chicago News*.

DISCOURAGED.

—*The Indianapolis News*.

WAR AND SENTIMENT.

the south bank of the Rio Grande, occupied a position very similar to that now occupied by Lorenzo Marques, the Portuguese port in Delagoa Bay. A blockade had been established by the United States against the Confederate ports on the north bank of the Rio Grande, and, to avoid this, cargoes were shipped to Matamoras, and when landed there were conveyed across the Rio Grande to Confederate territory. The ship *Peterhoff*, while bound to Matamoras, was captured by the United States fleet. She carried a mixed cargo, part of which was certainly contraband, while a part consisted of provisions, which were in all probability destined for sale in the Confederacy, but not necessarily for military consumption. The ship was libeled, and the case was carried to the Supreme Court. That court adjudged the arms and ammunition that were a part of the cargo to be contraband, and condemned them as such, but it declared the provisions to be innocent merchandise, and, as such, not subject to condemnation."

The Sun also quotes the following from a Supreme Court opinion delivered by Justice Story in the case of the *Commercen*:

"By the modern law of nations provisions are not in general deemed contraband, but they become so, altho the property of a neutral, on account of the particular situation of the war, or on account of their destination. If destined for the ordinary use of life in the enemy's country, they are not, in general, contraband, but it is otherwise if destined for military use. Hence, if destined for the army or navy of the enemy, or for his ports of naval or military equipment, they are deemed contraband."

IS A RAILROAD TRUST FORMING?

THE reported "harmonious arrangements" recently consummated between the principal railroads in the East have aroused the suspicions of Louis F. Post, the single-tax advocate, editor of *The Public* (Chicago). In spite of the official protests that the "friendly arrangements" mean nothing at all, he believes that they do mean something, and something very serious; for he thinks that he discerns, in the background, the looming shadows of a trust that will control transportation. Mr. Post says:

"There is a peculiar significance about the shifting interests in Eastern railroad properties now attracting attention, of which nothing has thus far been publicly said, but which needs only to be mentioned to be recognized as probable. The object of the moneyed interest engaged in these deals is not to promote railroading as a business, but to enable the great railroad 'capitalists' to withdraw from that business and yet appropriate its profits. In other words, the railroad business of the United States is in process of being put upon a ground-rent basis.

"To accomplish this, the great terminals must be controlled. On the Pacific coast that part of the plan is complete. The Southern Pacific and the Central Pacific have as perfect command of the ocean as if they owned it. The Gulf cuts but little figure; but to the extent that it is important it can be controlled by Illinois Central interests. Nothing remains, then, to place the traffic of the United States at the mercy of a trust of terminal proprietors but to secure control of the Atlantic-coast terminal roads. This has been almost done. By a consolidation of the Pennsylvania system, which controls the Baltimore and Ohio system, with the Eastern lines under the control of the Vanderbilts, the approaches to the Atlantic coast will be practically secure. Nothing will then remain to check the rapacity of the American railroad ring but the Grand Trunk of Canada and the Canadian Pacific."

When this control is perfected, thinks Mr. Post, there will be richness indeed for the operators. "It is the premeditated purpose of the financial interests, as we are assured by good authority," he says, "to let out the operation of the railroads to railroad operators at a rack-rent." He continues:

"The plan is an adaptation of and was suggested by the system familiar in cities, of ground-renting building lots. A few great 'capitalists' who own railroad rights of way which include important terminals, can, by letting out the use of these roads

and terminals to competitive operators, milk the railroad business of its best profits without incurring any of the risks and anxieties of operation. It is their command of terminals upon which they expect to rely to impose as ground rent for right of way 'all that the traffic will bear.'"

THE BRUITED "FENIAN RAID" INTO CANADA.

A RIPPLE of comment was set going last week by the rumor that a formidable body of Irish-Americans had a plot on foot to cross the Canadian border and wrest that colony from the British empire. Most of the supposed leaders are represented as maintaining an air of impenetrable mystery in regard to this scheme, but an officer of the Clan-na-Gael, whose name is not given, made the following statement to a New York *Evening Post* reporter on the day after Christmas:

"England can only be made to feel by physical force, and we're now going to give her some Boer treatment. We did intend going out and sinking that first expedition from Canada to South Africa, but thought it better to wait a little. We can mobilize our men without much difficulty for an attack on Canada, and we are fairly well armed—as well as the United States troops in the Spanish war. We have lots of Springfield rifles and are handy with the bayonet.

"No decision has been arrived at yet. Everything will depend on the immediate future. We have either regiments or companies all over the United States and are fairly well drilled, and a great many of our men are in the militia.

"The Ancient Order of Hibernians has really nothing to do with this. It numbers about 250,000, and a majority of its members belong to our organization. All its officers do, and so, of course, it will act with us. We have lots of men in the regular army—camps or clubs in every post—and even if they were sent against us to stop us on the border they would either march across with us or give us blank cartridge.

"If it is decided to attack Canada we shall do all in our power to keep matters so secret as not to embarrass the Government until we are actually on the border. The French population in Canada would be with us, and there are numbers of our own countrymen ready to welcome us. Canada would be an easy mark. We would have the Canadian loyalists on the run in a week."

John T. Keating, national president of the Ancient Order of Hibernians, declared on the same day that he knew nothing of the rumored invasion, and expressed the belief that "the best way to hurt or cripple England will be to do it in South Africa by aiding the Boers rather than by an invasion of Canada."

The press refuse to take the rumors seriously. "Our old friend the Fenian is on hand again," remarks the New York *Commercial Advertiser*, "to relieve the tedium of war." Even the frontier papers remain calm. The Detroit *News*, for example, says:

"The *News* is happy to announce that its old friend, the Fenian raid, is again in the throes of being plotted, and that Canada is to be made the scene of its depredations. It is claimed that the Irish and the Hollanders in the United States are manipulating the plot, and that the French of the province of Quebec have been drawn into the conspiracy. The American miners in British Columbia, compared with whom the unfortunate Uitlander of the Transvaal is one of the petted sons of Fortune, has been engaged to do a turn in the performance, but the main rehearsals will take place on the banks of the Detroit and St. Clair rivers, if the police do not interfere with the performers. Everything seems clear enough except the purpose of the plot; but we have every reason to believe that the intention of the raiders is to invade the province of Ontario and compel the United Empire loyalists to sing 'The Wearin' o' the Green,' 'Malbrouks 'en va-t-en guerre.' This being accomplished, it will be of no consequence whether an independent government is established in Canada or not. The French and Irish will have had the new St. Bartholomew's day that the Ontario Tories have long dreaded,

and it will matter little what becomes of the Government after that."

The Kansas City *Star* analyzes the situation thus:

"Even if the proposed Fenian army of 100,000 men could be successfully mobilized in the saloons of Boston, New York, and Buffalo, and there drilled in modern tactics, the problem of transportation would remain serious.

"The equipment of 100,000 men would cost half a million dollars alone, to say nothing of artillery, horses, and wagon trains. At fifty cents a day per man the cost of victualing this force until it could reach the Dominion and seize the Canadian restaurants and free-lunch counters would be \$50,000 a day. It is not probable that the railways would issue free transportation to the frontier, and the army would have to pay its fare, a most serious handicap to the successful prosecution of war. Then, granting that the Fenian army could hide from the United States marshals and successfully cross into Canada, it would be up against the worst military position possible.

"On one side would be the Canadian forces and on the other the American forces. The Fenians would have no base of supplies nor point upon which to retreat. They would be compelled to surrender to the American forces to escape from the Canadian army. The only chance for the invaders would be to occupy a Canadian city which is well provided with saloons and establish a base there, but an army of such great size would quickly consume everything in sight to eat and drink, and it would be necessary to capture another city. Then, having taken Canada, the question would arise what to do with it.

"The United States would not buy it, and the Fenians would have to keep it themselves, and then, in the hour of victory, would come disaster. As soon as the invaders organized a government and occupied the offices disputes would arise, and the various factions would fight among themselves and try to sell out to the British, and the whole thing would end as a joke."

Underneath most of the comments seems to be the suspicion that the affair is only an excellent specimen of Irish humor. If the raid bugaboo keeps some of the Canadian troops from starting for South Africa, the most rosy expectations of the plotters, it is surmised, will be realized.

A FAILURE OF MUNICIPAL CONTROL.

EVERY instance of the failure or success of the municipal operation of public utilities quickly attracts attention and is promptly made use of by one side or the other in the debate which the subject evokes. One of the failures seems to be the New York City dock department. A correspondent of the New York *Sun* calls attention to the department's official report and the deplorable record that it reveals, and from this correspondent's letter the Chicago *Evening Post* argues that municipal control is a failure. It says:

"The dock department has been in existence for twenty-eight years. It was created by a law which provided that all docks, wharves, piers, water-fronts and their appurtenances and easements then possessed by the municipality of New York, or to be hereafter acquired by it, should be under the full control of the commissioners, who were to execute only temporary leases for their use and to develop, improve, and extend the wharfage system for the public benefit. Much was expected from the adoption of this plan. The department was made independent and given the use of the city's credit for the issuance of bonds under certain general restrictions. The department has made its own collections and disbursements. Its total revenues for the period of its existence have amounted to \$34,000,000, while its expenses have been \$37,800,000, not including the cost of new property acquired or any allowance for expenses saved through the facilities afforded by the city in numerous important ways. The total loss to the city up to date on its ownership of the docks has been about \$16,000,000. This in spite of an unexampled water-front, excellent terminal facilities and improvements effected by the general government in the facilities of navigation between the Great Lakes, with which New York has all-water connection.

The *Sun* correspondent justly says: 'In no private business, conducted on a free capital in starting of perhaps \$25,000,000, exempted from taxation and all ordinary expenses, would a resultant loss after twenty-eight years of \$16,000,000 be considered a success, and in the case of New York the growth of the city's commerce has broken all previous precedents.' Contrast this showing of the dock department with the advances made in the same period in transportation, illumination, and other semi-public industries controlled by private enterprise! In point of fact, the business men of New York regard the dock department as a wretched failure, and at the various conventions and gatherings of the commercial societies the view uniformly taken is that the present condition of the department is the inevitable result of the principle of municipal ownership and control. All real incentive to progress and effort is removed by the system. Yet the present controller recommends the acquisition of all the docks by the city and the issue of new bonds for the purpose. He thinks that the city would realize immense profits in the course of time. The commercial interests will hardly agree with him."

HOW CAN THE DAILY BE REFORMED?

MR. E. L. GODKIN recently expressed the discouraging opinion that the newspapers have ceased to guide public opinion, or even to follow it very closely, but are controlled principally by the wishes of their advertising patrons, upon whom the newspapers depend largely for support. Now comes Mr. V. S. Yarros, of the Chicago *Evening Post*, in an article in *The American Journal of Sociology*, telling the remedy. First, however, Mr. Yarros describes the good things the newspapers have done. He says:

"What travel and actual intercourse do for the few, newspapers do for the many. To be interested in the politics, economies, and miscellaneous affairs of other peoples, to follow their struggles and study their intellectual and moral traits as manifested in daily conduct, is to become gradually and unconsciously cosmopolitan, broad, human. If one touch of nature makes the world kin, what must be the effect of the daily interchange of sentiments made possible by the press, the sharing by the nations in one another's joys and sorrows! Thanks to the press, the civilized world has become 'small' and organic. Nations feel themselves under a moral coercion, and a 'decent regard for the opinion of mankind' prevents much wrong and injustice, and induces anxious reflection and deliberation, even in apparently irresponsible rulers. The light that beats upon thrones, cabinets, parliaments, and other institutions is fierce, indeed, in these days of publicity. The Dreyfus trial, without a parallel in history so far as the keen concern of civilization in the proceedings, and outcome was concerned, was a striking illustration of the effect of the modern newspaper with its marvelous facilities for gathering and speedily spreading the news."

Having thus taken a glimpse of the brighter side, he introduces the other side of the subject by saying that the honest, fair, and truthful papers in the United States "could easily be counted on the fingers of one man's hands." He continues:

"Some papers are utterly reckless of principle, honor, and reason; others confine their yellow tendencies to particular spheres and subjects. Some lie constantly; others lie only at election time. Some manufacture news; others distort and misrepresent, and are content with preventing their readers from seeing things exactly as they are. Some lie for revenue, others for party advantage and the success of the cause in which they believe. The paper that desires and secures accurate reports, that sets down nothing in malice, that suppresses nothing which is unfavorable to its side, and honestly publishes everything which is creditable to the other side, is notoriously the rare exception."

The moral acrobat and contortionist who gives daily exhibitions in his editorial columns cuts a rather ridiculous figure when viewed behind the scenes. Mr. Yarros says of him:

"Nothing is more ludicrous and preposterous than the omniscience and dogmatism of the editor of a familiar type. Does the

editor or his subordinate staff ever hesitate to attack, judge, and correct anybody? Is there a question in science, religion, ethics, economics, politics, that the editor can not discuss at an hour's notice? Authority is something totally unknown to the newspaper. The editorial 'we' is above all. The editor is glad to have the support of authority, but he is not daunted or disturbed at finding recognized authority against his position. The mature opinions of scholars and experts he treats with a flippancy and contempt which the slightest degree of responsibility would render impossible. But the editor is irresponsible. The judicious and competent few may laugh at his ignorance and presumption, but the cheap applause of the many who mistake smartness for wit and loud assertion for knowledge affords abundant compensation. Controversy with an editor is a blunder. He always has the last word, and his space is unlimited. He is an adept at dust-throwing, question-begging, and confusing the issue. In private life he may be intellectually and morally insignificant, but his readers are imposed upon by the air of infallibility with which he treats all things, and the assurance with which he assails those who have the audacity to disagree with him. The average newspaper reader easily yields to iteration and bombast. He believes that which is said daily in print by the august and mysterious power behind the editorial 'we.' His sentiments and notions are formed for him by that power, and he is not even conscious of the fact."

How to bring the press back to truth, dignity, and power is the problem of to-day. Mr. Yarros has a plan. "All men of light of leading, all ethical teachers, all respected and distinguished guides of the public," he says, should strive to resist the lowering of journalism from a profession into a trade. He then tells how this is to be done, as follows:

"There ought to be more cooperation between these elements and the press. The worthy editors should receive more encouragement and appreciation, and the unworthy should be made to feel the scorn and indignation of the influential citizens. Editors ought to be watched and held to a strict accountability. They ought to hear from their constituency whenever they are guilty of a lapse, injustice, or blunder. 'Flops,' self-stultifications, and violations of fairness and decency would be far less frequent if editors knew that hundreds of denunciatory letters would pour into their offices. The fear of exposure, ridicule, and anger on the part of scores of intelligent readers would act as a deterrent. When self-contradiction, sophistry, lying, and misrepresentation are safe, because unchallenged, the editors who lack logic or conviction, or both, resort to these weapons without hesitation.

They would seriously consider contemplated sins of commission or omission if a vigilant and sharp-sighted constituency were certain promptly to call them to task. Public bodies should not hesitate to adopt resolutions of censure when a newspaper has been guilty of a flagrant wrong. Even the humblest reader should be quick to resent in a 'letter to the editor' any meanness or offense which outrages his moral sense. The editor may seem 'august' behind his 'we,' but he is human, and he is amenable to appeal and influence. He likes approbation and dislikes rebuke and criticism. He can be taught care and moderation. No single person, no matter how highly placed, is a match for the omnipotent editor, but in solidarity there is strength, and he who rightfully takes up the cudgels against an editor should be vigorously supported by all who sympathize with his protest."

CURRENT CARTOONS.

LETTERS AND ART.

THE POETIC CABARETS OF PARIS.

IN continental Europe, particularly in France, the club does not flourish as it does in Anglo-Saxondom. The café is the common ground where all meet, and to the student more than to any one else the café is of importance, because to his usually modest purse all other places of amusement are closed. The reader finds there the chief journals, and the writer finds paper, pen, and ink. Mr. Eliot Gregory (in *Scribner's Magazine*, January) tells of a French man of letters who was asked once why he patronized a certain café noted for the poor quality of its beer. "Yes," he answered, "the beer is poor, but they keep such good ink!" Mr. Gregory's account of these places is as follows:

"The use of a café in this way does not imply any great expenditure, the *consummation* costing very little. With it is acquired the right to use the café for an indefinite number of hours, the client being warmed, lighted, and served. From five to seven, and again after dinner, the *habitués* stroll in, grouping themselves about the small tables, each newcomer joining a congenial circle, ordering his drink, and settling himself for a long sitting. The last editorial, the newest picture, or the fall of a ministry is discussed with a vehemence and an interest unknown to Anglo-Saxon nations. Suddenly, in the excitement of the discussion, some one will rise in his place and begin speaking. If you happen to drop in at that moment, the lady at the desk will welcome you with, 'You are just in time? Monsieur So-and-So is speaking, and the evening promises to be interesting.' She is charmed; her establishment will shine with a reflected light, and new patrons be drawn there, if the debates are brilliant. So common is this, that there is hardly an orator to-day at the French bar, or in the senate, who has not broken his first lance in some such obscure tournament, under the smiling glances of the *dame du comptoir*."

Mr. Gregory gives the following picture of the world-famous *Chat Noir* in Paris:

"The old French word 'cabaret,' corresponding closely to the English word 'inn,' was chosen to replace the hackneyed 'café,' and the establishment decorated in imitation of a *hôtellerie* of the time of Louis XIII. Oaken beams supported the low-studded ceilings. The plaster walls disappeared behind tapestries, armor, and old faience. Beer and other liquids were served in quaint porcelain or pewter mugs, and the waiters were dressed (merry anachronism) in the costume of the members of the Institute (the Immortal Forty), who had so long led poetry in chains. The success of the 'Black Cat' in her new quarters was immense, all Paris crowding through her modest doors. Salis had founded Montmartre!—the rugged old hill giving birth to a generation of writers and poets, and nourishing this new school at her granite breasts.

"It would be difficult to imagine a form of entertainment more tempting than was offered in this picturesque 'inn.' In addition to the first, the entire second floor of the building had been thrown into one large room, the walls covered with a thousand sketches, caricatures, and crayon drawings by hands since celebrated the world over. A piano and many chairs and tables completed the unpretending installation. Here, during a couple of hours each evening, either by the piano or simply standing in their places, the young poets gave utterance to the creations of their imagination, the musicians played their latest inspirations, the *raconteur* told his newest story. They called each other and the better known among the guests by their names, and joked their mutual weaknesses, eliminating from these gatherings every shade of a perfunctory performance.

"It is almost impossible to give an idea of the delicate flavor of these informal evenings—the sensation of being at home that the picturesque surroundings produced, the low murmur of laughing conversation, the clink of glasses, the swing of a waltz-movement played by a master-hand, interrupted only when some slender form would rise and, leaning against the piano, would pour forth burning words of infinite pathos, the inspired young face lighting up with the passion and power of the lines. The burst of applause that his talent called forth would hardly have

died away before another figure would take the poet's place, a wave of laughter welcoming the newcomer, whose twinkling eyes and demure smile promised a treat of fun and humor. And so the evening would wear gayly on to its end, the younger element in the audience, full of the future, drinking in long drafts of poetry and art, the elder charmed to live over again the days of their youth and feel in touch once more with the present.

"Montmartre is thus sprinkled with these attractive *cabarets*, the taste of the public for such informal entertainments having grown each year rather than decreased; and with reason, for the careless grace of the surroundings, the absence of any useless restraint or obligation as to hour or duration, has an irresistible charm for thousands whom a long concert or the inevitable five acts at the Français could not tempt. It would be difficult to overrate the influence such an atmosphere, breathed in youth, must have, later, on the taste and character. The absence of the sordid money-grubbing spirit, the curse of our material day and generation, the contact with cultivated intellects and minds trained to encase their thoughts in finished verse or crisp and lucid prose, can not but form the hearer's mind into a higher and nobler mold. It is both a satisfaction and a hope for the future to know that these influences are being felt all over the capital and throughout the length and breadth of France. There are at this moment in Paris alone three or four hundred poets, ballad-writers, and *raconteurs* who recite their works in public."

WILL RUSSIAN MUSIC SUPERSEDE WAGNER?

AFTER Wagner, the exponent of the German spirit in music, what? Many critics have asked this question, and some have answered it by saying that the Russian school will hold the stage during the next period of musical development. Russian music is now very popular everywhere, the Czar's country having produced both composers and interpreters of high merit. Tchaikowsky is an established favorite, but the Russians themselves consider him rather eclectic and cosmopolitan, in spite of his abundant use of Russian folk melodies, his Slav intensity and melancholy, and his Cossack impetuosity.

Russia has now several living masters who are much more genuinely national. Among them are Rimski-Kossakoff, Borodin, and Glazounoff, and to them belonged the late Moussagarski. A French musical critic, Camille Bellaigue, writing in the *Paris Revue des Deux Mondes* on Russian music, dwells on the significance and fidelity of much of it to the national genius. He loves this music and commends it to French impresarii. Paraphrasing a Russian poet, he says that it is impossible to comprehend Russia intellectually, but one must believe in her. He has not been able to resist the magic of Russia's music. "It is not Italian, it is not French, it is not German, and, above all, it has nothing in common with Wagner's music. It is characteristic, peculiar." M. Bellaigue says:

"National and popular, this music reflects the Russian sky and the native soil. The Russian soul may find therein its image, especially the soul of the poor and downtrodden. It is the joy and sorrow, the smiles and tears, the love and indignation of these that this music prefers to sing. All honor to the Russian novelists and composers for consecrating so much of their artistic gifts to the lowly masses! 'The poor are of greater worth in all respects,' a poet has said, which is possibly an exaggeration; but certainly they are not of less worth, and it is wrong for French music to treat them with such contempt.

"Take even the *chef-d'œuvres* of French musical art, and how many of them can we call national, especially popular? What is there in common between our masters and the masses? What is there national in Faust or Manon or Sigurd? What do they express of the national sentiment, and how much do they give to the people? Russian music, on the other hand, delights in practising this commerce with the people, this giving and receiving. Democratic and social, or—using older and better terms—fraternal and compassionate, Russian music admits, indeed invites, the masses to participate in the realization of the ideal and the expression of beauty."

M. Bellaigue distinguishes between the historical music of Moussagarski and the legendary, symbolic, and picturesque school which, in a sense, does for the Russian spirit what Wagner did for the Teutonic. He praises both and predicts an international success for the modern Russian composers.

It is interesting to recall that recently an eminent German conductor, Felix Weingartner, spoke with equal enthusiasm of the symphonic music of the young Russians. One symphony of Borodin he described by saying that one who has never seen or known Russia could gain an understanding and vivid realization of her from that composition alone. Vance Thompson, the New York critic and essayist, is an admirer of Moussagarski. Theodore Thomas is evidently much impressed with Russian music, for his programs contain a great deal of the work of the older and younger Slav composers.—*Translation made for THE LITERARY DIGEST.*

SIR JOHN MILLAIS AND HIS FRIENDS.

NO English painter of the latter half of the nineteenth century was more severely criticized by the art critics and more affectionately loved by the masses than Sir John Millais. This is the general conclusion one reaches on reading the new work, in two volumes, entitled "The Life and Letters of Sir John Millais," by his son John Guille Millais. These volumes contain reproductions of nearly all the chief paintings of this celebrated artist, a history of these paintings, and many anecdotes and facts concerning his personality, and a number of his letters to intimate personal friends. The author clears up for the first time Millais's true relations to the Pre-Raphaelite Brotherhood. His son claims that he was the founder of this new school of art and had to bear the brunt of the attack made upon it, for

the reason that D. G. Rossetti early gave up this idea for Rossettism, and Holman Hunt, the other chief member, left England. The son wisely refrains from speaking of his father's marriage to his mother, Ruskin's divorced wife, except to give a foot-note relating that Lady Millais had been previously married, but that her conduct had always been above reproach.

John Everett Millais commenced to draw as soon as he was old enough to use his hands. When he was a lad of six, the family moved to Dinan in France. John and his brother William used to hang around the barracks there to see the regiments as they marched in and out. On one occasion they saw a major of enormous size, dressed in much gold lace, wearing a tall bear-skin and flourishing a heavy gold-headed cane, and strutting through the street. The gamins were running after him enjoying the spectacle. Young Millais took out his note-book and went to work with a will to put the major on paper. Some officers coming up behind him, without his knowledge, watched him work. When he had finished his picture it was so good that these officers patted the lad on the shoulder and gave him some money for the drawing, which they took down to the barracks and put on exhibition. It attracted so much attention that bets were taken that little Millais was not its creator. The boy was sent for, and timidly sat down and made a still better sketch of the colonel. It is related that the lad's passion for drawing was so intense that he would draw at the dinner-table, putting his figures on the table-cloth. His artistic temperament was so precociously developed that he could not get along with any school-teacher except his mother, who gave him all the schooling he ever received.

When Millais was seven, his mother took him to London to see Sir Archer Shee, the president of the Royal Academy. When the nature of the visit was explained, Sir Archer exclaimed, "Better make him a chimney-sweep than an artist." But Sir Archer had not seen the boy's drawing. The little fellow then took his seat and drew the fight of Hector and Achilles with such skill that Sir Archer opened his eyes with astonishment, and, recalling his first remark, declared that it was the manifest duty of the parents to educate the boy for the vocation for which nature had intended him. That satisfied the mother, to the lad's great delight, and he was put to sketching in the British Museum.

He soon entered Mr. Sass's Art Academy. Here the Society of Arts gave a silver medal to the student making the best drawing, and Millais (the youngest boy ever admitted to the school) won it—his first medal. On the occasion when it was to be presented, William Millais, the brother, was present and thus describes what took place:

"When the secretary, Mr. Cockling, called out 'Mr. John Everett Millais,' the little lad walked up unseen by his Royal Highness, the Duke of Sussex, who was giving the prizes, and stood at his raised desk. After a time the Duke observed that 'the gentleman was a long time coming up,' to which the secretary replied, 'He is here, your Royal Highness.' The duke then stood up and saw the boy, and giving him his stool to stand upon, the pretty little golden head appeared above the desk."

Millais was soon admitted as a student to the Royal Academy,

when he and Holman Hunt met for the first time. Young Hunt found it not an easy thing to get into the Academy. One day he was drawing in the East Room by himself. The scene that followed is thus described:

"Suddenly the door opened, and a curly-headed lad came in and began skipping about the room; by and by he danced around until he was behind me, looked at my drawing for a minute and then slipped off again. About a week later I found the same boy drawing from a cast in another room, and returned the compliment by staring at *his* drawing. Millais, who of course it was, turned round suddenly and said, 'Oh, I say, you're the chap that was working in No. 12 the other day. You ought to be in the Academy.'"

The two young students talked over their ambitions. They often helped each other on a picture, each painting certain things in it. They soon decided to leave the beaten track of art. They concluded that Raphael, the idol of art, had many imperfections. They would take nature as their only guide and go directly to her for inspiration. They called this Pre-Raphaelitism. That

was in 1848. D. G. Rossetti was at the time Hunt's student, and they of course expected him to work on their proposed principles, which he did. Maddox Brown, Charlie Collins, and one or two others joined the movement, and they soon called it a Brotherhood. It seems that Rossetti got credit for the whole idea for the reason that he went about advertising it with such enthusiasm. It has been often charged that Millais' work was largely influenced by D. G. Rossetti. In 1896

Millais denied this charge, declaring that his work would have been the same if he had never heard of the un-English Rossetti. The friendly intercourse between Millais and D. G. Rossetti lasted only four years. Rossetti wandered off after his own peculiar ideas, which did not resemble Pre-Raphaelitism at all, and Millais, being the most popular painter of the three, became the target for the critics.

Altho Millais could find sale for his early work, the prices paid in most cases made this part of his career a hard struggle. At this time he had to support his parents, who had made many sacrifices for his art education. One of his first pictures, "Ferdinand Lured by Ariel," he painted on contract with a dealer for £100, but the work was so original in conception, so dominated with the Pre-Raphaelite idea, that the dealer refused to take it. It was a sore disappointment to the struggling artist. But one day Mr. Frankum, a friend, brought a stranger into the studio. He highly praised the picture, but departed without saying a word about buying it, to Millais' great disappointment. After the visitors had gone, Millais took up the painting to put it back in its accustomed place, and to his amazement and joy he found in one corner of it a check for £150. This saved the family from want.

The precise date of the first meeting of Millais and Ruskin is not given. Millais writes to his friend, Mrs. Combe, on July 2, 1851, as follows:

"I have dined and taken breakfast with Ruskin, and we are such good friends that he wishes me to accompany him to Switzerland this summer. . . . We are as yet singularly at variance in our opinions upon art. One of our differences is about Turner. He believes that I shall be converted on further acquaintance with his works, and I that he will gradually slacken in his admiration."

Turner, we are told, lived a sort of hermit's life, and covered the rude walls of his leaky house with many of his works. Only a few of his most intimate friends were ever allowed to visit his abode. Lady Millais, who was one of these, says of him: "Withal, he had a great sense of humor, and when telling a story would put his finger to the side of his nose and look exactly like 'Punch.'"

Turner frequented the Athenæum Club and drove about the country studying landscapes. So absorbed did he become in these landscapes that he often fell out of his vehicle. Lady Millais further says: "Turner told me the way in which he studied clouds was by taking a boat which he anchored in some stream,

and then lay on his back in it, gazing at the heavens for hours, and even days, till he had grasped some effect of light which he desired to transpose to canvas."

This great artist was so averse to visitors that he moved his residence without telling any one of the fact. Lord Landsdowne, a great lover of art and one of Turner's best friends, learned where he had gone. His lordship wrote the artist a number of letters, and, receiving no response, he decided to

heard the lion in his den. He found the house. In the door was a small cat-hole, through which Turner spoke to any one on the outside. When his lordship knocked on the door, the artist asked if it was cat's meat (supposing his servant had brought meat for his cat), to which the visitor replied "Yes," and by this ruse secured admission.

From 1850 to 1852, Millais' work, especially such Pre-Raphaelite productions as "Ferdinand Lured by Ariel," "The Woodman's Daughter," "Isabella," and "Ophelia," had subjected him to a great deal of very severe criticism at the hands of prominent members of the Royal Academy. He was very sensitive, too. He was at this time painting what is still considered his great masterpiece, "A Huguenot." He wrote to Mrs. Combe:

"I have no doubt that likewise they will turn the subject I am at present about to their advantage. It is a scene supposed to take place (as doubtless it did) on the eve of the massacre of St. Bartholomew's Day. I shall have two lovers in the act of parting, the woman a Papist and the man a Protestant. The badge worn to distinguish the former from the latter was a white scarf on the left arm. Many were base enough to escape murder by wearing it. The girl will be endeavoring to tie the handkerchief around the man's arm, so to save him; but he, holding his faith above his greatest worldly love, will be softly preventing it. I am in high spirits about the subject, as it is *entirely my own*, and, I think, contains the highest moral. It will be very quiet,

"THE LAST TREE."
Reproduced by permission of F. A. Stokes & Co.

and but slightly suggest the horror of a massacre. The figures will be talking against a secret-looking garden wall, which I have painted here."

There is a story to the effect that the future Lady Millais, then the wife of John Ruskin, posed for this picture, and that it was then that Millais fell in love with her, and that Ruskin, noticing the affection between them, consented to his wife's divorce and to her marriage to Millais. The author of this biography, however, says that the model was a Miss Ryan.

Millais, of course, came to know nearly everybody of prominence in England. The following is an interesting incident in his early acquaintance with Frederick Leighton, who subsequently became a peer and president of the Royal Academy. Leighton had just finished "Cambue," a very important work, which Her Majesty purchased. In a banquet speech at the Academy on May 6, 1896, Millais said:

"In the early part of the evening, I spoke of my meeting with Fred Leighton. Let me tell you when and from whom I first heard of him. It was in the smoking-room of the Garrick Club, and the man who first mentioned the name to me was William Makepeace Thackeray. He had just returned from traveling abroad, and among other places had visited Italy. When he saw me enter the room, he came straight up to me and said: 'Millais, my boy, you must look to your laurels. I have met a wonderfully gifted young artist in Rome, about your own age, who some time will be president of the Royal Academy before you.' How that prophecy has come to pass is now an old, old story. We are, as we may well be, proud of our dear president, our admirable Leighton—painter, sculptor, orator, linguist, musician, soldier, and, above all, a dear good fellow."

A few months later, Leighton was dead and Millais was chosen as his successor president of the Royal Academy.

Millais was intimate with Thackeray, Dickens, Wilkie Collins, and Du Maurier; but above all his friends he loved that rare, rich personality, John Leech, the man who in the pages of *Punch* made the whole of creation laugh. Leech was one of the truest of gentlemen, and Millais and he were boon companions. They hunted and fished together, and Leech used Millais as a model for many of his most humorous sketches. After Leech's death, Millais stood at his friend's grave, beside that of Thackeray, in Westminster Abbey, and burst into tears and loud sobs, setting an example that was followed by Dickens, Canon Hole, and others who were present. George Du Maurier said: "We all forgot our manhood and cried like women."

Millais's eminence as an artist is due largely, his son thinks, to his hard work in early life. His genius was of the kind that it takes hard work to develop. "And many a time have I heard him say to young artists who thought to escape a grind like this by studying in Paris the methods of the impressionist school, 'Ah! you want to run before you have learnt to walk. You will never get on unless you go through the mill as I did, and as every successful artist has had to do.'"

Mr. Gladstone sat for Millais three times for portraits. He told Mr. Stewart Whortley, in speaking of the painter: "I never saw such a power of concentration in any man. I don't think I was in his studio for that portrait more than five hours and a half altogether."

Millais's bluff and hearty unconventionality of manner is illustrated by the story of his reception of Cardinal Newman when the latter dignitary, with a bevy of prelates, came to the studio to sit for his portrait. Pointing gayly to his sitter's chair, Sir John cried: "Oh, your eminence, on that eminence, if you please." Seeing the cardinal hesitate, he added encouragingly: "Come, jump up, you dear old boy!"

The close of the great artist's career is thus touchingly described by his son:

"The last moment he spent in his beloved studio comes vividly back to my mind. I had long wanted him to paint 'The Last

Trek,' a drawing which he had supplied as frontispiece to my book, 'A Breath from the Veldt,' and Mr. Briton Riviere had likewise urged him to do so; and now—pointing to a large white canvas which stood on one of the easels—he whispered, 'Well, Johnnie, you see I have got the canvas at last, and I am really going to begin "The Last Trek" to-day.' The subject appealed strongly to his feelings. It was that of a scene I had myself witnessed in South Africa—a white hunter dying in the wilder-

ness attended by his faithful Zulus. The title, too, seemed to please him (perchance as having some relation to his thoughts about himself); and after talking for some time on various points—such as the atmosphere of the Southern plains and the appearance of the parched and sun-cracked soil—he suddenly paused in his walk about the room, and, putting his hand to his forehead, said, solemnly and slowly, 'This is going to kill me! I feel it, I feel it!' The idea seemed to be but momentary. In another minute he was quite calm again, and throwing down his palette, which was already prepared, he pulled out his cards, and quietly commenced a game of 'Patience.' An hour later he felt so extremely unwell that he retired to his own room upstairs, closing the studio door behind him for the last time. He had commenced, tho he knew it not, 'The Last Trek'!"

A Pen-Picture of Charles Lamb.—In a new edition of "The Essays of Elia," published in England, the Introduction is written by Augustin Birrell, himself a prince of essayists. The London *Academy* reprints from this Introduction the following tender tribute:

"Lamb, like his own child-angel, was 'to know weakness, and reliance, and the shadow of human imbecility.' He went with a lame gait. He used to get drunk somewhat too frequently. Let the fact be stated in all its deformity—he was too fond of gin-and-water. He once gave a lady the welcome assurance that he never got drunk twice in the same house. Failing all evidence to the contrary, we are bound to believe this to be true. It is a mitigating circumstance. Wordsworth's boundless self-conceit, Coleridge's maddening infirmity of purpose, Hazlitt's petulance, De Quincey's spitefulness, knew no such self-denying ordinance. Lamb was also a too inveterate punster, and sometimes, it may be, pushed a jest, or baited a bore, beyond the limits of becoming mirth. When we have said these things

against Lamb we have said all. Pale Malice, speckled Jealousy, may now be invited to search the records of his life, to probe his motives, to read his private letters, to pry into his desk, to dissect his character. Baffled, beaten, and disappointed, they fall back. An occasional intoxication which hurt no one but himself, which blinded him to no duty, which led him into no extravagance, which in no way interfered with the soundness of his judgment, the charity of his heart, or the independence of his life, and a shower of bad puns—behold the faults of Elia! His virtues—noble, manly, gentle, are strewn over every page of his life, and may be read in every letter he ever wrote."

DECLINE OF THE NATURALISTIC NOVEL IN FRANCE.

M. EMILE ZOLA, when he published his "Roman Experimental," announced his invincible faith in what he termed "the novel of the future," and declared that thenceforth nature and reality were alone to reign in literature. Fiction was to become scientific, and romance was to give place to "facts." Altho this was but twenty years ago, says a writer in the *London Speaker* (December 2), already the ascendancy of naturalism is a thing of the past.

"M. Zola himself must be aware that hardly any of the books of fiction issued from the press in France during the last few years bear the typical features which should distinguish his much-praised novel of the future. Indeed, our novels of to-day have but few, very few, characteristics in common—not so much as a family likeness. Far from being all ruled by the principles of naturalism, the authors take their own temperament as their sole guide. Whereas M. Zola only wishes to philosophize, with amiable skepticism and learned irony, through a plot so thin that we sometimes lose its thread entirely, M. Bourget industriously works up those complicated intrigues which bring out his subtle (so subtle!) studies of psychology; M. Huysmans is a patient hunter after curios in the domain of rare sensations and forgotten art; M. Loti delights in the descriptions of far-off countries and of a sailor's life; and if we had time enough to view separately all the others, MM. Marcel, Prévost, Barrès, Theuriot, Marguerith, Rod, etc., each of them would exhibit the same independence in the endeavor to attain after his own way a purpose of his own. Whether their efforts are likely to meet some day in a general tendency, and they themselves should be regarded as the forerunners of a new movement, I can not, nor is it my object to, tell. This at least is evident, that they are at present the followers of no literary creed, and consequently we may safely maintain our assertion: naturalism has ceased to exist as a school.

"Its short career, however strange it may seem, when you remember that at one time it threatened to sweep everything away, can yet be accounted for. We must notice first of all that the novel is not the only field in which it lost its battle. It was in poetry and in painting that the reaction began, and there it went to the extreme, having now found its ultimate expression in a vague and unsubstantial symbolism—the very reverse of reality. Philosophy and criticism have followed; everywhere we find new tendencies at work. Of course it is hardly possible to ascribe to a mere coincidence the unanimity of the desertion which leaves the banner of naturalism helpless and forlorn. Even if many of the new tendencies could (as I think they can) be traced back to divers influences at home, or to the imitation of foreign models, the mere fact that these influences and these models were accepted is ample proof of a deep alteration in the public mind. Naturalism in its first stage, with Vigny, Gautier, Flaubert, Courbet, Renan, Taine, had been, whether consciously or not, a form of the general enthusiasm for science which welcomed the great discoveries of our century; the methods of observation so successfully applied to the study of the material world had been eagerly taken up by men of letters and artists alike; poets, historians, novelists, critics, philosophers, and painters had become the impersonal and impassive witnesses of things. So long as this enthusiasm did not subside, naturalism flourished. But our admiration is now more discreet; if we still look up to science with reverence, with gratitude and hope too, we no longer expect from it more than it can give. We know that, however far it

may extend the area of our vision, we still remain encircled by an impenetrable wall of mysteries, and that all the discoveries which led us to a greater certainty about the actual and the concrete can but remove farther the fundamental problems of life, not solve them. As science failed to satisfy all our longings and inquiries, its claims to an undivided worship were found groundless, and men began to seek elsewhere a refuge for their disappointment. Some found it in skepticism, some in mysticism, others are still in quest. Mysticism and skepticism, together with the vagueness and melancholy they imply, are therefore momentarily the characteristics of our art and literature. If those characteristics appear with less evidence in the novel, tho they have undoubtedly stamped their mark on the novel also, we must not wonder; fiction, the most comprehensive and supple form of literature, is an almost unlimited field of experiments, and the pioneers of the reaction are still working there to discover the vein that shall best reward their labors and exactly suit their aspirations and their powers. At all events the old vein of naturalism has been forsaken there as well as anywhere else, and under the same general impulse."

THE POETS STILL AT WAR.

NEW and old names continue to appear on the poetical lists in England, and lances for or against the Boers are shivered by the combatants.

Mr. George Meredith expresses himself as follows (in the *London Chronicle*, November 16), leaving the impression that his verse as well as his prose sometimes needs disentangling:

AT THE CLOSE.

To Thee, dear God of Mercy, both appeal,
Who straightway sound the call to arms Thou know'st;
And that black spot in each embattled host,
Spring of the blood-stream, later wilt reveal;
Now is it red artillery and white steel:
'Till on a day will ring the victor's boast,
That 'tis Thy chosen towers uppermost,
Where Thy rejected grovels under heel.
So in all times of man's descent insane
To brute, did strength and craft combining strike,
Even as a God of Armies, his fell blow.
But at the close he entered Thy domain,
Dear God of Mercy, and if thou-like
He tore the fall'n, the Eternal was his foe.

Thomas Hardy appears at the front again with the following poem in the *London Graphic*:

THE GOING OF THE BATTERY.

[November 2, 1899. Late at night, in rain and in darkness, the 73d Battery, R. F. A., left Durchester Barracks for the war in South Africa, marching on foot to the railway station, where their guns were already entrained.]

WIVES' VOICES.

Rain came down drenchingly; but we unblenchingly
Tudged on beside them through mire and through mire,
They stepping steadily—only too readily—
Scarce as if stepping brought parting time nigher.
Great guns were gleaming there—living things seeming there—
Cloaked in their tarcloth, uposed to the night;
Wheels wet and yellow from axle to felloe,
Throats blank of sound, but prophetic to sight.
Lamp-light all drearily blinking and blearily
Lit our pale faces outstretched for one kiss,
While we stood prest to them, with a last quest to them
Not to court perils that honor could miss.
Some one said, "Nevermore will they come! Evermore
Are they now lost to us!" Oh, it was wrong!
Howsoever hard their ways, some Hand will guard their ways—
Bear them through safely—in brief time or long.
Yet—voices haunting us, daunting us, taunting us,
Hint in the night-time, when life-beats are low,
Other and graver things. . . . Hold we to braver things—
Wait we—in trust—what Time's fulness shall show.

The following unnamed and anonymous poem appears in *The Telephone* (September 28), a weekly paper published at Cape Town. A New York journal calls it the best poem yet inspired by the war:

Lay my rifle here beside me, set my Bible on my breast,
For a moment let the wailing bugles cease;
As the century is closing, I am going to my rest,
Lord, lettest Thou Thy servant go in peace.

But loud through all the bugles rings a cadence in mine ear,
And on the winds my hopes of peace are strowed;
The winds that waft the voices that already I can hear—
Of the rooi-baatje singing on the road.

Yes, the redcoats are returning; I can hear the steady tramp,
After twenty years of waiting, lulled to sleep.
Since rank and file at Potchefstroom we hemmed them in their camp,
And cut them up at Bronkerspruit like sheep.
They shelled us at Ingogo, but we galloped into range,
And we shot the British gunners where they showed;
I guessed they would return to us—I knew the chance must change—
Hark! The rooi-baatje singing on the road!

But now from snow-swept Canada, from India's torrid plains,
From lone Australian outposts, hither led;
Obeying their command, as they heard the bugle's strains,
The men in brown have joined the men in red.
They come to find the colors at Majuba left and lost,
They come to pay us back the debt they owed;
And I hear new voices lifted, and I see strange colors tossed,
'Mid the rooi-baatje singing on the road.

The old, old faiths must falter; the old, old creeds must fail—
I hear it in that distant murmur low—
The old, old order changes, and 'tis vain for us to rail,
The great world does not want us—we must go.
And veld, and spruit, and koppie to the stranger will belong.
No more to trek before him we shall lead;
Too well, too well I know it, for I hear it in the song
Of the rooi-baatje singing on the road.

Most notable by far of all recent poetical utterances is the poet laureate's poem published in the London *Times*. It is as follows:

THE OLD LAND AND THE NEW LAND.

I.

The Young Land cried, "I have borne it long,
But can suffer it no more;
I must end this endless inhuman wrong
Within hail of my own free shore.
So fling out the War-Flag's folds and let the righteous cannons roar."

II.

It was a quick rash word, for the strong Young Land
Is a land whose ways are peace;
It weareth no mail, and its keels are manned
With cotton, and corn, and fleece.
While lands there are that are vased in steel, and whose war-hammers
never cease.

III.

And these, when they saw the Young Land gird
Its loins to redress the wrong,
Whispered one to the other, "Its heart is stirred,
But its hosts are an undrilled throng.
And its bolts yet to forge, so quick let us strike before that it grows too
strong."

IV.

And they said to the Old Land, "Surely you
Will help us to foil its claim?
It waxeth in strength, as striplings do,
And it girds at its parent's name.
Take heed lest its overweening growth overshadow your fading fame."

V.

Then the Old Land said, "Youth is strong and quick,
And Wisdom is strong but mild,
And blood than water is yet more thick,
And this Young Land is my child.
I am proud, not jealous, to watch it grow." Thus the Old Land spoke and
smiled.

VI.

"And look you," it said, "at the Young Land strike
For Freedom and Freedom's growth;
And that makes 'twixt us twain the unsigned by hand,
A bond strong as lovers' troth.
So 'ware what you do, for, if you strike, you will strike not one, but both."

VII.

Then they fretted and chafed; for, the shod in steel,
Their war-tread stops at the shore,
While the Old Land's breath is the salt sea gale,
And its music the wave-winds roar.
Then they hated the Young Land's youth and strength, but they hated the
Old Land more.

VIII.

Now the Old Land, in turn, for Freedom's Cause
Speeds her sons to the Southern zone,
They shout, "Let us clip the Lion's claws,
That Lion that lives alone;
And harry her lair, and spear her cubs, and sit on the Lion's throne."

IX.

And the Young Land laughs. "With her coursers fleet,
I guess she's a match for you all:
She has saddled the sea, and more firm her seat
Than yours, that would ride for a fall.
If you put all your fighting force afield, and charged at her watery wall."

X.

"But if ever, hemmed in by a world of foes,
Her sinews were sorely tried,
By the self-same blood in our veins that flows,
You would find me at her side,
So long as she strikes for the Cause for which her sons and my sons have
died."

XI.

Now thus let it be until wrong shall end,
This bond strong as lover's troth,
Twixt Old Land and Young Land, to defend
Man's freedom, and freedom's growth,
So if any should band against either now, they will meet, not one, but both.

The Oldest Printed Book.—Just at the present time, when preparations are being made to celebrate in Mayence, on a grand scale and with international cooperation, the five hundredth birthday of Gutenberg, the question as to which was the first book printed has aroused a lively interest among littérateurs, because of the appearance of a new claimant for this honor. This new claimant is a *Missale speciale* in the possession of the Antiquarian Book Concern of Rosenthal in Munich, which leading literary specialists, among them Drs. Falk, Stein, and Hupp, declare for typographical reasons to be the oldest printed book extant and to antedate even the famous Gutenberg Psalter of 1457. Recently the leading French authority on liturgies, Misset, examined this work and reached the conclusion that for liturgical and historical reasons it must have been older even than the forty-two-line Bible of Gutenberg, *i.e.*, the oldest edition, credited to 1450. The title of his monograph on the subject is "Le premier livre imprimé connu: Un missel spécial de Constance, œuvre de Gutenberg, avant 1450. Paris, 1899, Librairie Honoré Champion." This title indicates the author's conclusions, namely, that the Missale of Rosenthal is an extract from the famous Constance Missale, and must have been printed even before 1450.—*Translation made for THE LITERARY DIGEST.*

NOTES.

THE new "Cambridge edition" of Keats is unique in the fact that it contains in one volume all the letters of the poet as well as his complete poetical works. The volume contains also a photogravure from Lever's painting of Keats, and a vignette from the portrait in the National Gallery, London, together with a biographical sketch by the editor, Horace E. Scudder, notes, bibliography, and indexes.

THE death of Mr. Daniel S. Ford, the proprietor of *The Youth's Companion*, removes one of the leading newspaper publishers of the time. The almost unexampled success of that paper was due to his remarkable business ability. From an insignificant journal, it became one of the most prominent and profitable papers in the United States, and has for more than a generation brought pleasure and profit to the various members of the family.

"TITS," an English adaptation of Paul Hervieu's play "Les Ténailles," the second of the series of "modern dramas" undertaken by Mr. John Blair, was produced at the Carnegie Lyceum before the usual large and distinguished audience. It is a problem play touching in a serious spirit the subject of domestic unhappiness and divorce, and the teaching appears to be that the continuance of a loveless marriage such as that depicted in the drama is not only a personal degradation but a sin against the social fabric. The work of the principal actor is spoken of by the leading dramatic critics as good, tho the choice of the play is criticized as hardly one of sufficient interest for such a dramatic series.

MR. WILLIAM L. ALDEN writes that the breaking out of the war is bad for the winter trade in London. He says (in the *New York Times*): "The war promises to last for some time, and people will read newspapers rather than novels so long as it does last. There are two writers, however, who will benefit by the war. Kipling's books will sell more rapidly than ever, because he is so thoroughly identified with British patriotism and imperial supremacy. Mr. Rider Haggard's African novels will also have a new lease of life. His "Jess," which is in many respects the best book he ever wrote, deals directly with the Boers and their hatred of England. A new edition of "Jess" may be looked for at once, and its sale will probably be larger than it was when the book was first published."

A CURIOUS operation in literary surgery has lately been performed in England, and it is believed that the patient will recover. The subject was "The Heavenly Twins." Mme. Sarah Grand, at the request of many of her readers, cut from the narrative the striking story of "Isaiah" and "Diabelus," and has issued it through a London publisher as a distinct book. This operation is not wholly unparalleled in literary history. The separate publication of the papers in *The Spectator* relating to Sir Roger de Coverley will be recalled by every one. The New Shakespeare Society in England also published some years ago the play of "Marina," made up of the genuine Shakespearean portions of "Pericles," which constitute a drama within a drama and make a complete story of themselves.

SCIENCE AND INVENTION.

DOES ABSOLUTE TRUTH EXIST?

ABSOLUTE truth should not exist for the scientific mind. So says Prof. Henry A. Rowland, of Johns Hopkins University. In his presidential address before the Physical Society of America (New York, October 28), just published in *Science*, he cautions his hearers against supposing that there are such things as perfect truth and perfect error. Instead of these, he says, we should have a continuously graded scale of probability, and our belief in any statement will move up and down this scale as new evidence is adduced for or against it, rarely remaining in one place long, and never reaching the extreme top or bottom. Says Professor Rowland:

"The facts and theories of our science are so much more certain than those of history, of the testimony of ordinary people on which the facts of ordinary history or of legal evidence rest, or of the value of medicines to which we trust when we are ill, indeed to the whole fabric of supposed truth by which an ordinary person guides his belief and the actions of his life, that it may seem ominous and strange if what I have said of the imperfections of the knowledge of physics is correct. How shall we regulate our minds with respect to it? There is only one way that I know of, and that is to avoid the discontinuity of the ordinary, indeed the so-called cultivated legal mind. There is no such thing as absolute truth and absolute falsehood. The scientific mind should never recognize the perfect truth or the perfect falsehood of any supposed theory or observation. It should carefully weigh the chances of truth and error, and grade each in its proper position along the line joining absolute truth and absolute error.

"The ordinary crude mind has only two compartments, one for truth and one for error; indeed, the contents of the two compartments are sadly mixed in most cases; the ideal scientific mind, however, has an infinite number. Each theory or law is in its proper compartment, indicating the probability of its truth. As a new fact arrives, the scientist changes it from one compartment to another, so as, if possible, to always keep it in its proper relation to truth and error. Thus the fluid nature of electricity was once in a compartment near the truth. Faraday's and Maxwell's researches have now caused us to move it to a compartment nearly up to that of absolute error.

"So the law of gravitation within planetary distances is far toward absolute truth, but may still need amending before it is advanced farther in that direction.

"The ideal scientific mind, therefore, must always be held in a state of balance which the slightest new evidence may change in one direction or another. It is in a constant state of skepticism, knowing full well that nothing is certain. It is above all an agnostic with respect to all facts and theories of science as well as to all other so-called beliefs and theories."

Professor Rowland hastens to caution his hearers against unwarranted deductions from these statements. He does not mean, he says, that we need not guide our lives by the approach to knowledge that we possess. There are probably rigid natural laws, altho we can not get at them exactly; we can make these our slaves or we may be crushed by them. We must act according to our lights, and, if these are incorrect, we must suffer. On the closeness of our approach to knowledge, therefore, depend our own welfare and that of all our fellow creatures. The moral of all this, thinks Professor Rowland, is that we should bend all our energies to getting a closer and closer approximation to scientific truth by means of experiment. He adds:

"The aims of the physicist, however, are in part purely intellectual; he strives to understand the universe on account of the intellectual pleasure derived from the pursuit, but he is upheld in it by the knowledge that the study of nature's secrets is the ordained method by which the greatest good and happiness shall finally come to the human race.

"Where, then, are the great laboratories of research in this city, in this country, nay, in the world? We see a few miserable structures here and there occupied by a few starving professors

who are nobly striving to do the best with the feeble means at their disposal. But where in the world is the institute of pure research in any department of science with an income of \$100,000,000 per year? Where can the discoverer in pure science earn more than the wages of a day laborer or cook? But \$100,000,000 per year is but the price of an army or of a navy designed to kill other people. Just think of it, that one per cent. of this sum seems to most people too great to save our children and descendants from misery and even death!"

WOMEN AS INVENTORS.

IT is asserted that of patents taken out by women during the past five years fully 75 per cent. are yielding profitable returns. This statement is made in *The Patent Record* (Washington, December), which goes on to say that many patents nowadays are the results of observation in some store or mill where a woman employee sees room for improvement in a piece of machinery or a business method. Says *The Patent Record*:

"Much of woman's present activity in inventions is ascribed to the better educational facilities now obtainable. The college standard in high and popular courses in sloyd and manual training have taught women to use their hands as well as brains. Notwithstanding this, a large proportion of the more successful women inventors are those who have had only medium or limited educational advantages, but have been daily toilers in the various lines of industry. A Rhode Island woman invented an improved buttonhole-cutting machine that measures the distance between the buttonholes automatically, with much profit and convenience to garment-makers. A lock with three thousand combinations is a woman's invention; also a letter-box for the outside of homes that shows a signal when there is a letter inside for the postman to collect, an invention now in constant use. A woman has just perfected a valuable apparatus for removing wool from skins by electricity, showing that women are quick to adopt the modern facilities of the age to practical purpose.

"The Northwest, the Middle, and the Eastern States have produced the most active women inventors. The South has yielded the fewest number, but the Southern women who have entered the field at all have been financially successful. Two important aids to agriculture were the invention of an Alabama woman. A workingwoman in North Carolina succeeded with a culinary invention. A Florida matron patented a useful car-heating apparatus. A Texas woman invented a novel folding tent and another Southern woman a finger-exercising device, of value to musicians. A Western widow patented a method of desulfurizing ores; another invented a composition solder of use to metal workers.

"A number of women school-teachers are successful inventors, and have patented educational systems and devices, also kindergarten implements, erasers, school-bags, and book-rests. Women from the small towns in Wisconsin, Minnesota, Dakota, and Illinois have been prolific in inventing household conveniences, washing and cleaning apparatus, facilities for sanitation, garment bindings, shields, fastenings, and dress improvements. New England women have brought out attachments and improvements that have to do with saddles, harness, and vehicles; also the needs of barn and garden. They have invented butter-workers, plumbing appliances, brushes for cleaning, and fire-kindling compositions, toys, games, puzzles, and amusement knick-knacks. A considerable proportion of the fakirs' goods, novelties, and trick pastimes sold on the streets originated by women. They sell the patent right promptly to the proprietors of news agencies, who include such small gear in their stationers' and confectioners' supplies. A fair proportion of the specialty goods inventors and makers are women. Many whose trademarks are registered at the Patent Office have made fortunes, either through shrewdness in putting their wares on the market or because of the article's worth. These inventions include patent medicines, complexion soaps and wafers, hair ointments and restorers, and an infinity of health and toilet knick-knacks found at the drug-shops."

The career of the American woman as an inventor dates, we are told, from 1809, when a patent was taken out by Mrs. Mary

Kies for weaving straw with silk or thread. From this time till 1834 only fifteen patents were granted to women. In the next twenty-five years thirty-five patents were granted, and it was not until after the Civil War that there was any marked increase in the number of women inventors. *The Patent Record* states that one hundred and fifty-two models of women's inventions were exhibited at the Atlanta Exposition, and that since then the Patent Office has had a specially classified list of women's inventions prepared for public inspection.

HAS THE NERVE-CELL A MEMORY?

WE are wont to regard memory as attaching only to the great assemblage of cells that we call our brain. M. J. Renault, who writes on the subject for the *Revue Scientifique* (Paris, September 9), believes that it is also a function of the individual nerve-cell or neuron, and that each cell not only remembers, but is conscious of its memory, and exercises a separate physical control over its share of the bodily functions. Says M. Renault:

"The special characteristic of the neuron is that it is a sensitive cell that remembers; that is to say, every impression received determines an imprint of such a nature, and so perfectly characteristic, that it remains and is not effaced by the superposition of new impressions, which act on the neuron, each on its own account, in the same fashion. It is like a sensitized plate, which, receiving a throng of successive images, should keep them superposed, but nevertheless distinct, and should be at the same time capable indefinitely of developing at will any desired one of them for an instant. This occurs under the influence of impressions identical or of the same order with that which determined the primary imprint, but which need not be so vivid, and which may continue to be effective even after indefinite repetition. These place the neuron at once in the functional attitude that the first excitation was able to produce only with considerable labor. Now these are precisely the conditions of an elementary memory, in which the conservation of certain states, and their reproduction, are so easy that if we regard the process only superficially it appears to be spontaneous."

The play of the nerve-cells becomes known to us, the author goes on to say, only by the results of their mutual association. Consciousness and what have been called "mental faculties" have nothing to do with an act, he says. A nerve-cell receives an impression, either directly or through other cells; it finally reflects this impression to a motor neuron that causes muscular contraction. It is as purely mechanical as when we turn on an electric light. But the nerve-cell has memory; the muscle has not. The muscle-cell contracts in the same manner at the hundredth excitation (fatigue excluded) as at the first. The nerve-cell can be educated, because of its "cellular memory," and the contraction becomes easier to it at each repetition. To quote again:

"It is because the nerve-cells have memory that they regulate to correspond with their harmonic associations all the interior and general movements of the organism. The organic memory, as philosophers have understood it since the beautiful investigations of M. Ribot, is naught but the resultant of the individual cellular memories of our innumerable nerve-cells, and I can demonstrate that the reflex, that fundamental and most simple form of organic memory, is only the result of an anatomical arrangement reduced to a pure mechanism, as some have believed. I am also of those who assert that reflex action is the product of a specific hereditary memory, which has been laboriously acquired by our precursors in the race, then rendered organic by numberless repetitions, and finally fixed as a characteristic of the species. Such, at the outset, are complex acts like leaping or dancing, which, calculated, regulated, and acquired at first by mental action, have fallen into the domain of unconscious nerve action and have become automatic. Such also is the repetition of the multiplication table. If we say '6 times 6 is 36,' it is because of

a theorem that we know it, and by the play of reflex action that we say it. But all this has been sufficiently studied out, and is so well understood that I need not dwell on it longer."

Having endowed the cell with memory, the author next proceeds to inquire whether it possesses consciousness. Is the cell conscious that it has a cellular memory? M. Renault believes that it is. He cites the case of a man whose arm has been amputated, and who yet believes that he feels with the lost member. When the stump is touched he thinks at first that the sensation proceeds from the fingers, which no longer exist. This would not be the case, thinks the writer, if the cells were mere automata. They remember that their function was formerly to pass on a sensation from the fingers, and they are deceived into thinking that they are still doing it. They therefore send a wrong message to the brain. This is just what we should expect from entities with memories and with consciousness of those memories. The neurons alone, says M. Renault, know what they do and what is expected of them in the organism. They carry on hosts of organic processes and do not bother the brain—the great central ganglion—about it at all. If the regulative action of the neuron ceases for a single instant, all is changed, the anatomical elements revolt, and there is a state of disease. This, M. Renault believes, is the true theory of the nerve-cell and the one that most nearly represents the results of modern advanced investigation.—*Translation made for THE LITERARY DIGEST.*

THE ANDRÉE BUOY.

THE discovery of one of the buoys belonging to the Andrée expedition has been noted by the daily press. We are reminded by *Ueber Land und Meer* (as condensed in *The Scientific Supplement*) that twelve of these buoys were taken with the

expedition, each one consisting of a cork balloon painted with the Swedish colors (yellow and blue) and covered with a network of strong copper wire ending below in a spike.

THE ANDRÉE BUOY.

"In the upper end of the balloon there was an opening in which was secured a cylinder, that was closed at the lower end by means of a rubber packing and at the upper end screwed in the copper plate to which the netting was secured. On the plate the inscription 'Andrée's Polar Expedition 1896 Nr. . . .' was engraved. The inscription was dated 1896, the year for which the expedition was first planned, and was not altered altho Andrée really started in 1897. The iron cylinder was designed to carry communications in writing. From the cylinder, which projects beyond the plate, extends a strong spiral iron wire, that terminates in a Swedish flag made of sheet iron. This arrangement is

very practical, for if the buoy is thrown into the water it will always fall with the copper spike down, and if it falls on the ground or on ice, the spike will bore in so that the flag will always be uppermost. The buoy which was found is 12.5 inches long, and has been declared by several experts who met in Stockholm on October 1 to be the so-called 'North Pole buoy'; that is, the buoy Andrée was to have thrown out after the North Pole

had been passed. Captain Svedenborg, who has had experience in balloon ascensions, explained that the hooks seem not to have been fastened on the eyes, and that consequently the buoy was not let down by means of lines. The buoy was opened. The copper network was cut off at its lower edge, whereupon sea sand fell out; and when the copper spike with the copper tube secured thereto was taken out, the latter held some water—and the tube was sawed off. In the lower part they found a rubber stopper on which was some gravel. On the inner side of the tube there was a paper-like lining which the microscope showed to be a sort of seaweed. Professor Nathorst explained that the buoy could not have traveled from the Pole to King Charles Land. Svedenborg thought the buoy had been thrown out empty, and Professor Montelius maintained that it had not been proved that the buoy was thrown out empty.

Nansen thinks that the finding of the buoy is a bad sign, and believes that the evidence is that it was thrown out as ballast rather than as a means of communication. He thinks that the buoy was thrown out near Franz Josef Land.

NEW APPLICATIONS OF WIRELESS TELEGRAPHY.

INVENTORS seem nowadays to have entered a competition to see who shall devise the greatest number of applications of electric space-signaling. Among those recently reported in the daily press is the invention of A. F. Hamilton for facilitating approach to the harbor of Halifax, N. S. *The Electrical World* reports that the apparatus consists of "what may be called an electrical buoy on which is a bell connected with the land by means of a submarine cable. In addition to the bell, the buoy is intended to hold a Marconi transmitter from which signals may be sent from land to a distance of four or five miles." All vessels having suitable receivers can thus be readily warned of danger as they approach the coast, and can also ascertain their exact situation by paying due heed to the signals transmitted. Other applications of wireless-signaling systems are thus noted in the same paper:

"In a despatch from Chicago, under the head of 'Marconi Tests Are Outdone,' an account is given of tests of a wireless telegraphy by Prof. W. S. Johnson and C. L. Fortier, of Milwaukee. What these gentlemen accomplished, according to the information at hand, is this: 'They succeeded in telegraphing without wires through a suite of seven rooms, with all doors closed, and through seven walls. Another test was made, when the signals were conveyed through three fireproof vaults and an ordinary telegraph switchboard, in which thirty wires were connected up and about forty dead wires were located. Notwithstanding the fact that this switchboard contained live wires, the current passed through all of the vaults and through this board. This probably is the most severe test ever given wireless telegraphy. A third test was made, in which the sending instrument was placed inside of one of the steel vaults and both doors were closed and the combination lock turned. The signals were then transmitted clearly from the inside of the vault to an adjoining room.' The professor claims that his invention is materially different from that of Marconi, and that an instrument can be constructed to be carried on horseback. Other information tells of another system of wireless telegraphy tested at Lexington, Ky., by Prof. G. R. Sturtevant. The system, Professor Sturtevant says, possesses qualities superior to Marconi's system, in that instead of transmitting in waves which travel in every direction sent, the messages are sent in parallel lines in two directions, and can not therefore be taken indiscriminately by persons not intended to receive them. The system, he says, originated in England."

In an article on the applications of kites to this form of signaling, *Electricity* says:

"Of the various kite experimenters of recent date none have investigated the subject as carefully or as thoroughly as Mr. William A. Eddy. In studying the workings of the Marconi wireless telegraphy, Mr. Eddy is said to have come to the con-

clusion that a kite wire would be far better adapted to catching electrical oscillations in the atmosphere than Marconi's wires attached to poles driven in the ground.

"Mr. Eddy is furthermore of the opinion that if the two vertical points of sending and reception extend high enough into the air, enough electricity will be obtained from the atmosphere, even in a clear sky, to do away with the batteries now made use of. Whether Mr. Eddy is correct in his surmise can of course only be determined by experimenting, and it is along this and kindred lines that he has been working of late. Among other things he has devised a sparking apparatus which, when attached to a kite and sent up four or five hundred feet, can be made to emit sparks by means of atmospheric electricity, at one-second intervals, or much more rapidly if desired, and in this way Mr. Eddy believes war signaling aloft could be carried on."

TEMPERATURE OF THE HUMAN BODY.

ONE of the most striking facts in physiology is the uniformity of our bodily temperature. No matter what the extremes of atmospheric heat or cold may be, the temperature of the interior of the human organism rarely varies more than a few degrees. According to M. François Stepinski, who writes on the subject in *La Science Française* (Paris, December 1), the temperature of man may vary slightly during health, but within such narrow limits that we may say that in the ordinary conditions of life the average temperature of the healthy man is 98° Fahr. Variations above or below this do not exceed, in temperate climates, 2° to 3° Fahr. This variation may, however, be increased a little under certain circumstances. Says M. Stepinski:

"All conditions being the same, the normal physiologic temperature is not equal in all individuals; but, unfortunately, we have no very exact data on this point. Differences of a few degrees have been noted, and it may be imagined how useful it would be for the practising physician to know the mean normal temperature of his patient. According to some authorities, there are persons who have a low normal temperature, just as there are those who have a low pulse-rate, without counting children, with whom a slight lowering of mean temperature is frequent, but which always occurs after an accident.

"Every one knows that there are regular variations of bodily temperature during the day, and it is the same during the night. It has long been asserted that there are in the daily curve two maxima and two minima; but Charles Richet has shown that the central temperature goes through a very regular cycle, with a maximum at 5 to 6 P. M. and a minimum at 4 to 7 A. M. But it should be said that this curve is modified by motion, by work, and by feeding, which cause it to rise higher; and by sleep, rest, and hunger, which make it fall. It should be added that with persons who work at night the nocturnal curve is very similar to that of the day."

"The influence of age is not so great as is sometimes supposed. Evidently, after a few minutes of life, the new-born infant loses 2° to 3° [3° to 5° Fahr.], for we know that it quickly loses heat, and that it is necessary to protect it at this time. But ordinarily the temperature becomes normal again on the following day; only with feeble children does it remain low. With old persons, the temperature is often that of the adult.

"In regard to sex, experiments are too few to give very certain results. Perhaps there is a slight difference in favor of the female sex; but, to make up for this, women resist cold less than the male sex. . . . As to race, according to numerous observers, men of different races, placed in the same climates, have sensibly the same temperature as soon as acclimation has taken place."

The effect of climate and season on bodily temperature, which is next considered by M. Stepinski, depends, he tells us, on humidity as well as on heat and cold. Very hot weather raises the temperature slightly. Likewise, when we pass from a hot to a cold climate, a noticeable decrease in temperature takes place; but it is less rapid than the corresponding rise when a cold country is left for a warm one. The difference may amount to two or three degrees, but the abnormal temperature ceases

when the person becomes acclimated. If the surrounding medium is heated artificially, as in a Turkish bath, the bodily temperature rises quickly at first for several degrees; but a reaction takes place, and, owing to the evaporation of the perspiration, the temperature falls again. If the humidity is so great as to prevent this evaporation, there is grave danger of overheating. The inverse action, of course, takes place in a cold bath. To quote again:

"Feeding raises the temperature slightly, and thus after breakfast there is a rise of several tenths of a degree. The same often occurs after the evening meal; but, curiously enough, there is sometimes no effect at all. . . . The quality of the food must, of course, be taken into account. The thermogenic action of coffee, tea, and small doses of alcohol is well known, as well as that of coca and of certain medicaments known as stimulants.

"Physical labor and brainwork augment the temperature manifestly; the latter rarely raises it more than 0.6 of a degree [1.1° Fahr.], but the former has a much greater effect. Pathology confirms the data of physiology in this regard, for we know that the maladies where the temperature is raised most (tetanus, etc.) are those in which muscular contraction plays the greatest part. Finally, rest and sleep cause a slight diminution of normal temperature."

So much for the average central temperature of the body; but the author reminds us that the local temperature is quite a different thing. According to Gavasset, the temperature of the body increases from the skin inward, and from the extremities toward the trunk. The skin temperature may vary in a few hours by four to twelve degrees Fahrenheit, but the average remains pretty constant. The local temperature depends on nearly the same conditions as the central temperature. A curious phenomenon is the difference of temperature often observed in hysterical persons between the two sides of the body. This, however, the author reminds us, trenches on the subject of pathology, which he reserves for another article.—*Translation and Condensation made for THE LITERARY DIGEST.*

A SUBSTITUTE FOR THE X RAYS.

IT has been for some time a fact familiar to scientific men that certain substances are able to give off continuously rays that resemble Roentgen radiation in many particulars, especially in their ability to traverse many substances opaque to ordinary light and to impress an image on a photographic plate. Substances giving off these rays in unusually large quantities have lately been discovered, and it is now asserted that they are more convenient and economical for surgical investigation than the X rays. This announcement is made by Prof. George F. Barker, of the University of Pennsylvania, who recently gave an exhibition in Philadelphia of the powers of one of the newly-discovered substances—radium. We quote from the editorial column of the *New York Tribune* (December 17) a review of the facts that have led up to this assertion of the Philadelphia professor. It says:

"The investigations of M. and Mme. Curie, which resulted in the finding of radium, began early in 1895, if not before, and were doubtless stimulated, if not suggested, by the Bavarian professor's brilliant achievement. Roentgen's work naturally called to mind the observations of Becquerel, that uranium and its salts exerted a very feeble photographic influence. By experimenting with pitchblende, the mineral from which uranium is obtained commercially, M. and Mme. Curie found that the former yielded the same effect much more conspicuously. This led them to suspect that they were on the track of a new element. They even went so far as to name it provisionally, altho much difficulty was experienced in separating it from the substances with which it was associated. Just before the close of the year, with the cooperation of M. Bemont, they obtained indications of still another new element. The first they called 'polonium' and the second 'radium.' Polonium is believed to surpass uranium and its salts in emissive power five hundredfold, but Professor Barker estimates the efficiency of radium at one hundred thou-

sand times that of uranium. For this reason, and because of its comparative cheapness and simplicity, the second of the Curies' discoveries seems destined to replace the costly and complicated X-ray apparatus in the realm of surgery."

The curious thing about the radiation from radium and similar substances is that it appears like a spontaneous generation of energy. That it is really so, no physicist believes; but no adequate explanation of the way in which the rays arise has yet been found. Be this as it may, it is certainly convenient to possess a source of the rays that is not dependent for its action on any ordinary transformation of energy, as is the Crookes tube by whose means Roentgen rays are produced.

A NEW CURE FOR ANEMIA?

WHAT is described in the newspaper headlines as a new "elixir of life" is reported from the Pasteur Institute of Paris. No official report has been made by the discoverer, Professor Metchnikoff, but a representative of the *London Morning Post* sends to that paper a description, which has been cabled to American dailies. This "elixir of life" is described as a series of serums which arrest decay of the tissues of the different organs by reinforcing the phagocytes (white corpuscles) in their attack upon disease germs. The different serums in the series are specifics for different organs, and "an entire section" of the Institute, it is said, is now at work to find the specific of each organ, and "extraordinary results" have already been obtained. *The Morning Post's* account of the discovery is as follows:

"M. Bordet, one of the professor's pupils in 1895, published the results of a curious experiment, which consisted of injecting the blood of a rabbit into a guinea-pig. Later he injected the blood of this guinea-pig into a rabbit, and the latter died. Professor Metchnikoff sought the causes of the phenomenon, and was soon convinced that the blood of the guinea-pig, injected into a rabbit or other vertebrate animal, elaborates the poison that weakens the red globules of the blood and makes them the prey of the phagocytes.

"Starting from the fact that the poison elaborated in the guinea-pig is fatal in large doses, Professor Metchnikoff argued that the action in small doses must be stimulating. On this is based the action of all medicines, such as strychnin and arsenic.

"He therefore began to inject into rabbits feeble solutions of previously injected guinea-pig's blood. A cubic millimeter of the blood of the rabbits thus treated contained before the injections 3,000,000 red globules. In three or four days the number increased to 8,000,000."

The *Philadelphia Press* has an intelligent editorial on the subject, from which we quote as follows:

"The latest discovery of Professor Metchnikoff seems to be some variation of the older phagocytosis process [developed years ago by the professor]. He believes he can, in the case of localized diseases, so stimulate the blood corpuscles by means of special lymphs that they will overcome the poisonous influences in the tissues and bring them back to a normal condition. It may be said modern medicine does this in part to-day through general if not specific remedies. But Professor Metchnikoff is reported to go further, and by a stimulation of the cells in old age is able to restore the more active functions of the blood with the consequent improvement of tissue and a longer lease on life. In other words, just as the blood can be made to resist the attack of the diphtheritic germs by the use of antitoxins, so by Professor Metchnikoff's new serums it resists the decay of the tissues and rebuilds them as they weaken under the assault of years."

PROF. RUDOLF VIRCHOW'S jubilee—the fiftieth anniversary of his tenure of office as Professor Ordinarius—was recently celebrated at the University of Berlin, says *Science*, December 22. "In the hall of the Pathological Museum (Virchow's own creation) the Senate of the University, its rector, Professor Fuchs, at their head, assembled to greet their revered and honored colleague, and to present an illuminated and illustrated address, the text of which had been written by Professor Waldeyer. In it Virchow's wonderful many-sidedness, and his achievements as scientist, archeologist, and politician, were recounted in glowing terms."

THE RELIGIOUS WORLD.

SELF-CREMATATION OF BUDDHISTIC MONKS.

ONE of the striking features of Buddhism is its monastic system. The spirit of its monks and nuns is seen in the custom of self-cremation to which, in their religious zeal, they resort in order to influence the people. The English traveler, Max Gowan, has been privileged to witness this evidence of their zeal, and on the basis of his account, the *Germania*, of Milwaukee, brings out the following details:

It is known that the Buddhistic monks or bonzes, in order to move the hearts of their coreligionists, will inflict the severest bodily chastisement upon themselves and even mutilate their members. Their fanatical zeal and their desire to enter into the bliss of the Nirvana at times drive them even to suicide. On the island of Patu is found a high cliff from which those priests and monks who are ambitious to attain the holiness of Buddha hurl themselves into death. This place is called "the abyss of the goddess of mercy." Others seek to secure the same end by ascending a funeral pyre which they set on fire with their own hands. The bonzes usually come from the lowest ranks of the people; many of them enter the ranks of monks in order to lead a lazy life; they are content to leave the active world in order to enjoy the ease of the monasteries. The majority of the bonzes consist of men who become clerics against their will. As children of poor families, they are sold into the monasteries to be educated for the priesthood. Sometimes, however, Chinamen enter the order, and these are the ones who, as a rule, furnish the candidates for self-cremation. Gowan reports that on one occasion a mendicant monk, who was traveling through a province collecting money for the erection of a new monastery, announced that he would cremate himself, as other means of persuading the people to be liberal and charitable had failed. Those who had refused to contribute to the monastery were liberal in their contributions for the cremation, more wood and rosin being given than would have been needed to burn up all the monks and nuns of the whole cloister. The committee in charge of the ceremony refused to make use of the offer of rockets and other means of securing a pyrotechnic display, and confined themselves to placing several packages of ordinary powder in the clothing and armpits of the monk, with the evident purpose of shortening the ordeal. An English missionary tried to dissuade the monk from this act of self-immolation, but in vain. Then the political authorities interfered and forbade the deed. The monk was so unhappy over this refusal that he threw himself on the pile of wood and was afterward found there dead.

The coolness and utter contempt of suffering and death which often accompanies self-cremation almost surpasses belief. Several years ago announcement was made that on a certain day a young priest from the cloister of "the Mount of the Spirits" would burn himself alive. The faithful of both sexes who desired to attend the ceremony were urged to be present in good time, and were asked not to forget to bring something along as a gift to the zealous ecclesiast. When the multitude arrived at the cloister, another bonze, jealous of the attention and gifts secured by his colleague, declared that he too would burn himself alive and hastened to make his preparations. Two piles of wood were erected, one on each side of the temple, so that those who could not get a good view of the one ceremony could do so of the second. During the hours preceding the ceremony, the candidates for death were surrounded by their relatives and friends and a curious crowd of outsiders who had come to ask of them their influence in the world above. Magnanimously both promised to aid all in their power, permitted themselves to be venerated as true Buddhas, and thereby increased the finances of the cloister materially. Finally, the hour had come. Slowly they passed between kneeling crowds, and then, chanting and singing, took their positions. The first of the two ascended the pile, erected in the shape of a tent, and lighted it with his own hands, using an ordinary match. The multitude could, through the door and the openings of the tent, watch every stage in the cremation. Until the flames and smoke made it impossible any longer to behold the monk, he could be seen in the flames, singing a sacred hymn and beating the time with a skull carved out of wood.

An hour later the second candidate for death made his debut. He had closely watched his predecessor and coolly entered his own tent of death, and passed through the ordeal as the other. The ashes and bones of the two were carefully gathered and deposited in the cloister of Wen-Chao, where they are preserved as sacred relics.

Women, too, in their religious devotion, cremate themselves, altho their favorite way of seeking death for the cause is to hurl themselves into some sea or river and drown. No other type of religion on earth produces such exhibitions of fanaticism as are produced by Buddhism.—*Translation made for THE LITERARY DIGEST.*

THE RELIGIOUS PRESS ON MR. MOODY.

THE death of Mr. Dwight L. Moody on December 22 is naturally regarded by the religious journals as an event of profound interest to the whole Christian world. There is little diversity in the views taken of his great evangelistic labors and

A PHOTOGRAPH OF MR. MOODY DURING A SERVICE LAST SUMMER AT EAST NORTHFIELD, MASS.

of his success as a religious preacher, whose chief gift was to arouse the moral consciousness of men hitherto unawakened upon the spiritual side. *The Outlook* (undenom., December 30) comments on the fact that while there is a mysterious inclination in all schools to judge religious teachers by their theological opinions, we all judge Mr. Moody rather by Christ's standard, "By their fruits ye shall know them." It says:

"Mr. Moody was a religious preacher, not a theological teacher; and the character of his work is to be measured, not by its theological structure, but by its religious power. The difference ought to be as self-evident as it is simple. The theological questions are such as these: What was the nature of the influence exerted by the Spirit of God on the minds of the writers of the Bible? What is the relation of Jesus Christ to the Infinite and Eternal Ruler of the universe? How do the life, passion, and death of Jesus Christ effect a saving influence on the character and destiny of mankind? The religious questions are: How can I best use the Bible to make better men and women? What is Jesus Christ to me, and what can He be to my fellow men? What can I do to make available to myself the influence of His life and character in securing a purer character and a diviner life for myself and for those about me?"

"Mr. Moody's theology was to the last the theology which pre-

vailed in the New England orthodox churches in the first decade of the present half-century. The old Calvinism had passed away, shattered beyond hope of restoration by the preaching of Lyman Beecher and Charles G. Finney, and by the commentaries of Albert Barnes, which were in every religious household. The new theology, born of the evolution philosophy, had not yet found entrance into the churches of the Puritans; is not, indeed, even as yet formulated in its avowed philosophies. Bushnell's theology was still under the ban; Henry Ward Beecher had not yet become a theologian—he had been too busy, first as a revivalist, then as a moral reformer, to study philosophy, and was infusing a new moral and religious life into the old channels of theological thought. . . . It would be difficult to name any man in the present half-century who has done so much [as Mr. Moody] to give the power of spiritual vision to men who having eyes saw not and having ears heard not, to give hope to men who were living in a dull despair or an even more fatally dull self-content, and to give that love which is righteousness and that righteousness which is love to men who were before unqualifiedly egotistical and selfish. With him the theology was never an end, always an instrument. If any liberal is inclined to criticize his theology, let him consider well with himself whether he is doing as good work for humanity with his more modern and, let us say, better instruments. . . .

"He was the last of that school of evangelists in which his predecessors were Whitefield, Finney, Nettleton. His methods can not in our time be successfully imitated by another. But so long as the Church holds to this ancient faith in a divine Helper and Savior, and to its right to pronounce with authority, spiritual not ecclesiastical, the absolution and remission of sins, so long, tho by new voices and in new methods, it will surprise and perplex journalists, historians, and philosophers by the power of the Glad Tidings of Christ, of which Dwight L. Moody was so illustrious a herald."

The Independent (undenom., December 28) says of him:

"He was a thorough conservative in his study of the Bible, and had no faith in the higher criticism, altho he had tolerance for those who believed in it. He was a believer in Premillennialism, but was careful in preaching not to disturb his hearers with it. Many stories are told of his faith in persuading men of wealth to give money to carry on his work. He had to raise \$200,000 a year to carry on the Northfield schools and the work in Chicago. He was a very lovable man, a keen judge of human nature, remarkable for his common sense, and for the directness and fervency and simplicity of his appeals. No other evangelist of the time has done such a work, and that, too, without arousing any criticism. The people have all believed in him, even those of different faith or of no faith at all."

Zion's Herald (Meth. Episc., December 27) says:

"Mr. Moody was a man of large mold and striking individuality. In religious work and results he has been the colossal figure of the century, if, indeed, he ever had a prototype. . . .

"His tolerance was not the least of his remarkable characteristics, and must be noticed in this necessarily brief and hasty characterization. Tho a man of clear and decided religious tenets, and tho he held his convictions with tenacity, yet he was comprehensive and considerate of variant theological opinions. Conservative in his opinions of the Bible, yet he was so large and so tolerant that he could 'find' Prof. Henry Drummond and give him Northfield for a pulpit, sending him forth as 'a son in the Gospel.' And later when terror-stricken defenders of the faith were affrighted at the utterances of Prof. George Adam Smith, Moody invited him to Northfield to preach and to lecture. He was a robust, expulsive, apostolic disciple, a combination of much of the best of Peter and Paul, having Peter's burning zeal and consecration, but without his infirmities, for he never did nor could he have betrayed his Lord; not possessing Paul's culture or philosophy, but having his charity, brotherliness, and largeness of outlook for the kingdom of Christ, and, like Paul, 'abundant in labors.' The world is inexpressibly richer for the life which he has lived and the work which he has done."

The Lutheran Observer (Philadelphia, December 29) says:

"Mr. Moody seemed to be absolutely free from the mercenary spirit. It is said that his temporal wants were cared for by a friend that he might be allowed unhindered freedom in the work

to which he was so manifestly called of God. The world is poorer because this man of God has left it. He has put forces to work, however, that will carry his mighty influence on into the future, and who can tell the number of people on earth and in heaven who date their conversion from the day the truth fell

MR. MOODY'S RESIDENCE AT EAST NORTHFIELD, MASS.

upon their hearts under his ministry? If ever a man's work has been owned of God, in both its immediate and lasting results, it has been the work of the Christian hero, Dwight L. Moody."

The Evangelist (Presb., New York, December 28) says:

"It was not merely to save souls that Mr. Moody taught and preached and lived. It was to save souls that they might serve, that they in their turn should be ministers of salvation. This is why the highest eulogy of Mr. Moody yet spoken comes from a man of affairs known the world over, in the remark that he seemed to be 'the most successful promoter of practical religion of this, or perhaps any age.' The judgment was impartial and is just."

The Congregationalist (December 28) says:

"Mr. Moody was a wonderful leader of men. Everywhere he went he set others to work for Christ. No one was so bad as to be repulsive to him, and no one was so wise or good that he did not venture to approach and use him to further his service for Christ. Thousands of waifs rescued from rags and wretchedness are useful men and women because Mr. Moody put his arms of love around them and lifted them up. He has builded many structures in many cities where young men and women gather to work for and worship God. But his noblest monument is made of living stones builded together for an habitation of God through the Spirit. His life can best be summed up in one sentence: He was a wise winner of souls."

The Churchman (Prot. Episc., December 30) says:

"Mr. Moody has been the most remarkable example in our day of the consecrated layman. 'Wo is me if I preach not the Gospel,' seems to have been the prevailing thought even of his young manhood. Nothing discouraged him, and his indomitable will and faith commanded success with the multitude and respect even from those who could not share his convictions. 'I have always been an ambitious man,' he said to his sons, 'ambitious to leave you work to do.' He lived for work, and died of overwork. He seemed to care little for any business but his Master's. It was this unflagging energy, this faith in his vocation, that brought him the confidence of men to whom like energy and faith had brought like success in the pursuit of wealth. He combined strangely the old and the new. He was perhaps the last great revivalist on the old theological lines, and he was the first to use wholly modern methods of publicity and appeal. In his earnestness, his unselfishness, and his sanctified common sense he was one of the most remarkable men of our generation, for whose life the world has been better."

The Ave Maria (Rom. Catholic, December 30) says:

"The chief lesson of his life, as *The Times-Herald* indicates,

is that while his clerical brethren emptied pews with controversy, sociology, politics, and economy, Mr. Moody 'filled great auditoriums with the masses of the people who were hungry for the simple consolations of religion.' He was not a learned man, nor, according to academic standards, an eloquent man; but the fact is that whenever he spoke in halls or churches people struggled on the street for admission. It was the simple goodness and the persuasive earnestness of the man that drew them. With Dr. Moody, in all probability, passes away the Methodist revival."

DR. MCGIFFERT AND "THE NEW WAY WITH HERETICS."

NEXT to the trial of Dr. Briggs, the case of the Rev. A. C. McGiffert, of the Union Theological Seminary, has been the most important of the heresy cases which have vexed the Presbyterian Church of late years. The teachings of Dr. McGiffert's book, "A History of Christianity in the Apostolic Age," were formally condemned by the General Assembly, and Dr. McGiffert was requested to renounce them or give up his membership in the church. Upon his courteous but firm refusal to take either course, announced in a letter to the Assembly at its meeting last spring (see *THE LITERARY DIGEST*, June 17), the case was referred back to the New York presbytery for further action. During all this time in which the local church has been wrestling with the problem, Dr. McGiffert has continued to assert that his faith is in substantial harmony with that of the Presbyterian Church, and has refused to resign from the ministry and membership of that body. The church itself has been loath to precipitate another heresy trial; and at last, finding Dr. McGiffert immovable, the presbytery, in its meeting in the latter part of December, cut the Gordian knot by formally announcing its dissent from certain of his teachings, without taking any decided steps to cause his trial for them on the ground of alleged heresy. Thus apparently Dr. McGiffert may continue in the Presbyterian fold, while at the same time both the general Church and the local ecclesiastical authorities wash their hands of his teachings on the subject of the origin of the Lord's Supper and the authorship of the third and fourth gospels. In the report submitted to the presbytery by Drs. Henry Van Dyke and Howard Agnew Johnson, the four following points are cited as meeting the disapproval of the Church:

"(1) The apparent acceptance of the theory that the sacrament of the Holy Communion was not instituted by Christ Himself upon the occasion of the last supper as a memorial feast (p. 69, foot-note).

"(2) The discrediting of the view so long accepted by the Church, that the third gospel and the book of the Acts were written by St. Luke, the companion of St. Paul (pp. 217, 433), and the suggestion that they were more probably the work of some writer living in the latter part of the first century, a generation after the death of the apostle (p. 436).

"(3) The expression of uncertainty as to the authorship of the fourth gospel, and the assertion that the discourses in it attributed to our Lord, altho' they embody Christ's genuine teaching at least to some extent, are the composition of the author (p. 616).

"(4) The view that 'Jesus's emphasis of faith in, or acceptance of, Himself, is throughout an emphasis not of His personality, but of His message, and thus simply a reaffirmation of filial trust in, devotion to, and service of God as the essential and sufficient condition of an eternal life of blessedness in heaven' (p. 30)."

The report then formulates the principle that "a man is not necessarily to be held responsible for the general consequences which seem to be deducible from his views in certain particulars," and expresses the belief that Dr. McGiffert's professions of loyalty to the Church may fairly be accepted. The action of the last General Assembly is held to be sufficient to guard the doctrine of the Church, and it is announced that in view of this fact and of the evils and scandals attendant upon a "judicial process," it is

believed that neither the peace of the Church nor the purity of the faith calls for a trial for heresy. All members of the Church are urged to "refrain from setting forth the disavowed teachings as if indorsed by the Presbyterian Church, and, while exercising the liberty of scholarship, to be careful, also faithful, to maintain sound doctrine, and loyally to study the peace of the Church." The report, in spite of opposition, was finally adopted by a vote of 56 to 46.

The *Boston Advertiser*, commenting on the four points of Dr. McGiffert's condemnation, says:

"To a great many clergymen these questions appear to be just as legitimate matters of scholarly study as any others in the whole range of Biblical learning. They can not see why a professor in a theological seminary may freely examine whether the commonly accepted translation of a Bible verse from the Hebrew or the Greek is correct, and, if he finds it incorrect, may tell his pupils and his less learned brethren so; but may not, at his dire peril, examine and report whether or not the tradition regarding the human authorship of the particular book in the Bible in which that verse is to be found has sufficient weight of evidence for its support.

"But there are evidently a great many good people who draw the line at the higher criticism, and will have none of it. It is for their sakes that the members of the New York presbytery have taken this somewhat extraordinary action. Instead of passing those resolutions out of hostility to Dr. McGiffert, their motive was friendly, at any rate, on the part of the majority. There has been brewing for a long time a movement for trying Dr. McGiffert on charges of heresy. But wise Presbyterians dread it. They remember how near the ousting of Dr. Briggs came to disrupting the denomination.

"Always the most plausible plea of the heresy hunter is that by refusing to try an alleged heretic, or by trying him and not convicting and expelling him, the whole Church makes itself responsible for his 'errors.' The new way spikes that gun. The New York presbytery is evidently no longer responsible for Dr. McGiffert's 'errors,' seeing that it has passed resolutions disapproving of them. Meanwhile, Dr. McGiffert continues to be a member of the presbytery in good and regular standing, and at liberty, the same as before, to keep on with his studies and to publish their results. Nobody is responsible for Dr. McGiffert's 'errors' excepting Dr. McGiffert and those members of the presbytery who voted on his side."

Presbyterian opinion of the decision is fairly represented by two journals, the *New York Evangelist* and the *Cincinnati Herald and Presbyter*. The *Evangelist* notes that the action of the General Assembly appears to have made little impression on the New York presbytery, yet it believes that the former body will "respect the decision of the body to which it has itself referred the matter." The *Herald and Presbyter*, on the other hand, representing the "Literalist" party, declares that the action of the presbytery is a surrender to something worse than any heresy trial, and believes that the General Assembly will reorder the presbytery to try Dr. McGiffert. It is likely that at any rate a determined attempt will be made, in the Assembly which meets this spring, to reopen the matter over the veto of the New York presbytery.

Reconstruction of Religious Education.—Dr. Clyde Votaw, of the University of Chicago, is of the opinion that the present decadence of religious belief is largely to be attributed to inefficient Sunday-school methods. In secular education, he says, new ideals have transformed our schools; religious instruction plods along practically unchanged, and religion is the worst taught of all great subjects of education. The *Outlook* (December 2) thus summarizes and comments upon his address:

"Most of the graduates of our schools and colleges pass through a course of study in which religion is ignored. Its place is largely taken by philosophy and ethics. The result is that the student learns to know, think, and feel independently of any recognized religious element. Religion, which is at once the mainspring

and interpretation of life, is suffering from a disaffection which arises (1) from the present isolation of religious instruction; (2) from the amateurish and trifling nature of such religious instruction as is commonly given; (3) from the unwillingness to keep the content of religious instruction up to the progress of historical, philosophical, and ethical research; (4) from the failure to introduce into religious instruction the new psychological and pedagogical ideas which have imbued our secular schools. Dr. Votaw is no less definite in his prescription of a remedy. It is that education in religion should be taken as seriously as is secular education. In order to bring about a better condition, use must be made of four main agencies: the ministry, lay study, the religious press, and the Sunday-school. With regard to the last named Dr. Votaw justly claims that it must correlate its work with that of the secular school in such manner that religion shall not be left an isolated factor of which only the few ecclesiastically connected take note. His address is a fine illustration of a growing protest in educational circles against the secularization of education."

THE FALL OF THE TEMPLE OF AMMON.

THE recent catastrophe to the gigantic columns of the famous Temple of Ammon at Karnak, in the valley of the Nile, is universally lamented by archeologists and students of ancient history and religion. The temple was the most imposing in

THE FALLEN COLUMNS IN THE TEMPLE AT KARNAK.
From a photograph by Beats in *L'Illustration*.

Egypt and one of the most famous temples in the ancient world. In January, 1899, work was begun upon the ruins for the purpose of restoring the building to its original state, so that it might serve as an illustration of Egyptian temple architecture as it existed forty centuries ago. From *L'Illustration* (Paris, December 2), we quote the following account of this undertaking and of the subsequent disaster:

"This tremendous piece of excavation was advancing rapidly and leading to remarkable results up to the time when the existence of the temple itself was imperilled. A lotos-shaped column of the famous hypostyle hall of Rameses, 27 meters (88½ feet) in height suddenly gave way and fell in so unfortunate a manner that it threw down six other columns, one striking the other successively like so many ninepins. The enormous architraves, weighing from 10,000 to 12,000 kilograms (about 21,800 to 26,200

pounds) thus lost their support, and it would be difficult to describe the lamentable aspect of the hypostyle hall, where columns, bases, and debris of all sorts lay scattered in pitiful chaos.

"None of the ruined columns had caused any disquietude; their stability seemed perfect. The commission appointed by the Egyptian Government to inquire into the causes of the catastrophe appear to favor the theory of an earthquake as the cause. If this be the true explanation it is nothing new, for seismic undulations have before this played a destructive rôle in the history of the Temple of Ammon. Other hypotheses place the blame for the disaster upon the subterranean action of waters of the Nile. Whatever be the cause, urgent measures are required. The commission estimates that an appropriation of 100,000 francs is necessary to preserve the edifice. We trust that the Egyptian Government will not hesitate to permit the new director of antiquities, M. Maspero, to take measures to save one of the most marvelous of Egyptian remains."—*Translation made for THE LITERARY DIGEST.*

"SHOULD THE OLD CLERGYMAN BE SHOT?"

THIS seems a rather cruel question to ask, but it was asked, satirically of course, by a distinguished divine some years ago, and is now repeated by the Rev. John Watson ("Ian Mac-laren"), who (in *The Ladies' Home Journal*, December) makes it the text for a few remarks on the ever-recurrent question what to do with superannuated preachers. Dr. Watson's own solution of the problem is as follows:

"Would it not be better that each denomination should organize a retirement scheme upon a large scale with two conditions? The first would be that every minister should be removed from active work at the age of, say, sixty, and afterward he might give assistance to his brethren, or live in quietness, as he pleases. The second condition would be that he receive a retiring allowance of not less than half his salary. Should any one say that such a law is arbitrary, then the answer is that surely any minister would prefer to retire by law rather than by force, and that he would be in good company, for he would share the lot of every naval and military officer, and every civil servant, and every officer of any great corporation throughout the civilized world.

"And the church must not fall behind the state. Upon the *personnel* of her ministry must she depend for her visible success, and her aim ought to be that each congregation have a minister in full strength of mind and body, and that each man, after he has exhausted himself in the service of the church, should be kept in comfort during the remaining years of his life.

"Short of immorality and unbelief, one can not imagine a greater hindrance to the energy of the church than a large proportion of aged and infirm ministers in active duty. For this will mean obsolete theology, the neglect of the young, isolation from the spirit of the day, and endless wrangling. Nothing would more certainly reinforce the energy of the church than the compulsory retirement upon satisfactory terms of every minister above the age of sixty. For this would mean not only a reserve of good men upon whom the church could depend in emergencies, but a perpetual tide of fresh thought.

"At present, congregations have a grievance against old ministers who think they are young, and old ministers have a grievance against congregations who do not respect age, and between the two arise many scandals and breaches of the peace. When the church is as well managed as a first-rate business concern, then this standing feud will be healed, and no one will be so much respected and loved in the Christian church as the faithful minister who has served her in the fulness of his strength, and now in the days of his well-earned rest enriches her with his counsel."

DR. J. D. QUACKENBOS, of Columbia, in an address before the Society of Psychical Study, declared that hypnotism may be an aid to Christianity: "Is it right—that is the only question Christianity asks—is it right to unbend to the disreputable and criminal through direct communication with their subjective selves—right to exploit a legitimate psychological means to effect their regeneration? Does the religion of Jesus Christ answer these questions in the negative? No, for it is broad and liberal." The warped mind can be strengthened and straightened, said Dr. Quackenbos, by judicious suggestion, and he hoped to see existing forms of punishment modified, and to see suggestive therapeutics recognized as the proper instrumentality for betterment.

FOREIGN TOPICS.

CANADA AND THE BRITISH EMPIRE.

IT is now pretty certain that Canada will send a second contingent to South Africa. How strong it will be, and whether still other forces will follow, can not yet be ascertained; but there is no doubt that the English-speaking Canadians, and especially the powerful Scottish element among them, are determined to defend the British empire and thus deserve the protection of the empire in turn. For once more there is talk of an invasion of Canada from our side. A writer in *Truth* (London) publishes a letter "from an American statesman who has made for himself a household name," and who asserts that, since Great Britain must expand in Africa, the United States must expand here. We quote from the letter as follows:

"To meet the requirements of her surplus population, Great Britain has adopted an imperial policy. To meet the require-

BRITANNIA'S DREAM OF AN OSTRICH ROW.
—*Simplicissimus*, Munich

ments of our surplus population, the Government of the United States has already begun to enforce the principles involved in the Monroe doctrine—the doctrine which declares that America is for the Americans. . . .

"But we have on part of our frontier an alien state, Canada, armed and fortified. The Government of Canada is monarchical, and is controlled by Old-World prejudices and principles which are diametrically opposed to the New-World system which prevails throughout the United States. Not only is Canada a standing menace to our safety and peace, but it is an anachronism in its surroundings.

"As it is, much of our overflow population is settled in Canada, and it is obviously intolerable that free-born American citizens can not enjoy the privilege of citizenship in that country without renouncing their American citizenship and transferring their allegiance to a foreign sovereign. . . .

"These few facts which I have ventured to submit for your consideration will make clear to the people of Great Britain why it is that every American politician is closely following the course of events in Africa. Canada is our Transvaal, the Monroe doctrine is our imperial idea; and the necessity to provide for the expansion of our population is the same in Great Britain and in the United States. We want a precedent; you are creating one for our use."

Such manifestations, coupled with more or less ambitious edi-

torials in some of our papers, alarm some of our neighbors who would rather not become American citizens and who fear that they

UPS AND DOWNS.

"Way is a game of ups and downs."—Lord Wolseley, at the Authors' Club, November 6, 1899.

JOHN BULL TO OOM PAUL: "Now it's going to be your turn for a bump."
—*Westminster Gazette*.

will not be given a choice if Great Britain proves unable to defend her colonial possessions. *Saturday Night* (Toronto) says:

"If less than a quarter of a million Boers can provide fifty thousand soldiers, Canada with its six millions could provide enough men to fight them to a finish, even if there were no British empire. Without disturbing our domestic arrangements, fifty thousand men can go if none come back, and we only need to be shown the necessity in order to provide them. These seem to be large words, but Canada has learned a large lesson in her close proximity to the United States, and there is no other colony which has the same reasons for close adherence to an imperial arrangement."

The Globe (Toronto) says:

"It would be idle to disguise the magnitude of the stake that is now being fought for. It is much greater than mere dominion in South Africa. If Britain is to remain the potent influence that she is in the world to-day she must make it apparent that her sons are still the indomitable, resourceful, unsubduable men that their forefathers were. If the Boers can succeed, South Africa is lost. And if South Africa can be wrenched from her grasp by a few embattled farmers, what is to hold together her widely scattered dominions and dependencies in this iron world, where the strong hand is still the only title-deed to material posses-

JOHN BULL IN SOUTH AFRICA.

"Where are you going, Mr. Beef?"
J. B. "To Pretoria, to eat my Christmas dinner."

"Where are you going now, Mr. Beef?"

"I've changed my mind; will eat my Christmas dinner in London."
—*O Secolo*, Milan.

sions? That is the stake, and that knowledge is the surest guaranty that the Boer has essayed an impossible task. The empire's last man and last dollar will be placed on the issue."

Events (Ottawa) remarks that "the desire of the Americans to acquire Canada was not born yesterday, nor the day before, but has existed since the day the United States was born, and it is apt to break out every little while"; but it believes that Great Britain will come out stronger than ever, simply because she can not afford to lose. It adds:

"Whoever may criticize the diplomacy that preceded the outbreak of hostilities, no one can be blind to the necessity there is of British triumph. To-day it is a fight for British prestige, and it is a fight that must be won regardless of cost. No matter what it costs in men and money to defeat the Boers, to be defeated by them would cost more. The prestige of the British empire is at stake, and it must be maintained. Every Briton acknowledges this. At the same time it will not help our cause to remain in ignorance of the true state of affairs, and it is my opinion that there are not yet half enough troops in South Africa to drive the invading Boers out, invade their territory, and force them into submission, and nothing short of an unconditional surrender will now suffice."

This feeling is very general among English-Canadians from all provinces, tho some do not quite agree with the sentiment expressed in the following remark by the *Toronto Telegram*: "This war is a people's war and a righteous war, and the people who made it must calmly abide the issue without trying to transfer their share of the responsibility to the shoulders of Joseph Chamberlain." On the other hand, the French-Canadians are little inclined to take a hand in the game, as they regard the war

as an unjust attack of Great Britain upon a free people. Such influential journals as the *Patrie*, the *Press Temps*, the *Monde Canadien*, the *Verité* raise the cry of "To your tents, O Israel!" among the French Canadians. Julian Croskey, in *The New Century Review* (London), says:

"The French have never amalgamated; they stand aloof in their own province and their own press and society considerably more

tent to remain a province of the empire, because they are competent to utilize all the material advantages of this country themselves. But if a new Cromwell (or a new Chamberlain?) were to conceive the policy of settling part of their lands with Englishmen, and endeavor to work the franchise in such a way

ARMS FOR DR. (ED) LEYS. NO, I BEG PARDON! DR. LEYDS.
(Dr. Leyds is the European agent of the South African Republic.)

Arms: Quarterly: 1st, Under a spreading lie-lac tree of Brussels on the Sprout proper a well of Truth at present occupied by a young person masquerading under that name; 2d, On a ground semée of bullets, under a veil of mendacity fibrated in tissue, embroidered bruxellois for "insertion," a sanglier or fighting boar raldant and embattled, armed bristly to the teeth, gripped counteracted and released by a lion tardy on the paws, and strenuously hammered back martellois to the bordure; 3d, A false-hooded or bare-faced South African gibbon of history, dally gaily on the garble, anamant saphrant to the last, chroniclant in fraud the rise of a motley Dutch Republic, and set the Decline to Fall of the Wholly British Empire; 4th, A flight proper of new-leyd belgian canards arriving quacky in large capitals, charged under the wings for lacque-chiche with billets-de-banque proper. (*Motto:* "Given away with several pounds of £ s. d.") Over all, on an escutcheon of pretense, sinister, a human hand nailed to the counter holding a pen of calumny doctored taradiddle to taste; dexter, a similar hand dripping or into a forest of oil-bearing journalistic palms itchant on the continent. (*Motto:* "Are perennials!"—"Unlimited brass!") *Crest:* A bear agent transvaalois, disseminant of whoppers, ensconced proper in clover, charged on the hop with a long-bow of romance flexed to the verge of fracture, and a hatchet of effrontery slung proper in advance. (*Motto:* "No ocean-cable is as deep as I.") *Supporters:* Dexter, a parisian quill-driver of the boulevards, intransigent in anglophobia, dansette gloatant in delirium over mythical reverses; Sinister, on equally slender ground, a similarly misgilded muscovite of the press, rampant in enmity, with teeth fully displayed. (*Second Motto:* "Concordant nomine facta!"—"My deeds agree with my name!")

—Punch.

as to deprive the French of their unquestioned autocracy, Quebec would, without hesitation, revolt. I repeat, the French are not in the slightest degree assimilated, altho they have assimilated not a few of ourselves. The province of Quebec is scarcely identical with Canada as conceived by the British public."

Mr. Croskey quotes extensively from the *Verité* to show that the French Canadians are not unwilling to dream of a free and independent Quebec. But the cardinal point of French-Canadian objection to the sending of a contingent remains the supposed unrighteousness of the war. The *Verité* says:

"If any Canadians want to go to the Transvaal to fight in a war which all civilized men consider an iniquity, let them go, but it must be at their own cost or at that of England. The Government at Ottawa can not prevent them because Canada is only a colony. But at least our Government can refrain from lending a hand to this iniquity and it must not spend a penny of money for such a detestable end. It is said that England would defend us if we were attacked, and that we owe it to ourselves to defend England. Yes, that may be so, if England was unjustly attacked and had need of our aid to defend its true rights. But Canada is not held to take part in a manifestly unjust war. French Canadians owe loyalty to the British crown. It is their duty not to enter upon any seditious course against her. But that does not hold us to aiding the British Government in its unjust wars."

BAD MEDICINE.

PAUL KRUGER: "I was attacked and got these three mixtures in my grip, and I haven't been able to take either one of them."
—*Telegram, Toronto.*

than the Dutch Afrikanders stand aloof from the British settlers of the Cape. They have not the slightest interest in the protection of the British residents and commerce abroad. But, knowing their own aloofness, which in private society amounts almost to tacit rebellion, they are always on the watch for symptoms of imperial policy which might vaguely threaten a future coercion. Theoretically, they feel toward Great Britain and the British element in the Canadian Parliament just as the Boers of the Transvaal and the Dutch of Cape Colony feel toward their suzerain and fellow subjects. The other day, when there was a suggestion of settling certain portions of the province of Quebec with English or Scotch, the local press frankly avowed that such settlement must be boycotted. Quebec is for Frenchmen and Roman Catholics, they said. Had such a settlement been made, and had the British Government taken up the cause of the settlers against a boycott, we should, perhaps, have found in Quebec another Transvaal. . . . Unlike the Boers, they are quite con-

SPANISH COMMANDERS ON SPAIN'S LACK OF PREPARATION FOR WAR.

TWO Spaniards have recently given a description of their country's unpreparedness on the eve of the war with the United States. The most prominent is Admiral Cervera. He publishes his correspondence with the Spanish Secretary of the Navy, which, according to the Madrid *Imparcial*, shows the following facts:

In 1896 Admiral Cervera advised the cabinet to do everything in its power to prevent a rupture with the United States, as Spain would certainly be beaten. The Secretary of the Navy did not consider the situation desperate. He pointed out that many American ships were in the Pacific Ocean. Cervera answered that the American squadron there would without a doubt destroy the Spanish fleet in the Philippines. Being told that he ought to ravage the Atlantic seaboard of the United States, the admiral replied that this was absolutely impossible. He pointed out that the Spanish ships had been neglected, and were altogether unfit for an offensive war. When the war broke out, Cervera and his captains advised that the fleet should be kept at home, where it could be placed in a position for defense. But the governors of Cuba and Puerto Rico telegraphed that all would be lost unless the Spanish fleet made its appearance in the West Indies. Cervera was consequently ordered away. How he hovered around for a while, and at last entered the harbor of Santiago, is a matter of history. This was May 19, 1898. Seven days before, the Secretary of the Navy sent a telegram to Cervera at Martinique, informing him that the situation had changed, and permitting him to return. But the admiral never saw this message, as he had already left Martinique when it arrived. The authorities in Spain soon lost their heads altogether. One order, sent June 3, was to the effect that Cervera should sail for the Philippines, destroy Dewey's squadron, and return to the West Indies to meet Sampson. Cervera describes this order as outrageous, for he had not been provided with ammunition. So short was he of shot and shell that he could not afford to fire at the American ships when they approached Santiago harbor with their searchlights.

Cervera never doubted that his ships would be destroyed if he left the harbor. His plan was to blow the vessels up, to prevent needless loss of life; but General Blanco ordered him to leave—with what result all the world knows. The admiral declares that nearly six hundred lives were lost.

General Sotomayor, who commanded the garrison at Cavité, and has been punished with imprisonment for his alleged neglect, writes as follows:

"Cavité could not well be called a fort, tho it was officially described as such. It had no artillery, no submarine mines, nothing to place it in a state of defense. San Felipe, another so-called fort, had a few old cannon which may be valuable as curios, but were valueless as pieces of artillery. The only guns worth mentioning along the whole coast were a Paliser gun of 16 centimeters caliber, and a couple of old ship's guns, taken from the *Berenguela* in 1866. The Paliser gun only carried 4,500 meters, while the fire of the Americans was still effective at a distance of 6,000 meters. Nothing had been done for many years to place the Philippines in a state of defense. The Americans, on the other hand, employed British gunners engaged at Hong-kong [a statement long since officially contradicted]. Most of the ships were in so deplorable a condition that they could not leave port without endangering the lives of the crews."

Similar descriptions of Spain's weakness, with documentary proofs that the writers foresaw her quick defeat, are given by other prominent Spaniards. Yet many observers note that the people of Spain keenly resent their humiliation, and that signs of a revival are not wanting. Prof. Goldwin Smith, writing from Europe, addresses a note of warning to certain sections of the English. Confident that the best Americans are not anxious to be reminded of what he calls "that shameful fiction of the *Maine*," he says in the *Toronto Sun*:

"If Lady Randolph Churchill and her fashionable set think to court the Americans by reviving it, they may find themselves

mistaken. They may find themselves mistaken also if they think it perfectly safe to trample on the honor of poor vanquished Spain. The upper part of Spanish society is corrupt, as the state of the Spanish services in the late war plainly showed. But the peasantry is sound. In it Spain may find the sources of a new life, and become once more a great Mediterranean power."—*Translations made for THE LITERARY DIGEST.*

OURSELVES AND THE FILIPINOS.

THE recent news from the Philippines of the apparent collapse of the resistance to our troops leads some of the foreign journals to remark that the most difficult task is still before us in giving to the islands an efficient administration. *The Saturday Review* (London) points out that the Filipinos have not yet had a chance to see their new masters in the most favorable light. It says:

"Clearly the vain twaddle about conferring 'liberty' talked in the United States has much to answer for. It aroused hopes that can never be realized if the American Government is to retain the Philippines. On the other hand, the daily vaporings about 'a war of extermination' are not likely to win the affection of their new subjects. The Filipino in fact is grossly ignorant. He knows as much of America as the Boers of England, and probably classes all white men together. It is high time that the men in the United States who honestly desire to take up the work of civilization should assert themselves and show that they do not intend their officials or soldiers to be the moral successors of the Spanish. President McKinley gives no signs of adequately appreciating the gravity of the situation."

On the other hand, Goldwin Smith declares in the *Toronto Sun* that the anti-imperialists have not yet given up their fight in the United States. He writes:

"Passing by New York, the Bystander found the friends of the American Commonwealth and of the people's government still resolute and hopeful of success in their coming conflict with the great plutocratic oligarchy, which is striving to convert the democratic and industrial republic into a vulgar counterpart of the imperialist and military powers of the Old World."

"In Madison Square stands Dewey's Arch. A very fine arch it is, and abundantly embellished with the figures of those deities of war and aggrandizement which seem to be the real gods of a nominally Christian world. It is not original, but a copy, with some tasteful variation, of the arch of Titus, erected to commemorate his conquest of the Jews and the destruction of their city. Titus was a first-class jingo in his day. The Jews refusing to accept the 'civilization,' combined with 'liberty and happiness,' which he offered them at the point of the sword, he, 'taking bold with duty of the hand of destiny,' slaughtered them by hundreds of thousands and razed their city, after having in vain endeavored to impress upon them the beneficence of his intentions by crucifying a great number of them before the eyes of their besieged compatriots."

It does not yet appear certain to all Europeans that the resistance of the Filipinos has come to a final end. The Manila correspondent of the *Danziger Zeitung* writes in the main as follows:

It is very unlikely that the Americans can rule the country except within the zone commanded by their guns. Their troops must be well looked after, and their progress must necessarily be very slow. Their commissariat is dependent upon the slow buffalo carts, which can not travel faster than a mile an hour. In order to keep the Filipinos in subjection, good roads must be made, roads which enable the military to reach swiftly any important point threatened by the enemy. The conquest of the Philippines will not be accomplished by the soldier with his cannon, but by the engineer, the surveyor, the road-maker. The number of men which the American commander has at his service is so large that the difficulties of the transport service must seriously hamper the movement of the troops. On the other hand, the Filipinos can not be starved into subjection. American papers are very confident just now, but we who know the

country do not believe that the Filipinos will speedily collapse. The war can be ended only by a compromise.

The Berlin *Vossische Zeitung* fears that the Filipinos can not be induced to lay down their arms unless the United States Government gives proper guaranties that the liberties of the people will be respected. So far this has not been done, for President McKinley's promises are very vague, so the editor thinks.

Some of our exchanges from the far East point out that the present season is not considered favorable by the Filipinos for carrying on an active campaign, hence the comparatively slight resistance offered of late to our troops. According to the Hong-kong *Telegraph*, a portion of the Filipino army was disbanded early in October. The men were ordered home, and told to live peacefully, to insure non-interference from the Americans. We summarize the proclamation published by Aguinaldo upon that occasion:

We do not require a large number of troops just now, but the force kept under arms will not give up the struggle. The rest will return home, and adopt what course seems best, even if the invaders attempt to enlist their aid, by threats or by other means. This does not mean that the regular army will remain inactive. We will not submit to these foreigners, who wish to force new manners and sufferings upon us, such, for instance, as their language. I think we know better than these newly arrived foreigners what government suits us. We know, however, that many Americans appreciate our struggle for liberty, and I gladly authorize the Secretary of War to release the American prisoners. In America there is a great party that insists on the United States Government recognizing Filipino independence. They will compel their country to fulfil the promises made to us in all solemnity and faith, altho not put into writing. For this reason we must show our gratitude and maintain our position more resolutely than ever. We therefore pray to God on high that the great Democratic Party of the United States will win the next election and that imperialism will fail in its mad attempts to subjugate us by force of arms. . . . We may base our hopes on the right feeling of the American people. There are, moreover, some Americans here in the Philippines who have joined our side because they disapprove of the war which Mr. Atkinson calls 'criminal aggression,' and these Americans when offered the chance to return to their own camp have declined. . . . In conclusion, I repeat to my compatriots that they should conceal the beauties of the Philippines and the riches of the country in order that the grasping imperialists should not cause us any more trouble, and we shall enjoy everlasting peace.

The impression that the question of annexation has not been settled yet in this country is pretty general in the far East. The Tokyo *Yorodzu Choho* says:

"It will be seen that Admiral Dewey holds pretty much the same opinion as we do concerning this question of the Filipino qualification for autonomy. We are very glad that so great and popular a man as Dewey is favorably inclined toward the cause of the Filipinos, for that fact will powerfully help the pro-Filipino arguments of Bryan, Hoar, and others, in changing the American public opinion to granting freedom and independence to the brave and patriotic people."

Not so the Shanghai *Celestial Empire*. This paper believes that the American people will not again leave the path of imperialism, as they are likely to do good to the races they conquer. It says:

"It is not fair to speak of imperialism as if it must necessarily be an organized selfishness, or worse. There is an imperialism which is nothing of the kind; an imperialism which seeks first of all and most of all the welfare of the subject races. There is no reason why American imperialism should not be of this latter description. We are glad to read the strong and decided language in which President McKinley affirms that the victory of the American arms in the Philippines will mean the establishment of good government in those islands. . . . If we are right in our interpretation of the signs of the times, America has already begun to reap the harvest she has sown. We do not now

speak of any increase in her trade; we have in mind the quickened and extended feeling of the American people that an imperial mission demanded (1) a competent and clean civil service, inaccessible to party manipulation; (2) a settled and stable system of finance; and (3) a renovated and reorganized diplomatic and consular service. In striving to solve the problems of weaker peoples, America may not improbably find the solution of some perplexities and difficulties of her own."—*Translations made for THE LITERARY DIGEST.*

GERMANY AND THE UNITED STATES.

A FEW German papers have been lately advocating an alliance between the United States and Germany. Altho some writers oppose the idea on the ground that the United States is merely an *appanage* of Great Britain, others set forth that, despite the influence which Great Britain exercises upon public sentiment in this country, the Americans are capable of doing their own thinking and acting, and share to some extent in the European distrust of Great Britain's purposes. The majority of Germans, however, believe that they must prepare for at least an economic struggle, and the Cologne *Kölnische Zeitung* has taken in the suggestion of a European customs union, a scheme which, in the present temper of Europe, can no longer be considered an impossibility. Liberal papers, however, object. The Berlin *Tageblatt* says, in effect:

The population of Germany is increasing on the average by 500,000 souls a year, while there is no increase of territory on which white men can live. The standard of living is high among the Germans, and the only way to keep it up is by exports, counterbalanced by imports of raw produce. The United States may apparently reduce its imports of German goods, but pleasant relations with the Americans will insure the use of German capital among them, which must necessarily counterbalance the excess of American natural produce over the export of German industrial produce. The Americans, being a civilized people, can not be expected to keep on buying goods which they can produce themselves; but as their land will be undeveloped for hundreds of years, German savings can be placed among them to advantage, and it is not wise to alienate them.

The Bremen *Weiser Zeitung* points out that German merchants, in view of the undeniable energy of the Americans, have long ago begun to establish other markets. Hence the imports from the United States are much larger than the exports there. But the imports consist at present chiefly of agricultural produce, which could easily be supplied from Russia and Austria. The United States, says this paper, sends 60 per cent. more than it receives.

The Berlin *Deutsche Tages-Zeitung* points out that Germany is a free-trade country, the tariff being for revenue only. All countries are treated alike. "But if the United States endeavors to bleed us," says the paper, "we will put on the thumb-screws in the shape of an exceptional tariff. A rise of \$1.25 per ton for grain would practically exclude American agricultural produce in favor of the Russian article."

German industrial papers also point out that American capital is largely interested in Germany, especially in the electric branches, and that the forced withdrawal of such capital would hurt both countries. In considering the attitude of the German-Americans in case any such trouble should arise between the two countries, the *Frankfurter Zeitung* has this to say:

"It is just as well to put right those people who fancy that the German-American is German at heart. . . . If the German-American, by furthering the interests of his new country, can assist the old, he is naturally pleased, for every one, also naturally, has a warm corner in his heart for the land of his birth. But it should be repeated: The key to the attitude of the German-American must be found in American, not German politics."—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

SOME COLLEGE WIT AND HUMOR.

IF one may judge from the American college journals, the breed of humorists is in no immediate danger of dying out in this country for want of replenishing. College humor may be roughly classified in three groups: jests of an academic character, relating to the incidents and scenes peculiar to college life; jests of a general nature, which frequently refer to subjects in literature or the drama; and jests on events of the day,

"THERE SHE IS IN THE GRAND STAND. IF THIS BIG WON'T WIN HER, NOTHING WILL."
—*The Princeton Tiger*.

which often, as in the case of *The Cornell Widow* and *The Princeton Tiger*, are worthy of being compared with the best specimens of current humor and cartoon in the general press. In the first group, the Freshman, the college "widow" (the girl who has survived a long series of undergraduate beaux, and is now somewhat *defrisée*), and the sophisticated and hardened student who "touches" his father for a more bountiful supply of cash by various ingenious devices, such as sending home large bills for lamp oil consumed in his midnight studies, are among the favorite subjects for jibes and satire. In the cartoon which we reproduce entitled "Why Freshy Bought Printed Notes," the especial point lies in the fact that many college lecturers nowadays print a rather full abstract of their lectures, and permit students attending their classes to purchase them for a small sum. In the

present case, the Freshman flounders along to the twentieth lecture upon French history, but we infer from the page submitted to us by *The Harvard Lampoon* that his artistic and social tendencies have already got the upper hand of his thirst for knowledge, and he wisely concludes to forego a few packages of cigarettes and invest the necessary money in a printed "syllabus," from which he will be able to "bone up" or "cram" for the examination at which even thoughtless "freshies" must appear. Still another jibe at the expense of the Freshman is the following from the same paper:

A BARBARISM.

A Freshman was wrecked on a lonely isle
Where a cannibal king held sway;
And they served him up to the chocolate prince
On the eve of that very day;
But alas for them, for Heaven is just,
And before the dawn was seen,
They were suffering badly with colic and cramps,
For that Freshman was terribly green.

Various lights and shades of college life and thought appear in the following quips:

DON: "I hear that all the lights in town went out while you were calling on Marie."

PERK: "Yes, it was a close call."—*The Princeton Tiger*.

THE PRINCIPAL: "No, you can't go. You know very well, Miss Jollier, that you are forbidden to drive with young men unless you are engaged to them."

THE GIRL: "Oh, yes, but then I hope to be before we get back."—*Ibid*.

"She's pretty fast," said Perseus, as he viewed the prostrate form of Andromeda chained to the rock.—*Ibid*.

THE LAMP: "Did you know that Trimmin's trousers were divorced from his suspenders?"

THE BED: "No; on what grounds?"

THE LAMP: "Non-support, of course."—*Ibid*.

AT THE HOLLIS.

MADEL: "I think this 'Robespierre' is an awful play; don't you?"

HER ESCORT: "Yes; it's quite unnerving and Terryable."—*The Harvard Lampoon*.

The Transvaal war calls out the two following jests from *The Princeton Tiger*:

"The poor old Kimberley miner dug his pick into the hard African soil, his face seamed with disappointment and hopelessness. His dull eyes turned toward the ground. Suddenly, there amid the rubble, a beam of light met his glance. He dropped upon his knees and snatched up—a great fifty-karat diamond! The tears coursed down his weather-beaten cheeks. 'This,' he sobbed, 'this is certainly hard luck.'"

"Afar off could be heard Oom Paul executing a *pas seul* upon the waistcoat of Tommy Atkins."

JO: "The Boers would make good billiard shots."

JIM: "How so?"

JO: "They are great at reversing the English."

But perhaps the most humorous thing we have seen of late in college journalism was a recent issue of a paper published at one of the old colleges of New England, founded for the advancement of human learning and classical study. The titles on the several pages of the issue read somewhat thuswise:

First page: "The Yale-Amherst Football Game"; "Football Outlook in — College"; "The B. A. A. Meet."

Second page: "Freshman Gymnastics"; "Official Notice of Team Work for 1899-1900"; "Tricollegiate League Meeting."

WHY FRESHY BOUGHT PRINTED NOTES.

—*The Harvard Lampoon*.

Third page: "Skating-Rink Project"; "Meeting of the Glee, Banjo, and Mandolin Clubs"; "The California-Carlyle Game in San Francisco."

Fourth page: "The Ninety-seven Dinner"; "The Junior Promenade"; "Alumni Athletic Committee"; "The Cornell-Columbia Football Game"; "The Accident to Our Quarterback."

And so on *ad lib*. The humor was unconscious, but it is penetrating.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Burlingame Johnson writes from Amoy, October 2, 1899:

It is interesting to American corn growers to know that for the first three months of 1899, there was imported from foreign countries and coast ports a monthly average of 144,593 piculs (69,270-777 pounds) of rice, to supply the demand for cheap breadstuffs for this port and adjacent cities. The average price was above $4\frac{1}{2}$ cents Mexican ($1\frac{1}{4}$ cents gold) per pound. Corn meal, grits, and hominy could be laid down here at a price which would undersell rice during more than half the year. It is only necessary to introduce the corn products in an intelligent way so as to get the people to understand their use. A good demand and an ever-increasing outlet for the surplus corn of our Western States would be created. It would require only a few hundred dollars to do this, yet no mill has been found willing to bear any portion of the expense. One of the largest concerns in the West, when the proposition was laid before it, said it "had nothing to give away, and if Chinese wanted the meal, they could have it by paying cash."

Flour has been introduced here, in the beginning not at a profit. Its increase in consumption is marvelous. During the six months ended June 30, 1898, 28,343 piculs (14,271,349 pounds) were consumed, as against 24,446 piculs (12,223,032 pounds) for the same period of 1897, an increase of 3,897,317 pounds for the half year. This, too, in the face of the fact that flour sells for double the price of rice, while corn products could be sold at less than the average price of rice, thus recommending them to the thousands of people here who must be daily supplied with foodstuff imported from foreign countries.

It would be worse than folly to dump a cargo of the corn meal on this market and offer it for sale, as millers have suggested. It must be introduced

by first teaching a number of cooks (who are all organized in a guild or union) how to prepare it, and then giving away a limited amount of the cooked product through the public restaurants, which feed thousands of people. If this proposition does not appeal to the business sense of American dealers, this immense food supply will continue to come from other sources, and our surplus of corn will not reach this market.

Consul-General Goodnow, of Shanghai, sends a printed *resumé* of the customs returns for the quarter ended June 30, 1899. The article notes an increase in revenue collected by the customs during the quarter.

The number of regular treaty ports has risen to twenty-seven, and with the exception of Soochow, Amoy, and Kiamchek, they are unanimous in showing an improvement over 1898. At Hankow, Wuhu, and Shanghai, the improvement is striking. The total for the same quarter of the last three years has been:

Hankow taels.

1897.....	5,975,111 = \$4,415,640
1898.....	5,779,550 = 3,899,631
1899.....	7,000,347 = 5,046,615

This, says the article, is the largest collection in the decade. It includes two ports which appear for the first time—Nankin and Santuao—but they only give 15,000 taels (\$1,500) between them.

The import of cotton goods showed a decline in gray shirtings, T cloths, and drills and jeans of all kinds and an advance in white shirtings, sheetings of all kinds, and fancy goods. There was a marked advance in cotton yarn, English excepted, the comparative imports for the past three years being:

Description.	1897.	1898.	1899.
	Pounds.	Pounds.	Pounds.
English.....	699,700	1,040,300	1,372,000
Indian.....	95,167,000	95,846,600	10,373,475
Japanese.....	13,033,000	7,213,500	6,031,000

Except in case of cloths of all kinds, the import of woollens showed a large advance. In metals, there was a decline in railroad and bar iron, tin, tin plates, and quicksilver, and an improvement in old iron, lead, and steel. Foreign sundries showed an increase all round, almost the only exception being refined sugar. The comparative import of kerosene oil was:

Description.	1897.	1898.	1899.

In the northwest provinces of India, it is calculated that the autumn harvest will be about two thirds of the average, and on the whole the provinces are prosperous and should need little relief, as, in spite of the early cessation of the winter rains, the sowings are generally satisfactory. In Bengal and Burma, the rice crops are quite up to the average, and should be able to supply the distressed areas. In the central provinces, unless rain falls by the middle of the present month, severe and widespread distress is inevitable; and extensive relief is also likely to be needed in the Punjab, especially in the Delhi division and elsewhere, as the crops have failed badly, and satisfactory cold-weather sowing is not probable. In Madras, the prospects are good, and if the north-east monsoon proves normal, relief should be unnecessary. A good deal of assistance will, however, be required in the northern districts of Bombay. Western India seems to suffer the most. The rains of the monsoon having largely failed—in some districts almost entirely and in others to the extent of 10 per cent. or more—a failure of crops and a rise in price of fodder, grain, and food supplies have been caused. Many distressed natives from the up-country famine districts are now flocking to the cities, hoping to find employment to save themselves from want and hunger. Luckily, the recent good rain has much benefited the Deccan. Roughly estimated, it is

PRICES \$1 TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet

For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send \$5 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid, alcohol stove, vaporizer and four steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

RACINE BATH CABINET CO.,
BOX X RACINE, WIS.

Reduced Prices on Suits and Cloaks

WE have on hand several hundred pieces of fine Winter Suitings and Cloakings which must be disposed of this month in order to make room for Spring goods. You can now secure a fashionable garment at a reduction of one-third from former prices. Order from this Reduced Price Sale as freely as you wish; send back anything you don't like, and we will refund your money.

One-third has been cut off the price of every suit and cloak in our line, but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money.

Tailor-made Suits, former price \$5; reduced to \$3.34.

\$10 Suits reduced to \$6.67. \$15 Suits reduced to \$10.

\$20 Suits reduced to \$13.34.

Winter Jackets, former price \$5; reduced to \$3.34.

\$9 Jackets reduced to \$6. \$12 Jackets reduced to \$8.

\$15 Jackets reduced to \$10.

Separate Skirts, former price \$4; reduced to \$2.67.

\$6 Skirts reduced to \$4. \$8 Skirts reduced to \$5.34.

\$12 Skirts reduced to \$8.

Reduced prices on Capes, Newmarkets, Rainy Day Suits and Skirts, Bicycle Suits, Silk Skirts, etc.

We are also closing out a few sample garments which were made up for exhibition in our salesroom at one-half their regular prices. We tell you about hundreds of reduced price garments in our Winter Catalogue and Bargain List, which will be sent Free, together with samples of the materials, to any lady who wishes them. Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

A SMOKE TEST

Shut a room up tightly and allow half a dozen smokers their liberty. Within twenty minutes after the smoking has stopped, the room will be free from smoke and smell without opening doors or windows, provided that

The Jackson Ventilating Grate

is used in that room. It is not only the most healthful but the most economical heating contrivance in existence. These facts must be of interest to you.

descriptive catalogue "D."

EDWIN A. JACKSON & CO., 54 Beekman Street, New York.

now calculated that a crore or a crore and a half (about \$5,000,000) will be needed in the provinces for relief up to the end of March, the much still depends on the rains of October and November. About half a crore (\$2,500,000) will be needed for the Rajputana states, and it is quite possible that the government of India will arrange to advance sums to the states for famine relief. Several railway projects are now being made available for famine labor, especially in Rajputana. It is satisfactory to know that both the imperial and local governments are on the alert, and that all preparations in connection with the probable severe distress are arranged well in advance, while the experience bought during the last famine is being fully utilized.

Consul Everett writes from Batavia

In the interest of American trade, I am compelled to draw attention to the subject of which I have heard for some time, but the accounts of which I thought might be somewhat exaggerated. I speak of the breaking open of merchandise in transit through Singapore to ports in the Netherlands India. Merchants here and in Macassar now rarely receive a shipment via Singapore from which something has not been abstracted, and they have begun to figure regularly on a certain percentage of loss for all goods shipped through that port. Recently, the Chamber of Commerce of Macassar forwarded a petition to the Dutch consul-general at Singapore urging him to represent the matter to the authorities and secure proper protection to those who transship goods in that port. I do not hear that any attention has been paid to the consul-general's request. The object appears to be to kill Batavia and Macassar (the latter a free port) as distributing centers for Netherlands India. For instance, machinery shipped via Singapore direct to Tegal, or some such place, in a Singapore ship, stands a good chance of getting there in good condition. If, however, the same machinery is shipped via Batavia from Singapore in a Dutch steamer, the chances are that it will arrive in bad order and with essential parts missing.

There is no doubt that to a considerable extent the desired effect has been achieved, for whereas formerly nearly everything for any part of Netherlands India used to come through Batavia, it is now a fact that many of the smaller ports in the colony are importing and exporting direct.

Macassar was made a free port to compete with Singapore, Singapore being also free, but the latter place has waged such a relentless war that it has done Macassar a great amount of damage. In fact, I am told that for those living in Macassar it is useless to have anything come from Singapore, and that the only way is to import things direct from Europe, or else via Batavia from one of the Dutch steamers that come straight from Holland without going to Singapore.

The best way to ship goods here from New York is either by steamer to Amsterdam or Rotterdam, thence by direct steamers of the various Dutch lines to Batavia and the other ports in this colony, or by steamer to Liverpool, thence by direct English or Dutch steamer to Batavia. Those who ship via Singapore do so at their peril and must expect to find themselves involved in all sorts of claims and lawsuits on account of goods damaged and lost.

The address of Sir William White before the British Association at Dover last September is an excellent summary of the progress made in the ocean steamship construction. In 1840, the side-wheel ship *Britannia* of the Cunard Line, 207 feet long, 750 horse power, maintained a sea speed of about $8\frac{1}{2}$ knots on a coal consumption of 40 tons a day. Speed has been increased from $8\frac{1}{2}$ to $22\frac{1}{2}$ knots and the time of the voyage reduced to about 28 per cent. of what it was in 1840. Steamers have more than trebled in length, about doubled in breadth, and increased tenfold in displacement. The engine power has been made forty times as great. The ratio of horse-power to the weight carried has increased fourfold. The rate of coal consumption (measured by horse-power per hour) is now only one third of what it

CARTERIAN

Adjustable Expanding Document ENVELOPE

THE simplest, strongest, and best envelope ever invented for filing legal papers or documents of any description. By means of a slot it adjusts itself perfectly to fit any enclosure from a single sheet of paper to a package an inch thick. Remove a part of the papers and envelope will adjust itself to remaining contents.

The following testimonial is one of many received by us:

Manassas, N. Y., Nov. 29, 1899.
Gentlemen—Your Document Envelope places under obligation to you every one who has occasion to classify and file papers. I am greatly pleased with the same.

Yours truly, ALBERT D. MIMMS.

Send me a package of 1 dozen and also, or assorted sizes, and postpaid for 45 cents in stamps. Ask your stationer for them. If he does not carry them in stock or cannot get them for you send to the manufacturer.

CARTER, RICE & CO. (Corporation)

246 Devonshire St., Boston, Mass.

was in 1840. In 1871, the White Star liner *Oceanic*, 420 feet long, 7,000 tons displacement, with engines of 3,000 horse-power, had a speed of 14½ knots. In 1885, the *Trautman*, of the same line, was built, having a length of 565 feet, 15,000 tons displacement, 17,000 indicated horse-power, 20 knots speed, and coal consumption of 300 tons a day; then followed, in 1894, the *Cunarder Campania*, 600 feet long, 20,000 tons displacement, 25,000 horse-power, at full speed of 20 knots, coal consumption 300 tons a day; and in 1899 the new *Oceanic* of the White Star Line, 615 feet, 25,000 tons, and a speed of about 22 knots. The *Kaiser Wilhelm der Grosse*, of the North German Lloyd line, is 625 feet long and has maintained a speed of 24½ knots. A larger steamer is now building, the *Deutschland*, 650 feet, 25,000 tons, 35,000 horse-power, with an estimated speed of 25½ knots. Sir William White is confident that the maximum of size and speed has not been reached, and says that "increase in length and weight favors the better maintenance of speed at sea. The tendency, therefore, will be to even greater regularity of service than at present. Quicker passages will, to some extent, diminish risks."

The *Kaiser Friedrich*, which was one of two vessels built by the North German Lloyd for their new fast line, has been rejected on account of not coming up to contract requirements as to speed. She was built by Schichau, of Elbing, the yacht and torpedo-boat builder, and was to have been half a knot faster than the *Kaiser Wilhelm der Grosse*. She is 600 feet long, with engines of 25,000 horse-power. This fine ship has been taken over by the Hamburg-American line—the largest fleet now in the world—and is in their New York service.

Consul Atwell, of Roubaix, on October 20, 1899, says:

During last week's session of the Academy of Science, papers were read by Messrs. J. Iybowsky and G. Frou, on a gutta-percha producing plant, a native of northern China, which is cultivated in the colonial garden, Paris. Gutta-percha has been produced almost exclusively up to the present by trees growing in the Dutch East Indies, and attempts to acclimate these trees in the French colonies have not been very successful. The rubber trees of Java require conditions that render their culture impossible in all but a few of the colonies. The discovery of a gutta-percha producer that may be easily acclimated is thus a matter of great importance. The advantage of ready growth in a moderate climate is claimed for the plant reported to the academy. It is known as the *Euphorbia ulmoides*, and the fruit is said to contain 27.34 per cent. of gutta-percha of excellent quality.

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. Burr, Brooklyn, N. Y., says:
The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the "reaper" over the old-fashioned "sickle."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER
It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN
It enables the doctor to refer instantly to treatments, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER
The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. An library index it is unrivalled. Send for price list and circulars. Mention this advertisement. THE BURR INDEX CO., Sole Mfrs. HARTFORD, CONN.

In Memory of the Noted Evangelist, DWIGHT L. MOODY

"HE'S SAFE IN THE ARMS OF JESUS."

PERSONALS.

THE DUKE OF WESTMINSTER died on December 22, of pneumonia, at the age of seventy-four. He was often called the richest man in England, and was at least one of the richest. He owned about one square mile in the best part of London, and had estates in half a dozen counties in England and Scotland. His income was estimated recently at between \$6,000,000 and \$7,000,000 a year. From the London property alone he was supposed to receive \$7,000,000 a year, but he himself said some time ago that this was twice the real sum. It was from him that William Waldorf Astor bought Cliveden, his estate on the Thames, for \$1,000,000.

The successor to the title and estates is the Duke's grandson, Viscount Belgrave, who is now aide-de-camp to Sir Thomas Milner at Cape Town.

The manner in which much of the Duke's vast property grew is illustrated by this statement as to the London property already mentioned:

"Almost all his London property was rented out in the early years of this century on ninety-nine-year leases. At that time London was by no means the London of to-day, and the property that is to-day worth perhaps \$100,000,000, was little more than farm land lying between the cities of London and Westminster. These cities were growing toward each other, and the then Earl Grosvenor's estate became valuable as building lots. It was entailed, and could not be sold, so it was leased by the acre on long ground rents, at what were good prices then. The lessees rapidly covered it with houses. These were sold over and over again, always subject to the ground rent to the successive Grosvenors. As time went on these leases expired, and ground and improvements reverted to the Duke. Then he was able to rent the houses for their real value. There is much of this property, the leases of which have not yet run out, and many of the leases have still forty years to run."

GEN. LEONARD WOOD, who has just been made major-general, has won the good will of a great many good men in power in Washington, says *The Baltimore News*. He is recognized as a man of rare common sense. He is not a fluent talker as might be supposed, but expresses himself clearly and in a manner that stamps him as eminently practical. He is a specialist, not in one field, but in several. He is a Harvard man, and while at college made a record both as a student and all-around athlete. He is one of the best football players in the United States, and his athletic training served him usefully in several frontier campaigns. He has a medal of honor which he won in one of the Apache campaigns for valor and endurance in a very trying ordeal, and which he could not have won but for his enormous strength and staying powers. As a physician and surgeon he ranks very high, and as a student of sanitary problems affecting communities and army camps he has few equals. He is aggressively ambitious and has no hesitation in pushing himself to the front, altho he does it with an appearance of modesty which is entirely inoffensive. He married rich, which accounts for his being able to resist tempting offers in civil life. It is not money he wants, but position. He was appointed surgeon in the army in 1886 from New Hampshire, tho he is a native of Massachusetts. He is a sturdy, powerfully built man, stocky and full-blooded. When the Spanish-American war broke out he was stationed in Washington, and was physician to the families of the President and the Secretary of War, both of whom recognized his abilities and pushed him ahead.

A PLEASING incident in connection with the recent victories of the yacht *Columbia* over the *Shamrock* in the international races was the presentation of a handsome silver loving-cup to Capt. Nat Herreshoff by the employees of his ship-building works at Bristol, R. I. Upon it are engraved the names of eleven sailing-vessels which have been built at the Herreshoff yard, beginning with the *Fanchon* in 1863 and ending with the *Columbia* in 1899. The names of ten steam vessels also are given, beginning with the *Aucune* in 1870 and ending with the torpedo-boat *Morris* in 1899.

the army. Hood was the first to suggest to President McKinley the idea of immune regiments for service in Cuba, and was called to Washington to discuss the idea. The result was that he was commissioned as colonel of one of the regiments. It happened that this regiment saw no active service in Cuba, and last July, after being mustered out, Colonel Hood returned to New York and resumed his studies, which he again dropped just before the South African war began.

EDWARD EVERETT once concluded a statey speech in Congress with a long, sonorous, and superbly modulated citation of a passage from Tacitus, and then took his seat. No sooner was he through than up sprang a burly member from the West. He had once been an Indian agent, and he began to pour out a vehement harangue in Choctaw. After a while the Speaker called him to order. "I don't see why my freedom of speech should be abridged," he cried; "you let the gentleman from Massachusetts run on, and I didn't understand the first word of his lingo any better than he does mine." The scene was very comical, but it struck the death-knell of further classical quotations in Congress.

AN amusing litigation between Sandow, the strong man, and Mr. Harry Leigh, a professional pianist, was recently brought to a conclusion. Sandow had engaged Mr. Leigh to assist at an exhibition which he was giving at the Empire Theater in Liverpool. The musician's duty was to im-

AUTOMATIC CHAIN-STITCH.

The general advantages of this type of machine for family sewing comprise greatest ease and quietness of operation, simplicity of construction and the elasticity of the single thread seam. When needle is threaded the machine is ready, the stitch requiring neither bobbin nor shuttle. The thread is taken from one spool and is so interwoven and twisted that seam cannot rip unless its finished end be unlocked. When this is done, the entire length of thread can be quickly withdrawn without injury to the fabric.

Every genuine machine carries the trade-mark.

personate Paderewski, and, after giving a short musical recital, to sit tight on his stool, which was attached to the instrument, while Sandow carried both piano and performer off the platform. This entertainment had been given without mishap during a tour of some length. But on this particular occasion, while the strong man was carrying his double burden off the stage, he shot both the instrument and the artist over his head, smashing the former and injuring the latter. For this untoward incident Mr. Leigh claimed damages, maintaining that at the time when Sandow attempted to do the accustomed feat he was exhausted by several previous displays of his physical prowess. The strong man, on the other hand, vigorously denied this impeachment, and asserted that he had tripped on a crease in the carpet, which it was Mr. Leigh's duty to have removed. After some deliberation the jury returned a verdict in favor of the plaintiff, and awarded him \$500 by way of compensation.

ERNEST HART, says the *New York Tribune*, an extensive poultry raiser, of Coffeyville, Kan., having read in an agricultural journal that boracic acid would preserve chicken meat almost indefinitely, assumed that the chemical should be mixed with the feed of the fowls and given to them to eat. He tried the experiment, with the result that 750 of his 100 chickens died within twenty-four hours. He sued the editor of the paper, but the court held that any man of ordinary intelligence should have known better than to try to preserve the flesh of living fowls by means of chemicals.

KRUGER, says *Household Words*, in addition to his other accomplishments, is by far the best preacher in the Transvaal, and the Dutch Reformed Church boasts of some capable men there. He occupies the pulpit in a modern brick edifice across the street from his home about once a month, and always talks to standing-room only. He uses no notes, but speaks off-hand from a text, and does not hesitate to sprinkle a little humor in the discourse. In his speeches before the Raad he quotes Scripture generously, and even more so in conversation.

A BRIDGEPORT, Conn., man named Four Miles has made application to the Court to have his name changed to Frank Miller, on the ground that his present appellation is frequently used to hold him up to ridicule. His father had five children, all boys, and instead of giving them ordinary Christian names he called them by the first five numerals. One and Three Miles have already had their names changed by the court; Two Miles seems to be satisfied with his unique cognomen, and Five Miles can not take a new name until he shall have become of age.

For Seasickness

MIND AND MUSCLE.

Bodily energy, whether mental or muscular, is the natural outcome of the food we eat. The engine which pulls the train requires the finest coal. The fuel must be free from clinkers which will obstruct the grates, and must furnish the largest number of heat units per ton, for the efficiency of the engine depends most of all upon the character of its fuel.

So with the human engine: Food is fuel. It is the source of all bodily heat and energy. Poor food results in a poor, weak body, a miserable, weak, irritable, and despondent brain, shaken nerves, disordered stomach, and an unsuccessful life. To live well one must eat well. The best foods are the natural cereal products manufactured by the Battle Creek, Mich., Sanitarium Health Food Co. These choice foods, which have for many years been supplied to the thousands of invalids visiting this great institution and its score of branch establishments in a dozen different countries, are now available to the public, having been placed for distribution in the hands of leading grocers throughout the country.

One of the most popular foods made by this company is Granola, with a rich nutty flavor and three times the food value of meat. It requires no cooking, and is ready for immediate use with the addition of fruit juice or milk.

Granola is sold in pound packages by leading grocers.

A postal card from a reader of THE LITERARY DIGEST bearing the name of the grocer who does not sell Granola, sent to the Sanitarium Health Food Co., Battle Creek, Mich., will bring a free sample.

MORE OR LESS PUNGENT.

Medical Advice.—YOUNG PHYSICIAN: "When you have a case which baffles you, whom do you call in?"

OLD DOCTOR (gruffly): "The undertaker."—*Life*.

The Reason Why.—GILES: "Statistics show that fewer men fill drunkards' graves than in former years."

MILES: "What's the cause—world growing better?"

GILES: "No; I guess cremation has something to do with it."—*New York Evening World*.

No Wonder!—VISITOR: "What was the matter with the man they just brought in?"

DOCTOR: "Stuck his head through a pane of glass."

VISITOR: "How did he look?"

DOCTOR: "His face wore an injured expression."—*Baltimore News*.

He was an Athlete.—"Judging from that fellow's splendid shoulder and chest development, I should say that he was an eminent athlete." "That's Herr Splendid, who conducts the orchestra in Wagnerian opera."—*Chicago Record*.

Much more Serious.—"Do you know that a man is three eighths of an inch shorter at night than in the morning?" demanded Dinmore. "The last time stocks took a tumble," replied Mullins, "I was $\frac{3}{8}$ inch shorter at night than in the morning."—*Life*.

The Real Test for Swearing.—WRANGLER: "You say that Job's patience never was really tested?"

QUIRKER: "I do. Why, he never put the lighted end of his cigar in his mouth just as he wanted to make his argument most impressive."—*Life*.

A Natural Death.—COLONEL CORNWRIGHT: "Did that nigger die a natural death, Majah?"

MAJOR GORE: "Yes, sah; he was lynched for voting the Republican ticket."—*Life*.

Whose Gift?—"What is the price of this pin?" asked a young man in a Paris shop, handling a small silver brooch of exquisite workmanship. "Twenty francs, monsieur," said the clerk. "That's altogether too much," said the young American; "it's for a present to my sister; I'll give you five francs for it." "Zen it would be I eat gave as present to your sister," said the Frenchman, with a deprecatory shrug, "and I do not know the young mademoiselle!"

A Rude Suggestion.—GREAT ACTRESS: "That's an atrocious portrait! Is that the best you can do? Is there no way you can improve upon it? Suggest something."

PHOTOGRAPHER: "Madam, you might permit your understudy to sit for you."—*Cleveland Plain Dealer*.

Literally So.—"Well," said the monkey to the organ-grinder as he sat on the top of the organ, "I'm simply carried away with the music."—*Tribune*.

Dark Outlook.—FORTUNE-TELLER: "And I see a dark man who will give you trouble."

THE WIDOW (to herself): "The coalman! Why didn't I pay his bill?"—*Chicago News*.

A Misunderstanding.—A hush falls upon the court. "Do you know the prisoner at the bar?" asked the counsel. "When I've got the price, I know everybody at the bar!" protests the colonel.

"I have found your Bronchial Troches most useful for hoarseness and colds." PROF. L. RIOT, QUEENS COLLEGE, LONDON, ENG.

from the witness-stand, with dignity. The colonel, understand, employs the Kentucky dialect.—*Detroit Journal*

Not the Usual Kind—WANDERING WILLIE: "What do yer expect ter Chris mus?"

WEARY RAGGLES: "Well, et I'm committed to de island maybe I'll hev a watch an' chain."—*Judge*.

A Case of Recognition.—"What on earth are you bringing all those umbrellas in here for?" asked Mrs. Van Fashion, as Mr. Van Fashion puffed into their bedroom with an armful of rain-interceptors. "Why, I thought that reception was due to-night." "Yes, and you are afraid the guests will steal them, are you?" "Not at all. I am afraid they will recognize them."—*Life*.

He Couldn't Stand It.—"Judge, your honor," said the prisoner, "before I enter my plea I'd like to ask a few questions." "You have the court's permission." "If I go to trial, will I have to sit here and listen while the lawyers ask hypothetical questions of the jurors?" "Certainly." "And then hear all the handwriting experts?" "Of course." "And follow the reasoning of the chemistry and insanity experts?" "Very probably."

Are You a Cog?

If you are a workman or a clerk, and feel that you are like a cog in a wheel, going around but making no progress, write and learn how to prepare yourself for a really desirable position.

"Well, judge, your honor, I'm ready to enter my plea." "What is it?" "Guilty."—*Washington Star*

Retrospective.—"Harry!" "What is it, Dorothy?" "Did you give me that parlor lamp last Christmas, or did I give it to you?"—*Indianapolis Journal*.

Bicycle Dialect.—Mrs. SPROCKET: "George, what in the world happened to the pipe organ in church this morning while you were singing that solo?" MR. SPROCKET (who always talks bicycle): "Why, the organist was coasting on easy grade with her feet off the pedals, when she ran into some sharp notes and the old thing punctured."—*Ohio State Journal*.

One Fact that was Certain.—"Who was the scientist who made the discovery that baldness is a sign of intellect?" "I don't know his name, but I know is that he was bald."—*Indianapolis Journal*

Current Events.

Monday, December 25.

—The situation in South Africa remains unchanged; the British Government accepts another offer of a squadron of Canadian rough riders.

—Coal-miners and lace-workers in France go on strike to the number of several thousand.

—Christmas is celebrated by giving great dinners to the poor; at Windsor the Queen gives a reception to the soldiers' wives and children.

—The War Department issues a statement showing the amount of relief work done in Puerto Rico; great distress still exists in parts of the island.

—Large contributions are made to a fund for General Lawton's wife.

Tuesday, December 26.

—The bombardment of Ladysmith is continued; General Joubert resumes command of the Boer forces; Gen. Lord Kitchener reaches Gibraltar pending the arrival of Lord Roberts.

—Small engagements take place in the Philippines, resulting in native loss and capture of military supplies.

—Secretary Gage and Mr. Roberts, Director of the Mint, make statements as to the financial situation.

—The first treaty between Mexico and China is signed at the Mexican embassy in Washington.

—The funeral of D. L. Moody takes place at East Northfield, Mass.

Wednesday, December 27.

—Winston Churchill, captured by the Boers, makes good his escape and arrives at Chiverville Camp, where General Buller is in command.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. At druggists refund the money if it fails to cure. E. W. Loring's signature on each box. 25c.

PANTASOTE

Outwears Leather!

WATERPROOF, GREASE PROOF, STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerous, easily inflammable substances, and is not affected by heat, cold or moisture. Made in standard colors, plain or figured.

Enough to cover a dining chair, seat or foot-stool sent for 25 cents in stamps.

Sample Free! 15¢ in stamps, enough to make a Sewing Machine cushion, sent for 25¢, stamp with your upholsterer's name.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

Charles Warren; the Kimberley garrison make a sortie and capture several Boers.

—Colonel Lockett routs a Filipino force near San Mateo, Luzon.

—American merchant ships with cargoes of flour are seized by British cruisers in Delagoa Bay.

—Representatives of the leading scientific societies of the country meet in convention at New Haven.

—Edwin Gould is elected president of the reorganized Produce Exchange Trust Company of New York.

Thursday, December 28.

—Brisk engagements take place at the fighting centers in the Transvaal; the Boers bombard General Methuen's position.

—A parade of six thousand strikers is held at St. Etienne, France.

—The bodies of the Maine dead are buried in Arlington National Cemetery, in presence of the President and members of the Cabinet.

—Addresses are made by President Hadley, ex-Secretary Fairchild, and others, at the convention of the American Economic Association at Ithaca.

Friday, December 29.

—The bombardment of Mafeking continues; Ladysmith is closely pressed by the Boers.

—A detachment of American troops captures a Filipino stronghold beyond Malaban, and makes twenty-four prisoners.

—The Naval Board on Construction adopts designs for three new battle-ships of 14,000 tons.

—Naval casualties off the coast of Kent, and also near Cape Hatteras, result in serious loss of life.

—Rev. Sylvester Malour, the oldest Roman Catholic pastor in Brooklyn, dies of pneumonia.

Saturday, December 30.

—The British cruiser *Magicienne* seizes a German steamer in Delagoa Bay; seizures of American flour are also made, and provoke much criticism in this country.

—The funeral of General Lawton takes place in Manila, and his body is placed on board the transport *Thomas* bound for the United States.

—Favorable replies to Secretary Hay's note regarding the "open door" in China are received from England, Germany, France, Russia, and Japan.

Governor-General Davis is summoned from Puerto Rico to give information to Congress regarding a permanent form of government for the island.

—A fire in Chicago causes \$1,000,000 damage.

Sunday, December 31.

—Several small engagements take place in South Africa, and a British cavalry reconnaissance from Dordrecht is repulsed; Adelbert S. Hay, the new United States consul, leaves London for Pretoria.

—Pope Leo, in an address to his entourage, designates Cardinal Gotti as his successor.

—Rev. Dr. Purves accepts the call to the pastorate of the Fifth Avenue Presbyterian Church.

—The Irish-American societies of New York hold a mass-meeting to denounce England's war in the Transvaal.

LEGAL DIRECTORY.

We append below a list of leading lawyers in different portions of the United States.

Legal business, collections, and requests for local information will meet with prompt attention at their hands:

Henry C. Terry, 506-7-8 Hale Building, Philadelphia.

Mordecai & Gadsden, 45-46 Broad St., Charleston, S.C.

W. B. Hutchinson (Patents and) 33 Broadway, N. Y. City.

Arthur M. Higgins, Minneapolis, Minn.

John Moffitt, 59 Dearborn St., Chicago, Ill.

Rodolphe Claughton (Collection as an) 320 Broadway, N. Y. City.

Dr. Brown-Sequard on Rheumatism and Sleeplessness.

This renowned French physician and scientist taught that rheumatism, sleeplessness, pains in bones and muscles, neuralgia, sciatica and kindred disorders of weakened nerves and vitality were due to an excessive flow of electricity from the body to the earth. This was the thought that suggested the invention of the Slayton Insulation Treatment, by means of which this flow can be regulated or absolutely stopped. By night the patient's bed is insulated by means of the

Slayton Electric Switch Glass Caster, and by day the Slayton Insulating Spun-Glass Insole is worn.

A plain theory, but does it work? Take notice. In the past eight months some sets have been sold, and not one was paid for until after trial. Are you open to conviction enough to take a free trial of this treatment which is so helpful to others? Read these letters and see if it is worth while.

Mr. D. J. PRESTON, of Tipton, Mich., writes: "The Casters are worth more than their weight in gold to me. I have tried them and know that they have cured. I was so helpless for three months at a time that I had to be lifted from chair to bed. I have not felt any rheumatism since using the Casters."

NOEL MAY, of Denver, Colo., writes: "The Slayton Insulating Spun-Glass Insoles are proving highly satisfactory. I cannot speak too highly of them."

FREE TRIAL

We will gladly send anyone a full set of the SLAYTON ELECTRIC SWITCH GLASS CASTERS and SLAYTON INSULATING SPUN-GLASS INSOLES for trial. For the Casters and Insoles, we ask only \$1.00. For the Casters only, we ask only 50c. For the Insoles only, we ask only 50c. If they do not begin to cure, return them by mail and we charge nothing. If they do begin to cure, we will send you a new set of the Casters and Insoles. These articles can be used successfully with great benefit, but to insure the greatest benefit, both should be used. Be sure to state whether Casters are to be placed on iron, brass or wooden bedsteads, and the size of shoes insoles are to fit.

THE SLAYTON ELECTRIC CASTER CO., Ltd., — 25 High Street, Tecumseh, Mich.

Triangular College League.

"OLD PENN" WINK.

The first annual Tournament of what is to be known as the Triangular College League, composed of six players from the universities of Brown, Cornell, and Pennsylvania, was played in the rooms of the Manhattan Chess-Club, New York City, beginning December 27. The contestants were: C. H. Lester and H. N. Davis (Brown); L. A. Karpinski and E. H. Riedel (Cornell); R. H. Griffith and J. S. Francis (Pennsylvania).

The Intercollegiate Trophy, a silver punch-bowl weighing nearly one hundred ounces, was presented to the colleges in 1892. A number of graduates, who subscribed \$500 for the purpose, A college, in order to become the possessor of the Trophy, must win ten matches in succession. In the eight matches, Columbia won the first two, and Harvard has won the last six of the season.

The Marshall-Johnston Match.

In the match between F. J. Marshall, champion of the Brooklyn Chess-Club, and S. Johnston, champion of Chicago, the score stands at the time of going to press: Marshall, 3; Johnston, 1; Draws, 1.

"Maxims and Hints for Chess-Players."

We have received from Will H. Lyons, Newport, Ky., a little booklet, beautifully printed, containing "Maxims and Hints for Chess-Players," by Richard Penn, F.R.S. (reprinted from the 1899 London Edition); "A Fasciculus of Chess-Wrinkles," by Capt. H. A. Kennedy; and "The Morals of Chess," by Benjamin Franklin.

The first of these is what may be called a philosophical treatise on the temperament of a Chess-player. As an example, the first paragraph reads: "Win as often as you can, but never make any display of insulting joy on the occasion. When you can not win—lose (tho you may not like it) with good temper." Another paragraph advises the player not to be alarmed about the state of your adversary's health, when, after losing two or three games, he complains of having a bad headache, or of feeling very unwell. If he should win the next game, you will probably hear no more of this." The "Conclusion" is worth keeping in our scrap-book: "Chess holds forth to the philosopher relaxation from his several studies,—to the disappointed man, relief from unavailing regret,—and to the rich and idle, an inexhaustible source of amusement and occupation." The "Fasciculus" is a satire, and, as the quotation puts it, "Satire oft hits the mark when logic fails." Altogether it is a very delightful book, full of good things.

The Literary Digest

VOL. XX., No. 2

NEW YORK, JANUARY 13, 1900.

WHOLE NUMBER, 508

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

A "GREAT DIPLOMATIC TRIUMPH" FOR THE UNITED STATES.

THE report that Great Britain, France, Germany, Russia, Italy, and Japan have promised to give our Government written agreements to maintain the "open door" in China is hailed by many of the press as that of an epoch-making diplomatic victory. The *New York Journal of Commerce* says that this achievement will be, when completed, "one of the most important diplomatic negotiations of our time." Each of these nations agrees, according to the report, to respect the present treaty rights with China held by each of the other nations; in other words, no "sphere of influence" shall bar out the merchants of any of these seven powers from regions to which they have access under treaty with China. As England has seemed to be on the verge of war several times in her efforts to insure the "open door" in China, and her action since has been generally construed as a confession of inability to effect her purpose in opposition to the Russian program of "spheres of influence," Secretary Hay's achievement has caused all the more surprise. The *Chicago Times-Herald* goes so far as to say that "there has never been a more brilliant and important achievement in diplomacy."

Great things are predicted as a result of this agreement. If the "spheres of influence" are no longer to conflict with commercial freedom, it is assumed that China will be far more certain of preservation as a nation; that a situation which threatened a great European war is removed; and that the United States will greatly expand its influence and trade in the far East. The *Philadelphia Press* says: "The Spanish-American war bulks large in the public imagination, but when the results of President McKinley's Administration come to be valued in history it may easily be that the agreement announced yesterday by Secretary Hay in regard to Chinese trade will seem the larger achievement and the more important triumph." The *Boston Herald*,

which has not hesitated to criticize the Administration at times, says of Secretary Hay: "We wish to heartily commend him for what he has done, and do so with all the more warmth for the reason that there is a good deal in the policy of the present Administration which merits only condemnation." The *Boston Transcript* says:

"It is understood that certain of the European powers more than hinted that it would be as well for us and more agreeable to them if we would take some Chinese territory and start a 'sphere of influence' for ourselves. With this proposal, the acceptance of which would indeed have constituted a new departure in our diplomacy, our Government was too wise to agree. As a result of refusing it, we have an infinitely wider scope in the Chinese markets than we should have had with a 'sphere of influence' in competition with half a dozen other 'spheres.'"

The *New York Tribune* can not see why any nation should care to seize any part of China with its teeming population and attempt to govern it. For purely selfish reasons, says *The Tribune*, it is easier to let the Chinese govern themselves while the outside governments remain content with capturing the trade. The *New York Commercial Advertiser* thinks that the agreement will almost enforce itself. It says:

"The really large fact is that we have succeeded in binding the powers to the principle of the open door to trade—that is, of equal opportunity for commerce among all nations—not only as to us, but among themselves. This was a natural result which all desired, but it has an important consequence. It gives every power strong interest in preserving the *status quo* in China, in order to prevent the closing of any part of it to the trade of the world by taking it out of the scope of this general agreement. Powers that have been eager for dismemberment of China in order to secure the trade of part of it, will be eager now to prevent dismemberment in order to keep the trade of the whole."

The *Philadelphia Record*, to show how our trade with China is growing, quotes the following table from the report of the inspector-general of customs of China. It will be seen that while China's trade with Great Britain, India, the Continent of Europe, Macao, the Straits Settlements, and British America showed a shrinkage in each case, her trade with the United States showed a striking advance. Here is the table:

	—Haitkwan taels.—	
	1897.	1898.
Hongkong.....	90,125,837	97,514,017
Great Britain.....	40,015,587	38,962,474
Japan.....	22,364,784	27,376,063
India.....	20,068,183	19,135,546
United States.....	13,440,308	17,163,317
Continent of Europe.....	11,800,974	10,852,738
Macao.....	3,314,878	3,387,717
Straits Settlements.....	2,855,586	2,620,128
British America.....	6,004,019	1,964,914
All other countries.....	2,345,294	4,108,438
Grand totals.....	212,834,094	218,745,347

"If Americans shall not get their full share of trade under the new arrangement," says *The Record*, "they will have themselves to blame."

The *Boston Journal* thinks that this diplomatic triumph would never have been won if the United States had not so recently shown its military power. The *Chicago Evening Post* thinks, too, that our "physical presence" in the far East, in the Philippines, "lent potency to our arguments." Some one of the powers may wish to break its word in this matter when it becomes convenient to do so, but, says the *New York Sun*, "before that time

arrives, we also shall have naval fortresses in the harbor of Manila and elsewhere in the Philippines, and it will be the fault of our Navy Department and of Congress if we do not also possess a navy adequate to the enforcement of our treaty rights in China, and of fidelity to written agreements on the part of foreign powers."

Not all the press, however, thinks Secretary Hay's work such a remarkable achievement. *The New York Press*, a staunch advocate of protection, thinks that the "diplomatic triumph" puts us in a pretty predicament. It says:

"Now, then, what is to be our reply to Europe when it comes to ask how the door swings in the dismembered Spanish empire in response to our similar inquiry concerning the portals of the dismembered Chinese empire? Great Britain in the last recorded year of Spanish dominion sold to the Philippines goods worth \$2,467,090, Germany goods worth \$744,428, France goods worth \$359,700, as against our \$162,446. Our position in the archipelago is like Russia's in Manchuria—entirely military. We sell the people nothing, the trade which has followed the flag consisting mostly of beer and other creature comforts for the soldiers. So when we shut the door at Manila, as we are bound to do after closing that at San Juan de Puerto Rico, what sort of double knock may we expect from those of whom we are just asking assurances that they will keep their doors open at 'Falien-Wan, Chiao-Chou, and Yunnan?'"

"The Philadelphia *Record* is astonished to see Mr. McKinley trading along under a free-trade banner, but says: "What is still more astonishing is the docility with which the party of protection appears to follow him." The *New Orleans Picayune* suggests another move for the Administration:

"Now that the United States have become an Asiatic power, and are claiming all the rights and privileges pertaining to the so-much-talked-of-open-door policy for American citizens in China, it would be extremely inconsistent to expect to be permitted to close the doors of this country against the Chinese.

THE ESCAPED COW (with apologies to Dupre).
—The Denver Times.

The new national policy of imperialism promises to create a crop of vexations and trouble-breeding international questions."

The *Springfield Republican* thinks that the exclamations over Secretary Hay's great victory betray intellectual shallowness. It says:

"No possible harm can come from getting Russia, Germany, and France to promise to be good, or to repeat assurances of good conduct they have already made public, but to suppose that such assurances, politely written and most blandly tendered, really amount to anything in themselves seems rather funny."

No pledge given by our Government, *The Republican* points out, can be binding without the consent of the Senate, and all the other nations know it. Whenever Russia, for example, "gets ready to change policies regarding the 'open door,' the Czar can justly answer any remonstrance by the United States by pointing to the fact that our Government is under no pledge itself." The real situation, says *The Republican*, is not changed at all by these polite notes, and the only assurance of an "open door" still rests upon our ability to keep it open by force. It continues:

"Diplomacy has done nothing to change the situation, while the Government has gone far toward placing itself in a position where, to be consistent, it must guarantee by military force the territorial integrity of China, or share in a possible partition. Underneath this showy concern for the interests of American trade and capital in the far East there is a steady movement toward militarism."

SECRETARY GAGE AND "PET BANKS."

TWO recent acts of the Secretary of the Treasury in connection with the National City Bank of New York (under the control, it is said, of men connected with the Standard Oil Company) have aroused a storm of criticism from the opposition press, and have led even some Republican papers to question the propriety of the Secretary's course. Both houses of Congress have adopted resolutions asking Mr. Gage for copies of all letters, agreements, papers, or documents that have passed since March 4, 1897, between the Treasury Department, and the National City Bank or the Hanover National Bank, also of New York and supposed to be closely connected with the National City. What the press consider the more serious of the two charges is one made in connection with the sale last July to the National City Bank, by the Treasury Department, of the old custom-house property in New York City. The *Indianapolis Sentinel* (Dem.) gives the circumstances of the sale as follows:

"This sale was made under a special act of Congress, which provided that the Government should continue to occupy it as a tenant, and pay the purchaser a rental equal to 4 per cent. of the purchase price. The sale was for \$3,265,000. The president of the National City Bank, it is said, went to Washington with a certified check for \$3,225,350 on his own bank, which was presented to Secretary Gage, and immediately returned by him for deposit in the National City Bank. By this payment of all but \$40,000 of the purchase-money the bank became the owner of the building, and the Government becomes its tenant at \$130,000 a year. The bank has in fact never paid out a cent. All of its money is in its vaults for use, and has been all the time. And altho the sale is actually made the deeds have not been passed—theoretically because of the \$40,000 still unpaid—but evidently for the purpose of keeping the property in the name of the federal Government, and thereby exempting it from local taxation. This is a most extraordinary transaction throughout."

The *New York World* (Ind. Dem.), after reciting these allegations, quotes from the Revised Statutes to show that the law directs the Secretary of the Treasury to deposit money received from the sale of Government property in the Treasury, and that if he fails to do so he is liable to fine and imprisonment. *The World* says:

"1. Sec. 3618, of Revised Statutes provides that 'all proceeds of sales of old material, condemned stores, supplies, or other property of any kind shall be deposited and covered into the Treasury as miscellaneous receipts . . . and shall not be withdrawn or applied except in consequence of a subsequent appropriation made by law.'

"2. Chapter 337 of the statutes enacted by the Fifty-fifth Congress—the law providing for the sale of the New York custom house—says that:

"The Secretary of the Treasury is hereby . . . directed . . . to deposit the proceeds of the sale . . . in the United States Treasury as miscellaneous receipts."

"Section 1-617 of the Revised Statutes says that the proceeds

of such sales shall be 'paid by the officer or agent receiving the same into the Treasury at as early a date as possible.'"

The same paper quotes a statement by Secretary Gage to the Philadelphia *North American* in which he said: "The proceeds of the custom house in New York were deposited with the National City Bank. My action was within the law and the proprieties"; and then quotes Chief Justice Waite and Justice McKenna of the United States Supreme Court, who hold that money paid

"IT'S A LONG LAKE THAT HAS NO TURN."

During the Spanish-American War Secretary Gage was given the credit of inspiring much criticism of the War Department.—*The Detroit News*.

into a bank that is a designated depository for Government funds can not be considered to be paid into the Treasury. In a decision handed down in 1879 Chief Justice Waite said:

"The position assumed is to our minds wholly untenable. The designated depositories are intended as places for the deposit of the public moneys of the United States—that is to say, moneys belonging to the United States. . . . Altho deposited with a bank that was a designated depository, it was not paid into the Treasury."

The World says of Justice McKenna's opinion:

"Only last October the Supreme Court, voicing its sentiments in an opinion handed down by Associate Justice McKenna, formerly Attorney-General of the United States, reaffirmed the decision of Chief Justice Waite and settled for all time the status of the national bank and the relationship of the national-bank depository to the Treasury of the United States.

"Justice McKenna declares that the Government can not be held responsible for the money, because, altho it had been placed in a regularly designated depository, it could not be held to have been 'covered into the United States Treasury.'"

The World then quotes from section 5,490 of the Revised Statutes as follows:

"Every officer or other person charged by an act of Congress with the safekeeping of the public moneys who fails to keep safely the same, without . . . depositing in banks or exchanging for other funds than as specially allowed by law, shall be guilty of embezzlement of the money so . . . deposited or exchanged; and shall be imprisoned not less than six months nor more than ten years, and fined in a sum of money equal to the amount so embezzled."

The World makes the following comment:

"Mr. Gage does not merely deny the facts. He admits them. And in defense and explanation he offers nothing but the bald and meaningless assertion that he acted 'within the law and within the proprieties.'"

"There is therefore no necessity for an investigation of this part of the Standard Oil bank scandals. There is no necessity for delay. Mr. Gage should resign, and that at once. Mr. McKinley has all the necessary facts now—the clearly worded statutes and Mr. Gage's clear admission. Every day that Mr. McKinley permits him to remain at the head of the Treasury Department is one day more of the public spectacle of the President of the United States shielding a member of his Cabinet who has

been caught red-handed violating the laws for the protection of the public money."

The *Washington Times* (Dem.) says:

"Rather a serious state of affairs, we should say! It is to be remarked that it is one which is calling down denunciations even from Republican organs not usually squeamish about the legality or honesty of things done by or in the interest of the Administration and its financial associates. Every leading journal in Chicago, with one exception, joins in the note of general indignation, and, in short, an impression has been created which neither Mr. Hanna nor Mr. McKinley will venture to ignore. Congress certainly will have to take some notice of the matter or members will be afraid to face their constituents next summer. It is a bad business, and for the reputation of the country we are sincerely sorry that anything of the kind has happened, or could happen."

The *Chicago Inter Ocean*, a strongly Republican paper, says:

"Should Mr. Gage resolve to quit the Cabinet and the service of a people which good-humoredly but firmly declines to regard him as a financial genius, no one outside the diminishing Mugwump coterie would lament his departure; the Republican Party would feel a sense of relief, and the nation would proceed upon its way rejoicing."

The *Chicago Journal* (Ind.) says:

"A whole encyclopedia of anti-trust speeches, 'planks,' and interviews would not dispel the wholly justifiable suspicion which the actions of the Treasury in the past week have created. Mr. Gage has done the Administration more harm than any of its adherents or its enemies. Even Hanna falls short of his achievement in this direction."

The *Springfield Republican* (Ind.) says that "on the question of law involved the Secretary has probably not seen the end of the matter. He may have ample defense for his course, but it is not apparent on the face of the statutes." Many of the Republican papers seem to be waiting for the action of Congress before commenting on this phase of the matter.

The other act of the Secretary which has stirred up considerable discussion was the deposit of certain Government funds in the National City Bank in order to relieve the money situation during the recent Wall Street panic. Every one admits that the Secretary had a perfect legal right to make this deposit, and many papers believe that he performed a plain duty in thus preventing further disaster. The National City Bank was by this act made the distributing agent to other banks furnishing the securities demanded, all the deposits being first placed with it, and being distributed by it according to the Secretary's orders day by day.

Secretary Gage, in an interview, has made the following explanation:

"The National City Bank having given us the largest security, it was but logical for us to designate that bank as the gathering and distributing point for our funds. We informed the bank of our intentions, and that we would give them daily instructions concerning the distributions of the money to the other banks that had given us the additional security."

The *Chicago Tribune* (Rep.), however, thinks that a change of policy would be wise. It says:

"A policy of governmental interference in financial affairs for the benefit of stock-market speculators is not viewed with favor by the public. It prefers that the Government should remain neutral. This preference is shared by *The Tribune*. It believes it neither right nor expedient for the Government to attempt to bolster up a sagging stock market by exhibiting gross favoritism to a particular bank. It is too big a contract. The Government may be harmed more than the stock market is helped."

The *New York Financial Chronicle* suggests that Congress devise some law that will apply when the money market needs relief from the Treasury, so that the Secretary will not be assailed with criticism every time he tries to stop a panic. The *New*

York *Evening Post* warmly indorses this proposition. Secretary Gage, it is reported, favors a law authorizing the Treasury to exact interest payments on Government funds deposited in national banks, a law which *Bradstreet's* thinks would incite the national banks to find other ways of relieving tight-money situations instead of looking to the Treasury for deposits. At present the banks holding Government deposits pay no interest for the use of the money, while the Government continues to pay the banks interest on the bonds which they have put up as security—an arrangement which is generally considered very advantageous for the banks.

Some of the papers hold that the Republican precedents are against such dealings with the banks. The New York *Tribune* (Rep.) finds that Mr. Windom, President Harrison's Secretary of the Treasury, in his report of December, 1889, set forth many objections to the policy, saying:

"The deposit of public funds to an amount largely in excess of the needs of the public service is wholly unjustifiable. Such a policy is contrary to the spirit of the act of August 6, 1846, which contemplates a Sub-Treasury independent of the banks.

"It necessarily involves temptation to favoritism of the most objectionable character.

"It makes the Treasury more or less dependent upon the banks, on account of the difficult and delicate task of withdrawing the deposits when wanted without creating serious disturbance of financial conditions.

"It involves the exercise of a most dangerous power by the Secretary of the Treasury, whereby he may, if so disposed, expand or contract the currency at will, and in the interest of certain favorites whom he may select.

"It is grossly unjust to the Government to grant the free use of its money, while it pays to the very parties thus favored 4 and 4.5 per cent. interest on its own bonds which are pledged as security for the money thus received.

"There seems to be no excuse for this policy when the Treasury could use the same money in the purchase of bonds, and thereby return it to circulation and save a large part of the interest.

"It is manifestly unfair to the people to give the banks the use of their money for nothing, while they are required by the banks to pay from 6 to 8 per cent. for it.

"Bad as these features of such a policy are, a more serious objection is found in the difficulty and danger encountered in the withdrawal of such excessive deposits. Money thus deposited goes at once into the channels of trade, and business is adjusted to the increased supply. A sudden or injudicious withdrawal would be felt far more severely by the large class of business borrowers than by the banks. The latter are money-lenders, and a stringency may only increase their rates and add to their profits, while the former, having based their business ventures upon the accommodations afforded by the banks, may be utterly ruined when such accommodations are suddenly withdrawn."

The occasion for Mr. Windom's declarations was the action of Secretary Fairchild, of President Cleveland's Cabinet, who increased the deposits in banks from \$20,000,000 to nearly \$62,000,000. Mr. McKinley was a member of the House of Representatives at the time of Secretary Fairchild's action, and spoke emphatically about it. As Secretary Gage is reported to have said that his recent action is indorsed by the President and Cabinet, Mr. McKinley's former expressions are of considerable interest. The Springfield *Republican* (Ind.) finds that in *The Congressional Record* of February 29, 1888, Mr. McKinley is reported as follows:

"When we adjourned we left him [Secretary Fairchild] full power to pay it [the surplus] out, and I wish some friend of the Administration would explain why he did not do it in the only straightforward, logical, business-like way—that is, by paying the debts of the Government and saving the interest charge, which rests so heavily on the people. Instead of doing that, the Administration prefers another way. It prefers to use the banks as a means of putting it in circulation. . . .

"Nearly \$59,000,000, as I understand, of the surplus money

that ought to be in the Treasury to-day, the Secretary having refused to pay it out to Government creditors, is now out among the banks, held by them, they giving to the Government bonds as security for the deposit; and they are getting it without interest. They have the surplus money of the Treasury in their own hands, and they collect the accruing interest on the Government bonds which they have deposited as security, when, if the Administration had used the \$59,000,000 and bought a corresponding amount of bonds with that sum, those bonds would have been canceled, and the interest on that sum would have been stopped. And I charge here to-day that the President of the United States and his Administration are solely responsible for whatever congested condition we have in the Treasury, and whatever alarm prevails about the finances of the country. Every dollar of it would have paid a dollar of the Government debts if the Secretary had wisely exercised the discretion given him by law. What does a man do who has got a surplus balance in the banks and has outstanding debts bearing interest? He calls in the evidences of those debts and pays them off with his surplus deposit. That is what a business man would have done and that is what a business administration would have done; and we would have had \$59,000,000 less of interest-bearing bonds in circulation to-day if the President had followed the way blazed for him by the Republican Party."

"When the Republican national convention assembled, soon afterward," says *The Republican*, "Mr. McKinley, as chairman of the committee on resolutions, saw to it that a special denunciation was written into the platform of 'the Democratic policy of loaning the Government's money, without interest, to pet banks.'" *The Republican* further comments:

"It is a curious turn which time has brought, that the Administration of William McKinley himself should be pursuing this 'Democratic policy,' instead of 'the way blazed for him by the Republican Party,' and to a length which the Cleveland Administration never ventured to go. . . . The President plainly owes an apology to Cleveland and Fairchild."

THE DANISH WEST INDIES ON THE BARGAIN COUNTER.

THE current report that the United States Government is seriously considering the offer which Denmark has made to sell her possessions in the West Indies, has given to the three islands owned by the latter nation—St. Thomas, St. John, and St. Croix—an importance that they have not enjoyed before for many years. There seems to be no official confirmation of the report that our Government contemplates purchase, but the Washington correspondent of the New York *Tribune* learns that the subject will probably come before Congress in the form of a

joint resolution to buy the islands, and that little opposition is expected. The New York *Sun* says of the islands:

"Denmark has long desired to sell her three little islands in the West Indies, but she wished to drive a

THE DANISH WEST INDIES AND THEIR RELATION TO PUERTO RICO.

good bargain, and our Government thought the price she asked was too high. She did not care to sell at all till St. Thomas lost much of its commercial importance, and then \$7,500,000 was asked for that island and St. John, leaving St. Croix out of the question. She is now willing to take \$3,000,000 for the three islands, and they are worth the money. The inhabitants have always been willing to transfer their allegiance to our nation, and Denmark is willing to part with the islands because they are of scarcely any advantage to her. She sells to them a little butter, but not much else. For years they have bought in this country most of the food they do

not raise and nearly all the coal they sell to steamships, but England sells them most of their cotton goods and since 1896 they have bought much Cardiff coal. . . .

"St. Thomas and St. John lie on the same submarine plateau from which Puerto Rico rises and are really a prolongation of Puerto Rico to the east; but St. Croix, to the south, is geographically distinct, being separated from them by a deep ocean valley. The islands have felt severely the decadence of the West Indies sugar industry and are not prospering. They are fair and fertile, but are suffering from neglect. Their people speak a little Danish and other European languages and a good deal of English, and there is no reason why, under more favorable conditions, they should not flourish as they did years ago. It will be a blessing to the islands if they come under our flag, and we can make them worth much more to this country than their cost."

It is said that neither San Juan or any other Puerto Rican harbor can be advantageously used in all weathers for coaling large ships, while St. Thomas fulfils all naval and military requirements admirably. The people of the islands are said to be decidedly in favor of annexation to the United States. The island of St. Thomas is about thirteen miles long, from east to west, and about three miles wide. St. John is ten miles long and two and one-half miles wide.

Rescue of the American Prisoners.—The despatch from General Otis bringing the news that Colonels Hare and Howze have rescued all the American soldiers held captive by the Filipinos has called out a number of comments similar in strain to the following from the *Washington Star*:

"A bit of news comes from Manila to-day which will be even sweeter to the American people than the capture of Aguinaldo and the complete collapse of the whole Tagal rebellion. This is the tidings that Lieutenant Gillmore and his men have been rescued from their captors and are now safe in the American lines. The nation has watched the fate of these brave fellows for many months, often despairing lest they had succumbed to the hardships of their life, or had been slain by their wardens of war. Every suggestion of intelligence concerning their movements to and fro across country, the scrawled messages on prison walls, occasional words of reassurance sent by escaping prisoners or spies or correspondents, now and then a fragment of property—all were eagerly discussed and treasured. In the recent fierce chase through the mountains of northern Luzon there was practically as much popular anxiety for the rescue of these men as for the capture of the Tagal leader. Now that the feat has been

accomplished the heartiest thanks of the people are due to Colonels Howze and Hare for their persistent march against tremendous difficulties. The full report of their pursuit will make dramatic reading. But it will be of slight consequence compared with the story to be told by Lieutenant Gillmore and his men, descriptive of their perils, their wanderings, their hopes and fears. There will be a warm welcome awaiting these men when they turn homeward, for they belong to a country which appreciates valiant services and sympathizes keenly with suffering."

The *Philadelphia Press* thinks that this success proves that "General Otis is quite right in his optimism with regard to the situation in the northern part of the island."

CONNECTING LAKE MICHIGAN WITH THE MISSISSIPPI.

THE removal of a few shovelfuls of earth on the second day of the new year, letting the waters of the Chicago River into the great drainage canal begun over seven years ago, marked the practical completion of what *The Outlook* says is "the largest purely artificial canal in the world." Intended at first merely as a channel to carry off impurities, the idea and the work have grown until it is now predicted that it will some day be a great commercial waterway, connecting the busy ports of the lakes and the Mississippi, and making Chicago the country's commercial center. Altho it has cost one third as much as the Suez canal, it has been built by the municipal corporation. The Chicago papers devote most of their comment to the first purpose of the canal. *The Times-Herald* says of it:

"The drainage canal is the greatest sanitary project of the century. Its object is immunity from germ diseases for two million people by a purification of water supply. But its purifying influence will extend farther than Chicago's river or lake front. By diluting the sewage-laden waters of the river with the pure waters of Lake Michigan it will drive away the foul stench that has hovered over the Illinois and Michigan canal and the Illinois River valley for years. It will make this region more habitable than ever before by relieving the atmosphere of sewage contamination. Even the waters of the Mississippi will be purified in time, and St. Louis will no longer have any excuse for drinking Missouri-River microbes.

"Such a great purifying project that means pure water and pure air for so many millions of people should not be hampered by hair-splitting constructions of law or by observance of trifling technicalities in procedure."

MERELY "THROWING AN OLD SCARE" INTO J. B.
—*The Detroit Journal*.

FATHER TIME: "My! my! But it looks more like 1898 B.C." —*The New York World*.

SIDE-LIGHTS ON THE BOER WAR.

The St. Louis papers, however, fail to see the blessings which *The Times-Herald* predicts for their city, and there is a persistent rumor that the people of St. Louis will try to get some congressional or judicial action to prevent the fouling of the Mississippi with Chicago's drainage. *The Globe-Democrat* says:

"Inhabitants of the valleys along the Mississippi and the Illinois will inflexibly protect their health and property by every weapon of the law. Congress will be asked to appoint a sanitary commission to examine and report upon the sanitary questions involved in the drainage canal. So slight a request will not be denied or delayed. The commission will look into the health problems and render its opinion, based on full investigation, of the consequences of turning the sewage of a large city from its natural lake outlet to a system of rivers running in the opposite direction. Quarantines, and matters of sanitation generally, have received prompt attention in Congress, and no exception will be made in this case, one of the most important ever brought before that body. Injunctions to arrest a nuisance at its start will be applied for. In short, the Chicago drainage canal must establish beyond a grain of doubt that it is not an injury to the inhabitants of any place or region outside."

Edwin O. Jordan, assistant professor of bacteriology in the University of Chicago, writing in the *January Review of Reviews*, says of the possible effect of the canal upon the towns of the Illinois valley, and upon St. Louis:

"Inasmuch as a large portion of Chicago sewage, estimated as high as 80-90 per cent., has for some years passed into the Illinois River by way of the Illinois and Michigan canal, the dilution of the sewage on the scale projected would seem to promise nothing but improvement. In the celebrated report of the English commission on the pollution of rivers it is estimated after careful examination that 9,000 cubic feet of water per minute renders the sewage of 100,000 people inoffensive. The dilution of 20,000 cubic feet per minute required by the sanitary district will unquestionably improve visibly the quality of the Illinois River and is amply sufficient to prevent a nuisance. The question of the use of the Illinois River as a source of water-supply is, of course, quite a different one; but as a matter of fact no town at present derives its water-supply from this river, and all the large towns along the bank of the stream pour their own untreated sewage freely into it. The city of St. Louis, however, objects strenuously to the opening of the canal, on the ground that its own water-supply, which is drawn from the Mississippi some thirty miles below the mouth of the Illinois, will be injuriously affected. The distance from Chicago is so great, however, the length of the Illinois alone being over 260 miles, and the problem is so complicated by the mingling of the Illinois water with that of the Mississippi and the Missouri, that available precedents for a decided opinion are altogether lacking. This being the case, the trustees of the sanitary district have wisely undertaken a thoroughgoing chemical and bacterial examination of the present condition of the Illinois and Mississippi rivers, with the intention of following up the investigation with a similar series of analyses made after the canal is opened. In this way, and in this way only, can the questions raised by St. Louis be satisfactorily and conclusively answered."

An idea of the magnitude of the canal may be gathered from the following paragraphs from Professor Jordan's article:

"The channel proper extends from a point near Bridgeport to Lockport, about twenty-nine miles to the southwest. A portion of the excavation lies along the former bed of the Desplaines River, a small stream which has been ejected from its original course and made to flow in the 'river diversion channel' especially constructed for this purpose at an outlay of \$1,100,000. The wide fluctuations in the volume of the Desplaines, which is said to vary from a flow scanty enough to pass through a six-inch pipe to a volume of 800,000 cubic feet per minute, have rendered this special provision necessary. It is an interesting fact that in taking this channel the canal simply restores the prehistoric water-course, and that in earlier geologic times the Great Lakes drained into the Mississippi by way of the Illinois and Desplaines instead of into the St. Lawrence."

"The huge controlling works for regulating the flow from the channel into the Desplaines valley are at Lockport. The con-

trolling works include large sluice-gates and a bear-trap dam with an opening of 160 feet and an oscillation of 17 feet vertically. The fall from the controlling works to the upper basin at Joliet, four miles below, is about 42 feet. It is estimated that even when the channel carries only the minimum quantity of water required by law the falls will afford about 20,000 horse-power, which, converted into electricity and conducted to centers of distribution in Chicago, would yield over 16,000 horse-power at the sub-stations.

"The main drainage channel is in part cut through solid rock and in part through glacial drift, the total amount of excavation involved being 26,261,815 cubic yards of glacial drift and 12,006,984 cubic yards of solid rock. The rock cuttings are about 160 feet wide at the bottom, with nearly vertical walls. The excavations through the sections, with a preponderance of hard material, provide for a flow of 600,000 cubic feet of water per minute or a rate of flow sufficient for the requirements of a population of 3,000,000 people, which is about double the present population of the district. The narrower channel that has been cut through the more easily handled material provides for a flow of 300,000 cubic feet per minute, and can easily be enlarged by simple methods of excavation as the growth of the population demands. It is claimed that the canal will be navigable for any craft drawing less than twenty-two feet of water."

Montejo's Explanation of His Defeat.—The defense of Admiral Montejo before a Spanish court-martial for his failure to sink Admiral Dewey's squadron in Manila Bay was one of last week's diverting topics. When the members of the Government asked him who was to be blamed for the defeat, he flatly told them that they were. The Government, he averred, had left him without adequate arms and armament to meet a superior foe. When asked why his squadron abandoned Subig Bay he replied:

"The squadron did not abandon Subig, but Subig abandoned the squadron. When an army goes to take refuge in a stronghold after being persecuted by superior forces, and upon arriving at such stronghold finds that the place has not one cannon, and that the walls of the stronghold would only serve as a cage and a trap, what would it do? They would get out of that stronghold as quickly as possible. This is what the squadron did. In order to give an idea of our miserable situation I may mention that we had only fourteen torpedoes for the defense of 2,000 meters of space, and that the cable, which we obtained in Hongkong, was only long enough for five torpedoes, and, therefore, only five torpedoes could be placed."

The *Louisville Courier-Journal* thinks, however, that this does not clear Admiral Montejo. It says: "Truth to tell, that Manila victory was won with ease, but it was the incompetence of the Spanish that made it possible, and Admiral Montejo was as much responsible for this as any other man in the whole degenerate kingdom."

But the admiral's chief defense placed the blame for his defeat on one whom the Spanish court cannot reach. Admiral Dewey, it appears, was the guilty man. Said Montejo:

"Admiral Dewey, with pencil in hand, noted the thickness of his mantlets and his casements, and knew what energy was required to penetrate them. He also knew exactly the weight of the most powerful projectile of our ships, and by a simple mathematical calculation he arrived at the distance at which he could fight without himself receiving any harm. Thus he ascertained that he could fight at a distance of 2,000 or 3,000 meters with absolute impunity. The situation, however, was just this: We were vulnerable to all the projectiles of the enemy, and this the enemy well knew, while he got out of reach of our cannon and remained out of reach all the while."

None of the American press attempts to clear our admiral of this charge, but the *Philadelphia Ledger* facetiously remarks that "Admiral Dewey should explain to Admiral Montejo that he did not know the Marquis of Queensberry rules applied to naval combats."

BRITISH SEIZURES AND GERMAN WRATH.

THE seizure and search which British cruisers are reported to have made of several German steamers, one of them in the Suez canal, seem to have raised a storm of popular wrath in Germany. England's rights and Germany's wrongs in the case are a matter of dispute in the American press, but the importance of the affair seems to lie, as the *Boston Transcript* remarks, "rather in the excited condition of German public sentiment than in the legal aspect of the seizure of the German vessels." The seizure of the *Bundesrath* in Delagoa Bay carrying twenty-three passengers suspected of being Boer recruits, started the ill-feeling, but it was greatly intensified when the imperial mail steamer *General* was stopped at Aden, held by British troops, and compelled to discharge her cargo. It is not reported that anything contraband was found. The cause and probable result of the

THE SEIZURE OF THE AMERICAN FLOUR.

UNCLE SAM: "Cousin John, you're stepping on my toes."

—*The New York Herald.*

seizures are hazarded by the Vienna *Allgemeine Zeitung* in the following statement, which is reproduced in the cable despatches to American papers.

"It looks as if Great Britain cared less for the cargo in question than for demonstrating before the world that, altho most unlucky on the land, she is the unchallenged mistress of the sea, a demonstration which will do more for the German navy than all the speeches of Emperor William."

The New York *Sun* accepts the report that the British authorities suspected the German steamers of carrying recruits for the Boer forces; but points out that it was England who denied our right to stop a British steamer and capture Mason and Slidell during the Civil War. Here we have a case, says *The Sun*, "absolutely identical with that of the *Trent*, yet we see the captain of a British cruiser repudiates the very principle which, in our hour of desperate trouble, his country forced us to swallow." *The Sun* continues:

"Is England, then, the only authorized expounder of international law, and are its principles and precedents to be treated as rigorous or flexible at her sole option? . . . These acts [the seizures] are indefensible from the viewpoint of international law, but it is on the score of their egregious folly that they ought also to be reprobated by every far-sighted Englishman. Was it worth while to break her own precedents when, by so doing, she was certain to give offense to the United States and Germany, the only powers on earth upon whose good will she has any reason to count at this juncture? Is it wise for England to go out of her way to abridge the rights of neutrals in two grave particulars when in the days that are to come her national existence may

depend upon securing for those rights the utmost possible latitude?"

The New York *Journal of Commerce* thinks that England could find a much better way to cut off Boer reinforcements and supplies. It says:

"This is certainly not the only resource of the British Government. She is invading the rights of two neutrals in order to reach one belligerent. Yet all that she needs is to prevent the traffic between that belligerent and the Portuguese port. Great Britain must assuredly possess enough influence with a petty state like Portugal, partially dependent upon Great Britain for her independence, to induce her to perform her own duties as a neutral. The Boers are said to have threatened raids upon the Portuguese territory if the traffic between Pretoria and Lorenzo Marques were interfered with. But the neutral obligations of Portugal are clear. England can far better afford to give Portugal any necessary guarantees of indemnity for Boer raids than to sacrifice all rights of neutrals and subject the sustenance of her people to peril in her next war. The British agent at Lorenzo Marques must know what is going on, and if he can not secure its stoppage then England has less influence with Portugal than the United States had with England during our Civil War. To plead necessity as an excuse for seizing merchandise from a neutral to a neutral port is a confession of incompetence in the British Foreign Office."

The New York *Times* thinks that the Germans are too "touchy." It says:

"The somewhat hysterical remarks of the German press irresistibly recalls a remark of Stevenson's about the behavior of the Germans in Samoa: 'Touchy themselves, they read all history in the light of personal affronts.' Given this state of mind, and it is not wonderful that the German press should see, in the attempt of Great Britain to keep recruits and arms and ammunition out of the Transvaal, nothing but a deep-laid plot to insult and humiliate Germany."

The Cuban Prisons.—Some exclamations of surprise have been elicited by the recent reports of the evil condition of the Cuban jails. Many had supposed that after a year of American occupation the malodorous prison abuses would have ceased to exist, but General Wood seems to have found there a field full of opportunities for his administrative talent. *The Outlook* describes the situation and comments upon it as follows:

"He [General Wood] found that the sanitary conditions were bad, that prisoners slept on the bare floors, that even among American prisoners the average period of detention without trial was five months, and that Cubans whom General Ludlow ordered released are still held, after three or four years' waiting without trial. On the subject of Cuban prison abuses Mr. Charlton T. Lewis, of the New York Prison Association, has just made a report founded on personal inspection. He finds these abuses flagrant—the herding of boys in idleness with hardened prisoners; lack of beds, blankets, and clothing for prisoners; filth and vermin everywhere. In the Havana Carcel, which Mr. Lewis characterizes as 'worse than the Newgate of John Howard,' he found on December 2 last twenty-two American citizens, some of whom had been there for over five months vainly begging a hearing. The entire system of the lower criminal courts he believes to have been corrupt, with the results still continuing, as in the case of men sentenced to forty years' imprisonment for insolence to officials. General Wood has already made thorough reforms in the Santiago prison system, and no doubt he will now remedy the abuses in Havana and throughout Cuba. If half that Mr. Lewis charges can be substantiated, it is almost incredible that such abominable cruelty and injustice should have been allowed to continue even a year under American administration."

The new military government is being well received by the Cubans, and the early correction of the abuses seems assured. Mr. Rubens, formerly counsel for the Cuban Junta, who has just returned from a Cuba trip, said in a recent interview:

"The veterans of the revolution, and all elements, even those supposed to be most at unrest, are deeply gratified by the pro-

gram announced by General Wood—the reform of the courts so as to give speedy trials, the clearing of the prisons of those who have been languishing under the slow procedure, the establishment of a system of free public schools, and the construction of roads, all with a view to local necessities.”

ENGLAND'S RIGHT OF CONQUEST BY "THE HIGHER MORALITY."

PROF. WASHBURN HOPKINS, of Yale, expresses a view held apparently by a large number of newspapers and public men when he argues (in *The Forum*) that what may seem to be criminal aggression by a large nation against a small and weak one is really justifiable if it conduces to the advantage of the race. This principle he calls "the higher morality." England's rule in India and our subjugation of the red man, for example, show many instances of actual fraud and broken vows, but the result, he holds, has been for the general good. Even the wronged peoples themselves are better off than before. In India, he says, "the taxes are less than they used to be; justice is to be had for the first time; education is open to all; charity does more than ever before to cover the want bred of a people's thriftlessness. For this India has to thank England—that sinful nation that robbed the prince and stole the province." In this view, he believes, lies the solution of the ethical puzzle presented to us in the present war in South Africa. He says:

"Granted that, from the point of view of the narrow moralist, the Boers are right; that England holds to-day no suzerainty over the republic; that even what she claims to hold does not entitle her to demand what she requires of the Boers; that the war is in reality of her own making; that it is a conflict she has forced upon a free people; and that she has forced it for her own advantage. But there is a higher morality. The Boers are free to make their own laws; but they have abused freedom. They have sought to defend their corporate existence by a narrow-minded policy which has not worked for good, either to the Boers themselves, to England, or to the world at large. Is it not possible that there is a law working on larger lines for the good of all, and that England is only an instrument for the furtherance of the moral law which finds practical expression in the attainment by the human race of greater benefit? It is at any rate certain that, in the successive struggles for national domination, every victory in the long run has benefited man and raised him higher, even at the cost of the violation of ordinary ethical standards on the part of the victors. Even Poland and Ireland will have to admit this hereafter, as Brittany can admit it to-day. Is there not here a counterpart in the moral world to the inflexible severity of physical laws, whereby the maintenance of the race is upheld at the sacrifice of individuals? In the end, so far as man is concerned, the survival of the fittest is the success of the most civilized, or of those who potentially at least represent humanity's progress."

"I hold no brief for England; but while she serves God and man I rejoice in her triumphs. For God is served when man is bettered, and wherever England has taken her stand man has been bettered. This is the case in India. This is true of Egypt. It is true of the many little lands she holds round the earth. It will be proved again in Africa when Boer authority yields to her higher civilization."

The Springfield *Republican*, however, asks who is to decide when aggression is criminal and when it is "higher morality." Then, to show how the idea of "the greatest good for the greatest number" would work in every-day life, *The Republican* says:

"But we can call Professor Hopkins's attention to a case in point where concededly the greatest number is involved. Here are two men in narrow worldly circumstances, and here is the professor, who is, we will say, a millionaire with his residence crowded with superfluous wealth. The two men reason together on the 'higher morality.' They say it will obviously be to the greatest good of two, if not all three, that the professor be divested of part of his wealth. Larger possessions will make the two more conservative and contented, and law and order and safety to life and property will be enhanced thereby, as well as

a reasonable progress in the uplifting of men. And so the two raid Professor Hopkins's house at night and make off with some of his superfluous wealth.

"That is the 'higher morality' as taught by Professor Hopkins of Yale. That is the essence of his application of the utilitarian theory of morals. We invite to it the attention of those capitalistic interests that are behind and underneath this movement of forcible aggression, both in England and the United States, which sets up the principle that might makes right, and good to all must come from it. Do they desire that action upon this principle shall become contagious among the people at large?"

A Plea for a Children's Court.—Mr. John W. Keller, New York's Commissioner of Charities, is endeavoring to have created a special criminal court exclusively for the trial of children's cases. He says:

"At present, children are arraigned in any district court, and some effort is needed to have their cases considered and disposed of separately from those of adults. There are two classes of children's cases—those who are taken to court on account of improper guardianship or for correctional causes, and those where children are destitute. They are brought to me for disposition after commitment, and are thrown in contact with adult paupers. This is not good, and it is worse in the courts.

"I want a court established exclusively for the consideration of cases of children. I would rather have one of the present city magistrates' courts set apart for this purpose, but if this is not possible I am in favor of creating a new court, and the appointment of a special magistrate to sit in it. I understand the Board of City Magistrates object to setting apart one of their courts for the purpose, on the ground that they have all the work they can do now, but I hardly understand their objection. It amounts merely to a reapportionment of the work they do at present.

"So far as my department is concerned, I have made arrangements for the care of children committed to me separate from the adult paupers. The rooms for their reception in the old quarters of the department [of Charities] will be ready January 1. . . .

"There is ample room in the same building for a court, and the place is admirably suited for a court. If one is created and located there it will solve the entire problem."

The New York *Herald* declares that this suggestion "can not be too highly commended," and adds:

"Why not have all cases, not criminal, in which women are involved tried in this separate court also? And, going a step farther, why not have one woman judge at least to administer in controversies that involve the fit of a dress or differences between mistress and servant or teacher and scholar?"

The Columbus *Evening Dispatch* says:

"If Commissioner Keller accomplishes what he is working for, he will do a noble thing for children. Many a boy and perhaps many a girl has been converted into a life-time criminal through association with grown-up criminals in courts and correctional institutions. Of course many of them have inherited criminal instincts, and have likewise been under bad influences at home; but still the cases of a great many of them are by no means hopeless if these bad influences of heredity, surroundings, and associations were not supplemented and increased by continued contact with adult criminals."

TOPICS IN BRIEF.

GENERAL: "Are you sure you don't know where the Boers are?" Subordinate: "Yes, sir." "And you don't know how strong they are?" "No, sir." "Then let the advance begin."—*The New York Herald*.

STORY OF SOME GUILTY SAVAGES.—Once upon a time there were some guilty savages, who resolved to be civilized at small cost to themselves. Accordingly, they spent \$750 in the construction of a salted gold-mine in their midst. The next day it rained, but the day after that the genius of the Anglo-Saxon race came on the keen jump, with cannon and Red Cross nurses, and civilized these savages. When the invaders discovered the deceit that had been practised upon them, their chagrin knew no bounds. For they had no gold, while the natives had civilization.—*The Detroit Journal*.

LETTERS AND ART.

BOOKS READ IN SOME POOR DISTRICTS OF NEW YORK.

IF the old Spanish proverb, "Tell me with whom you go, and I will tell you who you are," is to be applied to the choice of books, there are some very encouraging signs among the denizens of New York City's tenement-houses. The New York *Evening Post* has been making an investigation into the kind of books read in these districts, and in the course of it has collected data from three branches of the New York Free Circulating Library, and from the circulating library of the University Settlement at Rivington and Eldridge streets. "At all of these places," the writer says, "it has been found that the best works of the standard authors are in constant use, and a greater proportion of works other than fiction is called for in these neighborhoods than in those occupied by people with larger means." Of the foreign element, the Hebrews form the largest and best class of readers, and many of the boys and men of this race are said to be insatiable readers. The writer says further:

"The most striking fact in connection with the reading of the poorer people is the number of children who call for books. They constitute about three quarters of the patrons of the free libraries in the poor districts; a larger proportion of the whole number of readers than anywhere else in the city. Wherever a new circulating library has been opened among the poorer people, its readers have at first been almost altogether children, who draw the parents in by degrees.

"To the public schools is ascribed most of the credit for the interest which the children take in reading. The schools encourage, and to a certain extent require, the use of books from the circulating libraries in connection with the school work, while the effort to interest the pupils in the nation and its history seems to be meeting with much success.

"At the Yorkville branch of the New York Free Circulating Library, No. 1523 Second Avenue, a class of readers are found who, altho thrifty, are for the most part living on small earnings. A majority of them are Hebrews, people who a decade ago were living in the tenement-houses down-town, but have moved farther up with increasing prosperity and knowledge. 'The children here,' explained the librarian, 'like nothing so well as American history and biography, and we have a constant call for the works of Barnes, Coffin, and other writers along those lines. Our principal fiction readers are the women and girls. A great many of the girls are employed in stores and factories, and they read mainly for recreation. The Holmes and Cary stories are usually their choice until we get them interested in something a little more substantial.' "

The East Thirty-fourth Street branch of the Free Circulating Library is in a quarter largely inhabited by Germans and Italians; it is not, however, a tenement-house district. Here the librarian in charge states that "the men and boys read a better class of books than the women and girls." The young men ask for text-books and the older men for books bearing on their work. Strange to say, there is little call for German books. The desire appears to be to leave foreign literature behind when the old country is abandoned.

The circulating library of the University Settlement, used largely by the Russian and Polish Hebrews, presents perhaps the most interesting and encouraging reports of all, particularly when one contrasts this new life and these new opportunities with the darkness of their European environment:

"These people, altho many of them are wretchedly poor, are very intelligent and eager to learn wherever a chance is offered. 'They are remarkable readers—particularly the children,' said one of the persons in charge of the library at this point. 'While not more than 10 per cent. of the older people can read English, fully 75 per cent. of the young folks can, so you see our work is mainly in the interest of the latter class. The girls read Sophie May and Susan Coolidge, calling for Charles Reade, Miss

Mulock, Miss Alcott, and Marion Crawford as they get older. The latter author is popular with the boys, too, but as a rule they choose works of history or biography. In reading fiction they look for stories of adventure and of city life. The boys like the Henty books and they love Trowbridge. When they think they ought to take up something a little further on they begin on Sir Walter Scott. In the boys about fourteen years 'd one noticeable trait is their desire for humor. Mark Twain and other humorous writers are sought for in a way that is surprising.'

"'Do you find that poetry is read?' was asked. 'Not much,' was the reply, 'except in connection with the work of the schools.' "

SHAKESPEARE'S INFLUENCE UPON PUSHKIN.

THE recent Pushkin centenary still continues to call forth articles and studies upon the life of the great father of modern Russian literature. In *The Cosmopolitan Magazine* (January), Zenaide A. Ragozin touches upon one phase of his literary development not hitherto noticed—the influence exerted upon him by Shakespeare. French pseudo-classicism had up to his time prevailed in Russia. The great innovation in Pushkin's dramas was that he did not treat them on the artificial lines of the French drama of Racine, but upon those of the Shakespearian histories. The writer says:

"He had been for a time, like all his contemporaries, under the spell of Byron's magnificent poetry and morbid views of life and men. But this influence was dispelled like mist before the morning sun when Shakespeare's glory burst on him. He studied him closely and lovingly; how searchingly and understandingly is shown by many stray bits of criticism scattered through his letters.

"'I never read either Calderon or Lope de Vega,' Pushkin writes, in a precious letter in which he opens a glimpse into the sanctum of his work, 'but what a man is Shakespeare! I can not get over him. How paltry Byron is by his side—Byron the dramatist, who in all his life understood only one character—his own. . . . To one of his personages he gave his pride, to another his hatred, to a third his moody melancholy. Thus out of one complete, gloomy, and powerful character he made several insignificant ones. That is not tragedy. . . . There is another common error. Having conceived a character, everything the author makes him say, even to the most indifferent, becomes distinctive and typical—like the pedants and sailors in Fielding's old novels. A conspirator asks for a glass of water in the manner of a conspirator—and makes himself ridiculous. . . . Now take Shakespeare. He lets his characters speak and act with all the careless naturalness of real life, because he is sure, at the right moment, to make them strike the right note.'

"To Pushkin's admiration and knowledge of Shakespeare we owe two more productions in two very different veins: a translation, or rather adaptation, under the title of 'Angelo,' of 'Measure for Measure,' grave and stern, and wholly worthy of the original; and a story in light, frolicsome verse, a charming bit of fun, which may be called a parody on 'Lucretia'—in this way: Pushkin happened to read the tale of the Roman matron's woes while in a particularly jocose mood, and the mad thought struck him, as he laid it down, 'What if she had not taken things so tragically, but had simply—boxed Tarquin's ears!' The idea amused him so much that he allowed it to take tangible shape in 'Count Noolio,' a modern version of the ancient story, enacted between a young and beautiful chatelaine and a young city Lovelace, bored and idle, her neighbor in the country, with just the *dénoûment* he had imagined."

Mme. Ragozin regards "Eugène Oniegin" as Pushkin's greatest work. It is, in the highest sense of the term, a society novel, she says, and can be likened only to Thackeray's "Vanity Fair":

"It rivals Thackeray's masterpiece in scope, in power, and grace, in vividness and depth, and as a wholly representative picture of the time and society it portrays, with an undercurrent of pensiveness and pathos, which belongs to the race, irrespective of time and setting. Add to all this the charm of matchless versification, sprightly, abundant, spontaneous, and musical as a mountain spring, and you will have a gem of a water and cut which would be hard to match in any literature."

OUR DEBT TO MILTON.

THE question has lately been raised in England whether Milton is still read, and the prevailing opinion appears to be that he is not. It will be an evil day for England if this is true, says *The Spectator*, for he more than any other man is the embodiment of those ideals which have made England strong and truly great, both in literature and life. Says the writer:

"No Englishman who ever lived has so fully realized the idea of what Israel meant by a prophet. Yet he was a prophet who was also a poet, versed in the finest details of his art. In him the sons of Zion and the sons of Greece were reconciled; in him was seen all the learning of his age, the most ardent yet most delicate service of the Muses, but all his vast and varied accomplishments were fused in the supreme devotion to truth and liberty, and the desire to make of England a worthy temple to these divinities. There has been no such combination of gifts, no such diverse powers incarnated in one person in England's history.

"For England herself Milton mainly desired the embodiment of these ideals: intellectual freedom, the position of the leader of the cause of liberty in Europe, and that worthy and noble inner life in the absence of which the outer forms of liberty are worthless. The 'Areopagitica' is the greatest plea for the freedom of the mind ever written, let alone its splendor as a piece of prose; and tho we have had our reactions since its production, in effect it killed the despotism over the mind. During the whole of the seventeenth century a Machiavellian despotism was desolating Western Europe, and preparing the way for unutterable tragedy in France. Milton, who had lived in the land of Machiavelli, and who saw with prophetic insight what this meant, roused England and Europe (he proudly asserts, with a noble egoism akin to that of Dante, of his work that 'Europe talks from side to side' of this great task) to a sense of the danger. In 'Paradise Regained' we find a great part of the poem devoted to the idea of that inner freedom, that liberty of the soul, to be gained solely by obedience to divine law which should come in priority to mere political liberty, as the real guardian and guaranty of free institutions. Milton was no democrat; he was an aristocratic republican, like Plato; he despised the mob as truly as he detested tyrants; he was for an ordered liberty, a commonwealth of men whom, as Cowper said, the truth had made free, living under the reign of law. If our life and influence as a nation are to stand for a living influence in the world, if we are to be saved from the very real perils of materialism, we shall go to Milton for our ideal.

"Matthew Arnold, in his essay on Milton, looking forward to the spread of Anglo-Saxondom, and quoting Heine as to the contagion of Anglo-Saxon vulgarity, says that the superb austerity of Milton will save us. So long as Milton is a power, the progress of the English speech can not mean the spread of vulgar contagion."

Recent Growth of American Fiction.—Observers of literary currents are commenting upon the interesting fact that all the most popular books of the past year are not only from American writers, but with one exception deal with American themes. These are: "David Harum," "Richard Carvel," "When Knighthood Was in Flower," "Janice Meredith," and "Mr. Dooley." *The Bookman* (January) remarks that this is not a mere coincidence, nor a fact of ephemeral importance:

"We believe that it is a reflection in literature of a spirit that is just as much felt to-day in our broadly national life. Americans have at last, we think, really learned to stand upon their own feet and to accept their own standards as the best for them. The movement away from foreign influence has been a steady but a continuous one for many years, and while, perhaps, it has been hastened by the thrill of national sentiment which stirred the American people throughout the brief period of our war with Spain, the same result was bound to come ere long. Nor do we think that it is in the reading public any more than in our authors that the change is now discernible. American writers until now have nearly always kept an eye on England and on English models in producing what they wrote, and the result was a self-consciousness and a lack of independence which were

fatal to originality. Now they have turned their backs resolutely upon everything extraneous, and at last they are able to see our own life as a whole and in its real significance and true properties. And to our mind we have made in this as yet only a mere beginning. The potentialities that exist in this gradually maturing intellectual independence are so momentous as to appeal with exceeding power to the imagination of all good Americans.

SOME RESULTS OF INTERNATIONAL COPYRIGHT UPON AMERICAN LITERATURE.

MR. RIPLEY HITCHCOCK, who enjoys the honor of being the discoverer of "David Harum" after six publishing houses had refused it, has just written an article recounting some of the great advantages which have already resulted to American authors and the American reading public since the adoption of the International Copyright Act in 1891. He shows that the effect of the new law in those nine years in encouraging the production of American rather than of foreign books has been little less than marvelous. He says (we quote from *The Independent*, December 14):

"A few years before the passage of the Platt-Edmunds act, a New York publisher testified before the Senate committee that 'the effect of absence of international copyright on the opportunities of American authors to get into print or stay in print is most dangerous. I have unused manuscripts in my safe, and have sent back manuscripts which ought to have been published. The market would not support them.' At the same hearing a Boston publisher said: 'For two years, tho I belong to a publishing house which issues nearly a million dollars' worth of books a year, I have refused to entertain the idea of publishing an American manuscript . . . simply from the fact that it is impossible to make the books of most American authors pay unless they first gain recognition through the columns of the magazines.' It is true that the position taken by the latter speaker was an extreme one, but the two opinions represent fairly the general attitude enforced upon publishers by the competition of piratical reprints. The first speaker, who found that in non-copyright days the market would not support American authors, has now had the largest individual success of his career, in all probability, from the publication of an American book.

"But before I touch upon the fact that it is the American, not foreign author, who has earned the widest popularity of late, it is logical to extract such information as may be afforded by general statistics, despite the danger of misleading inferences. From the very useful record kept by *The Publishers' Weekly*, we found that the number of books published in the United States each year from 1893 to 1898 was as follows:

	Total.	American Authors.		Total.	American Authors.
1893	4,538	3,396	1895	5,469	3,396
1894	4,665	3,300	1896	5,793	3,300
1895	4,609	3,313	1897	4,928	3,313
1896	5,234	3,371	1898	4,886	3,371
1897	4,474	3,371			

"This list includes new books, new editions, and books imported in sheets or bound for publication in this country. . . . From the year 1893 on, the classified lists show an increased proportion of American authors. In 1894, for example, in spite of the smaller total, the number of American books showed a slight gain, and the next year's increase remains nearly constant until 1898, when the preoccupation of war may be held largely accountable for many irregularities. In view of the output of war literature, little less appalling than war itself, this decrease in 1898 seems surprising, but many of the war books will doubtless be credited to 1899. In looking over these figures it is necessary to bear in mind that they are incomplete, despite the careful work done by the *The Publishers' Weekly*, for the reason that completeness is impossible."

These general figures, says Mr. Hitchcock, are of less significance than those which relate to the present demand for American books already published. The latter figures, he declares, are extraordinary, and prove that the past year has been "the

most remarkable in the history of the American publishing business." Mr. Hitchcock continues:

"That our latter state would be worse than our first was freely predicted by pessimists immediately after the passage of the copyright act, for it so happened that a few very popular English authors and a few meteoric new discoveries seemed almost immediately to occupy the field. Yet, in the year 1899 not a single foreign work of fiction has been published which has had in vulgar parlance a sensational success, while at the same time the year has been the most sensational in its successful fiction that the history of American publishing has known. The public demand for 'David Harum, A Story of American Life,' by the lamented Edward Noyes Westcott, has caused the printing of 350,000 copies up to the third week of November. Of 'Richard Carvel,' by Winston Churchill, it is announced that over 200,000 copies have been printed. 'When Knighthood Was in Flower,' by Edwin Caskeden, has long since passed the 100,000 mark, and 'Janice Meredith,' by Paul Leicester Ford, published only a few weeks since, has had a sale thus far of over 110,000. The exact figures in each case will be in excess of those given here by the time this article is printed, but they serve to illustrate the general results. Tabulated, they make a most impressive showing:

David Harum	390,000
Richard Carvel	245,000
When Knighthood Was in Flower	105,000
Janice Meredith	115,000
Mr. Dooley in Peace and in War	Probably over 100,000

"To this list may properly be added Mr. Thomas Nelson Page's 'Red Rock,' which continues its career as one of the 'best-selling' books into 1899, and if we go a little further back we find books by Miss Mary Johnson and Mr. Harding Davis with sales reckoned by the tens of thousands. These results and others realized by authors like Mrs. Riggs and Mrs. Burnett, without going further, are certainly full of significance. No copyrighted book by a foreign author has met with the sale of any of the books in our tabulated list. Before the days of copyright there were isolated successes like 'Ben Hur,' with its 650,000, and, in earlier years, 'Uncle Tom's Cabin,' with its measureless popularity, and books like 'The Wide, Wide World,' 'The Lamplighter,' 'Routledge,' and 'The Leavenworth Case,' but these are isolated cases, instances selected from a long term of years. Within the eight and a half years since the international copyright law went into operation there has been a reasonably constant increase in the number of American writers who have gained a place with the reading public, and the year now closing has brought a series of American successes which, taken collectively, have never been approached.

"Without protection from a multitude of cheap reprints of the most popular foreign authors, no author or publisher thoroughly conversant with the conditions of business will believe that any of the books which I have mentioned would have reached their present figures. If Kipling, Hope, or Caine were offered under the black flag at twenty-five cents side by side with honest editions of 'Richard Carvel' or 'Janice Meredith,' can any one doubt the effect upon the sales of the latter books? It would be a waste of time to press this point, but another phase of the subject should not be lost sight of, which is the effect of such success as a stimulus to other American writers. This may represent a dull and sordid view, but the fact remains that potential as well as professional writers, like men of other callings, are apt to be influenced by the prospects for reward, and the influence of the changed conditions has shown itself in a closer study of literary craftsmanship. We need not trouble ourselves in regard to genius. In spite of the traditions, genius usually makes itself felt. But as regards talent, the influence of the practical encouragement which present conditions admit of assuredly makes for better training and development and greater professional fitness on the part of our writers."

The "Star System" in the Magazines.—A glance at the literary programs of the leading American magazines for 1900 will reveal the fact that all of them have one leading feature, which they make prominent in their advertisements, and upon which they mainly rely as a means of attracting subscriptions. *The Bookman* (January) terms this the "mischievous

star system," and thinks it does not redound to the benefit of good literature. Following is the list of star magazine articles for this year, as given by *The Bookman*:

- "The Life of Oliver Cromwell," by John Morley, in *The Century*.
- "Eleanor," a novel, by Mrs. Humphry Ward, in *Harper's*.
- "Tommy and Grizel," a novel, by J. M. Barrie, in *Scribner's*.
- "The Life of the Master," by the Rev. John Watson, in *McClure's*.
- "The Great Battles of the World," by Stephen Crane, in *Lippincott's*.
- "The Autobiography of W. J. Stillman," in *The Atlantic*.
- "William Shakespeare, Poet, Dramatist, and Man," by Hamilton W. Mabie, in *The Outlook*.
- "The Theater and Its People," by Franklin Fyles, in *The Ladies' Home Journal*.
- "America's Literary Diplomats, from Franklin to Hay," in *The Bookbuyer*.
- "Essays on the Literature of the Nineteenth Century," in *The Critic*.

NEW LITERARY MOVEMENTS IN IRELAND.

FOR the past few centuries the people of Ireland have been too busy striving to keep alive some few cherished political ideals and too weighted down with poverty and disaster to develop a complex literary expression; but since 1891 there have been many signs that the old Keltic imagination is not dead. Young literary Ireland even dreams of a return of the former glories, of the time when Ireland was the lamp of Europe, shining in a world of medieval twilight. This dream is indulged apparently by Mr. W. B. Yeats, the best-known representative of the new Irish school of letters. The fall of Parnell, he says, marked the beginning of a host of new movements in which the national life has been seeking to find utterance. He writes (in *The North American Review*, December):

"More books about Irish subjects have been published in these last eight years than in the thirty years that went before them, and these books have the care for scholarship and the precision of speech which had been notoriously lacking in books on Irish subjects. An appeal to the will, a habit of thought which measures all beliefs by their intensity, is content with a strenuous rhetoric; but an appeal to the intellect needs an always more perfect knowledge, an always more malleable speech. The new writers and the organizations they work through—for organizations of various kinds take the place held by the critical press in other countries—have awakened Irish affections among many from whom the old rhetoric could never have got a hearing, but they have been decried as weakening the national faith by lovers of the old rhetoric. I have seen an obscure Irish member of Parliament rise at one of those monthly meetings of the Irish Literary Society, when the members of the society read their poems to one another, and ask leave to read a poem. He did not belong to the society, but leave was given him, and he read a poem in the old manner, blaming the new critics and praising the old poems which had made him patriotic and filled his imagination with the images of the martyrs, and, as he numbered over their names, Wolfe Tone, Emmet, Owen Roe, Sarsfield, his voice shook and many were angry with the new critics.

"The organizations that are making this change are the Irish Literary Society in London, the National Literary Society in Dublin, which has just founded the Irish Literary Theater, and the Feis Ceoil committee in Dublin, at whose annual series of concerts of Irish music, singers and pipers from all parts of Ireland compete; and the Gaelic League, which has worked for the revival of the Gaelic language with such success that it has sold fifty thousand of its Gaelic text-books in a year. All these organizations have been founded since the fall of Parnell; and all are busy in preserving, or in molding anew, and without any thought of the politics of the hour, some utterance of the national life, and in opposing the vulgar books and the music-hall songs that keep pouring in from England."

Old Irish peasant verse, says Mr. Yeats, has, like all primitive poetry, a passion and a sense of beauty that tremble on the

verge of incoherence, and he gives this bit—the lament of a peasant lover—as an example.

My love, oh, she is my love,
The woman who is most for destroying me.
Dearer is she for making me ill than the woman who would be for making me well.

She is my treasure, oh, she is my treasure,
The woman of the gray eyes,
A woman who would not lay a hand under my head.

She is my love, oh, she is my love,
The woman who left no strength in me;
A woman who would not breathe a sigh after me,
A woman who would not raise a stone at my tomb.

She is my secret love, oh, she is my secret love,
A woman who tells me nothing,
A woman who does not remember me to be out.

She is my choice, oh, she is my choice,
The woman who would not look back at me,
The woman who would not make peace with me.

She is my desire, oh, she is my desire:
A woman dearest to me under the sun,
A woman who would not pay me heed if I were to sit by her side.
It is she ruined my heart and left a sigh forever in me.

It is to this ancient spirit of Keltic imagination that Irish literature, in Mr. Yeats's opinion, is now returning, and he thinks Ireland's literary mission to the nations may be a great and important one. He says:

"Alone among nations, Ireland has in her written Gaelic literature, in her old love tales and battle tales, the forms in which the imagination of Europe uttered itself before Greece shaped the tumult of legend into her music of the arts; and she can discover, from the beliefs and emotions of her common people, the habit of mind that created the religion of the muses. The legends of other European countries are less numerous, and not so full of the energies from which the arts and our understanding of their sanctity arose, and the best of them have already been shaped into plays and poems. The Celt, as it seems, created romance, when his stories of Arthur and of the Grail became for a time almost the only inspiration of European literature, and it would not be wonderful if he should remold romance after its most ancient image, now that he is recovering his ancient possessions."

HOW AND WHY MR. MARKHAM WROTE "THE MAN WITH THE HOE."

THE teaching of Mr. Markham's famous poem "The Man with the Hoe" has been so often misunderstood that it is interesting to see what the author himself has to say as to his aim in writing it. In *The Saturday Evening Post* (Philadelphia, December 16), he tells us how he came to write the poem, and what was his real viewpoint. After alluding to his own early life, which was passed amid the hard conditions of a frontier stock-farm, he says:

"I have mentioned a few of the external forces that colored my thought. I may say, also, that for years my reading had drifted toward the philosophy evident in the poem. From boyhood till this hour I have wondered over the hoary problem that has been passed on to us from Job—why should some be ground and broken? Why should so many go down under the wheels of the world to hopeless ruin as far as human eyes can see? Is it necessary that many should perish that we who are the few may have life and light, may have food and shelter? And, withal, I had read in Isaiah of the industrial wrongs of old—in Isaiah, that voice of Vesuvius, shaking all around the horizon. Then, too, I knew how the world's injustice had forced from Christ's strong heart that cry against the mouths that devour widows' houses; and that other cry against the feet that walk over graves. . . .

"I did not write it as a protest against labor, but as my soul's deep word against the degradation of labor, the oppression of man by man. Of course I believe in labor; and I have little respect for an idler, be he rich or poor. It is against both the personal and the public good for any man to be at the same time a consumer and a non-producer.

"I believe in labor; I believe in its humanizing and regenerating power. Indeed, I believe that a man's craft furnishes the chief basis of his redemption. While a man is making a house, he is helping to make himself. While he chisels the block of marble, he is invisibly shaping his own soul. And it does not matter much what a man does—whether he builds a poem or hoes a field of corn. The thing of chief importance is the spirit in which he does his work. It must be done thoroughly and in the spirit of loving service. Work of this order is a perpetual prayer. Work of this sort is sacred, however lowly—sacred tho it be the sweeping of a gutter or the carrying of a hod.

"The spirit of use, of loving service, sends a gleam of the ideal into every labor. And man needs the ideal more even than he needs bread. The ideal is the bread of the soul.

"But while all true work is beautiful and holy, it is also a fact that excesses are evils—a fact that overwork and underpaid work tend to break down instead of building up. Work is good for a child, but I can put such heavy burdens upon him as to deform his body and stunt his mind. Dickens gave us this Hoe-boy type in Smike, the pathetic youth in 'Nicholas Nickleby.' "

Altho the poem has been published only ten months, the commendations and criticisms already elicited by it would fill several volumes. One of the most notable recent criticisms is from the pen of Mr. E. P. Powell, author of "Our Heredity from God," in *The Coming Age* (November). "Mr. Markham shows us the workman of civilization, not going up from the animal, but going down from what God made him," says the writer. "Such an interpretation of man and labor, especially of agricultural labor, at this time, puts the poem in alinement with that pessimism and explosive arraignment of social order in which sentimentalism strikes hand with brute force." Mr. Powell suggests an "amendment" to Mr. Markham's interpretation of Millet's peasant. It is in part as follows:

Lifted by toil of centuries, he leans
Upon his hoe, and gazes on the heavens;
The glorious light of ages on his face,
Who made him rise above the earth and fate,
A man who grieves, but conquers grief with hope?
Who loosed his tongue to speak articulate?
Whose was the hand that fronted up his brow?
Who kindled truth's red torch within his brain?

Behold the man that God doth make; and give
To have dominion over sea and land!
To trace the stars, and search the earth for power;
To make the seasons fertile to his will!
This is the dream He dreamed who shaped the sun,
And painted blue the firmament with light,
Through all the stretch of heaven, to its last throne,
There is no shape more glorious than his;
More eloquent of hate for sensual greed;
More 'laminated for the future's high demand.

What gulfs between him and the anthropoid;
Master of ax and plow! Behold for him
Shall yet speak Plato! of his loins the Christ!
Unless for him, the dawn would rift in vain;
The roses redden into thought,—and the hills
Would hold their poems inarticulate.
Here is the upward looker! Slowly rising up,—
Yet master of the earth, he turns the globe,
And reaps rich harvest where the beast would starve.

SOME FAULTS OF CONTEMPORARY JOURNALISM.

MR. JOHN JAY CHAPMAN, himself a journalist as well as a distinguished critic, believes that the influence which modern journalism is exercising, not only over life and morals but over literature, is anything but beneficent. It is the great bazar of modern art and letters, he remarks, but on its counters are to be found little else besides the mediocre, the hypocritical, the cheap, and the vulgar. In *The Critic* (January) he says:

"The press fills the consciousness of the people. A modern community breathes through its press. Journalism, to be sure, is a region of letters, where all the factors for truth are at a special and peculiar discount. Its attention is given to near and ugly things, to mean quarrels, business interests, and special

ends. Every country shows up badly here. The hypocrisy of the press is the worst thing in England. It is the worst exhibition of England's worst fault. The press of France gives you France at her weakest. The press of America gives you America at her cheapest. Perhaps the study of journalism in any country would illustrate the peculiar vices of that country; and it is fair to remember this in examining our own press. But examine we must, for it is important.

"The subject includes more than the daily newspapers. Those ephemeral sheets that flutter from the table into the waste-paper basket, which are something more than mere newspapers and less than magazines, and the magazines themselves which are more than budgets of gossip and less than books, make up a perpetual rain of paper and ink. Thousands of people are engaged in writing them, and millions in reading them. This whole species of literature is typical of the age; let us see how it is conducted.

"A journal is a meeting-place between the forces of intellect and of commerce. The men who become editors always bear some relation to the intellectual interests of the country. They make money, but they make it by understanding the minds of the people who are not taking money but thought from the exchanges that the editors set up. A magazine or a newspaper is a shop. Each is an experiment and represents a new focus, a new ratio between commerce and intellect. Even trade journals have columns devoted to general information and jokes. The one thing a journal must have in order to be a journal is circulation. It must be carried into people's houses, and this is brought about by an impulse in the buyer. The buyer has many opinions and modes of thought which he does not draw from the journal, and he is always ready to drop a journal that offends him. An editor is thus constantly forced to choose between affronting his public and placating his public. Now whatever arguments may be given for his taking one course or the other, it remains clear that in so far as an editor is not publishing what he himself thinks of interest for its own sake he is encouraging in the public something else besides intellect. He is subserving financial, political, or religious bias, or, it may be, popular whim. He is, to this extent at least, the custodian and protector of prejudice."

Since this enormous American reading public is made up of people of common-school education, closely resembling one another in their mental traits and prejudices, it is natural, says Mr. Chapman, that the science of journalism—which is dominated by purely commercial ideals, and whose officers are just as truly tradesmen as are the people in the shops—should have gradually come to mean the ability to tickle mediocre fancy and to cater to mediocre prejudice.

"The great investments in the good-will of millions are nursed by editors who live by their talents and who in another age would have been intellectual men. The highest type of editor now extant in America will as frankly regret his own obligation to cater to mediocrity as the business man will regret his obliga-

—*Punch.*

tion to pay blackmail, or as the citizen will regret his obligation to vote for one of the parties. 'There is nothing else to do. I am dealing with the money of others. There are not enough intelligent people to count.' He serves the times. The influ-

ence thus exerted by the public (through the editor) upon the writer tends to modify the writer and make him resemble the public. It is a spiritual pressure exerted by the majority in favor of conformity. This exists in all countries, but is peculiarly severe in countries and ages where the majority is made up of individuals very similar to each other. The tyranny of a uniform population always makes itself felt.

"If any man doubts the hide-bound character of our journals to-day let him try this experiment. Let him write down what he thinks upon any matter, write a story of any length, a poem, a prayer, a speech. Let him assume as he writes it that it can not be published, and let him satisfy his individual taste in the subject, size, mood, and tenor of the whole composition. Then let him begin his peregrinations to find in which one of the ten thousand journals of America there is a place for his ideas as they stand. We have more journals than any other country. The whole field of ideas has been covered, every vehicle of opinion has its policy, its methods, its precedents. A hundred will receive him if he shaves this, pads that, cuts it in half; but not one of them will trust him as he stands. 'Good, but eccentric.' 'Good, but too long.' 'Good, but new.'"

Every stroke of the editor's blue pencil is devitalizing literature by erasing personality, says Mr. Chapman; and it is done in the money interests of a syndicate. Its debasing effect upon character is just as great, nevertheless, as tho it were done at the command of the German Emperor. Mr. Chapman cites the case of the reporter who writes up a public meeting, but colors it with the creed of his journal.

"Can he do this acceptably without abjuring his own senses? He is competing with men whose every energy is bent on seeing the occasion as the newspaper wishes it seen. Consider the immense difficulty of telling the truth on the witness-stand, and judge whether good reporting is easy. The newspaper trade as now conducted is prostitution. It mows down the boys as they come from the colleges. It defaces the very desire for truth, and leaves them without a principle to set a clock by. They grow to disbelieve in the reality of ideas. But these are our future literati, our poets and essayists, our historians and publicists.

"The experts who sit in the offices of the journals of the country have so long used their minds as commercial instruments that it never occurs to them to publish or not publish anything according to their personal views. They do not know that every time they subserve prejudice they are ruining intellect. If there were an editor who had any suspicion of the way the world is put together he would respect talent as he respects honor. It would be impossible for him to make his living by this traffic. If he knew what he was doing he would prefer penury.

"These men, then, have not the least idea of the function they fulfil. No more has the agent of the insurance company who corrupts a legislator. The difference in degree between the two iniquities is enormous, because one belongs to that region in the scale of morality which is completely understood, and the other does not. We do not excuse the insurance agent; we will not allow him to plead ignorance. He commits a penal offense. We will not allow selfishness to trade upon selfishness and steal from the public in this form. But what law can protect the public interest in the higher faculties? What statute can enforce artistic truth?

"We actually forbid a man by statute to sell his vote, because a vote is understood to be an opinion, a thing dependent on rational and moral considerations. You can not buy or sell it without turning it into something else. The exercise of that infinitesimal fraction of public power represented by one man's vote is hedged about with penalties; because the logic of practical government has forced us to see its importance. But the harm done to a community by the sale of a vote does not follow by virtue of the statute, but by virtue of a law of influence of which the statute is the recognition. The same law governs the sale of any opinion, whether it be conveyed in a book review or in a political speech, in a picture of life and manners, a poem, a novel, or an etching. There is no department of life in which you can lie for private gain without doing harm. The grosser forms of it give us the key to the subtler ones, and the jail becomes the symbol of that condition into which the violation of truth will shut any mind."

SCIENCE AND INVENTION.

WIRELESS TELEGRAPHY'S PROGRESS.

THE sensational dailies are not saying so much about wireless telegraphy as they were in the days of the international yacht races, but a glance at the electrical journals shows that scientific interest in it and its applications—actual and possible—is unabated. Nearly a column of editorial notes is devoted by *The Electrical World and Engineer* to an attempt to explain the rise and progress of an electrical wave, such as that which bears the wireless message from point to point. It says:

"Many seem to find at first attempt a difficulty in picturing to themselves the genesis of a wireless wave, that spreads into space and acknowledges neither metes nor bounds. . . . The fundamental phenomena involved in the production of an unwired wave are delightfully simple, altho the precise detail of the action at each point and instant is still fascinatingly difficult.

"Any electric or magnetic disturbance whatsoever, in any place, save a perfectly conducting envelope, like a sealed can at absolute zero, generates an electromagnetic wave that travels off in all directions with that velocity which is so neatly and aptly designated by physicists as 'c.' This is true whether we wave an electrified comb, waggle a permanent magnet, or excite a transformer into multitudinous magnetic oscillations. The only question of importance is in the energy of the radiated disturbance. That depends upon the mechanism. We have to wave a pocket dictionary very violently in the air before we recognize a sound emitted by the moving book. Less active movement of a walking-stick will generate sufficient amplitude of disturbance in the air to make the movement audible, and, as we all know, a jerk from the wrist will make a whiplash generate so violent a local disturbance of the air as shall make itself recognized in a loud crack. But there was disturbance, and there was therefore sound, in each of the three cases. So, there can be no doubt that an excited transformer sends say 60 waves per second into free space each about 3,000 miles long, or more than long enough to span the Atlantic. The local intensity, however, is so feeble that it is not likely that coherers would be affected at any distance from the apparatus. If they were, central stations would have to reckon invisible electromagnetic radiation as a noticeable waste of coal.

"A suddenly demagnetized iron core in an induction coil can send out a disturbance of sufficient amplitude to affect coherers at a short distance, but what is wanted is the whip-crack of a much more sudden disturbance. Fortunately, a discharging electric condenser can produce oscillations so swift and sudden, in the neighborhood of the discharging circuit, that a powerful wave is emitted. A Hertz oscillator while discharging shakes the ether in its neighborhood so violently that during the very brief interval of its discharge it may be working at the rate of many horses, *i.e.*, many kilowatts. A sparkless oscillation from a high-tension source into or out of a condenser may also produce the impulsive shock upon the ether; but the quickest currents or electric motions that we can yet produce are those due to the natural discharge of a highly charged condenser, and this is always accompanied by disruption and a spark."

As regards new applications of the system, *Electricity* gives the following item of news:

"It is reported that the Ann Arbor Railroad will put wireless telegraphy to a practical test by introducing it in connection with their car ferry business across Lake Michigan. The contract with the Marconi representatives has been closed, and the system will be established at once. The station will be at Frankfort and at a point near Menominee, Mich. The space to be covered is about eighty-three miles. An attempt will be made by the Ann Arbor road to keep this ferry open all winter. If wireless telegraphy fails, a cable will be laid across the lake next year. Representatives of the Marconi system express confidence that they will be able to give satisfactory service."

As to new apparatus, the following, from the same paper, is of interest:

"Researches by Prof. Reginald A. Fessenden and his assistant, Professor Kintner, in the electrical laboratory of the Western

University of Pennsylvania have resulted in the production of a receiver for wireless telegraphy, which it is claimed is two thousand times more sensitive than the coherer of the Marconi system. In speaking of the discovery Professor Fessenden is reported as saying: 'Altho we have improved the receiver so that it is two thousand times as sensitive as the original one, we realize that we have not yet begun to see the limit. Marconi, in his brilliant experiments, has demonstrated that messages can be sent for ninety miles. As our receiver is so many times as sensitive, it is clear that messages can be sent by our method farther, tho just what the limit is I would not like to say.' "

In contrast to all this, a note of depreciation is sounded by Prof. Elihu Thomson, in a recent lecture in Lynn, Mass. Professor Thomson asserted that while wireless telegraphy is a very beautiful system and may be of great practical use, there are many objections to its wide adoption and many difficulties in the way of its perfection. He added:

"Any man by setting up a receiving-wire could collect the message, and in the case of war the enemy could either read the messages sent, or by setting up another instrument could send confusing messages. Salt water would stop the waves, and over a certain distance the curvature of the earth would probably stop them. The waves are so coarse that they would get around most obstacles. Wireless telegraphy will fill a certain gap. For lighthouses it will be invaluable. A certain number could be flashed out, and any vessel going by, no matter what the weather conditions were, could read the signal by simply running up a receiving-wire to its mast. Vessels at sea could find out each other's positions, and in time of war this would be of great service, provided always that there was no enemy around."

This is a fair example of the attitude of the more skeptical scientific men toward the new system; and, as even these admit its usefulness under certain conditions, it may be concluded that wireless telegraphy, even if it does not revolutionize communication, has "come to stay."

A LONG-DISTANCE MICROSCOPE.

THE microscope, as usually constructed, is intended for use at very short range; but there is nothing in the nature of the instrument to prevent its being made in such manner that the object observed may be at a considerable distance. This would in most cases be a disadvantage rather than the opposite; but an ingenious Frenchman has discovered that in the study of live insects and their habits a long-distance microscope is a great help to the entomologist. He has accordingly devised what he calls a "telemicroscope," or long-distance microscope, which is illustrated and described in an article in *Cosmos* (Paris, December 16). The writer does not give his name nor does he reveal that of the inventor of the

THE TELEMICROSCOPE.

new instrument. Possibly they are one and the same. The article begins with a few paragraphs on the classification of optical instruments. Of the two classes of instruments—telescopes and microscopes—designed to aid the human eye, the former attain their object, we are reminded, by means of enlargement through the use of lenses or mirrors. In the reflecting telescope mirrors are used; in the different refrac-

ting telescopes, lenses. In the latter instruments the enlargement being theoretically the greater as the objective has less curvature, the constructors have endeavored to increase the focal distance of the object-glass more and more. The great telescope of the forthcoming Exposition will have a focal distance of 60 meters [197 feet], surpassing in this respect all preceding instruments. The writer continues:

"A second class of instruments has for its aim the observation of bodies of small dimensions; this class includes simple and compound microscopes, the solar microscope, and the photo-electric microscope.

"As the enlargement in microscopes depends on the converging power of the lens or of the combination of lenses, constructors have endeavored to obtain more and more convergent lenses, and as the convergence is dependent on the diminution of the focal distance, the object-glass must be brought nearer and nearer to the objects observed. On the one hand, therefore, we have a tendency to observe objects that are farther away; on the other, to observe objects that are as close as possible to the instrument.

"It can not be denied that it would be advantageous to obtain a reasonably great enlargement at a medium distance. For entomologic studies in particular, with a lens that magnifies scarcely two or three times at a distance of 1 centimeter [$\frac{1}{2}$ inch], or with the compound microscope on which we are obliged to rely if we wish to get a greater magnifying power, it is impossible to study the habits of insects, the majority of their actions, or the phenomena of their existence. An instrument that should enable us to observe these tiny creatures without alarming them, doing them violence, forcing them to leave their accustomed haunts, or even depriving them of life, would certainly give valuable aid to science and would also be a source of new delights, as varied as they would be delicious and elevated."

Such an instrument as this, the writer goes on to say, is already in existence. Its magnifying power is more than 12 diameters at a distance of 10 inches. The power may even be increased by lengthening the tubes or modifying the lenses of the objective; but the magnification is sufficient, and by increasing it we should gain nothing. To quote again:

objective formed of two achromatic lenses. These can be separated or brought nearer together by sliding the tubes. . . . If the distance is less than the focal distance of greatest convergence they act like a single lens. A good ratio for their focal distances is 25 to 18 centimeters [10 to 7 inches]. That of greatest convergence, placed on the inside, condenses the beam of light, which it reverses and throws upon the eyepiece. This is the ordinary Dollond four-glass eyepiece. The eyeglass is as convergent as clearness will admit, for convergence here increases both the magnification and the extent of the field of view.

"Not only is the telemicroscope a microscope, properly speaking, but, as may be seen, it is also a valuable field-glass, because its use requires only a very slight adjustment of the tubes, which makes it more convenient than strong opera-glasses. It also surpasses these greatly in power, in the extent of its field of view, and in clearness."—*Translation made for THE LITERARY DIGEST.*

EASTERN AND WESTERN TYPES OF COLLEGE GIRLS.

EASTERN college girls have heads built on the "cutter" plan, while those from the West have skulls of "schooner" build. This is the nautical and rather mystifying language in which Dr. Jay W. Seaver, of the Yale gymnasium, states the results of some recent anthropometrical measurements. In his paper, which was read before the anthropological section of the American Association, at the recent meeting of allied scientific societies at New Haven, Dr. Seaver advances the theory that there are three distinct American types as deduced from physical measurements. Girls alone are discussed in the paper, because there are yet no measurements from men's colleges that can be used for the calculation of divers types. In a report of Dr. Seaver's paper *The Sun* (New York, December 28) says:

"His comparison of the records of the women students at these colleges was made with the object of determining whether the differences in type, if any, conformed to the showing of Gould's types of men calculated on the measurements of men in service toward the close of the Civil War. Gould's charts showed a tendency to distinguish between the rural and urban types, those soldiers who came from the Northern and agricultural States like Vermont and Minnesota being considerably taller and of more swarthy build than the average of the States in which the urban population predominated.

"In regard to the women of the colleges considered, Dr. Seaver finds the reverse is true. He considers the Wellesley girl as representing a fairly localized section about Boston, and, therefore, as the urban type. The record shows her to be generally taller than the girls of Oberlin and Nebraska. The head of the Eastern type is the larger, but has also the greater antero-posterior diameter, giving the 'flat-head' effect, or what Dr. Seaver termed 'cutter-shaped' heads. The Western type of head is more rotund, having the greater lateral diameter, and therefore conforms to the description 'schooner-shaped.'

"Both of the Western types have larger girth of chest than the Boston girls, and the Nebraskan records are marked by marvelous lung capacity. What the relation may be between the size and shape of the head and the brain power of the subjects comparatively, Dr. Seaver said he had not yet been able to determine. The matter has been one to which much study has been given, but so far no satisfactory results have been obtained."

In attempting to account for these facts Dr. Seaver could only offer a theory, that the "schooner" heads were due to the predominance of Teuton blood in the West. This was denied by the Western professors who took part in the discussion. They insisted that the real Teuton head was to be found in Boston, and that the Western was what they preferred to call an Alpine type.

MOSQUITO, NATURAL SIZE, AND ALSO AS VIEWED WITH THE TELEMICROSCOPE.

"The telemicroscope is really only a small telescope having an

WHY PAPER ROTS.

MODERN paper has a bad reputation. There is a general belief that it is of poor quality and flimsy texture compared with that made half a century ago. Most of our paper is now manufactured from wood-pulp, rags being used now in making expensive writing-paper only—a fact due to the enormous activity in the production of printed matter. To furnish paper for our hundreds of thousands of popular novels and our Sunday newspapers, the world's supply of rags would go but a little way; our modern paper-mills chew up whole forests into pulp, and still the cry is "more!" Yet there are some precautions that should and can be taken by paper-manufacturers. These are indicated in a note on "The Deterioration of Paper" in *La Nature* (Paris, December 16), which we translate as follows:

"Altho we are able nowadays to make paper that looks well and can nevertheless be sold cheap, it must be confessed that these papers of cellulose, wood-pulp, etc., have the serious fault that they deteriorate with extraordinary rapidity. A London publisher believes that books printed to-day will be no longer legible thirty or forty years hence, while the papers of the Middle Ages are still in a perfect state of preservation. Since 1855 the German Imperial Bureau for the testing of materials has been investigating the causes of this rapid deterioration and the remedies that may be applied. The British Society for the Encouragement of the Arts, Industry, and Commerce has also a committee to investigate the subject, and it has just published a detailed report. It has examined only papers made in the usual manner and subjected to ordinary conditions of use; and it has classed the observed deteriorations in two categories—disaggregation and alteration of color.

"As to the first, we meet with it in all papers, as well in those made of rags as in those that contain a high percentage of wood-pulp. The deterioration is due partly to a chemical transformation in the fibers themselves, and partly to the action of illuminating-gas in the libraries where the books are kept. In all cases, the chemical transformations tend toward breaking up the structure of the paper. In paper made of rags, these transformations come from the existence of acid substances, either present in the paper at the time of manufacture, or resulting from later reactions, or coming from the products of combustion of gas. In pulp paper there is oxidation, with a basic or alkaline reaction."

The English committee came to some practical conclusions, of interest chiefly to paper-manufacturers, such, for instance, as that the sizing should contain not more than two per cent. of resin in the dry state; that papers ought to be finished up with some normal excess of alum, which gives them a slight acid reaction; that papers should contain a minimum of chlorates; and that, in a general way, a paper designed to last as long as possible should contain at least 70 per cent. of fiber—cotton, hemp, or linen.—*Translation made for THE LITERARY DIGEST.*

"Tired" Iron Recuperated by Electricity.—As is well known, iron or steel used in structures such as bridges, the frames of buildings, etc., "gets tired," in course of time; that is, it undergoes some sort of molecular alteration or crystallization that causes it to deteriorate. From this cause steel springs often lose their tension and razors their temper. In all cases the metal will recuperate after rest, just as the tired animal muscle will. It has been reported that an Italian engineer has discovered that an electric current may be used to hasten the process of recuperation. Says *Electricity* (December 13) which gives us this information:

"The story of the discovery, for the truth of which we can not vouch, runs as follows: The inventor was awaiting his turn in a barber shop in a town in Italy, and heard the barber abuse his favorite blade because it was doing poor work. The razor was simply 'tired.' The inventor immediately jumped to the conclu-

sion that the razor was suffering from crystallization due to a change in the relative position of the molecules, and that rest from vibration would restore it to its original condition. He purchased the razor, took it home, and began experimenting. First he tried by the vibration of tuning-forks to destroy crystallization in the metal, but in vain. Then he inserted the razor in a solenoid and passed an electric current through the latter. The blade was much improved, but had by no means been restored to its original condition. The experiment was about to be abandoned as a failure, when the inventor bethought him that an interrupted current might bring about the desired result. This he tried and was rewarded by success.

"Altho it must be acknowledged the above story sounds, to put it vulgarly, 'fishy,' it is claimed that this electrical method of restoring lost qualities in iron and steel has been tried on a 'tired' web member of a bridge with success."

THE PYRAMIDS AND AN EGYPTIAN DAM.

AN interesting engineering story in which a Nile dam, the Pyramids, the Khedive, and a French engineer figure prominently, is told in *The Irrigation Age*. According to a writer in that magazine there was completed in 1861, under French supervision, what is known as "the barrage"—a dam at the apex of the Nile delta, just above Cairo, which was intended to make the river navigable during low water. Says the writer:

"Tho it had cost thousands of lives, and taken a quarter of a century to construct, it proved but a limited process. So insecurely had it been planned that in 1863 the sluice-gates had to be hurriedly revised to prevent the whole structure from being swept away and washed in sections to the Mediterranean. It was reinforced by the French engineers in charge, and managed to do part of the work intended for it, but only a part. It was never strong enough to serve any great area in the delta until the English came into exclusive control in 1883. Then Sir Colin Moncrieff, the English diplomatic agent and actual ruler of Egypt, took the barrage in hand. Under his administration the dam was built up, and made as effective as its early faulty construction permitted. Gradually the growing area in the delta was increased until to-day something over a million acres are growing the finest cotton in the world. What was formerly a sullen unclaimed waste is now yielding \$30,000,000 annually in crops. It is related that the barrage, worthless as it is as an engineering work of permanent value, almost cost the world the existence of its most ancient and inspiring monuments—the great pyramids. The construction of the work was undertaken while Mehemet Ali, 'the great,' was Khedive of Egypt. After he had decided on the dam, he placed Mongel Bey, a French engineer, in charge.

"Where am I to get the stone for the barrage?" asked the Frenchman.

"There," said Mehemet Ali, pointing to the pyramids. "From those great useless heaps. Use them up, every block, if need be."

"Mehemet Ali, it is related, was not a gentleman to be trifled with. He was an autocrat of the kind who figure in the 'Arabian Nights.' The engineer was literally between the devil and the deep sea. As a European he knew what would happen to him if he destroyed the pyramids. The entire civilized world would call down maledictions on his head and his name would be ever infamous where he would have it great. On the other hand was Mehemet Ali, with all the Egyptian scorn and disregard for the great antiquities that abound in the oldest country on earth. Even to this day the Egyptians care nothing for these hoary monuments except as they serve to attract tourists and back-sheesh. To reason with Mehemet, therefore, on the score of sacrilegious vandalism was worse than useless. So Mongel Bey got his wits to work. He came to his master the next day and said that elaborate calculations had convinced him that it would cost more to transport the pyramid stones than it would to quarry the living rock out of the adjacent hills.

"Very well, then quarry it," said the practical Mehemet tersely, and the pyramids were saved to the world by the Frenchman's ingenious lie."

The Craving for Stimulants.—Some people, at least, who are given to drink, may be entitled to more consideration than they are likely to receive from those who are laboring in the cause of temperance. If the deductions of Dr. H. Campbell, as contained in *The Lancet* for October 21, are correct, a moderate use of stimulants may in some cases be a positive benefit and a protection against excess. Dr. Campbell's contentions are thus abstracted by *The Medical Age*: The blood, he says, normally contains stimulants, and these stimulants exercise a favoring influence on function, and conduce to, and may even be a necessary factor in the production of, the feeling of well-being, which explains the widespread liking in man or beast for stimulating substances. "This liking, amounting often to a craving, is the expression of a great physiological principle. When there is perfect health, when the blood is well provided with its proper stimulants and not overcharged with depressants, there is no craving for extraneous stimulants, as alcohol, tea, or coffee. But when it is defective in the one or surcharged with the other, then is felt the desire for the glass of wine or the cup of tea. In order to obviate this desire we should seek to keep the body at the highest level of health. The more perfect the health the more perfect will be the composition of the blood, both in respect to physiological stimulants and deleterious toxins. A blood properly constituted in these and other respects will exercise a gentle stimulant action on the nervous system and induce a condition of mild physiological intoxication which expresses itself in a feeling of well-being and happiness—a condition which can not be bettered."

Rain that Never Reaches the Ground.—The following account of a Saharan shower that dries up before it gets to the earth is furnished by M. Jean Massart, a Belgian botanist, in a recent article describing his travels in the great African desert. He writes (*Revue de l'Université de Bruxelles*):

"In the afternoon the sky becomes covered with clouds. At first these are only a multitude of white points, just perceptible, immovable in the azure. Each point increases regularly in size. They are soon tufts of cumulus, evenly distributed over the sky. Their bases are flat, as they float in the calm air; the successive condensations of vapor take place alone on the edges and on the swelling upper face. The white masses extend; they join their edges; they form a continuous covering that becomes more and more opaque. All at once the cloud breaks into rain; the sky is streaked with long vertical bands that descend from it. O happiness! The plants, reduced to pitiful gray stalks, may again become green; they may finally reap the reward of the obstinacy with which they have refused to die of thirst. . . . Alas! The shower, so greatly needed, never falls. The rain that we see streaking the sky never reaches the ground; the drops evaporate in the overheated air through which they have to pass. What a country of deception! When there is grass for the camels, it is uncatchable. The lake that mirrors the distant sky is but a phantom, a caprice of the sun; and, last and greatest disappointment of all, the rain, altho real, waters only the air."—*Translation made for THE LITERARY DIGEST.*

Pure Air in Bottles?—Professor Dewar has recently devised a new method of testing the contamination of air, which is thus described in *The Humanitarian*:

"A short time ago he exhibited before the Royal Institution two samples of liquid air in glass tubes; one was made from air which had been washed to purify it from dust, soot, carbonic acid, and other impurities. This when condensed was a pale blue liquid; the other sample was made by condensing the air of the lecture-room in which the audience was assembled, and was an opaque, blackish fluid, resembling soup in appearance. It would appear as if condensed samples of air might afford an easy means for comparing different kinds of contamination. *The American Architect* suggests that it would not be difficult to provide a novel but a highly efficient kind of ventilation in military hospitals and other places where the natural air supply is bad and the necessity for a better one very pressing. As the process would also cool and dry the air, it might serve an additional purpose in tropical countries. The paper goes on to state that it would not be 'wholly impracticable to ship to yellow-fever

hospitals in Havana supplies of New Hampshire air bottled, so to speak, on the spot, and delivered cool and fresh to the patients.' This can never be accomplished, however, until some means have been provided for transporting liquid air to considerable distances without enormous losses caused by its return to its former state."

A Centrifugal Railway.—A few months ago we printed an illustrated article describing a proposed centrifugal pleasure railway, to be so arranged that during part of each trip the occupants of the car would be riding heads downward. We quoted also some sarcastic comments on the scheme. But a railroad man, Mr. C. R. Riley, writes from Dublin, Ireland, to *Industries and Iron*, to say that he has actually seen such a road in operation. He says "I remember about forty years ago visiting the Zoological Gardens which then existed in Liverpool and seeing a railway of precisely this description in use. The gage was a narrow one—as well as I can remember, about 18 or 24 inches. The car would hold a single person, and was drawn up an incline to the top of a high tower by means of a windlass. It was then allowed to run down an incline on the opposite side, then round a vertical loop of large diameter, and then up a lower tower, then down an incline on the opposite side and round a large circle on the ground to the foot of the first tower ready for the windlass again. I do not think it could have paid, for I only remember seeing the man who was in charge of it have a ride, and after him one visitor."

A Telephone in Every House.—Speaking of the recent cuts in telephone rates in various parts of the country, and especially in southern New England, where in some towns "inward" telephone service may now be had for six dollars a year, "outward" service being charged for by the single message, the *Providence Journal* says: "The day is coming when practically every household will have a telephone, just as it has other modern facilities. This may seem a broad statement, but no one can read the figures of the last few years without seeing how general the use of the instrument is getting to be. In 1880, there were 60,373 telephones under rental in the United States. That was one for every 823 persons in the community. But at the close of last year the number had risen to 1,124,846, or an instrument for every 66 persons! At the same rate the next ten years will find the telephone as ordinary a household convenience as a furnace or illuminating gas; even more so than the latter, for in the smaller towns electricity is being introduced as an illuminant more extensively than the older light."

SCIENCE BREVITIES.

A FRENCH naturalist quoted by *Popular Science News* asserts that, "if the world should become birdless, man would not inhabit it after nine years' time, in spite of all the sprays and poisons that could be manufactured for the destruction of insects. The bugs and slugs would simply eat up all the orchards and crops in that time."

SOME interesting experiments on the distribution of magnetic induction along a long cylindrical iron rod are described by Dr. C. G. Lamb in *The Philosophical Magazine*. "When the rod is weakly magnetized, the mean positions of its poles are comparatively near the ends of the rod; with stronger magnetization the poles move farther from the ends; and with very strong magnetization the poles move more and more toward the ends." Dr. Lamb points out that this has important bearing upon the magnetic testing of iron.

IN answer to a correspondent who asks how to keep frost from window glass, *The Pharmaceutical Era* says: "The methods usually advised are the employment of double windows, or the coating of the glass with glycerin. It is said that a thin coat of glycerin applied to both sides of the glass will effectually prevent any moisture from forming thereon and will stay until it collects so much dust that it can not be seen through. It has also been recommended as particularly useful to locomotive engineers to prevent the accumulation of steam and frost on their windows during the cold weather. Another very efficient measure is said to be a small fan, run by electricity or other power, and so placed as to blow directly upon the glass."

SEVERAL Western newspapers during the past month have described the breaking up of a tornado at Hennessey, Okl., by the discharge of a cannon. This recalls to the editor of *The National Geographic Magazine* a "tornado-breaker" patented by W. S. Blunt, several years ago. "The principle of this machine," says the writer, "rested upon the theory that an explosive discharged into the midst of an approaching tornado would immediately dissipate the cloud. The Chief of the Weather Bureau emphatically states, however, that the discharge of the most powerful cannon would be utterly inappreciable in its effect upon a tornado cloud, and that it is impossible for such clouds to be dissipated by any explosive that man may invent."

THE RELIGIOUS WORLD.

CHRISTIAN DOGMA AND CHRISTIAN LIFE.

A TRUE solution of the religious problem of the present day is to be found in a proper adjustment of the relative values of dogma and life, says Prof. A. Sabatier, the eminent French scholar. Dogma must not only be reinterpreted in terms of our own age, but must also be made subordinate to spiritual life. A Christian who wishes to preserve unchanged the dogmatic forms of faith in this day must lead a double life. "As a modern man, he lives in the world of Newton, Laplace, and Darwin; as a traditional believer, not doubting the full verbal inspiration of his Bible, he must, when reading it, forget what he has learned and live again unconsciously in the world as it was before the days of Copernicus." There is no exception to this phenomenon so far as people of culture in any church are concerned, he says—tho of course the mere unthinking devotee is now as content as he was in the days of the Crusaders. Professor Sabatier continues (in *The Contemporary Review*, November):

"If any one points to the apparent unity which a powerful discipline maintains in the Roman Catholic Church, one must examine more closely what is hidden under these official appearances, and what troubles and interior discords that silence conceals. How many souls, while inwardly revolting, are silent in France, in Germany, in America! What things does one not hear in confidence when, now and then, some of these men allow one to read what passes within them! Who can tell the tearings asunder, the despair, the moral agony, which are hidden under the roof of a presbytery! Again let me say, we are not speaking here of the unity of government, but of the unity and of the interior peace of the conscience. Well! I fear not to affirm that this spiritual unity is less in Roman Catholicism than elsewhere, or, if you prefer to state it so, that under this system of compression the trouble of souls only diminishes in proportion as the life of the spirit itself diminishes."

The entire edifice of traditional religious conception, says M. Sabatier, is destined, if it is to be preserved at all, to be transformed from foundation to pinnacle, and, further, this transformation will be highly advantageous to the cause of true piety. He gives the following as one example of the gain from the new interpretation of Scripture:

"You can not fully identify the Father whom Christ reveals to us with the national Jehovah of Israel who orders such horrible exterminations and vengeance. The Jehovah anterior to the times of the prophets is not essentially different from the god Chemosh of Moab, whose commands (as they are revealed in the recently discovered inscription of King Mesa) are no less murderous and his jealousy no less implacable. But do you really regret him? Was not your conscience uneasy, were you not perplexed and scandalized in your old faith when you read in Genesis and Numbers, in the book of Joshua, in the biography of David, such violence and trickery attributed to the God whom you adored? You could not but ask yourself with pain if indeed it were necessary to attribute to God all for which the old historians of Israel make Him directly responsible? And you hazarded timid explanations, subtle allegorical contrivances, to lighten if not to get rid of this Biblical nightmare. Well! rejoice and be thrilled with joy. This nightmare is dissipated, like all the specters of the night, by the light of the dawning day. History wisely interrogated puts everything in its proper place. It teaches you to see in these books the documents of an ancient phase of the divine education of a people which can not remain as they were, and which have no more direct authority over the disciples of Christ than the customs of the Stone Age over the legislators of to-day. We are no longer the slaves of the letter, but the children of the spirit. Does not a more enlightened theology render us a signal service by obliging us to remember it?"

So also, he says, will it be with a reinterpretation of ecclesiastical dogmas—"the second prop of our piety." These, like the holy writings, are only an historical growth, the result of centuries of thought and controversy, and we are to distinguish in

them the spiritual kernel from the intellectual husk. "No theologian of our day," he says, "repeats and professes the dogmas of the great councils in the same sense they had for those who saw their birth or origin. Every one accommodates them more or less consciously to his own use, translates them into his language, takes or leaves portions as it pleases him; in a word, *re-thinks* them in his mind, and in *re-thinking* them, interprets and transforms them!" By following this course we are thus always, he says, going from the surface of outward symbols to the inner heart of religion. He sums up the result of his study in the following propositions (using the term "Christian Science" as synonymous with "Higher Criticism"):

"(1) Our piety is disquieted and troubled by the antagonism obscurely felt between the new truths and ancient beliefs. Christian Science can bring peace and dissipate our disquiet.

"(2) As regards Holy Scripture, the radical transformation of old dogmatic views as regards inspiration and the canon has the advantage of delivering our piety from the intolerable yoke of the letter, and rendering us more attentive and more strongly attached to the spirit. Instead of a code, we have a book of life and fire. The Bible is no longer itself the revelation of God, but it is, as it were, the muniment room where its documents are preserved.

"(3) So also Christian Science renders traditional dogmas really useful by renewing their interpretation.

"(4) Called ceaselessly in this way to distinguish everywhere between changing forms and secure foundation, between that which is essential and that which is but accessory, our piety necessarily gains in spirituality and morality; it is obliged to fall back on its principles, on the personal experience of its truth, on the actual and interior witness of the Holy Spirit, the source of all certainty and peace to the Christian's soul.

"(5) Once having arrived at the conviction of the relative value of dogmatic forms as regards Christianity, which is 'spirit and life,' Christians of different denominations will no longer feel separated by insurmountable barriers. Their brotherly communion will become less restrained and sweeter, the feeling of their oneness deeper, the reality of the great family of God on earth more real than ever. Christian Science is called to give peace to individual souls, and peace to the churches."

CONGRESS OF RELIGIOUS HISTORY AT THE PARIS EXPOSITION.

SOME of the leading professors of the University of Paris issue an appeal in behalf of the coming "Congress for the Study of the History of Religions" at the Paris Exposition, to all lovers of religious science—theologians, philologists, sociologists, and ethnographers. The president of the congress is M. Albert Réville, of the Collège de France, and among the members of the committee are representatives of the Roman Catholic and Protestant faculties of the French universities. Questions submitted to the congress must be of an historical, not of a polemical, character. From *The Outlook* (December 30) we quote the following account of the scope and character of the gathering:

"The congress will meet September 3-9, 1900, forming, with other cognate congresses, an uninterrupted series, beginning with psychology on August 17, continuing with prehistoric anthropology and folklore until September 16. As many scholars are interested in the matter of more than one of these congresses, they are thus enabled to take part in the sessions of several without unduly prolonging their stay at the Exposition. The opening and closing sessions will be held at the Palais des Congrès, at the Exposition itself, but the other meetings will be at the Sorbonne. Eight sections have been created. These are:

"Section I. *Religions of Non-Civilized Peoples*.—Pre-Columbian American civilizations, etc.

"Section II. *History of the Religions of the Far East* (China, Japan, Indo-China, Mongols, Finns).—Relation of religions with the state in China. Historic evolution of Buddhism in China, Korea, and Japan. Distribution of Pali Buddhism and Chinese Buddhism in Indo-China, etc.

"Section III. *History of the Religions of Egypt.*—Funeral rites of so-called Thinite epochs. The god Pthah of Memphis; relations with other gods, etc.

"Section IV. *History of the Religions called Semitic.*—1. Assyro-Chaldea, anterior Asia. 2. Judaism; Islamism. How to reconcile the belief in the eternity of the world among the Chaldeans with data on the creation of heaven, earth, gods, and stars. Documentary value of the Talmud and its annexes for the history of religious ideas and rites among the Jews. Influence exercised by conquered Persia on conquering Islamism—Shi-ism, etc.

"Section V. *History of the Religions of India and Iran.*—Should the liturgy of the Brahmanas and Sutras be considered, in its principal features, as anterior or posterior to the hymns of the Rig-Veda? etc.

"Section VI. *History of the Religions of Greece and Rome.*—The Homeric poems as sources of myths, legends, and cults. Diffusion of Oriental pagan cults in the western and northern provinces of the Roman empire, etc.

"Section VII. *Religions of Germans, Celts, Slavs.*—Do the Germanic divinities spring from the Indo-Germanic pantheon, or are they the development of nature-demons? etc.

"Section VIII. *History of Christianity.*—First Centuries: Can Essenism be considered one of the factors of original Christianity? etc. Middle Ages: The ancient sources (Greek, Latin, Arab, Jew, and Byzantine) drawn upon by the theologians of the West during the Middle Ages. Modern Times: Influence of the philosophy of Kant and Hegel on historical criticism applied to the origins of Christianity, etc."

CHRISTIAN MISSIONS OF THE NINETEENTH CENTURY.

FEW phenomena of the century just closing are more interesting than the marked renewal of the missionary spirit among the great religions of the world. Militant Mohammedanism during that period has been infused with new life, and is reaching out in Africa, Asia, and the South Pacific islands to

FIG. 1.

spread the gospel of Islam. The religion of Gautama Buddha, also, is returning to its ancient cradle in India, and is sending its missionaries forth to Japan, and even to Europe and America, full of faith that these new fields are ready for their plowing. But it is in the Christian missions that one finds the most striking evidence of missionary advance. The Rev. Harlan P. Beach, in *The Missionary Review* (January), gives a number of interesting facts relative to the present state of Christian missions as compared with their condition at the opening of the nineteenth century. We reproduce for comparison two maps relating to the religious and political conditions of the world at the present time. He says:

"A study and comparison of the accompanying map [Fig. 1] will reveal the vast missionary expansion of our century. Instead of occupying islands, or timorously standing on the strand of unknown or unexplored continents, the church has boldly knocked at the doors of all the great nations and has gained ad-

mittance. It is true that this entrance has been only partial; yet it is possible and dependent on the obedience and willingness of the Christian, rather than on the will of hostile governments.

"Another striking fact, made evident by our recent political maps [Fig. 2], is the prevalence everywhere of European powers, who are either in actual possession of non-Christian lands, or

FIG. 2.

else include them within their 'spheres of influence.' About three fifths of the world's area is subject to Christian nations, and with the exception of Russian advances in Asia, and unimportant French, Portuguese, and Italian spheres of influence there and in Africa, the non-Christian world is almost wholly under the protection or sovereignty of Protestant powers, a most significant fact in the missionary situation. Under their fostering care, steamers and launches are threading rivers formerly unknown, and railroads are carrying God's messengers to their fields in hours instead of the former laborious days or months. When at their posts, the flags of Christian consulates are their protecting egis. Civilization, a doubtful compound of good and evil, enters with the powers to help and hinder missionary effort. Warneck years ago pointed out that the missionary activity of Protestant nations was almost exactly proportionate to their commerce. . .

"Excepting a few societies, mission boards are now sending out a far higher grade of missionary than was available a hundred years ago. Especially is this the case where the Student Volunteer movement has become fully established in colleges and universities, as in America and Great Britain. Most of these volunteers go out after having scientifically studied the great fields and religions, as well as missionary methods and problems. Even Dr. Warneck places American missionaries in the foremost rank for theological preparedness.

"As to geographical distribution of these forces, they have gone forth to all the ends of the earth. Asia claims the most of them, China and India containing alone about a third of the entire missionary body to their seven

FIG. 3.—Relative Numerical Strength of the Religions of the World.

tenths of the world's non-Christian population. South America, in point of habitable area per missionary, is the neglected continent, while the islands of the West Indies and Oceanica, with the exception of some groups, have been most fully cultivated and most nearly Christianized.

"Medical missions have been among the notable developments

of this century, as also the large use of Christian womanhood, so that to-day women constitute the larger proportion of the Protestant force. Through the merciful and gracious ministrations of these two agencies, an influence almost unknown a century since has been gained over factors powerful in every stage of culture, the grateful recipients of bodily healing and the more naturally religious and hopeful women and children. In these and manifold other ways missionaries are touching unevangelized peoples, so that Brainerd and Schwartz, if raised from the dead and allowed to read the pages of Dr. Dennis's 'Christian Missions and Social Progress,' would be startled by the breadth of present missionary operations. This versatility has most expended itself on the Dark Continent, as may be seen, if one examines the schemes of the 285 Protestant societies laboring among all African peoples.

"Many months must elapse before returns for the final year of this missionary century can be received, yet some incomplete statistics will give a hint of the extent of the work. The annual issues of the late Dean Vahl's 'Missions among the Heathen' have contained on an average statistics of about 360 missionary societies, while a fuller list combined from his periodical and Dr. Dennis's manuscript would increase the number working in heathen and other missionary lands to over 500. Many of these are, however, auxiliary or societies in aid, and some of them are laboring in Protestant countries, as the United States, Germany, etc. The leading societies of Christendom, doing strictly foreign mission work, reported last year the following facts: Total missionary force, 14,210; total native force, 54,420—making the combined forces in the field 79,591; stations and out-stations, 25,070; communicants, 1,255,052; adherents, 3,372,991; schools, 20,228, with 944,430 scholars; income during the year, \$14,513,972."

According to recent estimates, the present population of the globe is about a billion and a half, and of these, according to M. de Flaix, 477,220,000 are Christians, while the remaining 952,650,000 are non-Christians. From *The Christian Herald* we reproduce some interesting diagrams (Figs. 3 and 4) showing graphically the relative numerical strength of the leading non-Christian religions and the Christian denominations, together with their geographical distribution.

FIG. 4.—Christian and Non-Christian Populations of Each Continent.

Is Nature Christian?—Prof. Frederick Palmer, of Andover, like St. Paul, takes a pronouncedly dualistic view of nature. To him the universe is like the Ahriman and Ormuzd of the Zoroastrians, and there is an eternal antagonism between the things of "the spirit" and of "nature." Writing in *The New World* (December) he says:

"We are too much in danger to-day of ignoring this view and losing its valuable contribution to life. Nature is that which is; the kingdom of God is that which ought to be; and between the two there is a great gulf fixed. Nature is not Christian. Think of her enormous waste—the empty spaces between the stars, the needless leagues of sea, her savage hurry to turn the fruitful field into a forest, her carelessness of precious lives, her regardless casting of her pearls before inappreciative swine. Think of her callous cruelty—the thousands of creatures left to gasp and die on the shore at every tide, or to fall a prey in the forests to the stronger, the lack of opportunity to which millions of human beings must submit, the tortures which await every one of us before we can get out of the world. There is no trace here of any dominance of an 'ought.' Simply the fact stares us in the

face; often the outrageous, savage, cruel fact; and that it is not what it ought to be is no concern of nature's."

Yet there is an element in nature which is divine, the writer thinks.

If we claim a larger meaning for our word, if nature is to us not only the sum but the soul of all things, then we must triumphantly declare that we recognize through it all a plan, a spiritual element, a presence of God, which in its highest manifestation is Christian. Or, to translate and glorify our conclusion, we shall then gladly contemplate the Incarnation of Christ as something perfectly natural."

A NEW DEFINITION OF PAPAL AUTHORITY.

EVER since 1870, when Italian unity, with the Eternal City as its political capital, became a fixed fact, attempts have been made by friends of church and state to reach some understanding by which the Vatican and the Quirinal could live side by side in peace; but such efforts have always been met by the firm and historic *non possumus* (we can not) of the Pope. Recently the two authorities have again come into collision, and the Government confiscated a whole edition of the *Osservatore Romano*, the official organ of the Vatican, the first time that this has been done for eleven years. The Government declared as the reason for this act that the paper contained an article that was treasonable, embodying a program of a federative union between the Italian states to take the place of the present political unity. The clerical *Universe* declares that the reason for the act was that the article reported the good feelings entertained by the various states for the Holy See, and it condemns the confiscation as "an abuse of power." The *Italie* regrets the step, because it considered the article in question as too visionary to be taken earnestly, and the influential *Beilage* of the Munich *Allgemeine Zeitung* also thinks that the political program of the Pope there published should not have been so widely advertised.

Of considerably wider and deeper interest to the world in general is that portion of the discussion in the *Osservatore* in which is laid down anew and in clearer words than ever what purports to be the position, principles, and claims of the Papal power. This portion contains the heading "La Sovranità civile del Papa" ("The Civil Authority of the Pope"), under which appears a series of clear-cut propositions. We quote the following:

"1. The Church is a completed organization established as such by God upon earth, the invisible head of which is Christ, the visible head of which is the Pope in Rome.

"2. The Church is a religious organization with the purpose of serving mankind in securing eternal salvation.

"3. But the Church is at the same time the kingdom of God here upon earth, and therefore can not be of this world, as it does not originate in the world.

"4. Since the kingdom of Jesus Christ comes from heaven, it has also been created for heaven, and has there both its origin and its consummation.

"5. The divine Founder, Jesus Christ, is entrusted with both the highest priesthood and the highest kingly power; He rules and governs the religio-spiritual body that constitutes His kingdom and is the kingdom of God.

"6. In the Church, therefore, the idea of a kingly power and of a priesthood is intimately and indissolubly connected, and as the Church upon earth has been established upon Peter, and Peter is upon earth its head in the place of Jesus Christ, its heavenly Head, thus too everything that is in Christ and in the Church can also be claimed for Peter.

"7. Accordingly, like Christ, Peter is both a priest and a king.

"8. The priesthood embraces the authority of the magistracy; the royal power includes the power to govern, as the Church is a real and perfect society.

"9. Every society of necessity has a fundamental law and a permanent government. Without the former, there would be no moral unity; and without the latter, no social unity.

"10. The Pope is accordingly the master [*maestro*] of the law

and the head of the government of the society and the kingdom of Jesus Christ, being invested and delegated for this purpose by Christ Himself.

"11. Accordingly both as a teacher and as the head of a government, the Pope has no one over him except Jesus Christ.

"12. The Pope can accordingly be dependent upon no one except the power and the sovereignty of Jesus Christ.

"13. Then the Pope has no equal upon earth nor any superior [*in tutto e daper tutto*].

"14. It is a logical conclusion that the Pope of a necessity in every particular in which the spiritual association of Jesus Christ comes into relation to human society must be the sovereign.

"15. The Pope is accordingly the sovereign in the church and also in the world, in the divine and in human society, over against men and nations, over against princes and potentates.

"16. As the church is universal, it includes each and every other society; as it is the kingdom of God, it covers also all other kingdoms; as the Pope is the sovereign of the church, *i.e.*, of the kingdom and the Society of Jesus Christ, he is also the sovereign in every other society and in every other kingdom.

"17. The sovereignty of Christ, which is the same as the sovereignty of God, is the basis of every other authority; every other authority is founded upon this, whether it be human or divine, civil or political, private or public authority.

"18. Therefore the religious and the spiritual sovereignty of the Pope includes also the civil and the political authority throughout the world."

Then follow certain propositions in which this position is fortified and strengthened. Proposition 22 reads: "The truth of this claim is vindicated (a) by faith; (b) by reasons; (c) by history. We quote as follows from this argument:

"1. No word of the Bible contradicts the doctrine of the authority of the Pope in all civil affairs.

"2. Jesus Christ has established His church as a free institution, and has given it the right to make use of all human means for its purposes in order to protect this freedom.

"3. The civil authority of the Pope is helpful to the church and harms nobody.

"4. The Pope can not be the subject of anybody; hence must be an absolute sovereign.

"5. The Pope was never the subject of any earthly prince or power.

"6. The Pope has at all times been sovereign, even in the period of the catacombs, when he had independent territory and an organized society, which he controlled as a real and effective sovereign.

"7. In the times when the Christians lived in the catacombs, marriages were celebrated, baptisms administered, and all the affairs of this world were administered under the auspices and direction of the Bishop of Rome.

"8. As soon as the Pope emerged from the catacombs, the Emperor left Rome. Thus the history shows that the Pope has never been the subject of any human authority."

This weighty and significant discussion closes with the following "Conclusions":

"1. Jesus Christ has made His church free.

"2. He has thereby made it sovereign.

"3. The church, and accordingly the Pope also, must be free and sovereign.

"4. The Pope is free and must be free, not only in religious and spiritual, but also in temporal and material respects.

"5. The Pope can accordingly, neither in spiritual nor in temporal respects, be a subject; he must be a sovereign and a ruler.

"6. When, therefore, the Pope declares that he must be absolutely free and a ruler in temporal respect also, it is contrary to the faith, contrary to reason, and contrary to history to maintain that this is not correct."

Naturally, these views of the official organs of the Pope have aroused great interest, especially among those nations that have a Concordat with the Vatican. The German minister, von Crailsheim, has discussed the subject in Parliament, and it is understood that he will ask for official interpretation of the sig-

nificance of this pronunciamento. Others are inclined to ignore the matter, saying as does the *Beilage* that in these latter days such principles can have no practical effect. — *Translations made for THE LITERARY DIGEST.*

THE CHURCHES IN 1899.

IT is often stated that religious organizations are losing ground of late years in America. The question is one not easily settled, for in every religious body there is an undetermined and an undeterminable number of people who for various reasons maintain a merely formal acquiescence in the forms and doctrines of the church. Statistics, therefore, do not tell the whole story, but they are an interesting contribution to the discussion. *The Independent* (undenom., January 4), in accordance with its annual custom, devotes much space to a summary of religious progress in the United States for the past year. Besides separate reports of a general nature from each of the leading religious bodies, *The Independent* publishes carefully prepared tables of statistics, based wherever practicable upon the official figures of the several churches for the year 1899. Following is the general summary showing the net gains and losses:

STATISTICS OF THE CHURCHES.

Denominations.	GENERAL SUMMARY 1899.			NET GAINS IN 1899.			
	Ministers.	Churches.	Members.	Ministers.	Churches.	Members.	Per cent. of gain.

* Decrease.

These figures, says *The Independent*, while in the main trustworthy, are in some instances misleading, and a number of apparent losses (as, for instance, the loss of over three thousand Roman Catholic churches) are due no doubt to the more complete statistical returns received from the churches in 1899.

The census of 1890 estimated the total population of the United States at 62,622,250, and the total of church-membership at 20,612,806. The estimates for the present year, according to *The Independent*, place the population at about 70,000,000, and the church-membership at 27,710,004. This indicates, therefore, a gain in population of about twenty per cent., and a religious gain of thirty-four per cent., so that the ratio of increase for the churches is apparently fourteen per cent. ahead of the increase in population.

With regard to other evidences of advancement, *The Independent* sums up as follows the gains in missionary activities in church organization, and in spiritual life:

"Judged by the amount given not merely for church expenses, missions—home, city, and foreign—but for the support of charities of various kinds, there has been a marked increase in the expression of the Christian feeling which manifests itself in deeds of kindness to the unfortunate. So far as works are any proof, and the Apostle James is good authority, not yet having been discredited by the higher criticism, faith is very much alive. The articles which we print this week from representative men in the different denominations give a very uniform testimony as to the energy with which their branches of the church are taking up the needs along the lines of practical Christian work. Missionary societies have been relieved of debt; wider plans for church activity have been adopted; there is an increasing demand for Christian literature; educational institutions under the direct influence or control of the religious bodies are receiving more of attention and support, while others, distinctively secular, are feeling the pressure of Christian influence; witness the Bible-schools established by the Disciples of Christ in connection with a number of State universities. With an increase of startling amount in the number of calls upon the gifts of Christian men, there has been certainly a parallel increase in the readiness with which these calls have been met.

"With this enlargement of activities there has been manifest also a truer fellowship and an unwillingness to let minor difficulties hamper cooperative action. Unfortunately denominational lines are still so sharply drawn that there are seven organizations at work in Puerto Rico, six in Cuba, and five in the Philippines, while divisive efforts continue to distract older mission-fields, both at home and abroad. These are, however, attracting more of comment, usually unfavorable, from men in hearty sympathy with their general purpose, if not with their particular methods, and public criticism is having effect. The various interdenominational organizations, as the Federation of the Churches in New York City, the Conference of Foreign Mission Boards, etc., are illustrating methods of practical cooperation with a success, even if imperfect, which is attracting much notice. An element in this movement of interest is the growing prominence of laymen, professional and business men, who give a considerable part of their time and thought, as well as money, to church enterprises. The movement for an increase in the lay membership of the Methodist General Conference, the positive influence of the lay element in the Protestant Episcopal Church, the election of a layman as president of the American Board, are all indications of a purpose to utilize for church work every possible means to make that work more effective at less cost.

"Does all this indicate a secularization of the church? Are men becoming so absorbed with work that they have no time or inclination for faith? In the perfection of organization, is there danger of loss of spiritual life? The answer to these questions appears, too, in the articles referred to, and while a danger in this direction is recognized, there seems to be no good ground for belief that it is serious. On the contrary, there are many indications of a deeper spiritual life. This has been noticeable in the devotional character of exercises in the great ecclesiastical gatherings of the year, in the influence of such men as Mr. Moody has gathered around him at Northfield, confined, however, not to those audiences, but extended all over the country. It has had its share in the allaying of ecclesiastical and theological bitterness. 'We be brethren.' Men prefer to work together rather than cast each other out, even tho they can not always agree, taking in this respect a lesson from that prince of Christian workers and most devout man who has just left us for another service. What all need is even more of Mr. Moody's wide charity."

FOREIGN TOPICS.

HOW ENGLAND TAKES HER REVERSES.

IF the press of Great Britain correctly reflects public opinion, as is to be presumed, the reverses suffered by the British troops in South Africa have only strengthened the determination of the British to continue the war. The *London Times* says:

"A German newspaper, writing in no kindly spirit, says that it is not the subjugation of the Boers that is in question, but the British dominion in South Africa. If there were those among ourselves who doubted this, even after the ultimatum of the Boers and the invasion of the Queen's dominions, who can contest the fact now? Is it to be imagined that this country will purchase a respite—for it would be no more—by suing for peace on humiliating terms, as we are advised to do by the *New York Herald* and the *Liberté* in Paris? . . . But, after all, it is to the temper of our own people that we look with unshaken and confident hope. It would be a wrong to our national honor and to the history of our race to doubt that the nation which built up the British empire in India, after it had been shaken, if not shattered, from base to summit by the Sepoy mutiny, is able and resolved to break the resistance of the Boers and to place our

EUROPE (to England): "You really must excuse us. We try not to laugh—but—ha, ha—we can't help it!"
—*Le Rire, Paris.*

supremacy in South Africa upon solid and enduring foundations."

The *London Daily Chronicle* says:

"Just now, as Mr. Asquith said in his admirable speech at Tyneside, we have simply to consider that 'our title to be a world power is on trial.' That is thundered at us in every telegram. Some ridiculous persons abroad are advising England to make peace. The only peace-maker in this business is the British army. It is said that the Boer leaders express their determination to fight to the death unless we disavow any intention to annex the republics. Well, they are brave men, and they will have every opportunity of making good their resolution. At the cost of whatever sacrifice, Boer dominion in the Transvaal must end. . . . It is the greatest compliment to Mr. Kruger that we have to put forth our full strength to conquer him; and it is not a matter for boasting that, while our resources will enable us to keep on pegging away, his resources must diminish every week. . . . We have to save South Africa, and, as Mr. Asquith says, a good deal more than South Africa. Lord Roberts and Lord Kitchener are the men to do it, and they will carry with them the full confidence of their Queen and their countrymen."

The *Telegraph* still declares that peace can be dictated only at Pretoria. "It is not a mere question of supremacy in South Africa now," remarks *Lloyd's Weekly*; "we are fighting for our very existence as a nation. What is needed is to preserve calmness, dignity, and composure at home; and to do everything possible to support, encourage, and assist our forces so heroically battling for victory in the field." The *Newcastle Chronicle*, a north-country paper of no little importance, says:

"Our people are neither disheartened nor dismayed. Misfor-

tune has only put them on their mettle. They can count the cost without flinching, for they know what failure means. It means more than the loss of South Africa. It means the loss of prestige, power, dominion. It means that Great Britain will be great no more—that we shall lose India, our colonies, our possessions and markets in all parts of the world—that we shall descend in the rank of states to the condition of Holland and Spain. Such a fate may overtake us some day, but that day is yet distant. Knowing what is before us in the event of surrender and submission to the Boers, we shall fight to be last man and the last ditch. Admiral Blake, asked to surrender Taunton, replied that he had not yet eaten his boots. When we have eaten our last boot, it will be time enough for our enemies to proclaim the collapse and downfall of the British empire."

AND THOSE OTHERS.

CHORUS OF SPECTATORS: "If J. B. wins, he must give us something; if he loses, we'll take it."
—*Ull, Berlin.*

Many British journals congratulate themselves on the fortitude of the people under reverses. The *Edinburgh Scotsman* says:

"The checks and losses of the last fortnight have only spurred the country and the Government to fresh and greater exertions to bring the war to a speedy and happy issue. It has evoked new and magnificent proofs of the patriotic fervor, the unanimous will, and the solidarity of sentiment that pervades the whole empire. Disappointment may well be borne with fortitude when the effect is to bring forth manifestations like these. Boer cunning and Boer tenacity can not long withstand a force which, in every previous period of our history, and when opposed by difficulties and dangers infinitely greater than those that at present face us, has always proved irresistible and an agent in increasing the strength of the nation and furthering the progress of the world."

On the other hand, there are occasional expressions couched in a minor strain. The *Saturday Review* says:

"The British are a patient and plucky people, but a continuance of shocks to the nervous system like we have been having would have seriously affected the health of many. What with the dark weather, the fall of values on the Stock Exchange, and the anxiety about the war, we have not approached Christmas more miserably within the memory of middle-aged men. We should all adopt the grand old motto of Oxford University, 'Sursum corda!'"

PAUL KRUGER (to the Lion): "Gilt!"
—*Novoye Vremya, St. Petersburg.*

we were looking for relief we receive only evil news, it is something at least to remember that we have passed through even darker days before, and have in the end emerged from them triumphantly. The one thing that affords some consolation is that nowhere is there a sign of faltering. . . . It can not be disguised that we are now fighting, not for the fair treatment and liberties of the Uitlanders alone, but for the very existence of the empire

as a whole. It will not be only in South Africa that we shall feel the blow, but in every part of our widespread dominions if we had to yield in any respect to a triumphant oligarchy at Pretoria."

The *Outlook* is filled with admiration for the way in which the British people stand up under the news. It says:

"The British empire has at last come to the heroic lines, the critical act, and right nobly is it bearing itself. We should be panic-stricken or without heart to continue the fight, and yet are we fearless and determined; we should wriggle from our obligations by means of the subtle outlets of diplomacy, and yet are we arming for the next bout; we are smitten hip and thigh, and yet is our front held firmly in the face of the expectant nations. This pride of race and thew has had its effect. Even now our foreign audience has felt the impulse to applaud."

The *Spectator*, however, has a suspicion that the situation is not unlikely to create in other countries merriment rather than admiration. Speaking of the immediate effect of Buller's repulse, The *Spectator* says:

"Now, tho from many points of view it was excellent to see the nation's difficulties met in a spirit at once so serious and so determined, we can not but agree with our correspondent, Mr. Yerburgh, in thinking that there has been a good deal of exaggeration and overemphasis abroad during the past week. As he suggests, if we use such heroic language over a series of checks in our wars with the Boers, which, if troublesome, are, after all, only on a very small scale, what should we do if we were obliged

How the cartoonist of *Moonshine* thought it would be—

And how it was!
—*Amsterdamer.*

to face a great European army in the field? If that were to happen, and if we were to have reverses by land and sea, we should indeed have a right to regard the situation as one of great seriousness. As it is, there is nothing yet, and there is not likely to be anything in the course of events in South Africa, which could possibly justify the feeling of dismay, coupled, we admit, with absolute determination, with which the news of the Tugela was received last Saturday. . . . There was no good cause for talking as if we had actually got our backs to the wall."

The *London Morning Post* also thinks that its British contemporaries are indulging in more superlatives than the situation warrants. It expresses itself in the main as follows:

We have encountered a nation in arms, a nation which may be brutal in its dealings at times, but which is brave and strong and united. We have discussed the terms of peace, and divided the booty as if we were already victorious. In private life we follow the rule that only he should brag who has put off his armor. It is a pity that we can not do so as a people. Probably we have forgotten this rule because, during these many years of prosperity, we "waxed fat and kicked." We have now had our day of humiliation; let us take it silently and without boasting, worthy of the empire our fathers have won for us.

The rôle of Cassandra has so far not been disputed with the editor of the *London Review of Reviews*. Mr. Stead has somber visions:

"Of course it will be said that our navy guarantees our shores against invasion; and that no doubt is true—with limitations.

But our military authorities, when pressing for the fortification of London and for an increase of the army, have always warned us that altho the navy can be relied upon to cut off any French army landed upon our shores from its base in France no fleet, no matter how powerful, can absolutely guard our coast from a sudden descent, and 100,000 French soldiers landed on our southern coast might be not exactly the visitors whom we would care to receive when the cream of our army is fighting a nightmare on the South African veldt."

Few papers on the continent of Europe think that England takes her reverses in the right spirit. The Amsterdam *Nieuws van den Dag* thinks there is as much grumbling as there could well be. As for rioting, that is not indulged in by Teuton nations. The paper thinks much of the despondency of the British is due to the advertisement General Buller got as the "star performer." It says further:

"The average Englishman wanted the war, but he is too businesslike to wish for a struggle with a nation which he thinks capable of offering effective resistance. That was altogether outside of the program. But the average Englishman also understands now that the prestige of the country is at stake. He did not think of this before, but now that he has begun to grumble, he finds plenty of cause. Neither the ministers nor the generals nor the newspapers escape censure."

The *Handelsblad* remarks that there is a good deal of nervousness in England, but believes that sharper lessons will be needed to convince the people that they overestimate their position as a warlike power. It says:

"The military expert of *The Westminster Gazette* pens the following crazy remark: 'If the Boers were better fighters than ourselves, there would be no disgrace in being beaten by them. But it is bitter to acknowledge yourself defeated when you *know* you are the better man.' Now where on earth did the man get that 'knowledge'? Surely, the experience of 1881 did not impart it?"

The Paris *Figaro* says:

"The English have not wavered, tho the blow was a rude one. . . . The fact is, they feel instinctively that they are not fighting merely for the conquest of the Transvaal. They need not examine the situation very closely to discover this. They are fighting for their prestige, for their empire, for their rule over the thousand and one different races which have been terrorized by the imagination of British power. The British people feel that this prestige, which was worth more than whole armies to them, will be lost if they show signs of discouragement."

FRANCE TO RUSSIA: "Now's your chance; his hands are full."
JOHN BULL: "Beg pardon, did either of you gentlemen speak?"
—*Newcastle Weekly Chronicle*.

The Berlin *Vossische Zeitung* says:

"England's position is very uncomfortable. She would like to withdraw now, but she can not. What would England's voice be worth in the council of nations if this enormous empire is unable to conquer the little Boer republics? The cabinet of St. James endeavors to wipe out, at least, the past defeats. How far it will succeed remains to be seen. Certain it is that England's prestige has suffered terribly, and already there is talk of her downfall. That is probably an exaggeration; but the English have learned a lesson. It will not do to talk of conquering the whole world if you have nothing but your money to do it with. . . . What will England do if another Fashoda question arises, and the power opposed to Great Britain receives with contempt the expressions of British statesmen? The cabinet of St. James will be very careful in future. It will not again adopt a tone which leaves to the other power only the choice between humiliation and war. For despite her wealth, despite her fleet, England is not able to go to war with a great power. That much has been proven, and even if the Boers should be vanquished—which is not at all certain—this impression will remain."

Comments to the same effect—namely, that Great Britain's prestige has been seriously impaired—are found in European journals of all kinds. "Wherever Great Britain has to encounter something more substantial than naked savages, her power is not much greater than in South Africa," says the *Pester Lloyd*, a paper generally well disposed to the island empire; and the Prague *Politik* remarks that "the whole evidently can not even hurt the hedgehog, let alone the bear!"—*Translations made for THE LITERARY DIGEST.*

GERMANY'S NAVAL POLICY.

GRAF VON BÜLOW, the Secretary for Foreign Affairs in the German cabinet, has made a declaration regarding the foreign policy of the German empire which has received world-wide attention. Introducing the subject of a large increase of the German fleet in the Reichstag, von Bülow described how in former centuries other nations divided the wealth of the world "while the Germans were busily engaged breaking each other's heads." Once more important changes are to be expected, and Germany should be prepared for them. He continued:

"Are we on the eve of another division of the earth? I do not believe it yet. But on no account can we permit another power to say to us: 'The world has already been parceled out.' We will not permit any power to tread on our toes or to shove us aside, either commercially or politically. We will no longer stand dreaming while others seek practical advantages. . . . I am glad to say that, all things considered, our claims are acknowledged. With France we have always come easily to an agreement when colonial questions had to be settled. Russia has met us in a friendly way, and we reciprocate. Our relations to the United States have been warmly commented on by the President quite recently, and we are willing to show equal consideration. As regards England, we are quite ready to live in peace and unity with her, provided the consideration shown is reciprocal. But the political situation is favorable to us now, and we must provide for the future. That this future may be peaceful, we all wish. That it will be peaceful, none of us can say with certainty. . . . At any rate, we must create a fleet strong enough to repel any attacks. I say 'repel attacks' advisedly, as the peaceful character of our people does not permit us to think of anything but defense, and I think we have earned the reputation of being moderate, tho firm. But if we neglect to provide a fleet now, we will never be able to make up for lost time. . . ."

"There are some groups of interested people, perhaps of nations, who find that they lived more at their ease when the German permitted them to treat him as the arrogant cavalier treats his tutor, despite our high standard of education and culture. But these days of political impotence and economical submissiveness are past, and shall not return. We have no intention to become again the menials of humanity. Yet we can not main-

tain our position unless we have a powerful army and a powerful fleet. . . . In the coming century we shall be either the anvil or the hammer."

The fleet desired would be a formidable one. It would have 40 heavy battle-ships, 12 first-class cruisers, and 24 second-class cruisers, besides the necessary gunboats, torpedo-boats, transports, etc. The cost would be in the neighborhood of \$250,000,000. Large as is this sum, it is yet doubtful that the Reichstag will dare to refuse it. The people believe in the necessity of a fleet as a protection against the supposed rapacity of Great Britain. Altho the demands for the complete annihilation of German power and prosperity, so common in Great Britain during the Samoan affair, lurk to-day only in provincial and colonial papers which have not yet learned that the times have changed, the effect lasts. Perhaps no article has ever been so widely and so persistently quoted as the one in *The Saturday Review*, in which the assertion was made that "if Germany disappeared from the map to-morrow, there is not an Englishman who would not be the richer on the day following. Having destroyed the power of Germany, England could afford to be generous and invite Russia and France to help themselves to German territory." The article closed with an adaptation of the elder Cato's saying, *Delenda est Germania!* The British press recognize that Germany is fearful of English aggression. The London *St. James's Gazette* nevertheless points out that measures in defense of Germany are not necessarily attacks upon Great Britain. It says:

"Since Prince Bismarck ceased to make those far-ranging declarations of policy which went to the root of so many matters and flashed with memorable phrases, no public man has delivered a more interesting speech than that in which Count von Bülow justified the naval policy of his Government. . . .

"There was a period certainly in which Germans were the objects of a rather condescending good nature, and when such a typical Frenchman as Prosper Mérimée unquestionably expressed the sentiments of his countrymen when he sneered at German sentiment, peccantry, and want of practical sense. Mérimée lived just long enough to see the nation he despised shatter his beloved empire to fragments, and to die, terrified and broken-hearted, before the dramatic revelation of the New Germany. . . . We do not imply any dishonesty in Count von Bülow when we say that he asks for a strong navy in order that the mere knowledge of its existence may weigh on her neighbors, and that it may be used as occasion serves. In other words, it will and it must be a menace implied if not paraded. We make no complaint of that. Germany has a right to defend herself and we, who have never been tired of late years of insisting on the value of 'sea power,' have no ground to complain if our teaching has had its effect on others. Moreover, we know that the German navy need not necessarily be used against us."

The Times and *The Daily Chronicle* devote long editorials to the "shrewdness and common sense" of that chronic opposer of all expense in the German Reichstag, Eugen Richter. At the same time they deplore his want of perspicacity as shown by his remark that England's strength is greatly overrated. The French and Russian papers show no uneasiness at the prospect of an increase of Germany's naval armaments. *The Daily Chronicle* says on this point:

"As regards the assertion that the doubling of the German fleet is meant as a species of menace directed against this country, it may be dismissed as premature altogether, if nothing else. The idea, it is true, appears to find great favor among our neighbors on the other side of the Channel. The *Debate* asserts that 'it is exhaustively proved that the proposed doubling of the German fleet can only be directed against England,' and the *Times* follows suit. We fail to see the truth of this, or that the conclusion inevitably follows upon which the French press insists. A strong German navy would be by no means useless in the not remote contingency of a war with France, or with France and Russia. And, considering the power of the British navy, its prestige, and admitted superiority over any combination such as Germany could form against us at sea, we may conclude that

Germany's naval schemes are so far aimed at placing the empire on an equality with their overt opponents on the Continent, rather than designed to try conclusions with a power like Great Britain, the result of which is a foregone conclusion. The wish is father of the thought to which our French neighbors give expression; and if we view askance the naval proposals of the German Government, it is certainly not on the score of any apprehension we may feel in regard to the use Germany may hereafter make of her fleet to our own detriment."

It is interesting to note, however, that in these days many Englishmen accept a certain amount of responsibility, if not for the nation, at least for British officials, when increased continental armaments are referred to. Thus *The Westminster Gazette* admits that, with the exception of England, no power causes another to increase its armaments. It proceeds as follows:

"Every one plays for safety, every one except Great Britain, which stands outside the ring and is regarded with apprehension by all Europe, as a possible disturber of the peace. In our usual way, we regard this as evidence of a general hostility to us. It is, for the most part, nothing of the kind. It is mere apprehension of John Bull in the European china-shop. They ask with alarm what would happen if Mr. Chamberlain were let loose in Europe with an irresistible navy at his back. It is, therefore, necessary from their point of view to build ships that England may be kept quiet and toned down to the general level of European gravity. England probably will have to accept the situation to a certain extent. She can not build ships to compete with all possible enemies combined. But if the balance of naval power is altered, her policy must be altered. She must go quietly, avoid offense, and so arrange her affairs that at any dangerous moment she may have support at her back. She must muzzle Mr. Chamberlain and have an intelligent anticipation of events before they occur. This, after all, may be no bad thing for her peace and for the peace of the world."—*Translation made for THE LITERARY DIGEST.*

IN MEMORY OF WASHINGTON.

MANY handsome tributes were paid to the memory of George Washington by the press of continental Europe, on the centenary of his death. Even here, however, the European journals do not fail to find an opportunity of reiterating their views about England. "All roads lead to Rome," and all political topics just now lead to the South African war. In the *Amsterdam Nieuws van den Dag* A. Aarsen writes:

"Over a hundred years ago England waged a war in America against a numerically weak people, as she does to-day in Africa. It was a war not rich in brilliant feats of arms on the American side, but very remarkable for the courage, determination, and staying power of the people attacked, a war full of hardships and reverses for the Americans. 'And who,' asks Dr. Pol, the historian, 'who was the man that brought about ultimate victory? George Washington, and George Washington alone. . . . His genius filled all gaps. Untrained troops against a disciplined army, an empty exchequer against the richest country of the world, want of commanders in the face of the best generals and admirals—these were his difficulties, and he overcame them all. It is true, the natural advantages of the country were in favor of the Americans; but caution and wisdom, not audacious courage, were needed to win.'"

"The founder of American freedom did more. He confirmed it. . . . George Washington was not only a noble man, he was a unique man. Princes admired him, historians of all nations recorded his deeds, the poets were inspired by him, his contemporaries loved him, the later generations idolized him. Even to-day the work he began reveals his touch. To him his country owes its past, its present, its future."

The *Berlin National Zeitung*, in the course of a long article, says

"The Constitution may have many faults and weak points, the masses of the United States may be ruled by all the passions of greed and the desire for aggrandizement, yet the inner worth of the republic which George Washington founded remains intact. Whenever there was need of them, men who were worthy of Washington came forward, such as Lincoln and Grant. There is something unique in Washington's character. Most of the great men in history—the founders of religions, the lawgivers, the empire-builders—appear superhuman. In Washington, we find a man who seemed hardly above the average. He does not appear so even in the legends which cling to his memory. Yet he accomplished a work which bids fair to last to all future time. It was accomplished by a combination of unselfish virtue, of faithful attention to duty, of obedience to the dictates of humanity, combined with a manner and personality absolutely charming in its simplicity."—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

MARK TWAIN ON LYING.

NOT long ago, a little book was published, entitled "Who Lies?" the object of which was to maintain deliberately what the Psalmist said in haste—that all men are liars—and to extend the Psalmist's indictment to all the gentler sex. The lie social, the lie conventional, the business lie, the political lie, and other kinds of lies were described and many of them defended. Mark Twain takes the same position in an article on "My First Lie and How I Got Out of It" in the *New York World* (December 10). The first lie he remembers (?) is described as told when he was nine days old, and pretended to be in pain in order to get "a ration between meals." From this he passes to the inference that "almost all lies are acts, and speech has no part in them." Moreover, by the eternal law of his being, man is bound to lie, "from the cradle onward, without exception," and he proceeds to illustrate as follows:

"I am speaking of the lie of silent assertion; we can tell it without saying a word, and we all do it—we that know. In the magnitude of its territorial spread it is one of the most majestic lies that the civilizations make it their sacred and anxious care to guard and watch and propagate.

"For instance, it would not be possible for a humane and intelligent person to invent a rational excuse for slavery; yet you will remember that in the early days of the emancipation agitation in the North the agitators got but small help or countenance from any one. Argue and plead and pray as they might, they could not break the universal stillness that reigned, from pulpit and press all the way down to the bottom of society—the clammy stillness created and maintained by the lie of silent assertion—the silent assertion that there wasn't anything going on in which humane and intelligent people were interested.

"From the beginning of the Dreyfus case to the end of it, all France, except a couple of dozen moral paladins, lay under the smother of the silent-assertion lie that no wrong was being done to a persecuted and unoffending man. The like smother was over England lately, a good half of the population silently letting on that they were not aware that Mr. Chamberlain was trying to manufacture a war in South Africa and was willing to pay fancy prices for the materials.

"Now there we have instances of three prominent ostensible civilizations working the silent-assertion lie. Could one find other instances in the three countries? I think so. Not so very many, perhaps, but say a billion—just so as to keep within bounds. Are those countries working that kind of lie, day in and day out, in thousands and thousands of varieties, without ever resting? Yes, we know that to be true. The universal conspiracy of the silent-assertion lie is hard at work always and everywhere, and always in the interest of a stupidity or a sham, never in the interest of a thing fine or respectable. Is it the most timid and shabby of all lies? It seems to have the look of it. For ages and ages it has mutely labored in the interest of despotisms and aristocracies and chattel slaveries, and military slaveries, and religious slaveries, and has kept them alive; keeps them alive yet, here and there and yonder, all about the globe; and will go on keeping them alive until the silent-assertion lie retires from business—the silent assertion that nothing is going on which fair and intelligent men are aware of and are engaged by their duty to try to stop.

"What I am arriving at is this: When whole races and peoples conspire to propagate gigantic mute lies in the interest of tyrannies and shams, why should we care anything about the trifling lies told by individuals? Why should we try to make it appear that abstention from lying is a virtue? Why should we want to beguile ourselves in that way? Why should we without shame help the nation lie, and then be ashamed to do a little lying on our own account? Why shouldn't we be honest and honorable, and lie every time we get a chance? That is to say, why shouldn't we be consistent, and either lie all the time or not at all? Why should we help the nation lie the whole day long and then object to telling one little individual private lie in our own interest to go to bed on? Just for the refreshment of it, I mean, and to take the rancid taste out of our mouth."

After recounting some amusing incidents to illustrate different kinds of lying, and paying his respects to Bryant (?) for his colossal lie, "Truth crushed to earth shall rise again," and to Carlyle for his equally stunning lie, "This gospel is eternal, that a lie shall not live," and to George Washington for his "I can not tell a lie," which "would have taken a medal at any European fair," he returns to his subject of national lies, still maintaining his pretense of being a champion of lying in general.

"To sum up, on the whole I am satisfied with things the way they are. There is a prejudice against the spoken lie, but none against any other, and by examination and mathematical computation I find that the proportion of the spoken lie to the other varieties is as 1 to 22,541. Therefore the spoken lie is of no consequence, and it is not worth while to go around fussing about it and trying to make believe that it is an important matter. The silent colossal national lie that is the support and confederate of all the tyrannies and shams and inequalities and unfairnesses that afflict the peoples—that is the one to throw bricks and sermons at. But let us be judicious and let somebody else begin."

INFLUENCE OF MUSIC IN BATTLE.

ALL nations from the dawn of history have recognized the value of music as a subtle and powerful aid to the soldier in times of peace and of war. The soldier can not even march his best without it, for it lightens the foot and lightens the heart. Plutarch says of the Spartans that when advancing to the attack, they kept pace to the time of their flutes, "their music leading them into danger cheerful and unconcerned." A great modern soldier, Marshal Saxe, said: "Sounds have a secret power over us, disposing our organs to bodily exercises and at the same time deluding, as it were, the toil of them." Says a writer in the *London Globe*:

"Modern commanders seem to be in complete agreement on this point. If the regimental band is broken up, Lord Wolseley counsels officers to call upon the drums and bugles. 'The troops march a hundred per cent. better than in silence'; and this resource also failing, the men should be got to sing by companies. Lord Roberts also regards music as of the first importance in supporting the energies of soldiers on the march, and in inspiring them when nearly worn out. Count Moltke held the band to be an absolute necessity to a regiment; and it was largely owing to his efforts that the German military music attained its present perfection. During the earlier stages of the Franco-German war the parade step of the German army was sometimes assumed in the supreme moment of a contest, while the drums beat and the bands played the regimental march. Such a display no doubt reveals a very high point of discipline; and, according to the German drill-book, it insures 'the most complete concentration of the physical and mental powers of the individual on the performance of the matter in hand.' But the system has been severely criticized, nor was it persisted in even in the German army. At all events, there is little fear of its introduction among our own troops, whose battle-music is of a much less formal and ostentatious character. Our full regimental bands do not as a rule go on active service, music in the field being chiefly supplied by the trumpeters and buglers of the cavalry, and the buglers, drummers, and fifers of the infantry; while the Highlanders seldom lead the van without some of their redoubtable pipers to cheer them on.

"Nothing stirs a Highlander, especially in a distant country, like the pibroch of his native glen. Philibeg and bagpipe are to him a birthright, 'shoulder to shoulder' with his brother Scot, he irresistibly mourns to the occasion. And when the strain rises at the critical moment of an engagement its appeal is absolutely electrical. It is an old story that is often retold. Many a piper has been hailed by his comrades as the hero of the fight. In one of our battles of Calabria, when the infantry charged the French, a seasoned old bagpiper of the 78th Highlanders posted himself in a solitary situation on their flank, and encouraged his comrades with a famous Scotch tune, the effect of which was literally overwhelming. And in the Peninsular war similar incidents were of constant occurrence. On the other hand, the absence of their wild music has been so felt by the Highlanders that they have lost all spirit and dash. At the battle of Quebec, in 1759, the general complained to a field officer of the conduct of a regiment which had been repulsed and had fallen into disorder. The reply of the latter was significant: 'Sir, you did very wrong in forbidding the pipers to play this morning. Nothing encourages the Highlanders so much in action; even now it would be of use.' 'Then let them blow as they like,' said the general. The pipers did; and with magical effect upon the drooping spirits of the men, who at once reformed and returned victoriously to the charge."

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The London *Daily Mail* (October 25, 1899) announces in the following way the opening of the new commercial department of the British Board of Trade:

"The commercial intelligence office—the new department of the Board of Trade which is to supply merchants and manufacturers with information as to trade and markets all over the world—was opened yesterday. The department is housed in temporary offices at 30 Parliament Street. In charge of it is Mr. Thomas Worthington, whose recent reports on the trade of South America attracted wide attention. The commercial intelligence office is an experiment, the object being to learn all that is to be learned about markets and tariffs and competition and rates; to tabulate it, to edit it, and to put it in order; and to place it promptly at the disposal of the merchant to whom it may be of use. Besides collecting information from colonies and India in the ordinary way, the department, it is expected, will send special missions to foreign countries as occasion requires or procure special reports by experts upon particular trades or industries, subject to the sanction of the Foreign Office. It will arrange for the exhibition of patterns and samples. It will bring together, from different parts of the world, information bearing upon particular industries and the markets with which they are concerned. All this information will be distributed, frequently free of cost, to chambers of commerce and other public bodies, and at a small cost to manufacturers, merchants, and other private persons. But the office may in its wisdom withhold from general circulation such information as may be more suitable for communication confidentially to chambers of commerce and other associations."

Underwear That Saves Doctors' Bills is a Good Investment.

KOTEDSILK

IS ANTI-RHEUMATIC; SOOTHES THE NERVES; PREVENTS COLDS; QUIETS THE MIND; WARDS OFF PNEUMONIA; KEEPS THE SKIN HEALTHY; IS GERM-PROOF,

and is withal the most luxurious underwear on the market.

KOTEDSILK UNDERWEAR CO.

Millbury, Mass., And All Leading Stores.

Reduced Prices on Suits and Cloaks.

WE have on hand several hundred pieces of fine Winter Suits and Cloaks which must be disposed of this month in order to make room for Spring goods. You can now secure a fashionable garment at a reduction of one-third from former prices. Order from this Reduced Price Sale as freely as you wish; send back anything you don't like, and we will refund your money.

One-third has been cut off the price of every suit and cloak in our line, but the quality is right up to our usual standard—just as good as if you paid double.

Tailor-made Suits, lined throughout, former price \$5; reduced to \$3.34.
\$10 Suits reduced to \$6.66.
\$15 Suits reduced to \$10.
\$20 Suits reduced to \$13.34.

Winter Jackets, lined throughout, former price \$5; reduced to \$3.34.

\$9 Jackets reduced to \$6. \$12 Jackets reduced to \$8.
Separate Skirts in the new French cut, former price \$4; reduced to \$2.67.

\$6 Skirts reduced to \$4. \$8 Skirts reduced to \$5.34.
Reduced prices on Capes, Newmarkets, Rainy-Day Suits and Skirts, Bicycle Suits, Silk Skirts, etc.

We tell you about hundreds of reduced price garments in our Winter Catalogue and Reduced Price List, which will be sent free, together with samples of materials, to any lady who wishes them. Write to-day for Catalogue and Samples; don't delay—the choicest goods will be sold first. Be sure to say you wish the Winter Catalogue and Reduced Price List.

Our new Spring Catalogue of Tailor-made Gowns, Skirts, Bicycle Suits, Rainy-day Suits, Wash Suits, etc., will be ready February 1st. Write now; we will mail you a copy, together with a full line of Spring samples, as soon as issued. Be sure to say that you wish the new Spring Catalogue.

information as may be more suitable for communication confidentially to chambers of commerce and other associations."

"The department should meet two classes of exception to the present system—that of traders who say the consuls are too busy on the diplomatic side to devote a proper attention to trade, and that of the consuls who say that the traders worry them with futile inquiries and never read their reports."

Consul Hill sends the following from Amsterdam, October 18, 1899:

The diamond trade in Amsterdam shows the effect of the war in its inactivity. Prices of rough diamonds, which for some time have been noted as rising at intervals of two months, have been marked up twice within the last eight days. The rise must restrict sales, since manufacturers will find it difficult to buy at the advanced prices.

Under date of October 23, Mr. Hill adds:

The main reason for the great scarcity and high prices is the unusual demand from the United States and continental buyers. The whole output of the De Beers mines is sold in March of each year; this year, the syndicate had to consent to an advance of 35 per cent. There is great difficulty in obtaining supplies, scarcely any parcels of less value than £1,000 or \$1,000 being sold.

Consul Gifford, of Basle, on October 20, 1899, says:

"I transmit to the Department, for the benefit of American manufacturers, a communication from the Aluminium Industrie-Aktion Gesellschaft, of Neuhausen, Switzerland, of which the following is a translation":

To the American Consulate, Basle:

There has been such an increase in the price of coal and coke on the continent of Europe within the last year that there seems to be a possibility of importing these materials with advantage from the United States. As our establishment uses more than 10,000 tons of coke yearly, we should be glad to establish relations with several American factories producing coke of acknowledged excellence, or with large business houses dealing in the same article. We shall therefore be obliged if you will send us a few addresses.

This may open a new and extensive field to American commerce.

Consul Martin, of Amberg, on October 30, 1899, says:

I desire to call the attention of manufacturers of iron and brass bedsteads to the opportunity offered in Canada for the establishment of one or

Registered Trade Mark.

Annual Sale of Linen at "The Linen Store."

An intelligent examination of the Household Linens offered at our Annual Sale during January will, we feel assured, lead economical housekeepers to replenish their supply. Table Cloths, Napkins, Towels, Bed Linen, etc., are offered at such prices and in such variety as make them worthy the consideration of those requiring such goods.

We cordially invite a visit of inspection and comparison.

James McCutcheon & Co.

14 West 23d Street, N. Y.

Duplicate Whist Tables...

All the advantages of trays with a table to play on. Hidden compartments to play sixteen hands. No lost or mixed cards. Each player has four leads in sixteen hands. No errors or confusion possible. The table is a substantial piece of furniture, in oak or mahogany. It folds when not in use. Price delivered \$7.00. Explanatory circular free. GEO. H. RICE, Green Bay, Wis.

more factories for their manufacture. Many of the dealers throughout Canada are at the present time buying their iron and brass goods in the United States and paying the duty of 30 per cent., while the iron and brass from which they are made are free of duty under item 57 of the Canadian customs act of 1897, viz.:

Tubes, rolled iron, not welded or joined, under 1½ inches in diameter; angle iron, 3 and 4 gauge, not over 1½ inches wide; iron tubing, lacquered or brass covered, not over 1½ inches in diameter—all of which are to be cut to lengths for the manufacture of bedsteads, and are to be used for no other purpose; and brass trimmings for bedsteads, when imported by or for manufacturers of iron or brass bedsteads to be used for such purposes only in their own factories, until such time as any of the said articles are manufactured in Canada.

Consul Winter writes from Annaberg, October 11, 1899:

Germany's export trade continues to increase. Through recent treaties with Japan and Spain, exporters look for a still greater gain. The figures for the first half of the present year make an extraordinary showing, and this result is based upon the increased exports to the United States. Germany also sold much more to Great Britain during the first half of 1899 than during the same period of 1898. During the first half of 1899, one hundred and eighty-two joint-stock companies were organized in the German empire. Their capital was invested for the most part in establishing new banks, in opening mines, in electrical undertakings, and in building breweries. The new Dortmund-Ems canal, connecting the Elbe and the Rhine, giving cheap transportation to the inland cities of Germany in connection with ocean freights, will undoubtedly stimulate foreign commerce in a large degree.

PERSONALS.

It is not generally known, but the theatrical profession has at least one representative in the present Congress. It is Julius Kahn, of the Fourth District, San Francisco, and one of the most picturesque and interesting figures upon the floor. As a new member, he has taken no part in the proceedings of the House beyond that of an attentive listener, but the genial ways so long cultivated while on the stage have made him a host of ardent friends among his fellow members. Away back in the early eighties he was in Washington with the Kiralfy Brothers in "Michael Strogoff," and, later on, with Joseph Jefferson in "Rip Van Winkle." He has had the usual varied experiences

incident to theatrical life, and has graduated there from with a kindly soul and a heart that bubbles over with mirth. Between his Tiresias days and those of politics he settled down to the practice of law out in San Francisco.

The Queen's farewell to the Highlanders ordered to the Cape from Balmoral reminds M. A. P. of a story which is told of how her Majesty saw the Guards off forty-five years ago, when they left London for Malta, en route for the Russian war. They marched past in front of Buckingham Palace, the Queen and Prince Albert looking on from the balcony. As the last company was going by, the Queen—young, girlish, impulsive—shaped down, took off one of her shoes, and threw it among them, with the old English idea of giving good luck. Even the discipline of the Guards broke down, and a dozen men scrambled for it. Who actually secured the royal token of good luck was never known. Probably the Guardsman who carried it off with him was among the killed or missing of some Crimean battle-field, and his knapsack was plundered by marauders who had no idea where the little satin shoe had originally come from.

THAT interesting publication, the "Congressional Directory," has made its appearance, says the Philadelphia Press, and is being perused by new members eager to read their biographies and compare them with those of older statesmen. If a Congressman has any tad or peculiarity it is almost sure to be mentioned in his biography, the facts for which are furnished by the members themselves. For instance, Mr. Mahany, who was in Congress for two terms, was very proud of his victories in academy and college, and his autobiography contained conspicuous mention of the honors he took in various institutions of learning. They served more than once as the bases for good-natured raillery from his opponents on the floor of the House. If a member has achieved a signal position in commercial or professional life, his biography is almost certain to show what he has ac-

A Chance for Writers!

The Shortstory Publishing Company, Boston, Mass., will pay \$4,200 cash, in sums of \$100 to \$500, for clean, clever, original, *unusual* stories of 1,500 to 6,000 words for publication in THE BLACK CAT. Each story will be judged solely upon its merits without regard to the name or reputation of its writer; but no story will be considered at all unless it is sent strictly in accordance with the printed conditions, which will be mailed free, together with many of the names and addresses, as references, of the men and women in all parts of America who have received over

\$30,000 Cash

for BLACK CAT stories. Write at once for particulars, as the contest closes March 31. THE SHORTSTORY PUBLISHING CO., 67-77 Fort Hill Bldg., Boston, Mass.

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. Hume, Brooklyn, N. Y., says: "The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the 'resper' over the old-fashioned 'sickie'."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled.

Send for price list and circulars. Mention this advertisement. **THE BURR INDEX CO., Sole Mfrs. HARTFORD, CONN.**

Letters

Copied While Writing.

Keep a copy of all letters; no press; no water; no brush; no work. Any ink; any pen; any paper. Our Pen-Carbon never smuts; our clip holds paper firm. Write with no extra pressure, and our Pen-Carbon Letter Book produces a perfect copy. Can be used anywhere.

If your stationer does not keep it, write for free sample. Mention this paper. Dept. L.

ONE HUNDRED

copies of a letter, piece of music, drawing, or any writing can be made on a **Lawton Simplex Printer**. No washing. No wetting of paper. Send for circulars and samples of work. Agents wanted.

LAWTON & CO., 30 Vesey St., New York, 67 Dearborn Street, Chicago.

completed. Each one's political career, if it has been an active one, is set forth with much pride, and the old soldier gives his record with pardonable length and detail.

The new directory contains the average amount of self-laudation, but many of the new biographies are of unusual length. It is generally supposed that Mr. Beveridge is now the youngest member of the Senate. Such is not the case, however, as the Populist, Marion Butler, of North Carolina, holds that distinction. Mr. Butler was born May 20, 1867, and is now in his 37th year. Mr. Beveridge was born October 5, 1860, and is now in his 38th year. Senator Penrose, who is 39 years of age, is the third youngest member.

The longest biography in the directory for a number of years was that of Congressman-at-Large Galusha A. Grow, of Pennsylvania. In the new directory Mr. Grow's record is short compared with that of Senator Chauncey M. Depew. Mr. Grow occupies thirty-four lines in the directory, while the celebrated orator, after-dinner wit, and railroad man takes fifty-one lines in which to relate the leading events of his busy life. In his autobiography Mr. Depew relates his railroad and political experiences, interestingly and frankly. His disaffection in 1872 is disposed of in this paragraph: "In 1872 was candidate for lieutenant-governor on the Liberal Republican or Greeley ticket, but voted with the Republican Party every year since 1872, as he had every year before 1872, beginning the year he graduated from Yale College." Mr. Depew recites a number of occasions on which he was the orator of the day, some of them being celebrations of centennial events.

There are some queer facts in the "Congressional Directory" this year, as usual.

Willis Brewer, of Alabama, says in his autobiography that he "has been a journalist, has practiced law, has written books, and is now a planter."

James K. Jones, of Arkansas, chairman of the Democratic national committee, says he "was a private soldier during the late unpleasantness, on the losing side."

James M. Robinson, of Fort Wayne, was a newsboy.

Mecenas E. Denton, of Missouri, says he "was the original offensive partisan removed for pernicious activity" while United States attorney for the western district of Missouri.

William Connell, of Pennsylvania, worked in the mines when he was a young man, but is now the president of a bank. James W. Ryan, of Pennsylvania, says he used to be a mule driver.

Mr. Noonan, of Chicago, gives a picturesque vista of his past career, and says that "during the years 1840 and 1841 Mr. Noonan's modesty was the subject of newspaper comment, as he held three offices at the same time—viz., state senator, colonel, and park attorney, and was a candidate for Congress."

A Toledo collector, Charles Rich Johnson, who makes a specialty of obtaining personal facts about famous men, has given to the Toledo *Star* a blank which it is claimed Major-General Lawton filled in November 16, 1892. Some of the answers are certainly indicative of the man:

My idea of beauty in nature—A sunset on the Western plains.

My idea of beauty in art—A modern ship of war. A modern gun on a disappearing carriage.

My favorite studies—Nature and character.

My favorite colors—Red, white, and blue.

My favorite qualities in man—Courage, honesty, and truthfulness.

My favorite qualities in woman—Fidelity and devotion.

My greatest misery—Killing time.

My greatest amusement—Romping with my children.

My favorite residence—Southern California.

General Lawton also expressed preferences in various lines for Shakespeare, Dickens, Mark Twain, Longfellow, Owen Meredith, Schubert, Verdi, Lincoln, Grant, Beecher, the late General MacKenzie, Booth, Robson, and Hopper.

THE late Miss Florence Marryat (Mrs. Lean), says *The Westminster Review* was the youngest of eleven children of the author of "Midshipman Easy." She possessed some interesting relics of her father, including the only portrait really done

Dept. H, 62 Dry St., New York.

ZINC AND LEAD

"Tale of Fortune"—a neat prospectus telling all about the zinc and lead mines of Missouri, and how fortunes have been made in zinc. Also "Snap Shots"—a handsome circular of zinc etchings of views of scenery in that highly-favored country. Both of the above circulars mailed free on request, along with a favorable proposition for making a safe investment that will yield monthly returns. Address **WALTER SAYLER, 171 La Salle St., Chicago, Ill.**

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Indigestibles

The outer covering or shell of grain is entirely indigestible, yet we see quantities of persons filling the delicate stomachs of children with oats in some form or whole wheat products. Not only is there little food in these preparations but there is a lot of positively detrimental stuff which irritates the stomach and impairs the digestion.

CREAM OF WHEAT

is composed of only the part of the grain useful as a food—it is palatable, nutritious, and digestible.

A series of gravures which we issue will interest you. They are really fine, and you get one with two packages of Cream of Wheat. Your grocer has them.

Cream of Wheat Co., Minneapolis, Minn.

A UNIQUE FOOD.

A vegetable meat containing 25 per cent. more food elements than beef, and tasting so similar to beef and chicken that one can hardly distinguish the difference, is a unique food, called Protose, made by the Sanitas Nut Food Co., 71 Washington Ave., Battle Creek, Mich.

This is truly an important addition to our food products. Progressive physicians have long agreed that rheumatism, indigestion, biliousness, Bright's disease, diabetes, heart trouble, and various nervous affections were in many cases due to, and always aggravated by, eating flesh foods. Many people are so accustomed to their meat daily that the meal seems tasteless without it, and it was hard for patients thus afflicted to break the old-time habit. Protose, however, meets all the requirements of the meat eater and furnishes a more nutritious and palatable meal. It can be manipulated in the culinary department in all the various ways that flesh foods are prepared.

The makers will send a free sample on receipt of six cents to pay postage.

Cod Liver Oil is a food

and the greatest care should be exercised in its selection.

Peter Moller's Cod Liver Oil

is the best oil that fifty years of continued scientific research has produced. By the process now employed the oil is kept from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Give this new oil a trial. Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agents. Notice the date in perforated letters at bottom of the label.

Schleffelin & Co., New York.

ELECTRICITY IS LIFE

from life. It was painted by Behnes the sculptor, when Marryat was made post-captain at the age of twenty-four. In her drawing-room the lamp usually stood upon a small tea-table made out of a piece of her father's old ship, the *Ariadne*. She also possessed the medal of the Legion of Honor which the Emperor Napoleon, who died in Captain Marryat's arms when he was one of the guard of honor at St. Helena, gave to him just before he breathed his last. At one time Miss Marryat was an ardent Spiritualist, and used to lecture on the wonders of the unseen world. On one occasion she informed her audience that an Elizabethan monk with whom she had frequent conversations told her the exact whereabouts of a dog which she had lost. His directions on investigation turned out to be perfectly accurate, and the dog was found at the fishmonger's, as he had indicated. The same spirit, a constant frequenter of Miss Marryat's table, was fond of listening to singing, but objected by very rapid knocks of the table to a song called "Champagne Charley." He demanded something serious, and was not satisfied even with "Ye banks and braes o' bonnie Doon." But some spirits won't satisfy. Another of Miss Marryat's anecdotes related to an old lady who was "levitated." The lady, who was in a separate room from the witnesses of the occurrence, was known to be in conversation with one or more spirits. Suddenly a voice was heard in tones of remonstrance, and the old lady was wafted into the room some height above the floor. Being seventeen stone in weight, her position was one of no small inconvenience. The lady entreated her astonished friends on no account to let go of hands, lest she should make a sudden descent. She eventually subsided into a chair with such violence as to break its front legs.

MORE OR LESS PUNGENT.

A Hard Fact.—FAX: "The diamond is the hardest known substance."

DE WITTE: "Yes—to get."—*Collier's Weekly*.

What He'd Do.—RECRUITING OFFICER: "If the command came, 'Fire!' what would you do?"
WOULD-BE SONGER: "Run for the hose."—*Judy*.

Rooted to the Spot.—NED: "I wonder if it amazes a girl when a fellow catches her under the mistletoe?"

TED: "It must; she always seems to be rooted to the spot."—*Town Topics*.

An Important Difference.—SOPWITH: "Lombardo says there is no difference between genius and madness."

WAGGLE: "Pardon me; madness gets three square meals a day."—*Life*.

The Same Thing.—LIK: "Is your husband laying anything up for a rainy day, my good woman?"

SHE: "No, sir; but he's saving up to buy a snow-shovel."—*Yonker's Statesman*.

"Unsettled."—"Can you tell me what sort of weather we may expect next month?" wrote a subscriber to the editor of a paper, and the editor replied as follows: "It is my belief that the weather next month will be very much like your subscription." The inquirer wondered for an hour what the editor was driving at, when he happened to think of the word "unsettled." He sent in the required amount next day.

He was Very Pious.—MR. COMMONSTOCK: "I sent a Bible to my boy at college and requested him to read the chapters which I had marked. Then in each of those chapters I placed a five-dollar bill."

MR. FAMILYMAN: "Ah! a good scheme! Do you think he read them?"

MR. COMMONSTOCK: "I guess so; for he's just

For Seasickness

Use Horsford's Acid Phosphate.

Dr. J. F. HORSFORD-BRICE, of S.S. *Teutonic*, says: "I have prescribed it among the passengers travelling to and from Europe, and am satisfied that if taken in time, it will in a great many cases, prevent seasickness."

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

A NEW RHEUMATIC REMEDY.

A prominent physician writes:

SPOTSWOOD, N. J.

DEAR SIR:—Please send me, by mail, four more bottles of TARTARLITHINE.

I will also here state, in justice, that this is the most welcome remedy that has come into my hands since my beginning of the practice of medicine. It has given me, in every case of rheumatism in which I have used it, the happiest kind of results. I have used discretion, perhaps even more than necessary, in its employment; that it be given to patients whose cases do not yield to ordinary treatment, old chronic cases of gouty diathesis, where there is a tendency to calcareous deposits, etc. These are undoubtedly the most troublesome patients to give what might fairly be termed good results. Now these have been the very kind in which I have been using Tartarilithine with the very happiest results to patients and myself. Many valuable remedies come daily to our aid, but this has been the most welcome one to me thus far.

Yours very truly,

J. G. D.—, M. D.

Masterpieces of American Art

THE AMERICAN ART PUBLISHING CO. recently succeeded in making arrangements with AMERICA'S GREATEST ARTISTS for the reproduction of their MASTERPIECES in the finest photogravure process.

These photogravures represent paintings that have been sold for thousands of dollars and others that are fresh from the artist's brush.

These reproductions would sell rapidly at any art store at \$5.00 each, but they cannot be purchased except directly from us, as we absolutely control the copyrights.

Beautify Your Home

You have read about many of these paintings and the enormous prices paid for them, but, doubtless, never even dreamed that you could obtain a perfect fac-simile in elegant form and at a nominal price to adorn your parlor or drawing-room.

These photogravures are printed from the finest plates that modern workmanship can produce, on extra heavy paper made expressly for this work. Size, 18 x 24 inches. Twenty-five of them are placed in a beautiful Portfolio, and so arranged that they can be conveniently removed for framing without injury to either the picture or Portfolio.

The masterpieces of twenty-five of America's Greatest Artists are now for the first time available in a single collection.

An Art Educator

This Portfolio, besides being a beautiful ornament to any home, is also an Art Educator, and will at once stimulate a desire for the artistic.

Accompanying each picture is given a description of the painting, also a portrait and biographical sketch of the artist, an interesting account of his early studies, how he was led to take up art as a profession, in what schools and under what masters he received his instruction. It describes his trips and sojourns abroad, where and when his paintings were first exhibited and the honors they received both in Europe and America. The titles of the artists' most notable paintings are also given and where they now are. All of this information is not only interesting but exceedingly instructive.

OUR SPECIAL PROPOSITION

To all who make application this month, the price will be less than one-third the regular price and on very easy monthly payments. The Portfolio will be sent on examination with the privilege of returning if not entirely satisfactory. Write at once for full particulars to

AMERICAN ART PUBLISHING CO., No. 156 Fifth Avenue, New York City

mailed me the Bible, asking that I mark some more chapters and return as soon as possible."—*Puck*.

The Best He Could.—"Oratory is a gift, not an acquirement," said the proud politician as he sat down after an hour's harangue. "I understand," said the matter-of-fact chairman. "We're not blamin' you. You did the best you could."

Misnomers.—Mrs. Brown: "Our language is full of misnomers. For instance, I met a man once who was a perfect bear, and they call him a 'civil engineer.'"

Mrs. Smith: "Yes, but that's not so ridiculous as the man they call a 'teller' in a bank. He won't tell you anything. I asked one the other day how much money my husband had on deposit, and he just laughed at me."

An Abstract Noun.—The governess was giving little Tommy a grammar lesson the other day.

Time and Labor Savers.

Clergymen, Lawyers, Doctors, or men in any business where rapid reference to papers or documents is desirable should carefully scrutinize the merits of Burt's Patent Indexes advertised in another column of *The Digest*. They are classed among the most important labor savers yet invented.

"An abstract noun," she said, "is the name of something which you can think of but can not touch. Can you give me an example?"

TOMMY: "A red-hot poker."

He was Unprepared.—"He told his audience that he was wholly unprepared." "Do you believe it?" "Yes; he had his speech in his pocket, but he hadn't learned it."—*Chicago Record*.

An Irresistible Appeal.—COWWIGER: "He must have appealed very strongly to your sympathy to have borrowed a hundred."

HENPECK: "He did. It was to keep his wife away in the country for another month."—*Life*.

He Ought to Have Been One.—A Scotchman was asserting that all the great poets were of his nation. "Well, but," said one, "how about Shakespeare? You can't say he was a Scotchman?" To which the other replied: "His talents would justify the supposition."

A Case of Lost H's.—There was once a Sergeant Channell, who for some reason was at fault some-

EUCALOL Cures Catarrh

Sir Morell Mackenzie says:

Maintenance of the mucous membrane of the nose is as essential to the state of health as that of the tongue is to taste.

For twenty-five years the most successful treatment of nasal and throat catarrh has been in the New York and Philadelphia Nose and Throat Hospitals. Years of careful observation and experiment led them to put supreme confidence in the treatment of cleanliness and antiseptics.

Eucalol

is a treatment based on antiseptic cleanliness as used in these hospitals. No catch-penny quick remedy but the essence of the combined knowledge of the greatest physicians of the world. It is pleasant to use, the effect instantaneous, and is a sure cure for Nasal Catarrh, Dry Catarrh, Grippe, Colds in the Head.

FREE OFFER Eucalol has cured thousands and will cure you. To prove its merits we will send five, on request, a large package of Eucalol. Don't delay, write at once.

how about his h's. One day before Mr. Justice Creswell, a sometime sayer of sly and acrid things, a ship case was being tried, and Sergeant Channell was on one side and Sir Frederic Thesiger on the other. Every time the former mentioned the vessel he called it the *Ellen*; every time the other counsel mentioned her he called her the *Helen*. At last the judge with quaint gravity said: "Stop! What was the name of the ship? I have it on my notes the *Ellen* and the *Helen*. Which is it?" The bar grinned. "Oh, my lud," said Thesiger, in his blindest and most fastidious manner, "the ship was christened the *Helen*, but she lost her 'h' in the chops of the Channell."

The Plaint of Dying Humor.

I know not what the cause should be
That Humor melts my heart no more;
That nothing now induces me
To roar.

In days of old my waistcoat heaved
Conjointly with my heaving chest,
As soon as ever I perceived
A jest.

The simple pun, the patent wheeze,
Would take me in the diaphragm;
But now I hardly care for these
A cent.

I almost fear—I know not why—
That Laughter's fount has been mislaid;
I could not giggle, not if I
Was paid.

And yet my health is very fair;
I harbor no religious doubts;
And am but sixty-four or there-
abouts.

Time was when I and others laughed;
When many an apoplectic fit
Was traced directly to a shaft
Of wit;

For such would find the harness-joint,
And pierce the vulnerable spot,
Whether they chanced to have a point
Or not.

—From "In Cap and Bells," by
OWEN SEAMAS.

Current Events.

Monday, January 1.

—General French temporarily captures the town of Colesberg after an engagement lasting more than two hours; wagons and stores are captured, the Boers being taken by surprise.

—A general advance of the American troops in Southern Luzon results in the capture of Cabuyao after a sharp engagement.

—Andrew Carnegie gives to the trustees of Cooper Union, New York, \$100,000 for the establishment of a day-school in connection with the Institute.

—The social season in Washington is opened in a brilliant manner with the New Year's reception given by the President and Mrs. McKinley.

Tuesday, January 2.

—Colonel Pitcher defeats a small Boer force near Belmont; aggressive action on the part of Buller is looked for.

—Captain Leary, Governor-General of Guam, issues a proclamation abolishing slavery in that island.

—Secretary Hay announces to the Cabinet the success of his negotiations for receiving a continuance of the "open-door" policy in China.

"I find them the best preparation for colds, coughs and asthma."—Mrs. S. A. WATSON, Temperance Lecturer.

Sold in boxes only—Avoid imitations.

The Fear of Humbug

Prevents Many People from Trying a Good Medicine.

Stomach troubles are so common and in most cases so obstinate to cure that people are apt to look with suspicion on any remedy claiming to be a radical, permanent cure for dyspepsia and indigestion. Many such pride themselves on their acuteness in never being humbugged, especially in medicines.

This fear of being humbugged can be carried too far; so far, in fact, that many people suffer for years with weak digestion rather than risk a little time and money in faithfully testing the claims made of a preparation so reliable and universally used as Stuart's Dyspepsia Tablets.

Now Stuart's Dyspepsia Tablets are vastly different in one important respect from ordinary proprietary medicines, for the reason that they are not a secret patent medicine; no secret is made of their ingredients, but analysis shows them to contain the natural digestive ferments, pure aseptic pepsin, the digestive acids, Golden Seal, bismuth, hydragris and nux. They are not cathartic, neither do they act powerfully on any organ, but they cure indigestion on the common-sense plan of digesting the food eaten thoroughly before it has time to ferment, sour, and cause the mischief. This is the only secret of their success.

Cathartic pills never have and never can cure indigestion and stomach troubles because they act entirely on the bowels, whereas the whole trouble is really in the stomach.

Stuart's Dyspepsia Tablets taken after meals digest the food. That is all there is to it. Food not digested or half digested is poison, as it creates gas, acidity, headaches, palpitation of the heart, loss of flesh and appetite, and many other troubles which are often called by some other name.

They are sold by druggists everywhere at 50 cents per package. Address F. A. Stuart Co., Marshall, Mich., for little book on stomach diseases, sent free.

33 K-Kt 4	33 B-Q 6
34 K-B 5	34 B-Kt 4
35 K-Kt 6	35 Resigns
1 h. 20 m.	2 h. 5 m.

Notes from *The Evening Post*, New York.

(a) This peculiar development of the Knights is a great favorite with the Yale players, who adopted it throughout the tourney. It is, however, inferior to the regular Kt-K 3.

(b) Black's game becomes too restricted in con-

sequence thereof. This Pawn should advance two squares.

(c) Premature.

(d) B-K 3 misses here a speedy win by 6... B x P ch; 7. K x B, Kt-Kt 3 ch, followed by Q-R 5.

(e) 3... P-Q Kt 3 or 4... Q Kt-Q 2 was proper. As played, White obtains a superiority in position.

(f) Better were 4... B-B 2.

(g) Here P-Q Kt 3, followed eventually by P-Q R 4, was in order.

(h) The decisive error of judgment. The Bishop here is badly posted, subject to attack, and prevents Black from disputing the open file. The B should have gone to Q 2.

(i) By adhering to strictly defensive and waiting tactics, Black only aggravates matters. He ought to have engaged the enemy by Kt-Kt 3.

(k) This loses a Pawn. His game was still tenable by 1... Kt-Q 2. If then 2. R x B, Kt x Kt, 3. d x B-K 3, Kt (Q) x P.

(l) This sacrifice does not afford him the desired relief. Relatively best were 3... Q-B 2. Of course, White then could make sure of the Q B by R-Kt 3, whereupon he should win with ordinary care. The remainder of the game can easily be appreciated.

The Vienna Tournament.

MAROCZY TAKES FIRST PRIZE.

The Kibisch Memorial Tournament was finished January 4. The prize-winners are: Maroczy, 1st; Brady and Schlechter, 2d and 3d; Alapin, 4th; Marco, Wolf, and Zinkl, 5th, 6th, 7th; Korte, 8th; Popiel, 9th; Alton, 10th. The score stands:

Rank.	Loss.	Rank.	Loss.
Maroczy.....	4	Zinkl.....	6
Brady.....	7½	Korte.....	8
Schlechter.....	7½	Popiel.....	9½
Alapin.....	6½	Alton.....	10
Marco.....	6	Schwartz.....	10½
Wolf.....	6	Prock.....	11

The following table shows the results of all the games, and the scores made by each contestant:

	Alapin	Alton	Brady	Korte	Maroczy	Marco	Popiel	Prock	Schlechter	Schwartz	Wolf	Zinkl	Total wins.
Alapin.....	4	4½	3½	3½	4	4	4	4	4	4	4	4	44½
Alton.....	4½	4	4	4	4	4	4	4	4	4	4	4	44½
Brady.....	3½	4	4	4	4	4	4	4	4	4	4	4	44½
Korte.....	3½	4	4	4	4	4	4	4	4	4	4	4	44½
Maroczy.....	4	4	4	4	4	4	4	4	4	4	4	4	44½
Marco.....	4	4	4	4	4	4	4	4	4	4	4	4	44½

Tot. lost.....	4½	4½	4½	4½	4	4	4½	4½	4½	4½	4½	4½	44½

Tobacco and Chess.

Pillsbury is an inveterate smoker of strong cigars. When questioned, recently, by a reporter of the *Washington Post*, whether or not his smoking was harmful to him as a Chess-player, he said: "No, I don't find smoking interferes with my play. Some folks say it takes the sharp edge from one's intellect, and spoils one's memory. I haven't found it so. I've smoked since I was fourteen, and I can play better when I have a cigar in my mouth—only a cigar, never anything else. When I play a lot of games at the same time I must be keyed up to it, as it were. I practise what you call self-hypnotism. It is largely will power. You see, it's just this way. When it comes my turn to make a move at one of the Chess-boards my mental powers are concentrated severely on the one move. All the other Chess-boards, the Checkers, and Whist are obliterated from my mind. It is as though I had never started playing those games at all. I seem to remember nothing of them. I come to a decision, the move is made, and I turn again to the cards in my hand. Quick as lightning the game of Chess vanishes from my mind. Now it is nothing but Whist with me. I seem never to have had a thought of anything but the game of cards. I play one. Then I move one of the checkers. These transitions of mind take place so quickly that I seem to be playing Chess, Checkers, and Whist all at once, and to be thinking of all the games at once. But it is as I explained. The only thing I really need for the ordeal is my cigar."

The Literary Digest

VOL. XX., No. 3

NEW YORK, JANUARY 20, 1900.

WHOLE NUMBER, 509

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE SITUATION IN SOUTH AFRICA.

THE future of the campaign in Natal, according to the correspondents at the front, rests upon the success or failure of General Buller's present advance toward Ladysmith. A victory for the British, they point out, will dishearten and demoralize the Transvaal forces, stop the growing disloyalty in Cape Colony, put new heart into the English, both at home and in the field, and perhaps open a clear road to Pretoria; while a British defeat will make their situation, both in South Africa and in world politics, far worse than before the battle. Many American papers express surprise at General Buller's failure to bring on a general engagement two weeks ago, when General White signaled from Ladysmith that his forces were "hard pressed." General White is warmly praised for his success in beating off the Boers, but it is remarked, in view of his heavy loss, that a few more such successes would be disastrous. General White estimates that the Boer losses, however, were heavier than his own.

The British now have a formidable force in South Africa. The number of men is estimated at 120,000, and they are commanded by a field marshal, two full generals, four lieutenant-generals, and twelve or fourteen major-generals. Several interesting bits of information were published last week about the size and make-up of the Boer forces. A letter published in the *Lowell Telegram* from James F. Dunn, of that city, who is in the Boer army, places the total Boer strength, counting all the able-bodied men in the two republics, at 100,000. In the Boer army, he says, is one brigade of 2,000 Germans, with trained officers who have served in the German army, another brigade of French, Scotch, and English, with European officers, and an Irish brigade of over 2,500, most of them from California and other Western States, "with quite a sprinkling from the old country and from the Cape. Our commander," he adds, "is Colonel Blake, a West Pointer, who used to be in the regular cavalry at home, and a jim-dandy, a fighter, and a tactician that West Point may be proud of." Mr. Dunn

says that the British will need 250,000 men to overcome the Boers, an estimate shared by Winston Churchill, the correspondent who was taken to Pretoria as a prisoner and escaped. Most of the Uitlanders, Mr. Dunn says, have joined the Boer army. Their worst oppressors, he declares, were not the Boers, but the "Rhodes crowd."

The storm of indignation against the British War Office, which is accused of sending an inadequate force with inadequate artillery, ammunition, and generalship against an underestimated foe, reminds several American papers of the recent attacks on our own War Department. Some cable despatches report the English people as almost upon the verge of hysteria. A specimen of the expressions of the British press and public men is seen in Rear-Admiral Beresford's address before the London Chamber of Commerce, in which he said that England is suffering from a "rotten, false, and misleading system of administration" in the War Office. One report has it that the stock of Lee-Metford cartridges is running low in the magazines and that the notorious dum-dum bullet will be resorted to, but this report is not widely believed. The German Emperor's action, in notifying Krupp & Company that they must not supply war material to either Boer or Briton, is thought to be aimed at England, perhaps in reprisal for England's seizure of the German mail steamers. It is said that England had placed with that firm a large order for lyddite shells. We quote below some of the most interesting comments on the progress of the war:

Are Boer Victories Desirable?—"The quicker the war is ended, the better for all parties, because the final result must be the same whether the war is long or short, and it is better for all parties that there be a short war than a long one. . . . It is not to be supposed that Great Britain will yield in the end. Great Britain must conquer. The logic of the case is in that direction. There has been no contest in our day, if in any other, between foes so unequally matched as are this great empire and this small South African state, in which the weaker triumphed. It is difficult, indeed, to imagine Great Britain, with its world-wide sway, achieved by world-wide conquest, yielding to a nation such as that of the Boers. British defeat can be but temporary in such a wager of battle, and can only prolong a contest which many think should never have begun, and which all agree that it would be calamitous to have long continued.

"For this reason, we hold that it is a mistake for any person to rejoice in the defeat of the British forces. Suppose such a person is not moved by passion or prejudice, suppose he has a sincere belief that the Boers are fighting for liberty, and his sympathy goes out to them in that attitude; still, as we have said, the case has its practical side. . . . Continued successes of the Boers implies, on the one hand, a long war, with much bloodshed and ultimate British triumph, or, on the other, the same long war to be ended by British defeat. In the contemplation of the one, the world may well mourn; in the contemplation of the other, it must shudder."—*The Boston Herald.*

England's Military Mistakes.—"It may interest the gentlemen who have had so much to say about the inferiority of our military administration as compared with that of England to note these facts:

"1st. The Highland Brigade, in the attack at the Modder River, wore in a heat nearly 90° in the shade the heavy uniforms they are accustomed to at home.

"2d. There has been a serious failure in staff service in South Africa. To this in part is due the fact that General White's left wing lost first its ammunition and then itself. General Gatacre marched his men blindly into a trap, and left 670 prisoners.

Lord Methuen's advance is torn to pieces before the troops had even deployed for the attack.

"3d. 'Plumes, red tape, and favoritism' have been quite as controlling in English military affairs as they have ever been in this country. The head of the British army was evidently selected for other reasons than because he was England's ablest soldier, and he has the reputation of being influenced in his choice of men by other considerations than those of experience and ability. 'The jealousies of red-tapeism are at the bottom of all our troubles,' an English officer is quoted by *The Herald* as saying. . . .

"It is complained in England that their authorities were completely deceived by the cunning Boers as to their strength. They showed visitors with great ostentation what they wanted them to see, but nothing more. Some English officers did learn of the preparation the Boers were making, but they could not get a hearing at the War Office. General Butler, who was one of these, was harshly criticized instead of being listened to. In a recent speech Lord Wolseley said: 'We have been grossly misinformed as to the strength and resources of the Boers.' Another complaint is that made by Mr. Burleigh, a correspondent, who says: 'Is it not a little odd that the War Office has forgotten to provide the officers with a supply of military maps of Natal? It so happens at the moment that even colonels are unable to procure trustworthy maps, either military or ordinary, for the good reason there are none left on stock anywhere.'—*The Army and Navy Journal*.

Uitlanders Have Disappeared.—"How many of these valiant Uitlanders who were clamoring for their rights have joined the British army? In comparison to their numbers, there is not a baker's dozen with arms in their hands. We know, on the other hand, that a good many of them, those who had no grievances, and who were satisfied with the situation, have joined the Boer commandos, and are now fighting in the ranks. But the vast majority of the Uitlanders, sufficient in numbers to outvote the Boers if the privilege of suffrage had been conferred on them, have disappeared as suddenly as if the earth had opened and swallowed them.

"For the first time since the American Revolution, when a few families went back to the old country, British subjects have dropped their property and fled from the scene of war. Johannesburg is a deserted city, and the Uitlanders have eloped.

"What bearing this may have on the general result we do not know, but it is a fact that can not be very reassuring to the British troops. It will not add to the cheer of the camp-fire for Tommy Atkins to know and feel that he is risking his life for the rights of a lot of men who have run away like a pack of jackals."—*The Atlanta Constitution*.

It is Inspiring.—"This disparity in numbers, which grows al-

most day by day, has made the conflict on the Transvaal border the most remarkable in history since the American Revolution. Never before in this century did a handful of people wage such successful warfare against a giant nation. Never before in this century did so small a population send forth such an indomitable army to battle. Never before in this century did such tiny governments dare so much for principle and do so much in defense of their own frontier as the Transvaal and the Orange Free State are daring and doing to-day.

"The world has seen no greater heroism, no grimmer determination, and it is an inspiring spectacle, at the close of a commercial century and in a commercial era, to witness this marvelous devotion to the cause of government by, for, and of the people."—*The Chicago Inter Ocean*.

CONGRESS AND THE PHILIPPINES.

THE long-expected discussion of the Philippine question by Congress, the body which has "power to dispose of and make all needful rules and regulations respecting the territory belonging to the United States," has begun, greatly stimulating the newspaper criticism and comment on our expansion problems. Senator Beveridge's speech last week, in support of his resolution looking to the permanent retention of the islands, was the opening shot from the expansion ranks in the Senate, and Senator Hoar's brief rejoinder is taken to indicate that he will champion the anti-expansionist cause.

The military situation in the islands will, it seems likely, have much influence on the decision of Congress. The news despatches indicate that the insurrection in the northern part of Luzon is badly demoralized; the insurgent strongholds are taken, their army is broken up into small bands, Aguinaldo's cabinet is scattered and some of its members made prisoners, several of Aguinaldo's family have been captured, and the Americans who were prisoners have been released. Senator Hoar admitted, in a recent public letter, that "the Philippine armies are scattered," and that "Aguinaldo is a fugitive and in concealment." Lieutenant Gillmore, one of the rescued American prisoners, whose captivity since last April has given him some knowledge of the natives, throws an interesting side-light on the situation when he predicts that armed resistance to our rule will continue as long as there are any Tagalogs left. The campaign south of Manila has just opened, but General Otis reports that Cavite province is already occupied by American troops, and the occupation of the

JOHN BULL'S TROUBLES IN CARTOON.

other provinces seems to be only a matter of a short time. It is predicted that before the rainy season begins, in May, all Luzon will be under American control. A serious revolt is said to be on

foot in the island of Panay, but the rest of the archipelago is comparatively quiet.

As Mr. Beveridge seems to be a leader among the Senate expansionists, his recommendations will very likely make a strong impression on legislation, and the form of government which he proposes for the islands becomes therefore a matter for careful inspection. The main features of his plan are as follows:

"A Philippine office in our Department of State; an American governor-general in Manila, with power to meet daily emergencies; possibly an advisory council with no power except that of discussing measures with the governor-general, which council would be the germ for future legislatures, a school in practical government; American lieutenant-governors in each province, with a like council about them; if possible, an American resident in each district and a like council grouped about him; frequent and unannounced visits of provincial governors to the districts of their province; periodical reports to the governor-general; an American board of visitation to make semi-annual trips to the

archipelago without power of suggestion or interference to officials or people, but only to report and recommend to the Philippine office of our State Department; a Philippine civil service, with promotion for efficiency; the abolition of duties on exports from the Philippines; the establishment of import duties on a revenue basis, with such discrimination in favor of American imports as will prevent the cheaper goods of other nations from destroying American trade; . . . American judges for all but smallest offenses; gradual, slow, and careful introduction of the best Filipinos into the working machinery of the Government, no promise whatever of the franchise until the people have been prepared for it—all this backed by the necessary force to execute it; this outline of government the situation demands as soon as tranquillity is established. Until then military government is advisable."

Even this plan, however, said Mr. Beveridge, "will fail in the hands of any but ideal administrators." The men we send "must be themselves the highest examples of our civilization."

Senator Hoar, too, has a plan. He and many other anti-expansionist leaders in the press and in public life, noting the peaceful and prosperous condition of Cuba as compared with the condition of the Philippines, are asking whether similar promises and treatment would not have done as much in one case as in the other, and whether it is even now too late to bring peace to the far-Eastern archipelago by a promise of ultimate independence. Senator Hoar's plan is to train the Filipinos for self-government and independence. He says, in a letter to the press, that he "would send General Wood or General Miles or Admiral Dewey to Luzon" and "would have him gather about him a cabinet of the best men among the Filipinos." Lending the aid of the United States army merely to keep order, he "would permit the people to make laws and to administer laws, subject to some supervision or inspection till the disturbed times are over." When law and order are assured under native rule, he "would by degrees withdraw the authority of the United States," guaranteeing them protection against the cupidity of other

TWO VIEWS OF EXPANSION'S BURDENS.

nations and lending our aid for a reasonable time to maintain order.

Senator Hoar's Plan a Poor One.—"Now the difference in the point of view between Senator Beveridge and Senator Hoar is that the former has studied the Filipinos in the Philippine Islands, has journeyed there, and has formed his judgment, whether it be right or wrong, on the spot; whereas Senator Hoar has studied the Filipinos through books, documents, and reports. One man has seen, the other has heard.

"Senator Hoar being a man of vehement sympathies, stiff in opinion as well, generally goes the whole length of his sympathies. His argument with regard to the Philippines is no exception, and yet if Mr. Hoar's methods of government were set up in the islands, there is good ground for believing that they would defeat his purpose. Thus, suppose the aid of the army of the United States was lent to maintain order, against whom is order to be maintained? The answer that springs to the lips most naturally is against those who oppose or may oppose the ascendancy of Aguinaldo, for Senator Hoar deems him the chosen leader of the people of the islands. If the people of the Philippines are allowed to make and administer laws, 'subject to some supervision or inspection,' wherein would be found their independence? But Senator Hoar is candid enough to see that to enable the Filipino republic to maintain itself, it must have our support and protection always with it. . . . Here would be an endless field for difficulties. We must guard the Filipino republic against the assaults of other powers, furnish it with capital enough to begin business, and employ our army to do the police work of the native administration. In other words, we must make ourselves responsible before the world and to the world for the conduct and actions of people who do not owe allegiance to us, but to whom we owe protection. That is Senator Hoar's idea, and it bids fair to be his alone."—*The Boston Transcript (Rep.)*.

Another View of Senator Hoar's Plan.—"There is no novelty in this plan. It has been suggested many times. It has the merit of simplicity. If any such assurance had been received from George III., before hostilities broke out in the American colonies, or even after they had broken out, and if Edmund Burke or Lord Chatham or any other man in whom our fathers had confidence had been sent to carry it into effect, the war would have come to an end, to the great happiness of both countries then and thereafter.

"What prevents the adoption of such a policy now? Nothing but the grasping disposition which finds voice and expression in Senator Beveridge's speech. It is the lust of conquest, the desire for gain, the greed of territory and of power over others. It is the spirit of dominion, of possession, of imperialism—a spirit at deadly strife with our principles of government, at variance with the Declaration of Independence, with the preamble of our Constitution, and with the tenets of Christianity. Senator Hoar has highly honored himself by the stand he has taken, and has given courage and hope to multitudes of his countrymen who still cherish the ideas upon which the republic was founded, by showing them that they are not without first-rate leadership in the highest councils of the nation."—*The New York Evening Post (Ind.)*.

Senator Beveridge's Ideals.—"The Philippines are not merely an opportunity, but a sacred trust. Senator Beveridge asked:

"What shall history say of us? Shall it say that we renounced that holy trust, left the savage to his base condition, the wilderness to the reign of waste; deserted duty, abandoned glory, forgot our sacred profit even, because we feared our strength and read the charter of our powers with the doubter's eye and the quibbler's mind? Shall it say that, called by events to captain and command the proudest, ablest, purest race of history in history's noblest work, we declined that great commission?"

"Surely this fine passage refutes the criticism of Senator Hoar that the eloquent orator spoke only of material gains and had no thought of right, justice, duty, and freedom, the glorious American words. Nothing could be more gratuitous. Mr. Beveridge was bound to dwell on the economic advantages of Philippine retention, but he gave equal prominence to the higher and nobler sanctions. He holds that our rule will mean freedom, justice, and prosperity to the islanders, and that our withdrawal would be cowardly and immoral, as well as inexpedient. In his own words: 'We will exalt our reverence for the flag by carrying it to a noble future as well as by remembering its ineffable past. Its immortality will not pass, because everywhere and always

we will acknowledge and discharge the solemn responsibilities our sacred flag in its deepest meaning puts upon us.'

"The alternative proposed by Senator Hoar would bring neither peace nor freedom. He mistakes the nature of the Filipinos, according to Mr. Beveridge, and that fatally weakens his whole case. It is not a question of patriotism, but of real knowledge of the situation and thorough grasp of the problem. Senator Beveridge has displayed both, and he deserves the congratulations he is receiving."—*The Chicago Evening Post (Ind.)*.

About those Model Administrators.—"When Senator Beveridge was so naively setting up his lofty official standard of qualifications for proconsuls and pretors in the Philippines it is not strange that Senator Hoar involuntarily turned to the seats of Senators Hanna and Platt. The Massachusetts Senator, in listening to this description of an official Utopia in our Eastern archipelago, probably asked himself whether after a hard-fought campaign Chairman Hanna would busy himself in recommending talented administrators and philanthropists for official posts in the Philippines, if such could be secured. Similar places under the home Government are, under the spoils policy which prevails in spite of civil-service reform, the rewards of partizan activity, and they go to the most deserving political workers. We know too well what kind of recommendations for guardians of the simple-minded Filipinos would emanate from the Pennsylvania machine. Heaven help the natives if any of the municipal spoils-men should be sent out to administer their affairs and teach them the methods of self-government!

"The Beveridge standard of qualifications of officials for the Philippines is utterly unattainable in existing conditions; yet it would be far better to strive toward that standard than to give up our Eastern possessions to the control of the spoils-men. Senator Beveridge, at least, may be depended upon to fight for his political ideals."—*The Philadelphia Record (Ind. Dem.)*.

BRITAIN'S RELEASE OF AMERICAN FLOUR.

THE reply of the British Government to Ambassador Choate regarding the seizure of American flour in Delagoa Bay, and the subsequent release of the cargoes, is regarded by the American press as the inevitable abandonment by England of a position which had become quite untenable. Great Britain now declares that she will not regard provisions as contraband, "unless intended for the enemy." It is further contended, however, that the seizure was not a violation of the rights of a neutral power, since England still claims, under her old common law, the privilege of seizing flour and other provisions "as a military necessity," this privilege being subject to indemnity. While England's reply seems to have met with official acceptance at Washington, it nevertheless arouses indignation in the American press. The *Baltimore American* voices a widely expressed sentiment when it says:

"What chance would American shippers have under such a ruling? Who is to execute this new international law decreed by Great Britain? A shot is fired across the bows of the ship with the American products on board. A naval lieutenant goes aboard, and finds flour or wheat or corn. He can not tell whether it is going to the Boer army or to the Portuguese, or to both. The ship's papers are correct. It has no private mark on it to show its destination. What will the officer do? He will confiscate it, of course. He may, or his Government may, make an apology or an explanation afterward, but that does not build up American commerce, struck down by the insolence of Great Britain."

Some of the papers are more friendly to Great Britain in their criticism. The *New York Tribune* thinks that "the good faith of Great Britain has from the outset been undoubted." The *Philadelphia Inquirer* considers that the British Government has made "an entirely reasonable and satisfactory reply." The *New York Press* finds in the incident a tribute to American common sense. It says:

"The contrast between general American behavior and that of

the German press and people, breathing threats, shrieking for a greater navy, demanding the seizure of British vessels in German ports, and betraying a comical unacquaintance with international law in every grimace and every gesture, is most satisfying to Americans. It must also be somewhat puzzling to those entertaining preconceptions as to 'Teuton stolidity' and 'Yankee hysteria.' The explanation is doubtless to be found in the fact that in international maritime relations the Germans are veritable infants, while we are getting a good deal more than a big boy now. However that may be, we have got our flout, which is no great thing, the whole dispute being a mere lawsuit; but we have kept our temper, which is a great thing, considering how completely the other fellow lost his."

MR. ROCKEFELLER ON TRUSTS.

THE answers of John D. Rockefeller, president of the Standard Oil Company, to the questions of the Industrial Commission are accepted as a new and welcome light on the trust problem because they come from a man who knows what he is talking about. As Mr. Rockefeller was the founder and is still the head of the largest trust in this country, if not in the world, his statement of the good and the evil of trusts, and how to get the good and escape the evil, has roused no little comment. First, however, he answers some charges that have long been standing against the Standard Oil Company. As to railroad freight rebates, by which it has been said the Standard built up its monopoly, Mr. Rockefeller denies that his company ever received rebates that other shippers could not obtain, and declares that "no percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time."

Another long-standing charge has been that the railroad companies overcharged other oil shippers and paid the margin to the Standard Oil Company. When questioned about this, Mr. Rockefeller replied:

"I know of no such instance. It seems that some arrangement of that nature was entered into by one of our agents in Ohio, being the same case which has been testified to by George Rice. When notice of this agreement was brought to the officers of the company for which it was made it was promptly repudiated, and the money received, some small amount, I think under three hundred dollars, was refunded. And this was not done because of any notice, action in court, or judicial opinion, but promptly as soon as reported, and before we had any knowledge of judicial proceedings."

What has attracted the most notice, however, has been Mr. Rockefeller's opinion of the advantages and disadvantages of trusts in general, and the legislation that he recommends. The advantages to the stockholders and to the public he summarizes as follows:

- "First, command of necessary capital.
- "Second, extension of limits of business.
- "Third, increase of number of persons interested in the business.
- "Fourth, economy in the business.
- "Fifth, improvements and economies which are derived from knowledge of many interested persons of wide experience.
- "Sixth, power to give the public improved products at less prices and still make a profit for stockholders.
- "Seventh, permanent work and good wages for laborers."

The two dangers, he thinks, are that trusts may be formed simply for speculation, "and that for this purpose prices may be temporarily raised instead of being lowered." But these are no

more arguments against combinations, he says, "than that the fact that steam may explode is an argument against steam."

He makes two suggestions regarding legislation:

"First, federal legislation, under which corporations may be created and regulated, if that be possible.

"Second, in lieu thereof, state legislation, as nearly uniform as possible, encouraging combinations of persons and capital for the purpose of carrying on industries, but permitting state supervision, not of a character to hamper industries, but sufficient to prevent frauds upon the public."

The *New York Journal*, noting Mr. Rockefeller's statement that one of the dangers of trusts is that "prices may be temporarily raised instead of being lowered," remarks:

"This was said to have been written on Tuesday. A day later the Standard Oil Company, controlled by Mr. Rockefeller, 'raised' the price of oil three cents a gallon.

"By this 'raising' instead of 'lowering' the price of oil Mr. Rockefeller increases his income by millions a year.

"This is the danger he refers to. How would he advise us to meet it?"

The *New York Times* thinks that the "state supervision . . .

THE PUBLICITY-CURE FOR TRUSTS.

VOICE FROM THE MAN UP THE TREE: "If you don't let go, I'll put your name in the paper!"
—*The Verdict*.

sufficient to prevent frauds upon the public," which Mr. Rockefeller recommends, "admits the principle of publicity in corporate management," a principle which has been urged by Bourke Cockran and other speakers and writers on the trust problem. The *New York Journal of Commerce* points out that, in spite of all that Mr. Rockefeller did say, he neatly dodged the main point of the whole question. He did not tell why it was necessary to suppress competition. It says:

"The architect of the greatest of the trusts of course succeeded in stating fully and forcibly the advantages the community derives from the industrial combinations. The cooperation of capital, the transaction of business on a large scale, the management by men of exceptional ability, all contribute to the economy of production and the general welfare. But all these, it should be answered, may be attained without the suppression of competition. The suppression of competition is not in the public interest, and it is the first thing aimed at by the trusts. The extermination of the small operators is a decided disadvantage to the community. If the small operator can not compete in the open field with the large operator, his extermination must be accepted as one of the drawbacks of a movement which is on the whole one of progress. But we fear that few trusts can be acquitted of the charge of seeking the destruction of small operators either by securing exclusive advantages with the transportation companies

or by selling lower than cost till the man of short capital is driven out and the combination of large capital is left free to use its isolation in ways that are not in the public interest or in accordance with sound business methods."

And it is not true that the trusts reduce prices. The same paper says:

"The margin between raw and finished products has been shown to have increased under the manipulation of the trusts. Circumstances which they could not control have forced down the prices of their products, but they have succeeded in forcing down still farther the prices of the materials they buy."

The *Boston Journal* says:

"This at least is true, that the sooner law-making bodies recognize the distinction between combinations which are proper and advantageous and those that work mischief to the public, the sooner will the entire subject be lifted from the region of mere declamation to that of practical regulation."

The Philadelphia *North American* thinks that the Standard Oil Company may have received a few favors from the railroads, in spite of what Mr. Rockefeller says. It adds:

"If the American railroad system were run on postal principles, with uniform rates for all comers at all times, Mr. Rockefeller's fortune would be some scores of millions smaller than it is, and the Industrial Commission would find the volume of its work considerably reduced."

THE MONTANA SENATORIAL SCANDAL.

THE testimony now being given before the Senate Committee on Privileges and Elections in the hotly contested case of Senator Clark of Montana "is revealing the seamy and corrupt side of Montana politics," says the *Chicago Evening Post*, "in a manner calculated to produce general disgust." The Washington correspondent of the *Boston Transcript* says that it "shows what a war between two not overscrupulous multimillionaires can accomplish for the political degradation of a commonwealth." The Montana war is thus described by the *New York Evening Post's* Washington correspondent:

"Clark decided many years ago to come to the United States Senate and to run the politics of Montana. Mark Daly, another copper king, decided that Clark should do neither of these things. Ever since then an auction has been going on in Montana every time any political or other favors were to be disposed of. The terms Republican and Democrat are almost as unknown there as Whig and Tory. Everything is 'Clark' or 'Daly.' Both leaders are Democrats, but the Republicans are likewise divided into the 'Clark' and 'Daly' factions. Practically all the newspapers of the State are either Clark or Daly, and are run as the literary machinery of the rivals. No man would think of starting a newspaper in Montana to stand on its own merits and be supported by subscriptions and advertisements, any more than he would think of running a Methodist church for the profit to be made on church sociables. Occasionally some Clark man switches over from Daly, or *vice versa*, and in the present trial all turns upon the allegation that some Daly spies insinuated themselves into the Clark camp, took Clark's money, sealed it and marked it, and then came out and 'blew' on him."

The principal man who "blew" is thus described by the Philadelphia *Ledger*:

"The 'star witness' for the prosecution is a member of the legislature, named Whiteside, who gained the confidence, as he tells the story, of Wellcome, Clark's agent, and entered with him into the purchase of votes, in order that he might get evidence to expose the corruption of Montana politics. Wellcome was disbarred by the Montana supreme court the other day on the charge of engaging in bribing State legislators in connection with Clark's election. Wellcome's disbarment was secured on the testimony of Whiteside, who swore that he had received a promise of \$10,000 for his own vote, and on the evidence of another Clark, a State Senator, who swore that Wellcome had paid him \$10,000, which, in accordance with a previous understanding, was turned over to Whiteside, and by him used as evidence."

Thirty \$1,000 bills were exhibited before the Senate committee last week as evidence. These bills, according to witnesses, had been paid to four members of the legislature for voting for Clark. No newspaper has yet proposed a remedy for Montana's political condition. There is a widespread belief that popular election of Senators is the cure for the deadlocks in the legislatures, such as occurred in Pennsylvania, California, Utah, and Delaware last year; but, says the Philadelphia *Ledger*—

"that remedy would hardly prove efficient under the conditions prevailing in Montana. Where such powerful subterranean forces are at work as are said to be active in Montana, the nominating conventions called to name the candidates for popular suffrage could be wielded to the purposes of the boss as readily as legislatures, and by the same means."

SECRETARY GAGE'S DEFENSE.

SECRETARY GAGE, in his reply to the charges made by the newspapers, and in response to the request of Congress for information, does not appear to deny any of the specific facts alleged; but he avers that none of his transactions were illegal, and that all were for the public good.

As to the sale of the custom house in New York to the National City Bank and the deposit of the proceeds with that bank—which transaction has been the basis of the more serious criticism—Secretary Gage replies in considerable detail. The reason the custom house was sold to the National City Bank, he says, was because it offered \$3,265,000 for the property, a sum larger by \$190,000 than that offered by the next highest bidder. By the terms of the sale, the bank was obliged to pay at least \$750,000 down, but it chose to pay \$3,215,000 down, leaving only \$50,000 unpaid. Mr. Gage tells why he handed this money back to the National City Bank, which is a designated depository bank for Government funds, and which in this case, as in the case of all other deposits, furnished to the Treasury Government bonds to secure the deposit. He says:

"This deposit was made in a depository bank for the same reason that other deposits have been made in them, viz., because to withdraw the currency into the vaults of the Treasury, where it was not needed and could not be utilized, would have required a withdrawal of credit that was being extended in commercial circles, and to that extent a disturbance to the natural order of business would have followed. To have required its payment by the National City Bank to another designated depository would have been an ungracious discrimination without substantially changing the fact."

The nub of the controversy, however, it will be remembered, was the question whether the money so deposited in a designated depository can be said to be "paid into the Treasury of the United States," as the law requires. Two extracts from decisions of Supreme Court justices, quoted last week, seemed to answer this question in the negative; but Mr. Gage, in reply, quotes from the same decisions to show that they not only do not injure his case, but actually confirm the legality of his action.

The first was Chief-Justice Waite's decision in the case of *Branch v. United States* (100 Supreme Court Reports, 673). In this decision the chief-justice said:

"The designated depositories are intended as places for the deposit of the public moneys of the United States—that is to say, money belonging to the United States."

The second was Justice McKenna's decision in the case of *Coudert, administrator, v. United States* (reported in 175 Rep., 175). After quoting the sections of the law involved, Justice McKenna said:

"It is obvious from these provisions that it was only public money of the United States of which national banks could be made depositories, and it was, therefore, only public money which an officer could deposit in them, whether he received it originally or received it to disburse."

Mr. Gage holds that these decisions confirm his contention that

public moneys may properly be placed in the designated depositories and that when so deposited they are "in the Treasury." He also quotes the Controller of the Treasury, whose decision is binding upon the executive branch of the Government, as ruling "that money is paid into the Treasury of the United States by being deposited with the Treasurer of the United States here in Washington or to his credit with an assistant treasurer or in a designated depository."

As to his action on December 18 and thereafter, in depositing the internal-revenue receipts with the National City Bank to relieve the Wall Street panic, Mr. Gage says that "the withdrawal of large sums of money from active circulation to the Treasury vaults" must inevitably cause "disturbance to business." He counteracted this withdrawal, therefore, by depositing the surplus in the banks, where, he says, it was "secure to the Government," and yet remained "available to business use." The National City Bank was selected simply as a distributing agent, and the reason for this selection, says Mr. Gage, was that the National City Bank offered far more security than any other.

Secretary Gage's critics have been trying to make political capital out of a letter written by Vice-President Hepburn, of the National City Bank, to Mr. Gage, and included by the latter in his report to Congress. Mr. Hepburn asked the secretary to continue using that bank as a depository of public money, and after calling attention to the bank's strength, added: "If you will take the pains to look at our list of directors, you will see that we also have very great political claims, in view of what was done during the canvass last year."

Mr. Gage, however, fails to see why he should be held responsible for Mr. Hepburn's indiscretions. To the Washington correspondent of the *New York Evening Post* he said:

"I am to be pilloried, I see, because I published that letter with the rest of the correspondence instead of suppressing it. Why did I publish it? Because it was a part of the correspondence called for, and I had nothing to conceal. The logic of this case is unique and ingenious. If a man writes me a letter containing any objectionable matter, I suppose I must go to jail for it? Isn't that the argument?"

"I dare say, if the files of this department were searched, these would be found to contain hundreds of letters written to various secretaries, making claims of one sort and another on political grounds. There is a widespread notion that this argument carries weight. With me, neither partizanship nor personality has had one iota to do with any of my transactions as Secretary of the Treasury with the national banks. I don't suppose I know the politics of six men in the Treasury Department, below the assistant secretaries. I did not find out till a day or two ago, and then by the merest accident, that a man who has been in my closest confidence for two years past is a Democrat."

Gage in League with the Money Trust.—"There was a rumor the other day that Gage was going to retire from the Cabinet in order to become president of this bank; and, from the way in which he has seemingly been trying to empty the United States Treasury into it, there would be nothing astonishing if the rumor were to prove true. Gage has not yet been three years at the head of the United States Treasury; and yet in the course of that time he has showered on the National City Bank of New York favors which have been worth to it in cold cash the goodly sum of \$1,862,337. The favors have taken the shape of immense government deposits such as Union Pacific payment of \$35,000,000, internal revenue receipts amounting to \$17,000,000, financing the payment of the \$20,000,000 indemnity to Spain, etc.

"Now, whether Gage is going to become president of the National City Bank of New York or not, it is but too plain from these favors shown by one of the leading members of the Administration to one of the banking institutions controlled by the Standard Oil group, that the Administration is in league with the money trust to control the finances, and through the finances the industries, of the country. Nothing was ever known of an Administration so thoroughly inequitable as this proved connection with the money trust—that it should not only not be opposed to the

trusts which are running the United States and pauperizing the American people, but that it should be actually aiding these infamous combinations of capital to do this very thing."—*The New Orleans Times-Democrat* (Dem.).

Animus of the Attack.—"The outcry against Secretary of the Treasury Gage for the position he has assumed in dealing with a critical financial condition is inspired largely by the mad desire on the part of irresponsible journals to create a sensation, and also by the near approach of the Presidential campaign. Those who understand the animus of the attacks to which the secretary has been subjected give little heed to the printed calumnies, but the clamor is apt to create a false impression in the minds of honest but less well-informed people, and the whole matter is therefore reprehensible in the highest degree. A man's reputation is not made by lying enemies, altho for the moment they may obscure the position which he really holds in the sphere of usefulness he is called upon to occupy. While Secretary Gage may be put to a temporary disadvantage, as the result of the mendacious assaults on his character, there is little question that the effects of these attacks will be ephemeral, and that ultimately he will figure in history, not only as a financier of the highest distinction, but as a statesman and patriot in the truest sense of the word."

"If the ordinary citizen will only stop to reflect that when the secretary has been forced to do, state, county, city, and school officials have been doing for years—in keeping public funds in banks, where they belong—he must conclude that there is nothing deserving of execration in the secretary's course. The truth of the matter is that Mr. Gage is something of a martyr to his fellow citizens, who have consistently refused to put their house in order against periods of sudden distress, but who yet expect him to drag the country out of its troubles by force of his genius."—*The New York Financier* (Fin.).

A Suggested Remedy.—"The suggestion that the Secretary of the Treasury be allowed to charge interest on Government deposits in national banks is not a bad one. It is exactly what a private individual would insist upon if he had large amounts of money in hand for which he had no use for considerable periods of time. He would place it in banks, but he would see that he got some remuneration for the use of his money. The Government should follow the same plan. The depositories can use the money to profit, and it would be nothing more than right that the Treasury should receive a moderate rate of interest. To deposit in a bank is to make a loan, but as the law now stands the Government can not charge interest. Since the money market is seriously disturbed by the withdrawals of the excess of revenues, it is manifestly just and proper that an attempt should be made to counteract the evils of this congestion, but in doing so the Treasury is assailed for favoring national banks. Were there a moderate interest rate charged there would be less ground for complaint, tho there would always be grumbling. The rate ought to be left at the discretion of the secretary, as the value of loans constantly fluctuates, and could not be fixed by law."—*The Louisville Courier-Journal* (Ind. Dem.).

How About the Bank-Notes?—"Why isn't the issue of money by the banks on Government bonds just as much of a pet-bank policy as this of Secretary Gage? Mr. Windom said it was grossly unjust to the Government and unfair to the people to turn Treasury money over to the banks without interest, and then pay them interest on the bonds deposited and permit them to loan the money out to the people at whatever rate they could be compelled to pay. But this is precisely what the Government is doing every day, and has been ever since 1864, under the national bank act. In the one case the banks deposit United States bonds with the Government and receive and lend out specially prepared currency on this security. In the other case they deposit United States bonds and receive and lend out money of the Government which has not been specially prepared. The two cases are exactly parallel. They differ only in non-essential details. Secretary Windom unintentionally spoke as strongly against the bank-note policy as against the bank-deposit policy, and those Republicans who are now denouncing Secretary Gage on the general terms of his course are unwittingly denouncing the present bank-note system.

"And they are doing this at the very moment when a party financial bill is pending in the Senate which provides for the ex-

tension of the public debt and its refunding for the express purpose of enlarging and perpetuating what must evidently be called a pet bank-note policy."—*The Springfield Republican (Ind.)*.

WOMEN AND WINE.

SEVERAL daily papers have lately drawn attention to an alleged increase of drunkenness among women. The *Chicago Journal* declares that this increase is very noticeable in that city. It says:

"The explanation of this phenomenon is not difficult. As life has become more tense, more strenuous for women, the need, real or fancied, for stimulants has come upon her as it did upon men. It is the exceptional woman to-day who is not in some sense a business woman, for even the pursuit of society has become a business. With greater independence, heavier cares, and a livelier intellectual life than her grandmother enjoyed—or suffered—the twentieth-century girl may be expected to seek much the same method of securing relief or stimulus as her brother does.

"Doubtless this will be bad for the race. The alcoholic taint inherited from one parent has wrecked enough lives. If the danger be doubled the gravity of the results will be enhanced. But it is an irrefutable proposition that if women are compelled to do an ever-increasing share of man's work, they will ultimately contract a share of man's vices too."

A Southern paper, the *Atlanta Journal*, adds its testimony to the existence of a similar state of things in the Georgia metropolis as follows:

"It is said that there were more women on the streets of Atlanta under the influence of liquor last Saturday night than the police had ever observed before in all their experience, and in our exchanges from other cities we see frequently accounts of women who have been arrested for drunkenness.

"The rather free indulgence of women in wine and even stronger drinks at entertainments is one of the deplorable events of modern social life, and we fear that it is on the increase.

"The proprietor of a fashionable New York hotel is quoted as saying that women guests give his bar a very large patronage by orders from their rooms, and that the drink habit among women of the higher as well as the lower classes is growing.

"It would be pleasant to believe that such statements as we have referred to are either entirely untrue or grossly exaggerated, but the frequency and emphasis with which they are made will not permit them to be brushed aside merely because it is painful to give them credence.

"What are we going to do about it?"

At the same time the reported serum cure for alcoholism, noted in a recent number of *THE LITERARY DIGEST*, is claiming its share of attention, altho the attention is not always favorable. Thus the *Philadelphia North American* says:

"Courage is needed to set bounds to the march of medical science in any direction, but we shall believe in this serum when the claims for it have been demonstrated. Alcoholism is an attractive field both for the physician and the charlatan. The one is animated by the knowledge that he is seeking a cure for a master evil, and the other is buoyed by the hope of the fortune that waits for anybody who can cause it to be believed that he is able to eliminate the drunkard's craving.

"Physicians can do much to aid the man who desires to shake off the drink habit. They can attend to his general health, brace him with tonics, quiet his nerves, regulate his diet, and tell him how to keep well. But up to date no medical device has been discovered that will cure a drunkard who does not bring his own will into play and keep it at work. The French have a saying that 'he who has drunk will drink,' and that is true of all but the few who rescue themselves from the vice by the exercise of persistent will power. There have been many pretended discoveries of drugs, or combinations of drugs, that, like this new French serum, were advertised to inspire an unconquerable distaste for alcohol, but none of them has stood the test of time. It still remains true that the only known sure cure for drunkenness is not to drink."

GENERAL JOUBERT'S OPINION OF NEW YORK.

HENRY GEORGE, JR., who has been writing for the *Philadelphia North American* an account of General Joubert's visit to America a few years ago, devotes some interesting paragraphs to the disappointing impression that New York City made upon the old Boer commander. Mr. George writes:

"He had lived in this country years before, and now he desired to see what change had come in New York. So a carriage party went into the business center, crossed the big bridge, observed the elevated railroad structure, drove through the park, viewed the imposing buildings, and inspected in passing the residences of the richest in a metropolis fast getting to be the wealthiest city in the world.

"I have now seen how the rich, idle people live among you," he said. "Please let me see how the working people live."

"Accordingly the carriage was driven through the swarming East Side, where people had piled up in the past decade so that a single square block contains what are called the 'homes' of a thousand human beings—the population of a good-sized village. The visitor slowly shook his head and said, as if reluctantly: 'How can I go back and tell my people that this must be one of the fruits of their ardent dream; that the great republic, after which our new little republic is fashioned, shows a terrible gangrene in its very heart, in the center of its biggest and proudest and most splendid city!'"

A story has been going the rounds of the press to the effect that General Joubert was an officer in the Confederate army during the American Civil War. Col. Lamar Fontaine, in fact, a Confederate officer, said in a letter to the *Richmond Times* that the general was an officer in Taylor's Louisiana brigade, and that he commanded the brigade at Front Royal in May, 1862. Another Confederate soldier, however, of whom *The Times* says that "he knows what he is talking about," declares in a letter to that paper that there was no Colonel Joubert in that brigade at that time and that no such man commanded the brigade at Front Royal. If Joubert was in the brigade, says this correspondent, he could not have been at that time above the rank of captain. Mr. George W. Van Sicken, the New York agent of the Transvaal relief fund, says in a letter to the *New York Sun*: "Mr. Lamar Fontaine is 'away off' about General Joubert having been a 'Johnny Reb.' General Joubert visited this country about nine years ago, and with his wife and granddaughter was a guest at my house. He never served in the Confederate army."

LETTERS AND ART.

LITERATURE OF THE NINETEENTH CENTURY:
A RETROSPECT.

NO century, it is generally conceded, has made a more substantial contribution to the permanent literature of the world, both in prose and verse, than has the century just ending. Mr. Sidney Lee, editor of "The Dictionary of National Biography" and author of the recently published "Life of Shakespeare," points out, in the course of a brief *résumé*, some of the chief literary characteristics of the century. He writes as follows (we quote from a reproduction of his article in the *Philadelphia Times*):

"In certain regions of literature, writers in past ages have displayed more commanding power than any that has been displayed during the last hundred years. England has not produced a second Shakespeare among dramatists, nor a second Milton among epic poets, nor a second Pope among epigrammatists, nor a second Gibbon among historians, nor a second Boswell among biographers. On the other hand, in the realms of lyric poetry and romance heights of excellence have been scaled in the present century which were never conquered before. In melody and metrical faculty, in depth and tenderness of feeling, Shelley's 'Ode to the Skylark,' Keats's 'Ode to a Nightingale,' many of the sonnets of Wordsworth, many of the songs of Tennyson, transcend like efforts of any poet who preceded them. Sir Walter Scott's 'Antiquary,' Thackeray's 'Esmond,' George Eliot's 'Adam Bede,' are crowning peaks in a world of art which was in a large degree *terra incognita* to the generations that went before. And outside the domain of lyric poetry and romance there are literary paths upon which wayfarers of our century have conferred a splendor hitherto unimagined. Browning's 'Ring and the Book' is a more penetrating study of the intricacies of the human intellect; 'Carlyle's French Revolution' is a more vivid presentation of stirring historic incident; Ruskin's 'Modern Painters' is a more eloquent and sensitive interpretation of pictorial art than any earlier endeavors in philosophic poetry, or in history or in esthetic criticism. Beside Browning, Pope is a superficial student of human character; beside Carlyle, Robertson is a halting and clumsy historian; beside Ruskin, Burke is a purblind critic of art. If by some unlucky turn of the wheel of fortune English literature had come to an end in the year 1800, it is no exaggeration to assert that it would have been shorn of more than half its glory.

"From the point of view of the literary historian the nineteenth century is only comparable to the sixteenth. Both centuries are characterized by an irresistible outburst of intellectual energy and excitement which generated great achievements in all departments of human effort. The elation of spirit that inaugurated the new order in the political, intellectual, and social systems of the time found at both epochs its most permanent expression in purely imaginative literature. The literature of the century may for convenience of detailed study be considered in chronological sections, but there is an essential homogeneity about the whole of it that renders chronological division unnecessary and undesirable in a brief general survey. Grounds might be urged for separating the century into at least two periods.

"In 1837 the giants of the literary movement of the opening years of the century either were dead or had ceased to write. Among poets, Byron, Shelley, and Keats had passed away. Wordsworth had ceased to be a poetic force save in the sight of admirers more zealous than discreet. Of writers of fiction, Jane Austen had been dead twenty years, and Sir Walter Scott five. Among essayists whose work conferred on the literature of the century one of its most distinctive charms, Charles Lamb, the king of essayists, did not survive beyond 1834; Hazlitt died in 1830; and, altho De Quincey and Leigh Hunt lived more than twenty years longer, their best work was done before 1837.

"But the writers of eminence who have exclusive right to the epithet Victorian prove, after allowance has been made for individual idiosyncrasies which in great literature count for much, to belong in spirit to the age of their immediate predecessors. They sought expression for their thought in forms not essentially different from those to which their predecessors devoted their energies, and their thought showed no new departure.

"Tennyson is nearly at all points Wordsworth's successor—in his sympathy with the lofty political and philosophic sentiment of his contemporaries which he sought to interpret in verse, in his careful observation, and in his sympathetic description of inanimate nature, in his command of poetic diction and melody, and also, it is to be admitted, in his lapses into bathos and commonplace; Browning—a twin peak with Tennyson in the range of poetry—presents a stronger individuality. He is less closely allied to the writers who flourished in his early youth, but in many of his most striking characteristics—in his robust optimism, in the universality and activity of his interest in current life and literature, in his predilection for study of past history, and even in his indifference to the graces of form which degenerated with him at times into a grotesque barbarism—in all these regards Browning betrayed his kinship with Byron and Scott.

"As a poet, Matthew Arnold marches under the banners of Wordsworth and Shelley; as a critic, he is at some points more subtle and at others less sympathetic than Lamb or Hazlitt; but the distinctions are due not so much to difference of age or of innate temperament as to the idiosyncrasies that come of accidental differences in youthful training and environment."

Of the prose writers, especially the novelists and essayists, Mr. Lee says:

"Thackeray reached the highest point in his career as an artist in fiction when he produced 'Esmond,' a story of the time of Queen Anne. Dickens, in 'The Tale of Two Cities' and in 'Barnaby Rudge,' worked with all his vigor on more or less documentary foundations. 'George Eliot' was more scholarly and more laborious, and therefore less successful, in 'Romola,' when she sought to evolve a romance out of the history of the Florentine Reformation. Robert Louis Stevenson, the ablest of recent novelists, made his most sustained bid for reputation by pursuing the historical trail of Scott, and Stevenson had many disciples who are still sedulously treading in his footsteps. The main and most artistic stream of prose romance in England has been faithful throughout the century to the channel that Sir Walter Scott first glorified.

"But the nineteenth century has not only won its literary triumphs by virtue of the exercise of the imagination in poetry and romance. Throughout the century, history and criticism, in which the imagination plays a more or less limited part, has flourished conspicuously. The two chief practisers of the arts of history and criticism in the nineteenth century were long-lived. Carlyle was born five years before the end of last century; Macaulay was born in the first year of the present century.

"In style, Carlyle and Macaulay were as the poles asunder. The spasmodic irregularity of the one has nothing in common with the disciplined orderliness of the other. Macaulay's influence on the English prose style has been far greater and, on the whole, more beneficial than Carlyle's. Carlyle's style was a bow of Ulysses, which none but himself could draw. In other hands it became an implement of burlesque. Macaulay's style was less impracticable. It was mainly characterized by a directness and an emphasis which inclined to rigidity, but often grew under his hand into brilliant eloquence. It proved a dangerous style for purposes of servile imitation.

"The habit of eloquent emphasis is apt to degenerate among incompetent writers into bombast, but those authors of English prose who followed Macaulay at a discreet distance gained in clearness and point without much sacrifice of grace.

"The lasting vogue of Macaulay's prose style rendered it impossible that any English prose style should be widely acceptable that did not aim in the first and last place at perspicuity, and Mr. Ruskin soon proved that perspicuity in English prose is not incompatible with the highest artistic beauty and pliancy. Affected prose has consequently met with small encouragement, and is an inconspicuous feature in a general survey of the century's literature."

The present time is a period of literary transition, and altho "literary artisans" are numerous, says Mr. Lee, great artists are not to be found:

"Only one of the immortal giants of the century's literature still survives—Mr. Ruskin. Some might place at his side Mr. Swinburne among living poets, and George Meredith and Thomas Hardy among novelists. The poetry of Mr. Swinburne's youth

will rank among the century's literary glories, but it is doubtful if Mr. Swinburne, at any period of his career, has produced anything that entitles him indisputably to a place at the side of Shelley, Keats, or Wordsworth, Tennyson or Browning, and his latest work fails to maintain the promise of his earlier years.

"It is doubtful, too, if in a comparative study of the century's literary energies Mr. Meredith's or Mr. Hardy's novels can be credited with that universality of appeal, or that depth and clarity of vision which are characteristic of the greatest fiction of the century—the best fiction of Scott, Thackeray, Dickens, and George Eliot. The English-speaking world has lately proclaimed in trumpet tones that the throne of the old kings of English literature is worthily filled by one of the youngest writers of the day—Rudyard Kipling. Time will show.

"The nineteenth-century period of English literature has been as great as any preceding period in the number of its workers and in their many-sided excellence. But it is sure proof of the ending of that most fertile period that there should be in the latter end of the century but one living voice whose utterances in either poetry or prose can be said in any large sense to hold the nation's ear. It is more probable that Mr. Kipling is the harbinger of a new era of English literature—the era of the twentieth century—than that he is the last comer of the old. In creative energy and original personality he seems at the moment to stand alone. But may he prove the swallow that heralds a coming spring."

"THE CHILDREN OF THE GHETTO" IN LONDON.

ENGLISH critics and theater-goers have not proved to be much more appreciative of Mr. Zangwill's play than their American cousins, and after a brief run at the Adelphi Theater, London, the drama has been withdrawn. Still, it did not meet the bitter denunciations which were heaped upon it in New York

in certain quarters.

The Outlook (London, December 16) speaks of it respectfully: "If Mr. Zangwill wanted to show that he could write a play when he tried, one quite understands why he put 'The Children of the Ghetto' on the stage. He can write a play; the production at the Adelphi proves it."

The play, continues *The Outlook*, is not "compact" nor

A TELEGRAPHED PORTRAIT OF MR. I. ZANGWILL
("NOT WITHOUT PREJUDICE").

From *Unwin's Chap Book*, reproduced in *The Academy*.

"well-made," but it is daring and portions are "beautifully, symphonically conceived." But he "has not realized how almost crudely simplified must be the English prose which he is to trust his mimes to speak across the footlights."

"Max," the dramatic critic of *The Saturday Review*, says that the evidence all goes to prove that Mr. Zangwill can not write a good play:

"In dramaturgy he can only waste his time. I do not say this because he has no sense of construction, the whole of his first act being occupied with a little incident which ought to have been merely explained by one of the characters, in a very few words, as having previously occurred. Sense of construction may be acquired. It is because Mr. Zangwill has no power of making his puppets live that I advise him to leave dramaturgy alone. When the conflicts come—a conflict between a young man and the old man whose daughter he loves, a conflict between the young man and the girl—one does not care two pence about them because none of the conflicting characters has drawn one breath

of life or contains one drop of blood. The young man, we know, is a millionaire and a lax Jew; the old man is a strict rabbi; the girl accepts the hand of the young man. But that is all we know about them. Never for one moment does Mr. Zangwill make them live. They are not more human than the A, B, and C at the corners of a triangle in Euclid. 'Why,' soliloquizes the girl, forced to choose between her lover on one hand, her faith and her father on the other, 'why is this terrible alternative forced on me?' That is Mr. Zangwill's notion of a heart-cry, and it is typical of all the writing in the play."

The Academy says that Mr. Zangwill has deliberately chosen two oddities of Jewish life and combined them as a foundation for his play. It adds: "Is the stuff of tragedy so rare in the Ghetto that it must be concocted out of themes so far-fetched? Are not the Jews men and women even as the Gentiles are, subject to the same simplicities of passion and fate? If so, why has Mr. Zangwill preferred material so bizarre and intractable as is here displayed?"

TRAVELING LIBRARIES.

ALTHO our age has been called an age of libraries, there are still innumerable small towns and hamlets where no public libraries exist, and in such places the "traveling library"—originated by Mr. Melville Dewey, one of the most widely known of librarians—is an institution of far-reaching influence. In 1892, the State of New York, at Mr. Dewey's suggestion, made an appropriation which it has since maintained, for sending out traveling libraries of about one hundred volumes each. At first but forty-six libraries were sent out, but by the fifth year these had increased to nearly five hundred separate book collections, comprising in all some fifty thousand volumes. The work is directed by the Board of Regents of the State University.

Of these traveling libraries, twenty per cent. is devoted to fiction, and from ten to twenty per cent. to travel, biography, and history. There are also special collections for particular communities, selected by library specialists of large experience. Besides the special "Environment Libraries," consisting of books relating to some particular section of the country, there are "Picture Libraries," containing pictures to be framed and hung on the wall, lantern-slides and the necessary apparatus. Catalogs, with helpful notes pointing out the excellences and limitations of the works, and with brief critiques from the leading reviews, accompany the libraries.

A writer in *Ev'ry Month* (January) gives some interesting data concerning the development of traveling libraries in New York and other States. He says:

"By far the most interesting of these experiments, because of the fact that it has been carried on without a penny of State aid, and because of the general support which has been given to it from the first, is the traveling library system of Wisconsin. . . . The population of western Wisconsin is largely Scandinavian, and nearly all of foreign extraction. The people are miserably poor in material things, and this is a measure of their intellectual poverty. An inconceivably small percentage of the population are communicants of any church. To these people, so sorely in need of the 'sweetness and light' which books bring with them, go these libraries on wheels. The first station may be at the cross-roads, and the volunteer librarian may be the postmaster, the country storekeeper, or the section boss. The books are kept in circulation until the next consignment arrives, when they are called in, packed up, and sent along to the next town. In this way 10,000 volumes are kept moving through the State of Wisconsin. Special arrangements were made in 1898 to supply books through this method to the camps where Wisconsin soldiers were stationed.

"To those who only imperfectly realize the civilizing power of books the effect upon the population of these poverty-hardened rural communities is magical. There is no system of popular education that yields such large results for so small an outlay. The abandonment of old habits of lounging and dissipation at

the country saloon has marked the advent of the traveling library. The young men who formerly spent their winter evenings there have deserted these quarters, and prefer to remain at home with some book which has suddenly opened to them a new source of pleasure. So marked has this defection become that saloon-keepers often volunteer to act as librarians in order that their former patrons may not absent themselves altogether. . . .

"Among the books which lead in the Wisconsin traveling libraries are Miss Alcott's 'Old-fashioned Girl,' Aldrich's 'Story of a Bad Boy,' some of W. O. Stoddard's books, 'Helen's Babies,' Mrs. Catherwood's 'Story of Tonty,' 'The Hoosier Schoolmaster,' and the earlier novels of Captain King are among the most popular. The old favorites fairly hold their own, tho 'David Copperfield,' because it was in two volumes, met the fate accorded to two-volume novels, and was neglected. Mr. Hutchins tells us that the farmers' families took a special interest in Jacob Riis's 'How the Other Half Lives.'"

MUSIC AND MEN OF GENIUS.

ONE of the most singular phenomena of genius is the total absence of any appreciation of music among many famous men of letters. Andrew Lang, in fact, goes so far as to say that most poets and literary men hate music, confessing that for his own part he can "bear a song" if the words are pleasing, and that he is touched by the refrain of Gregorian chant much as a dog howls when certain notes are struck on the piano. On the whole, he agrees with Dr. Johnson, who spoke of music as "the least disagreeable of sounds."

According to Mr. Cunningham Moffet, who writes in *Music* (January), the absence of the musical ear is not an intellectual but a cerebral characteristic. Mr. Moffet instances the case of General Grant, whose repugnance to music was so great that it caused him intense suffering to sit through a grand opera or even to hear a song. His common reply to the question, "What shall I sing?" was the rather dampening one: "*Something short.*" Catherine II., of Russia, after trying in vain to cultivate a love of music, said that to her it was "noise and nothing but noise." The two Napoleons also found it difficult to tolerate music.

Mr. Moffet agrees with Lang that many men of letters have had little ear for music, but he instances among the music-lovers the names of Gautier, De Musset, and a large proportion of the English and Scottish writers, including Shakespeare, Milton, Coleridge, Addison, Goldsmith, De Quincey, Moore, Charles Reade, Darwin, and even Carlyle, who declares music to be "the speech of angels." But when we come to look at the other side of the picture, says Mr. Moffet, we find a large array of famous names:

"Charles Lamb has told us all about his musical capacities, or incapacities, in his essay on 'Ears.' He was apparently destitute of what is called a taste for music, as much of it usually confused him, and an opera was merely a maze of sound in which he almost lost his wits. A few old tunes ran in his head, and now and then the expression of a sentiment, tho never of song, touched him with rare and exquisite delight. He has told us, however, how he revered the fine organ playing of Mr. Novello and admired the equally fine singing of his daughter.

"I don't know whether Macaulay really disliked music or not, but he certainly cared very little for it and remembered less. Writing in his journal for June 14, 1851, in giving an account of a dinner at Windsor Castle that he attended, he says: 'The band covered the talk with a succession of sonorous tones. "The Campbell's Are Coming" was one.' To this his biographer and nephew, Sir George Otto Trevelyan, adds in a footnote: 'This is the only authentic instance on record of Macaulay's having known one tune from another.'

"Dean Stanley had absolutely no ear for music; he really detested it as much as General Grant did, and fled from it when he could. Prof. Max Müller in a recently published book quotes him as saying to Jenny Lind after she had sung Handel's 'I Know That

My Redeemer Liveth': 'You know I dislike music; I don't know what people mean by admiring it. I am very stupid, tone deaf, as others are color-blind. But,' he added with some warmth, 'to-night when from a distance I heard you singing that song I had an inkling of what people mean by music. Something came over me which I had never felt before; or, yes, I had felt it once before in my life.' Jenny Lind was all attention. 'Some years ago,' he continued, 'I was at Vienna, and one evening there was a tattoo before the palace performed by four hundred drummers. I felt shaken, and to-night, while listening to your music, the same feeling came over me; I felt deeply moved.' 'Dear man,' she added, 'I know he meant it, and a more honest compliment I never received in all my life.'

"Dr. Thomas Arnold, of Rugby, was also entirely lacking in musical taste. Speaking of this defect, he says: 'I can no more remedy it than I could make my mind mathematical, or than some other men could enter into the deep delight with which I look at a wood anemone or wood sorrel.' Charles Kingsley belonged to the same class; he liked music because it was 'such a fine vent for the feelings.' Henry Buckle, the historian, could not tell one tune from another, altho, like Macaulay, he had a most marvelous memory for almost everything else. He once acknowledged, however, that he was moved when he heard Liszt play in London. Byron had no ear for music, and Rossetti found the art 'cool unto the sense of pain.'

"Shelley had a voice, it is said, like a peacock's, and Tennyson had only verbal music in him. Sir Humphry Davy had a fine perception of the beautiful in nature, but had so poor an ear for sound that he could not even catch the simple air of the British national anthem. He was also deficient in time, for while a member of a volunteer corps he could never keep step. Dean Hook used to maintain that Handel's 'Messiah' had turned more sinners to righteousness than had all the sermons that were ever preached. Yet the dean himself knew only two tunes, 'God Save the Queen,' and the other, said he, 'I don't remember.'

"THE THEATRICAL SYNDICATE."

THE dominant force in the drama of to-day, says Mr. Norman Hapgood, is the "theatrical trust," and its history sounds like that of a melodrama or satirical romance. In the new *International Monthly* (Burlington, Vt., January), Mr. Hapgood gives the first three acts of this play "from the inside," and holds out some hopes of giving us the other two acts—the decline and fall—a few years later. He writes:

"During the season of 1895-96 it became known that a combination was being formed to control many theaters. The spelling of the names of some of the members varies, but on the present method they were: Nixon and Zimmerman, of Philadelphia; Klaw and Erlanger, and Hayman and Frohman, both of New York. By February it was announced that thirty-seven first-class theaters were in the hands of the syndicate. To each of the houses thirty weeks of 'attractions' were to be guaranteed. The essence of the system, from that day to this, with constantly increasing scope and power, has been that the theaters take only such plays as the syndicate desires, on the dates which it desires, and receive in return an unbroken succession of companies, with none of the old-time idle weeks. Another inducement to the owners of theaters was the promise of better terms from traveling managers; but the actual outcome of that idea is not so clear."

The way for this combination was paved by gaining the control of a number of strategic points, such as certain theaters of the far West and especially of the principal theaters on the route from Washington to New Orleans:

"Few, if any, companies can afford to jump the distance between those two cities, so with the best houses in Richmond, Norfolk, Columbia, Atlanta, Montgomery, and Mobile in their hands, Klaw and Erlanger were practically masters of that territory. Later they obtained similar power over the route coming down from Ohio or Pennsylvania through Tennessee, until they could dictate to companies wishing to go from Pittsburg, Cincinnati, or Chicago to New Orleans. A Southern manager, named Greenwall, tried to get enough theaters to keep New Orleans open

from the North, but failed. The first of the large cities to be entirely controlled was Philadelphia, where the theaters were in the power of Nixon and Zimmermann; and at first the most the syndicate could do was to shut a company out of the Quaker City; but now a number of cities of almost equal importance are barred. To be practically controlled, a city need not have all of its theaters in the hands of the syndicate. If the routes approaching it are dominated, the power is almost equally complete. San Francisco, for instance, has an independent theater, the California, but few companies from the East can afford to go to the Pacific coast without playing in such places as Denver, Salt Lake City, Omaha, Toledo, New Orleans, St. Paul, Minneapolis, Kansas City, in all of which towns the leading theaters are under syndicate control. When it is remembered that most of these are one-week stands, the difficulty of getting along without them will be obvious. Control of the one-night stands, especially in the rather unprofitable South, is less important for the better class of companies, but to be shut out of Cleveland, for instance, where no theater of any kind is free, means much. Detroit and Providence are further illustrations, as are smaller places like Utica, Syracuse, Wilkesbarre, Rochester, Reading, Lowell, Mass., Newark, N. J., and Jersey City."

The grip of this great combination was fastened more and more strongly on all the chief cities, says Mr. Hapgood. Managers tried in vain to organize an opposition. Then the leading actors, including Francis Wilson, James A. Herne, James O'Neill, Richard Mansfield, and Mrs. Fiske, drew up an agreement not to book through the syndicate; but with that characteristic commercial foxiness to be expected in such individuals, "the trust," says Mr. Moffet, settled the matter in short order by bribing the mainstay of the opposition to desert his allies. Of one actor who had the temerity to maintain his manhood and try to own himself the manager of "the trust" said:

"Mr. Wilson was a shining mark, and we determined to make an example of him for the benefit of offenders."

Mr. Wilson, however, still continued to live, and bear arms against the combination; but one by one his colleagues fell away, and he himself finally succumbed to a tempting offer. It is a noteworthy fact that the only remaining independent actor is a woman—Mrs. Fiske.

As to the effect of this combination on the life of American drama, Mr. Hapgood writes:

"'Phroso' was one of the poorest melodramas given in New York for a long time; 'The Conquerors,' one of the coarsest and dullest. 'The Ghetto' was a strong play; 'Children of the Ghetto,' a very strong one. The first two were highly praised and constantly talked about by the New York press; the last two were first attacked and then neglected. Had Charles Frohman produced the first two, he would have been reverently praised for high ideals. Had Liebler & Company produced the last two, they would have met one storm of condemnation followed by silence. This is not mainly venality. It is simply that the point of view is strict toward equals, reverential toward monarchs.

"This power of the press is not easily exaggerated. Paragraphs all over the country, for a solid year, assured feverish attention to Maude Adams's *Juliet*. Any item about the intentions of Mr. Frohman is eagerly quoted everywhere. If he produced the worst play ever seen, it would not receive the abuse heaped upon Mr. Zangwill's powerful drama. If he produced 'Griffith Davenport,' the critics would shake themselves into alertness for its good points, whereas for Mr. Herne they expressed the sufferings caused by what they deemed its dullness. Now, the New York papers are seen by perhaps twelve million people, including the newspaper men all over the country. A syndicate attraction is put into New York just as soon as it has been 'tried on the dog.' It then becomes known through the land. A non-syndicate production, like 'Arizona,' may have to wait a year or more before it can get into New York at all, and until it does it loses the immense help of the New York press. Your man in Troy, with a salary of twelve dollars a week, is the type of the theater-goer through the country. If he has three

'shows' to choose from during a certain week, he spends his dollar on the one he has heard of. He would have heard of 'The Christian' even had it never been in New York, but 'Arizona,' 'Griffith Davenport,' and 'The Royal Box,' would be playing a dangerous game to go to such towns before a New York run had made the idea of them familiar. They would be deserted for the familiar names."

GEORGE SAND IN HER LETTERS.

IN the letters of George Sand that appear in the *Revue de Paris* (December 1) a new-born grandchild is the center of interest. M. Edouard Rodriques, to whom most of the letters are addressed, was a man of large wealth and noble character. To him, "accustomed to the happiness of being a grandfather," she prattles fearlessly of her "puerile delights" in caring for the little grandson who has made his appearance. But the letters do not consist entirely of pictures of domestic felicity; they touch upon all subjects, art, literature, and politics. Here, for instance, is her account of the production of "Spiridion":

"'Spiridion' was written in Majorca, in a ruined château, between two oceans; the scene was magnificent, the winters frightful. Our château contained three apartments, and it was exposed to all the winds that blow. I was there with Chopin and my children. My son was ill from his too rapid growth, and Chopin ill from his birth, alas! We had heard that the climate was an eternal spring, and thither I took my invalids. But we encountered snow and ice, tempests, inundations, and almost famine. It was a grand retreat nevertheless, and, ill as he was, Chopin composed many beautiful things. 'Spiridion' was inspired by these surroundings, just as it happened."

One of M. Rodriques's protégés was a talented boy, Francis Laur, in whom George Sand felt a warm interest. She had made him known to his generous patron, who was providing the means for his education. In her letters to and about this boy is plenty of material for a lovely idyl that would vie with one of her own exquisite productions in that line. Her letters to this youth are all aglow with kindness and wisdom. As a single example, read this extract from what she has to say when he writes to inform her that he has fallen desperately in love:

"What, stupid! on the eve of your examinations you permit yourself to fall in love! Go then, it is a serious fault. You must resist alike your senses and your imagination; you must perform the impossible; but it is not impossible, for what you feel is not love. The heart has nothing to do with it. Do you know what love is? It is a complete, ardent friendship. The attraction that does not repose upon an immense affection is a mere physical need, and it is not necessary to make an ado about a vague appetite that may fall upon the first object at hand. Recover your reason and will; work, reach the requisite summit of knowledge, and you can philosophize later on the nothingness of human acquisitions. Take your place in society, on the grand road that has been opened to you, where you will be able to be a son, a lover, and a man—three things that you can not be at present, since you can not support your mother, take a wife, and choose a career without exposing yourself to chances that will crush you, and to a blame that will stifle you. . . . Since you comprehend how important it is to leave your college crowned with honors, do not permit yourself to be distracted by any more reveries. There is only one thing that is certain in life, and that is that to live requires courage."

Francis decided to follow her advice, and later fulfilled her expectations.

While thus engaged in ministering to the needs of others, George Sand never relaxes her literary labors. But in the midst of these labors a cruel calamity ensued: her grandson, the little Marc, "who had been growing like a rosebud," was suddenly stricken, and the grandmother utters this cry of anguish:

"My friend, I have just come from Mérac, shattered by fatigue and grief. Our poor infant is dead. My son is broken, and his wife also. They have promised me to have courage, and I, who

have none myself, imparted it to them. Do not be disquieted about me. I will bear all, since it must be. Love me well."

Her domestic happiness was not, however, permanently destroyed by this bereavement. Another child replaces the lost cherub, and her concluding letters to M. Rodriques breathe only joy and satisfaction.—*Translation made for THE LITERARY DIGEST.*

MR. GODKIN'S REMINISCENCES OF AMERICAN JOURNALISM.

MR. E. L. GODKIN, who has lately retired from the editorship of the *New York Evening Post* and *The Nation* after a journalistic service of over forty years, signalized the end of the year and of his newspaper career by a lengthy article in *The Evening Post* (December 30), in which he gives some "Reminiscences" of men and events during that period. What he says about early and later journalism is particularly of note, even tho it may to many seem marked by a pronounced spirit of pessimism. Mr. Godkin, who was born in Ireland and obtained his first journalistic experience as correspondent of the *London Daily News* in the Crimea, came to New York while still a young man, before the Civil War. He was particularly impressed with the *New York Tribune*, then the most influential journal in America:

"The paper was an institution more like the *Comédie Française* than anything I have ever known in the journalistic world. The writers were all, as it were, partners in a common enterprise, and Greeley, tho all-powerful, was simply looked upon as *primus inter pares*. He was, however, adored by the farmers in New England and in the Western reserve, who believed he wrote every word of *The Tribune*, not excepting the advertisements. The influence of such a journal was deservedly high. Greeley from the very outset had supplied the spirit which made the paper an authority in the land, for he sacrificed everything, advertisers, subscribers, and all else, to what he considered principle. The paper would probably have suffered from his want of education and general knowledge, if he had not surrounded himself with writers who made ample amends for his defects. It must be added, however, that, as the years rolled by, self-conceit grew upon him, and made the end of his career, in some sort, a tragedy."

In those *ante-bellum* days, modern democratic journalism—not to say "yellow journalism"—had not arisen. With the exception of occasional outbursts of vulgarity, to be condoned perhaps because of the intensity of party principle in that period, the newspapers were edited to please the clergy, the professional classes, and the select few. But the elder Bennett, remarks Mr. Godkin, early discovered the secret that far more profit was to be gained by catering to the tastes, the prejudices, and the ignorance of the half-instructed "masses" than in high-class journalism, which still cared something for principles:

"Bennett found there was more journalistic money to be made in recording the gossip that interested bar-rooms, workshops, race-courses, and tenement-houses, than in consulting the tastes of drawing-rooms and libraries. He introduced, too, an absolutely new feature, which has had, perhaps, the greatest success of all. I mean the plan of treating everything and everybody as somewhat of a joke, and the knowledge of everything about him, including his family affairs, as something to which the public is entitled. This was immensely taking in the world in which he sought to make his way. It has since been adopted by other papers, and it always pays. It has, indeed, given an air of flippancy to the American character, and a certain fondness for things that elsewhere are regarded as childish, which every foreign visitor now notices. Under its influence nearly all our public men are regarded as fair objects of ridicule by opponents. This is also true of most serious men, whether public men or not. Even crime and punishment have received a touch of the comic. I used to hear, at the time of which I write, that Bennett's editors all sat in stalls, in one large room, while he walked up and

down in the morning distributing their parts for the day. To one he would say, 'Pitch into Greeley'; to another, 'Give Raymond hell'; and so on. The result probably was that the efforts of Greeley and Raymond for the elevation of mankind on that particular day were made futile. By adding to his comic department wonderful enterprise in collecting news from all parts of the world, Bennett was able to realize a fortune in the first half of the century, besides making a deep impression on all ambitious young publishers.

"The steady growth of the Bennett type of journalism, which has ever since continued, and its effects on politics and morals are now at last patent. In all the free countries of the world, France, America, and Italy, tho in a less degree in England, it constitutes the great puzzle of contemporary political philosophy. It is ever substituting fleeting popular passion for sound policy and wise statesmanship. Democratic philosophers and optimistic clergymen are naturally unwilling to admit that the modern press is what the modern democratic peoples call for, and try to make out that it is the work of a few wicked newspaper publishers. But the solemn truth is that it is a display of the ordinary working of supply and demand. Consequently, all discussions of the evils of the press usually end either in a call for more Bible-reading in the schools, or in general despair."

Mr. Godkin's summary of present conditions is dark, yet not wholly so. Not only in politics, he says, is the old statesman defunct, having given way to "the adroit manager of elections," but in the intellectual and spiritual realms "press and pulpit have both declined." "The press has ceased to exert much influence on public opinion, and the pulpit has become singularly and sadly demagogic." According to his observation, men of ability seldom enter either profession now. Yet he sees some rays of light in the present darkness:

"I think the progress made by the colleges throughout the country, big or little, both in the quality of the instruction and in the amount of money devoted to books, laboratories, and educational facilities of all kinds, is something unparalleled in the history of the civilized world. And the progress of the nation generally in all the arts, except that of government—in science, in literature, in commerce, in invention—is something unprecedented, and becomes daily more astonishing. How it is that this splendid progress does not drag politics on with it, I do not profess to know. One reason, I fear, is that we have got into the way of taking material prosperity for good government—a delusion of which the bosses take advantage, and which to most men is the sweetest delusion possible. There is no such fosterer of indifference to politics as a good bank account."

NOTES.

A BOOK of charming "Child Verse" by Father Tabb has lately been published. The poems are both grave and gay, and include some religious child-poems of quaint and exceptional beauty.

THE Union Theological Seminary (Presb.) in New York is about to extend its work along university lines. It seems a rather grotesque misuse of words to say that this theological faculty is to become a "theological university," as a *New York weekly* calls it, but in its own field it is to do work of a strictly university grade, such as is done by the theological faculties of the German universities. New chairs are to be established and eminent scholars secured as lecturers.

KIPLING, it seems, turns to beneficent account the widespread desire to possess his autograph. The *Philadelphia Record* tells of a West Philadelphia girl who sent a modest request for an autograph, enclosing a stamped and addressed envelope, as is her wont. Says *The Record*: "In reply she received a printed slip from Mr. Kipling's secretary setting forth in brief that Mr. Kipling would be pleased to furnish his autograph upon payment of \$5.00 to any charity which the collector might prefer, a receipt for which should immediately be sent to him. She donated the sum to the Children's Country Week Association, forwarded the receipt to Mr. Kipling, and the other day she received the autograph."

At the recent Founder's Day meeting of the Carnegie Institute, Pittsburgh, Miss Cecilia Beaux was awarded the first prize and declared to be the greatest living woman painter by the international jury artists. In bestowing the prize, Mr. William M. Chase, of New York, said: "Miss Beaux is not only the greatest living woman painter, but the best that has ever lived. Miss Beaux has done away entirely with the idea of sex in art. Our country is just entering a new and successful era in matters of taste. I can assure you that the art feature of the nation as promoted by her artists will not be found wanting or weak. We are happy to be offered the opportunity to place works side by side with the best the world knows."

SCIENCE AND INVENTION.

A FRENCH PRIZE CUP FOR AERONAUTS.

THE Paris Aero Club, which numbers among its members many of the young French nobility, has just offered a prize cup to be competed for by aeronauts. This has already stimulated adventurous balloonists to exertion, and may do a real service to science, since exploration and investigation of the upper air is now much needed in meteorology. M. W. de Fonvielle tells us in *La Science Illustrée* (December 16) something of the aerial cup contests just inaugurated. He says:

"The prize cup for aeronauts proposed in September, 1899, by a member of the Aero Club, to become in September, 1900, the property of the aeronaut who has made the longest trip between those two dates, starting from Paris, has been already competed for four times in six weeks, and has been carried off three times successively; first, by the Comte de la Vaulx and M. Mallet; second, by M. Farman and M. Hermite; third, by the Comte de Castillon, M. St. Victor, and M. Mallet. The first were stopped by the ocean in the neighborhood of Rochefort, the second by the Mediterranean near Aix, and the third near Verterbuk, in Sweden. The distances traversed in these different records were increasingly large. The Comte de Vaulx was satisfied with 400 kilometers [248 miles], M. Farman went nearly 600 kilometers [373 miles], and the Comte de Castillon nearly 1,300 kilometers [806 miles], crossing the North Sea and the sound on the way. This progress is remarkable. It shows that we are only at the beginning of surprises, even if the competitors do not exceed the limits of what it is possible to do without exposing life too seriously.

"The Aero Club celebrated the victory of the Comte de Castillon and M. Maurice Mallet by a banquet given under the auspices of the Comte de Dion. More than one hundred members were present, as well as some invited guests, among whom were M. Triboulet, general secretary of the French Society of Aerial Navigation. . . .

"Having learned that M. Janssen, the astronomer, had made choice of M. Mallet to take charge of his next scientific ascension, for the reason that he had made the best record for the cup, the Aero Club voted to place at the illustrious astronomer's disposal a fine new balloon which the society has just constructed.

"This ascension will be carried out in a short time. It will be only the third of its kind, but it will not be the last, for the approach of the Exposition will give an impulse to experiment, and the Aero Club has collected funds for a series of fifty trips, of which a great number will doubtless break the record and carry off the cup, which is destined to be celebrated. It will have a history of which we now know only the first chapters. May it never become tragic!"

The author gives us a few particulars of the record-breaking voyage of Castillon and Mallet, from which it appears that when their balloon, the "Centaur," descended in a Swedish forest on the night of October 1-2, 1899, the two aeronauts, after wandering about for some time, stumbled upon the hut of a woodman. The good man and his family were overjoyed, believing the balloon and its navigators to be the far-famed Andrée expedition. Probably that ill-fated air-ship was the only one that the Swedish peasants had ever heard of. We are told that the trip lasted nearly twenty-four hours and that the altitude varied, by nearly two miles. Thus the opportunities for scientific investigation offered by such a trip as this, where the observers actually occupy the balloon, are still superior to those presented by so-called "sounding-balloons" where the observer stays on the ground and sends up his balloon with self-registering apparatus, "taking soundings" of the upper air in something the same fashion as the marine investigator takes them, in the opposite direction, of the deep sea. The inventors of this method of aerial investigation, Messrs. Hermite and Besançon, still hold the record, but altho they and their scientific brethren have brought out some interesting facts, the best method of exploring the

upper air, M. de Fonvielle thinks, is to go there oneself; and so the Aero Club, with its record-breaking and its cup contests, may be regarded as really accomplishing something of value to science.—*Translation made for THE LITERARY DIGEST.*

LONG-DISTANCE PHONOGRAPHS.

THE combinations of telephone and phonograph invented by M. Dussaud in France continue to attract attention on the other side of the Atlantic, altho we have yet seen none of them in this country. Some of the inventions of the French electrician have already been described and illustrated in these columns. According to M. Emile Gautier, who contributes a leading article on the subject to *La Science Française*, the matter is now in practical shape. Some combination of the phonograph with the telephone receiver will henceforth play a prominent part in our houses and offices. Says M. Gautier:

"By combining the phonograph and telephone under peculiar conditions M. Dussaud has succeeded in obtaining the following practical results:

- "1. The registration of a telephonic message transmitted over a distance as great as 1,000 kilometers [621 miles].
- "2. The registration of music, vocal or instrumental, transmitted from one end of Paris to the other.
- "3. The registration of a lecture or sermon, by means of a transmitter hidden underneath the speaker's desk or chair.
- "4. The registration of a telephonic communication even in the absence of the person called."

M. Gautier calls especial attention to this last point. With one of the new instruments, he says, when we telephone to any one, it makes no difference whether he is at home or not. If he is absent, the message will be received and registered by a phonograph, which will repeat it to him faithfully when he returns. In M. Dussaud's invention the person at one end of the telephone line is able to set in motion, at the other end of the line, the registering apparatus, and to stop it when he has finished talking. The Dussaud telephone has for its object, according to the writer, the following results:

- "1. To register and preserve telephone messages in material form.
- "2. To register them even in the absence of the person called, who can thus hear the message on his return.
- "3. To register in permanent form orders, instructions, and administrative directions.
- "4. To register news, information, and articles sent to the agencies of newspapers.
- "5. To register political, judicial, or other debates, by means of several transmitters connected to one or more receivers.
- "6. To register with the subscribers to a theatrophone the musical works that they hear, which they may thus reproduce at pleasure."

M. Dussaud has attained these results, says M. Gautier, by studying the conditions of the electrical transmission of sound, with reference both to the transmitting and the receiving station. To quote again:

"In the first place, he has increased the sensitiveness of the transmitter by utilizing the principles that govern the action of sonorous waves on one or more of the membranes of a microphone and on one or both faces of these membranes.

"He has also increased the sensitiveness of the receiver by utilizing the principles that govern the action of an electromagnet each of whose poles acts on a vibrating plate; the sonorous waves received on both faces of each of these vibrating plates being converged by as many tubes on the same point of a very perfect phonograph."

All this, the writer insists, is not mere theory, for M. Dussaud's instruments have been constructed and exhibited in public. The results attained in one of these public demonstrations are thus described:

"M. Dussaud used only two cells, with a resistance equal to a

circuit of 500 kilometers [310 miles]. He thus showed to a remarkable degree the clearness of transmission and the possibility of reproducing his messages phonographically as many times as desired, even in the absence of the correspondent. The experiment was made with various musical instruments . . . with imitations of the cries of various animals, and also with the human voice. . . . Great applause was given in particular to the great air from 'Samson and Delilah' transmitted telephonically 375 miles and reproduced phonographically with scarcely any sacrifice of the delicacy and crystalline purity of the singer's voice or of its skilful shading."—*Translation made for THE LITERARY DIGEST.*

THE LATEST MATHEMATICAL PRODIGY.

LIGHTNING calculators used to excite interest chiefly among mathematicians; but they are now equally interesting to psychologists, who have attained considerable insight into their methods. The boy prodigy, who makes his appearance now and again, has a prodigious "head for figures" and a phenomenal memory, and often great ingenuity in devising "short cuts" and abridged processes, of which he makes use often without being able to explain them. These facts are once more illustrated by the case of Arthur F. Griffith, who exhibited his powers at the recent meeting of the Society of Psychologists at New Haven. Says the *Boston Transcript* (December 29), in its account of this event:

"There has not been another such case discovered in the last fifty years, and its discussion has been one of the events of the sessions. . . . Griffith has such a command of figures that he can multiply sets of four-place numbers by three-place numbers in three seconds, and four-by-four-place numbers in four seconds. He extracts the cube root of nine-place numbers in three seconds and the square root of even ten-place numbers in three seconds. Given twenty seconds and he will square a number running into the trillions, and in twenty minutes' mental calculation will multiply three sets of figures the total of which will reach a decillion. He has also a prodigious memory for all kinds of numerical arrangements. Anything that has a number connected with it never slips his memory, and he can repeat accurately sets of problems given him to solve years afterward."

Griffith is about twenty years old, we are told, and was born on a farm in Milford, Ind. He showed an unusual power of counting when an infant, and at five could count to 40,000, comprehending the value of the numbers. At this time he could remember the number of grains of corn fed to the chickens each day for a year back. To quote again:

"At ten Griffith went to school and studied ten years, excelling in all kinds of arithmetic. He made the acquaintance of the university professors a year ago, and since then has been studying under their tutelage. At twelve Griffith could do almost anything in simple multiplication, and at that age had developed short methods of multiplication for himself. At the present time he knows the multiplication table to 130, and about two fifths of it to 1,000, the squares to 130, the cubes to 100, the fourth powers to 20, and many fifth powers. He also knows to the thirty-third powers of 2 and 5. He can factor by memory to 1,500, and knows the primes to a much higher figure. His short methods are for the most part original, and cover almost every case that could be presented. He has fifty methods for multiplication, of which he uses such as fit the particular case in hand, choosing his method by instinct and what he calls the 'feeling' of the number. He has six methods for addition, six for division, and one for subtraction. Many of his 'short cuts' to results are marvelously rapid of practise. Charts showing the comparative rapidity of calculation in his case and in that of the most rapid accountants on difficult sums give him an overpowering advantage. Thus, in finding the fifth power of 994, for instance, the best approved method has 336 individual processes, while Griffith uses but 13, carrying those in his head and giving the answer before the user of the other method has reached his second step. Griffith has two distinct classes of rules which he uses, one class being those of the ordinary rapid calculator, most of which he discovered for

himself, and the other class similar in method to algebraic formulas. . . . All of Griffith's methods are arithmetical, however, and many of them are curiosities to the mathematicians, who are at a loss to discover how he came upon them."

DANGERS OF ELECTROLYSIS.

THE word "electrolysis," which in our works on physics means chemical decomposition by the agency of an electric current, has come in popular language to signify the corrosion of metals in the soil, due to such decomposition. The real electrolysis, which is the splitting up of the salts of the soil into their chemical constituents, is lost sight of; but the effects produced by those constituents when they attack our gas-pipes are not to be overlooked. Hence a transfer in the popular meaning of the word. But whatever the word may mean, the fact—the eating away of underground metallic objects—is patent and is fast be-

LEAD SERVICE PIPE SHOWING THE EFFECTS OF EIGHT MONTHS' ELECTROLYTIC ACTION, AND CLEARLY ILLUSTRATING THE FACT THAT DAMAGE OCCURS ONLY WHERE THE ELECTRICITY LEAVES THE CONDUCTOR. THE INTERIOR SURFACE IS UNATTACKED.

Courtesy of *Appleton's Popular Science Monthly*.

coming a danger. In an article on the subject in *Appleton's Popular Science Monthly* (January), Hubert S. Wynkoop writes as follows:

"Hidden beneath our highways lie gas-pipes, water-pipes, railway tracks, Edison tubes, cement-lined iron subway ducts, and lead-covered cables. These are the electrodes. In contact with these conductors is the soil, containing an electrolyzable salt—chlorid, nitrate or sulfate of ammonia, potash, soda, or magnesia, generally. In the presence of moisture this soil becomes an electrolyte, or salt solution. In the absence of electricity no appreciable damage occurs; but the passage of an electric current, no matter how small, from one pipe to another is sure, sooner or later, to leave its traces upon the positive conductor in the form of a decay other than mere oxidation. It is to this decay that has been given the name of *electrolysis*; so that when this heading appears in the daily press or in technical journals one may interpret the term popularly as 'the electrolytic corrosion of metals buried in the soil.'

"To produce electrolytic disintegration of pipes, etc., on a scale grand enough to cause apprehension, a bountiful source of electricity is essential. Unfortunately, this condition is not lacking to-day in any town in which the usual overhead trolley electric railway is in operation. This system of electric propulsion is based upon the use of a 'ground return'—that is to say, the electricity passes out from the power-house to the bare trolley wire, thence to the pole on the roof of the car, thence through

the motors to the wheels, when it is expected to return to the power-house *via* the rails.

"As a matter of fact, however, the released electricity by no means confines itself to the rails and the copper return feeders—legitimate paths provided for it. It avails itself, on the other hand, of what may be termed, for brevity's sake, the illegitimate return—comprising all underground electrical conductors except the rails and return feeders, and including subterranean water-courses, sewers, and metallic earth veins."

How can this electrical destruction of all our costly systems of underground piping be prevented? Of course one way would be to make such a perfect "legitimate" return circuit through the rails that there would be practically no "vagrant" current. There have been many attempts to do this, and many electricians still believe it possible. Mr. Wynkoop disagrees with them. He says:

"I am of the opinion that it is impossible, from a financial standpoint, to provide so satisfactory a legitimate return that considerable electricity will not seek a path through pipes, cable covers, etc.; for, in order to confine the electric current to the rails, the resistance of the earth and its contained pipes would

COPPER DRIP PIPE AFTER SEVENTEEN DAYS' EXPOSURE IN SALT WATER TO THE ACTION OF ELECTRICITY. HALF SIZE.

Courtesy of Appleton's Popular Science Monthly.

have to be infinitely great, and this condition can be realized only by making the resistance of the rail infinitely small as compared with that of the earth. The cost of arriving at this condition is prohibitive, and the improved track return is, and always must be, a palliative merely, not a cure."

It has also been suggested that as the injury occurs only when the current leaves the metal, the attachment of a conducting wire to the affected part would mend matters. This would be the case in small towns, the writer thinks, but in larger places, where the system of conductors is complex, the evil will be cured in spots only while new danger-points constantly develop. Another suggestion is the employment of an auxiliary dynamo and system of wiring for keeping the polarity of all buried pipes negative; for the negative pole is not attacked. This is also too difficult a problem in large towns. A similar remark may be made regarding the proposed insulation of buried pipes with wood or terra cotta. Mr. Wynkoop believes that the only practicable palliative would be the employment of some insulating lacquer—yet to be discovered. Yet this would give only partial relief. Says the writer again:

"Supposing that we discover this lacquer or this alloy and by such means guard against damage to all new construction, how are we to care for the metals already buried? We can not dig them all up and paint them, neither can we attempt to replace them by the new alloy. I do not see that the state of the art to-day presents any solution of the difficulty other than the banishment of the single-trolley system. None of the electrical remedies (so-called) offers more than partial and temporary relief, and the chemical field is just beginning to be explored."

Mr. Wynkoop's concluding paragraphs are decidedly pessimistic:

"This condition of affairs is deplorable; for, while we may not care how extensively or how frequently the city authorities or the private corporations are obliged to renew their underground metals, we are at least vitally concerned as to whether the stray electricity is endangering our steel office buildings, our bridges, our water-supply, our immunity from conflagrations, and the safety of the hundred and one appliances that go to make up our modern civilization.

"Are the Brooklyn Bridge anchor plates going to pieces, or

are they not? Are the elevated railroad structures about to fall apart, or are they not? The consulting electrical engineer says 'Yes,' the railway man says 'No.' The municipal authorities say nothing. 'When doctors disagree—'

"I deem it doubly unfortunate that so much valuable brain energy has been inefficiently expended in the discussion of electrolysis. Each writer has viewed it from his own standpoint. Electrical literature has acquired in this way a series of views, interesting and instructive, but also bewildering. There is no composite view, such as might be obtained from the report of a commission composed of a technical representative of each of the interests affected. So far as I am able to learn, such a commission has never existed."

BRIDGES OR TUNNELS?

THE question of the relative merits of these two methods of communication between the opposite banks of great rivers has been brought prominently into public notice of late by the protest of Controller Coler of New York City, against pending schemes for bridging the East River, and his advocacy of tunnels as cheaper and better substitutes. The engineering side of the question, which is the only one that concerns this department of *THE LITERARY DIGEST*, is thus briefly viewed from opposing standpoints in *The Engineering News*:

"To back up his opposition against the proposed bridge plans, and to support his plans for tunnels as a substitute, Controller Coler secured expert reports from Mr. William B. Parsons, M. Am. Soc. C. E., chief engineer New York Rapid Transit Commission, and from Mr. J. Vipond Davies, M. Am. Soc. C. E., one of the engineers of the East River gas-tunnel, and of the projected Long Island Railway tunnel. Summarized very briefly these reports maintain the following general propositions: (1) Tunnels possess the important advantage of being cheaper to construct and maintain than bridges; (2) tunnels require no purchase of expensive real estate for approaches, as these can be located on city property underneath the streets; (3) as tunnels do not require the purchase of costly real estate they can be run anywhere, even directly across the city, and so connect with every intersecting transportation line; (4) the gradients on the approaches are descending in the case of tunnels, and ascending in the case of bridges, and trains can therefore be started more quickly and operated more economically in the former case; (5) tunnels can be built more quickly than bridges; they give a better foundation for railway trucks and permit higher speeds; they can be made perfectly dry and free from fog and weather conditions; (6) the material beneath the East River is rock or compact soil, which are especially suitable for tunnel construction; (7) several tunnels can be built for the cost of one bridge, and can be distributed at several different points along the river front, thus better accommodating the traffic."

On the other hand, the engineers of the city department of bridges present arguments that are briefly summarized in *The Engineering News* as follows:

"(1) Subaqueous tunnels, such as would be required under the East River, would be purely experimental, both in respect to the execution of the work and their operation; (2) it would be almost impossible to construct such a tunnel so as to render it dry; (3) it is practically impossible to locate a tunnel under the East River having a grade that would permit train traffic, and at the same time have a terminal at any reasonably accessible point on Manhattan Island; (4) to furnish the same traffic capacity as the new East River bridge would require six 15-foot tunnels and two 25-foot tunnels, which would cost more to construct than the bridge; (5) tunnels are wholly unfit for the use of teams and pedestrians."

Two resolutions, one for the construction of bridges, and the other to make surveys and studies for two tunnels before going on with the bridge work, have been presented in the Municipal Assembly, which has referred both resolutions to the proper committees. These committees are holding public hearings to hear arguments for and against each proposition. The result will

probably be the construction of some of the proposed bridges and also some of the tunnels, so that in future the question of their comparative merits is likely to be settled by actual trial.

A COMBINED GAS- AND STEAM-ENGINE.

IN the steam-engine, the heat of moderately slow combustion is applied to vaporize water in bulk, and the vapor is used to drive a piston. In the gas-engine the piston is moved by a minute explosion, or, in other words, by the sudden expansion due to the very rapid combustion of gas mixed with air. According to *The Western Electrician* (December 23), an engine combining both these principles has been devised by Prof. V. H. Emerson, an American engineer residing in Ottawa, Ont., who has established a reputation in Canada through his recent discovery of a process for the conversion of sawdust and saw-mill refuse into calcium carbide for the production of acetylene gas. In his new engine, water-spray is suddenly converted into steam by the explosive combustion of air charged with carbonaceous matter. The mixture is exploded by electric spark, and hence Professor Emerson has given to the device the somewhat misleading name of "hydro-electric motor." In an interview quoted by the Canadian correspondent of the journal already named, the inventor said:

"The principle upon which my motor operates is equivalent to building a fire directly in a vessel of water; the water, taking up the entire heat, becomes expanded into steam, and thus produces mechanical energy by so doing. The hot gases escaping from the smokestack of a steam-boiler or the high temperature of the exhaust of a gas-engine is entirely obviated by my system of motor, and it will exceed, in point of economy, more than 50 per cent. of the best steam-engine practice.

"In order that the operation may be more thoroughly understood, I may state that atmospheric air is charged with carbonaceous matter. This mixture is ignited by an electric current, producing expansion and a high temperature. At this instant it is brought into contact with water, broken into minute proportions, the water being converted into vapor instantaneously, which reduces the temperature and increases the pressure, which acts upon a piston and is converted into mechanical power. The whole operation is automatic and continuous, and we have practically a steam-engine without a boiler or exhaust steam."

The following additional details are quoted from another part of the interview:

"I can not go into the structural details concerning the motor, as I have not yet secured patents. I have designed the machine for operating my carbonizing machinery, of which I expect to install plants throughout the country. The motor may be used for many other purposes, such as operating street-cars, boats, supplying electric light, or pumping water for private residences, and as a motive power for vehicles; in fact, in any place where a powerful motor of light weight is required. A 10-horse-power motor, as constructed for a carriage or boat, would not exceed 125 pounds in weight, and the 2-horse-power machine I now have in operation weighs 46 pounds, but in this I have not attempted to reduce the weight. The motor operates at a moment's notice by connecting a lever with a key, which puts an electric battery in circuit, and it is as easily controlled as a steam-engine; in fact, when once started, it requires no further attention."

An Alcohol Motor.—Another claimant for popular favor among the various kinds of motive power suitable for automobiles is an alcohol motor, which is said to be popular in Russia. Says *The Evening Telegraph* (Philadelphia, December 23): "Heavy trucks carrying loads of four and five tons are in large use in St. Petersburg and Moscow, with power derived from alcohol motors, and the Russians contend that as compared with products of petroleum this fuel, while giving as great power as any that have been used, has the advantages of cleanliness and absence of odor. Petroleum is the favorite fuel of Paris, another great automobile center, tho there is much complaint of the

fumes accompanying its use. But its advantages are, so far, held to offset its drawbacks. It is cheap, and it is easily applied; therefore it holds its own. It is contended by St. Petersburg, however, that alcohol by the Villon process can be produced even more cheaply, while it is a safer thing to handle than petroleum. In this country, we fancy, the question of expense can not be dismissed as easily as it is in Russia, for unless radical changes are made in our internal-revenue laws alcohol would here run up a heavier bill than coal oil. Crude ethyl alcohol could be made very cheaply here, perhaps as cheaply as the Russian 8 cents a gallon, if the law did not stand in the way; but under the law it costs over \$2 a gallon, which would appear to be prohibitive. But there is no telling what may be the outcome of this reform. At present, probably, electricity, in one or another of its applications, is the favorite fuel in America, but we are quite unprejudiced and stand ready to welcome anything that is found to be better."

WHY SILK AND WOOL ARE EQUALIZERS OF TEMPERATURE.

IT appears that the electrical properties of certain animal tissues were given to them for a purpose, for these properties are closely connected with the suitability of such tissues for use as a protective covering. It has long been noted that silk and wool, both animal products, become electrified by friction, while linen, hemp, and cotton, of vegetable origin, are totally without electrical properties. The well-known French physicist, Charles Henry, has been experimenting to see whether this property may not be connected in some way with the ability of silk and wool to maintain a constant temperature, which makes them so useful as clothing, either natural or artificial. His results are thus communicated to *La Nature* by M. Henri Coupin:

"M. Henry tried in the first place to increase the electric properties of silk to a considerable degree and at the same time, if possible, to amplify its thermic qualities; he succeeded by incorporating with silk a neutral preparation that had no effect upon its appearance. The electrical properties of this silk were much more marked than those of ordinary silk. . . . It was found that when this highly electric silk is heated it cools more rapidly than ordinary silk, and when it is cooled it cools less quickly than the ordinary kind. The electric properties of silk thus tend to assure constancy of temperature, producing cold upon elevation of temperature and heat upon cooling.

"M. Henry explains the mechanism of this autothermic regulation by means of electric discharges. When the tissue is heated, the air included in the interstices expands; it thus is forced out of the tissue, rubs against it, and is electrified; being electrified it discharges upon the tissue; but this movement determines a current of air at the surface of the tissue and consequently a cooling. When the tissue is cooled, the air in the interstices contracts, and thus again rubs and is electrified; it then discharges toward its point of departure. The air thus sets up a vibration, and prevents the access of cold air from the exterior, producing a relative heating. To sum up, in electrifiable tissue there is during heating a tendency to cooling, and during cooling a tendency to heating."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

IN a paper read before the Society for the Promotion of Health, we are assured by an editorial writer in *The Minneapolis Times* (December 8) that pure sand is recommended to dyspeptics. Says the editor: "What we all need, says the gentle doctor, is grit—the real grit that is furnished by the silica in the sand. To get that we must swallow a little clean sand every day with our meals. The presence of the grit will assist in the grinding process, and our food, instead of distressing us, will nourish and cheer us. . . . Six five-grain capsules of pure sand should be taken with each meal."

THAT serum-inoculation was anticipated by a Canadian physician as early as 1863 is claimed in *The Canada Lancet* (November), which reprints a letter from Dr. (now Sir James) Grant to *The Medical Times and Gazette* of London, written in February of that year. Dr. Grant describes his successful treatment of psoriasis by vaccination, and says: "I consider the above cases sufficient evidence that the simple process of vaccination should not be confined alone to its protective influence against smallpox, but also extended to the treatment of many cutaneous diseases not of parasitic origin, but arising from irritant poison, generated in the organism or in that vital fluid the blood."

THE RELIGIOUS WORLD.

GOD'S AID IN WAR, AND THE SOUTH AFRICAN CONFLICT.

WAR has always been a source of perplexity to many men of thoughtful and religious nature. Aside from its unspeakable horrors, the perplexing picture is constantly presented of two contending forces, each believing in the justice of its own cause, and each supplicating the same Divine Power for victory. Perhaps this is one disadvantage of a monotheistic conception of Deity, for the Greeks and Romans and other polytheists were not troubled by such scruples, and for them martial triumph meant the favor of the more powerful god toward the victors. The present conflict in South Africa is arousing the old discussion of this problem, for Boer and Briton are each appealing to the same God. The *London Spectator*, admitting that the problem is probably insoluble, tries nevertheless to find a partial solution by means of an illustration drawn from the American Civil War. It says:

"There are plenty of things which are inscrutable in the governance of the world, but we should not therefore try to turn away from them or to bury them out of sight. We may have to go forward with the work of the world and leave them unsolved, but we do not make them less mysterious or less awe-inspiring by pretending that they do not exist. Mr. Lincoln during the American Civil War faced the matter we are now dealing with, and faced it with his usual clearness of vision and detachment of mind. He did not solve the problem of course, but at least he left it not a cold, hard paradox, a thing for mockery or sneers, but what it is—a matter which if too hard for man is not too hard for God. It is in the second inaugural that the passage we refer to is to be found. In that astonishing piece of reasoned poetry, where the greatness of the occasion, coupled with the greatness of Lincoln's own nature, made the President speak like a prophet new inspired, he puts before us the exact difficulty. Both sides in the war, he told his countrymen, 'read the same Bible, and pray to the same God; and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered—that of neither has been answered fully. The Almighty has His own purposes. 'Wo unto the world because of offenses! for it must needs be that offenses come; but wo to that man by whom the offense cometh.' " Those words might with only a little change be said to-day, and said without offense by either side, as might also the passage which begins—'Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away,' and ends with the declaration that whether the war is long or short, we can only say: 'The judgments of the Lord are pure and righteous altogether.' The last period must be quoted verbatim—a passage both for thought and language as noble as any in our language: 'With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations.' Here it seems to us is the lesson needed for the present war. We must not cherish the feeling that we do not care what the merits of the case are, or speak as if the justice or want of justice did not matter. It does matter, and must matter. On the other hand, those who believe that the war is a just one need not and ought not to worry themselves, not because they have doubts as to our cause being good, but because the Boers so sincerely think their cause good, and because both views can not be right. That is no concern of ours. As Lincoln says: 'With firmness in the right, as God gives us to see the right, let us strive on to finish the work.' If we are to think, not of our own standard and sense of right and wrong, but are to be constantly looking round to see whether somebody else has not got a different or a better one, which conflicts with, or even cancels, ours, we shall simply paralyze our hearts and consciences. It is

not expected of us that we should do more than what honestly seems to us to be right. It is far better to do that strongly and earnestly than to do nothing, because there may be another view of what is truth and justice. 'The Almighty has His own purposes.' We can only strive to do our duty, confident that if we do that all must fall right, whether the issue is or is not the one we desire. But a part, and no small part, of our duty in moments of peril and danger is to stand by our own country. We do not for a moment wish to indorse the mischievous sentiment, 'My country, right or wrong.' If a man sincerely believes that his country is playing an evil part he can not, of course, give her help with a whole heart. But for the men who have not arrived at any such conclusion, or who do not profess to have mastered the merits of the quarrel, the duty of patriotism is clear. It is not for nothing that men are bound each to each by the ties of patriotism. They can not break away from the duty of national cohesion lightly or capriciously. Till the country is committed to the arbitrament of war a man may well take sides against the Government—*i.e.*, that which represents his country—and has a right to speak in its name. When, however, war has once begun, a man must indeed be clear and confident in the wickedness of his country's action if he can abandon the fulfilment of the duty of patriotism."

CAREER OF DR. EDWARD MCGLYNN.

NO priest of the Roman Catholic Church in America has occupied a more conspicuous position than Father McGlynn, who died at Newburg, N. Y., on January 7. It was, of course, as an advocate of Henry George's single-tax theory, and not as

REV. DR. EDWARD MCGLYNN.

a priest, that he won and held public attention for many years. Since his reconciliation with the church, and his retirement to a comparatively obscure parish on the Hudson, Dr. McGlynn has been little in the world's eye, but his death has called attention again to his striking personality and career. He was born in New York and educated in its public schools, later going to the College of the Propaganda at Rome, where he

received the doctorate of theology in 1860. As rector of St. Stephen's Church in his native city, he was for many years known only as one of the most successful and beloved of priests. Says the *Springfield Republican* (January 7):

"The first serious break was reached when in 1882 Dr. McGlynn became interested in the Irish Land League, and made speeches in its behalf which were declared by Cardinal Simeoni, prefect of the propaganda, to be 'openly contrary to the principles of the Catholic Church.' This was the more remarkable because one of the chief counselors of the Land League was an Irish archbishop, and much more heretical sayings had been spoken by priests in Ireland. The cardinal recommended to Archbishop McCloskey the suspension of McGlynn, with the saving clause that the Pope left it to his judgment. Dr. McGlynn was not suspended then, and his activity in the first political campaign in behalf of Mr. Cleveland was passed over; but the very prominent part he took in the Anti-Poverty Society founded by Henry George, and his ardor in advocating George's election for mayor of New York in 1886, brought matters to a crisis. Archbishop Corrigan first cen-

sured him and then removed him from the charge of St. Stephen's, his whole offense being referred to the Vatican for decision. In the course of his advocacy of the teachings of the Anti-Poverty Society he expressed himself with such severity, sarcasm, and animadversion on the 'Roman machine' that undoubtedly some notice had to be taken of it. But these *obiter dicta* were not the stated grounds of his suspension. Those grounds were his espousal of alleged Socialistic theories, destructive of the order of things on which the Roman church rests as the expression of the will of God. Because of these, and not for his disrespectful and irreverential observations about the cardinals and the Pope and the whole Roman machine, his removal from the pastorate was decreed, and he was ordered to report himself at Rome, and finally he was excommunicated.

"Dr. McGlynn did not cease his addresses before the Anti-Poverty Society, and he entered upon a lecturing tour in the interest of a renewed society on the basis of the George single-tax theory. The case of McGlynn made so much stir in this country, and there was so great a sympathy felt for him among Roman Catholics, that even Archbishop Corrigan, who had been very severe in his measures, declared that he should be glad to have Dr. McGlynn reunited to the church; and one of the first proceedings of the papal legate Satolli in 1892 was to examine into the case of this priest. A trial was held in the Roman Catholic University at Washington, and Rev. Dr. Burtzell was McGlynn's voluntary counsel. What Dr. Burtzell really said is concealed under the veil of secrecy which marks Roman Catholic trials of heresy or discipline, but the result was that Dr. McGlynn was, on December 24, 1892, 'declared free from ecclesiastical censures and restored to the exercise of priestly functions, after having satisfied the Pope's legate on all the points in his case.' And later it was said that Satolli did not find McGlynn's teachings really at issue with the church's teaching."

Dr. McGlynn never uttered a word of regret for his course. Before the immense audience which greeted him at Cooper Union after his reconciliation with the church, he spoke of "the cause" as a holy one and of himself and his followers as martyrs. Yet, altho he occasionally took part in public meetings in behalf of single-tax principles, and preached a eulogy at the great public funeral of Henry George, his public career practically ended at this time. It was during the period of his excommunication, when he lectured upon social-reform questions throughout the United States, that he made some of his most oft-quoted remarks. Some of these have a decided tinge of Irish humor and will not soon be forgotten. His most famous saying was: "The Roman Catholic Church will never be at home in America until the Pope shall walk down Broadway with a stove-pipe hat on." Among his other sayings, the *Springfield Republican* quotes the following:

"Even if high Roman tribunals summon a man to answer for teaching scientific truth, and demand that a man retract it, then it is my duty and every man's duty to refuse to retract it."

"If Galileo had defied the power of that tribunal and incurred the penalties it could then inflict, and when he was dying they had said, 'Repudiate your truth or die without the sacrament,' it would have been his duty to refuse the sacrament. It would have been proper and Catholic for him to say: 'I submit to your sentence while cursing your tyranny. By the power of the civil law you can annoy, denounce, imprison, torture, and kill, but my soul rides free above your dungeons and your anathemas. Another generation will come to this prison and will tear it stone from stone.'"

"I must teach you to distinguish between the errors and crimes of the ecclesiastical machine and the ideal church of Christ."

"Nowhere is the church more hated than in the so-called Catholic countries. There he (the ecclesiastic) is shunned as the unclean. The sight of his shovel hat and sleek face at the window of a car empties the whole compartment and gives it to him alone."

"If you want to see an absolute devotion to the church you must look for it where the church has been deprived of her wealth and benefactions and largely freed from Rome's domination and diplomacy."

"I still hope for a democratic Pope, and I'll take back all I said about the stove-pipe hat and let him wear any kind of a hat he

chooses, if he will devote his energies to smashing his temporal throne so that it could not be rebuilt in a thousand years."

"So long as Catholic people give the Pope to understand that he can do what he pleases with them, and allow an archbishop in New York to forbid an American priest to make a political speech or attend a political meeting without first obtaining the consent of the Sacred Congregation of the Propaganda, which don't know but what Florida is a suburb of New York and Mobile a street in San Francisco—so long as Catholics let the Roman machine, of which the Pope is the mere puppet, do this, that machine will use Paddy in Ireland, and German Paddy, and American Paddy as pawns on the political chessboard, to be sold out at any time for what it can get in return."

The *New York Press*, under the caption "The Great Service of Dr. McGlynn," says:

"Dr. McGlynn did not live or die in vain. Setting out for an impracticable goal, he performed by the way a great practical service. He established the fact of the political freedom of the Roman Catholic clergy in America. He caused it to be proclaimed throughout the United States that the papacy was not the ally, defensive and offensive, of Democratic bosses. In this he accomplished more for Roman Catholicism than any other American of his time. And in this he accomplished more for America than any other Roman Catholic of his time. That is not to abolish poverty, but it is to do much. It is to do far more than has been done, with a single possible exception, by the 'preacher in politics.'"

The *Brooklyn Times* speaks of his influence and work, comparing it to that of the famous Brooklyn priest, the late Father Malone:

"There have been few more forceful men in the Catholic Church in the United States than Edward McGlynn, but, despite his aggressive disposition in controversy, there was none gentler or more sympathetic in private life. He was faithful to the discharge of his priestly functions, and altho he stood manfully to his maxim, 'No politics from Rome,' he accepted the religious teachings of the church without reservation or question. There have been many able priests in the United States, but when the history of the Roman Catholic Church comes to be written, it will be admitted that among those who have worked to bring it into accord with American ideas and to commend it to the favor of the American people, the names of Malone and McGlynn deserve to be enrolled in the foremost place."

Russia and the Pope.—The religious as well as diplomatic importance of the new papal mission at St. Petersburg is regarded in Europe as very considerable. After long negotiations, the Holy See is at last to be allowed a representative at the Russian capital, and for the first time in history Rome will set foot upon the banks of the Neva, in the person of its first legate, Monsignor Tarnassi. From the *New York Sun* we quote the following account of the new mission:

"It will be an interesting sight, and what may not the results be! It seems that Russia will do its best to help Monsignor Tarnassi in his task. Ever since the partition of Poland the enemies of the Czar have spread among Western nations a theory—which has not always been belied by the facts—the theory of the absolute irreconcilability between Catholicism and Orthodoxy. The Czar was the anti-Pope. The gulf between Poland and Russia, between Russia and the Holy See, it was declared, was impassable. All Western nations, including the French—and the distrust still continues in many of them despite the Franco-Russian alliance—look upon Russia as an unchangeable enemy of the church. There appears, therefore, to be an incomparable opportunity for the Russians to put an end to this view, I may call it this legend. Should the new mission work easily and with results, should it subserve at the same time the interest of Rome and of St. Petersburg, then there is an end forever to the Polish dissension."

"The first nominee to the mission is a guaranty of success. Monsignor Tarnassi has a heart full of kindly devotion and generosity; he is, moreover, a highly cultivated man, of perfect tact, with a long and slowly acquired experience. He is practical. At different times he has known the men who direct matters at

St. Petersburg. He possesses their sympathy and their confidence. After having studied, by the Pope's advice, the detailed history of the papacy's relations with the empire of the Czars (Father Pierling has given us fragments of this history), he will manage to Russify Romanism at St. Petersburg and to Romanize Muscovitism at the Vatican. It is evident that the Holy See will employ all its sagacity to attain a triumph that will mark no ordinary date in the history of the present pontificate, of Russia and of humanity."

THE HIGHER CRITICS OUTDONE.

WHILE the general tendency in Biblical criticism among professed German theologians has been of late back toward more conservative positions, especially in reference to the New Testament, voices from the ranks of the laity are being heard in favor of a still more radical neology. Two works have recently appeared from the pens of notable German university professors. Professor Haeckel, of Jena, who holds the chair of zoology, and is the recognized chief of the Darwinistic clans in the Fatherland, has published a purely theological work, entitled "Welträtsel" ("World Problems"), in which he aims to demonstrate that the four gospels now found in our canonical New Testament were selected by the Council of Nice from among a large batch of contradictory and falsified documents, and that this was done by a peculiar kind of trickery. The Jena zoologist has, in other words, revived the old charges which most theologians claim to have long since refuted.

Still more remarkable are the productions of the veteran law professor of the University of Tübingen, Dr. Fr. Thudichum, who has begun the publication of a series of pamphlets in which he attempts to prove that a large number of writings held sacred by the church are really literary falsifications. The series is entitled "Kirchliche Fälschungen" ("Literary Falsifications of the Church"), three numbers of which have appeared. The first bears the special title "The Confessions of the Apostles and of Athanasius," and in it he purports to show that the Apostles' creed is really a Roman falsification from the fifth or the seventh century, in order to crowd out the older confessions of the church. A still later false document is the so-called creed of Athanasius. The second number of the professor's series is entitled "The Epistle to the Hebrews," and purposes to show that this canonical epistle is also a product of the fourth or fifth century, prepared by the priest party in order to bolster up the claims of the bishops and of the hierarchy of that time. The third number has just appeared, and is entitled "The Deification of the Apostles, Especially of Peter." In it the author rejects as false large sections of the Gospels and the Acts, claiming that there were later inventions and additions of the priest party, who, according to his ideas, transformed the primitive simple church into a hierarchy, the purpose being to make Peter and the other apostles representatives and prototypes of their own positions. Among these writings impeached as false are the Epistle of Peter, the Apocalypse, and the fourth gospel. The Apostle Paul, we are told, had in reality no historical existence, but was invented by the priest party for their own purposes.

Those who in Germany seem to be most concerned over these radical teachings are the adherents of the advanced type of Biblical criticism. Two of the best representatives of this school have recently given expression to their views in the *Christliche Welt* (Leipsic). Professor Jülicher, of the University of Marburg, in No. 48 of that journal, writes in substance as follows:

This [Thudichum's] production, altho that of a veteran law professor nearly seventy years old, is an exceedingly flimsy production, the exhibition of extreme superficiality and ignorance. The author himself confesses that he never read the Epistle to the Hebrews until he was sixty years of age. He has no knowledge whatever of the best of modern literature or research on the subject, and his methods are those of a schoolboy. The pam-

phlets of Thudichum have no claims whatever on serious consideration. He states that he as a jurist feels impelled to say what the official position of the theologians would not allow them to utter. In view of such offer to help the theological teachers, we can only say "God protect us from our friends!"

Professor Harnack, in the next issue of this same influential journal, looks at the matter from another side. He says in substance:

Why is it that outsiders can break into the domain of theology and make it and its methods and its teachings ridiculous, as has been done by these professors of zoology and of law? In what other field could an outsider make such pretensions and not become the object of supreme contempt? These miserable fabrications only show again that theological science does not yet possess that credit and recognition as an equal branch of learned investigation which is enjoyed by other departments and which secures for them safety from such reckless abuse. It is time that the protagonists of theological science worked with might and main to secure for their science the equality in public estimation that it deserves. — *Translations made for THE LITERARY DIGEST.*

DR. BRIGGS ON THE CHURCH CRISIS IN ENGLAND.

THERE can be no doubt that there is a crisis in the English church at the present time, says Dr. Charles A. Briggs; but its seriousness has been overestimated by extremists upon both sides. Since the Reformation, the Puritan and the Anglo-Catholic party have been contending for mastery. Queen Elizabeth and Archbishop Laud were among the earliest Anglo-Catholics, and enforced the Act of Uniformity against the Puritans. Now the Puritans are trying to enforce it against the Anglo-Catholics. In *The North American Review* (January) Dr. Briggs writes:

"As the Anglo-Catholic party has aimed at a reunion with Rome, the Puritan party has ever aimed at a reunion with the Protestant churches of the continent of Europe, with the Presbyterian Church of Scotland, and with the nonconforming bodies in Great Britain. This, then, has been the agonizing struggle of the Church of England: the effort (1) to maintain the unity of all Christians in England in the Church of England; (2) of the Anglo-Catholic party to unite with the Church of Rome; (3) of the Protestant party to unite with the Presbyterian and nonconforming communions. This struggle has increased in intensity in our times. It is involved in the tide that sweeps on toward a reunion of Christendom. And so the crisis is upon us.

"What, then, is to be the end of this struggle? Is the Act of Uniformity to be used in our generation to force a section of the Anglo-Catholic party out of the church? Is it to be used to destroy the Church of England as a national church and to break it up into several denominations representing the several parties? There are some who think it and who hope it, and who are striving to bring it about."

None of these events are likely to occur, he thinks. The policy of the leaders of the church has always been one of comprehension, and they are unlikely, at the dictation either of a few ultra-Protestants or of a few anti-liberals, to reverse the policy of centuries. From the statements of representative men upon both sides, it is evident that the great mass of church-members seek comprehension so far as it is possible.

"The Act of Uniformity is used to pinch the Anglo-Catholics to-day. But there are already signs that the extreme men among them are demanding that equal justice should be done to the Puritan party. In a few months we shall hear all manner of complaints from the Puritan party when the Act of Uniformity is applied to their irregularities also. The quicker this comes the better, for it is necessary that all parties should as soon as possible agree to a repeal of the Act of Uniformity, which has been for more than three hundred years the curse of the British nation.

"It is an enormous gain that the leaders of the Anglo-Catholic

party have come over to the same attitude toward the Act of Uniformity as was maintained by the great representatives of Puritanism in the sixteenth and seventeenth centuries."

This comprehension of the widest differences as to doctrine and worship, instead of being a source of weakness in the Anglican Church, is the very trait which gives that church its unique position in Christendom, says Dr. Briggs:

"So far as doctrine is concerned, there is practically no difficulty in the Church of England at the present time in the way of comprehension. There are theologians who hold, maintain, and freely proclaim, on the one side, all the essential doctrines of the Catholic Church before the Reformation, only rejecting ancient abuses and the supremacy of the Pope, and the dogmas proclaimed since the Reformation in the Church of Rome. It is true that they have no legal right so to do. The Articles of Religion exclude, and were designed to exclude, these very things. And yet they manage by unnatural interpretation of the Articles, or by an assertion of the superiority of Catholic tradition to the Articles, to maintain these opinions, and no bishop attempts to interfere with them. On the other hand, Protestant doctrines are held, maintained, and advocated with equal freedom, even in such extreme forms as would have been regarded as unsound by the Protestant reformers. Calvinistic, Lutheran, and Arminian doctrines are equally at home in the Church of England. Right or wrong, legally, historically or ideally, from whatever point of view you may regard it, that is the situation; and it is impossible at the present time to change it. From the point of view of Christian union, this is a wholesome situation. If there is ever to be a reunion of Christendom, comprehension in doctrine must be fully as wide as this. In this respect the Church of England is the beacon, the hope, and the joy of the movement for the reunion of Christendom.

"Now, it is just this situation as to doctrine that makes it practically impossible to enforce the Act of Uniformity as to worship and its ornaments and ceremonies. Those who hold the Catholic doctrine of the mass must express that doctrine in appropriate ceremonies, with appropriate ornaments. Those who hold the Lutheran doctrine will also insist upon somewhat different ceremonies from those who hold the Calvinistic view. The toleration of the doctrine, the recognition of the right to hold the doctrine, necessarily involves the toleration and recognition of the right to the ceremony and ornaments which express the doctrine. On the other hand, those who hold the Calvinistic doctrine must also express that doctrine by the simplicity of the service of the holy communion, and by the exclusion of all but the simplest kind of ceremony and ornament."

The church will, however, have to pay for her liberty. The church in Wales will probably be disestablished, but the English church itself will not be disestablished.

"It is quite true that many of the Anglo-Catholic party would prefer disestablishment to the long continuance of the present intolerable situation. The Puritan party and the great middle party will be forced to choose between disestablishment and liberty of worship to the Anglo-Catholics. There is little doubt that the liberty will be given and the establishment will be continued. It is probable that the bishops will have to pay their price and give up their seats in the House of Lords. That might be, on the whole, a blessing to the Church of England and a gain to parliamentary government in England. Every one of these things counts on the side of liberty, of comprehension, of reconciliation, and of reunion. The inevitable result of this crisis is much greater freedom, elasticity, and comprehension in the worship of the Church of England. The American church has led the way, and it may guide and help the mother church still further in this direction. No nobler position has ever been taken than that of the House of Bishops at Chicago, when they stated the third article of the quadrilateral of church unity: 'The two sacraments ordained by Christ Himself—baptism and the Supper of the Lord—ministered with unfailing use of Christ's words of institution, and of the elements ordained by Him'; supplemented as it was by the statement in the declaration 'that in all things of human ordering or human choice relating to modes of worship and discipline or to traditional customs this church is ready, in the spirit of love and humility, to forego all preference of her own.'

"This ideal has been indorsed by the Lambeth Conference, and is the common platform of the Anglican Church for reunion. This platform has reconciled many to the Anglican communion."

CHRISTIAN MISSIONS IN JAPAN.

THE substantial accuracy of Mr. J. Stafford Ransome's "Japan in Transition" (see THE LITERARY DIGEST, September 16) is admitted by trustworthy Japanese critics; but some of them deny the truthfulness of his very unflattering statements concerning the Christian missions in that country. His statements on this subject are called in question by *The Japan Weekly Mail*, a newspaper representing no particular religious class. It says:

"In Mr. Ransome's chapter on the 'Prospects of Christianity' there are palpable evidences that, instead of employing his own faculty of shrewd observation, he has allowed his opinions to be strongly colored by the very medium he condemns at the outset. It is a mere historical error that he should speak of the 'Dutch' as having 'preached Christianity in Japan centuries ago,' but it is a different kind of error to say that the missionaries have been in the habit of counting as converts every Japanese pupil attending their schools; that the 'Japanese professor, or other experienced adviser, says to the young man starting on his travels, 'You had better buy a Bible and go to church while you are away''; that 'the time which should be devoted by the missionaries to Christianizing Japan is largely taken up by degrading squabbles between the representatives of the various shades of Protestantism about their respective methods and the details of their faith'; that 'many of the missionaries, tho paid as missionaries, run a successful commerce in connection with their religious work'; that 'Christianity, in the true sense of the word, as far as the Japanese are concerned, is in as bad a state as it possibly could be without being absolutely extinct'; and that 'the most painful part of it all is that this has been mainly brought about by a large section of the men whose care it should have been to look after it.' These and similarly exaggerated remarks about the lives of ease and comfort led by the average missionary are simply echoes of the after-dinner talk heard among the most prejudiced and ignorant section of the foreign residents—men who, from the moment of their arrival in Japan, set about abusing the missionary without taking the trouble to learn anything accurate about his life and doings. Mr. Ransome has here been greatly misled, and he does still greater violence to his own sound judgment when he writes as follows:

"And yet, and this is the irony of fate, there is a distinct possibility that Japan may, within a few years, suddenly become a 'Christian' country. Such an eventuality would not, however, be the result of conviction, nor of sympathy with Christianity, nor would it be due to the preachings of the present-day missionary, but in spite of them. Should it take place, it would mean that a law had been passed establishing Christianity as the national religion, and the Japanese people would accept the change without troubling themselves. This would have been enacted from a similar motive to that which has prompted Japan to purchase ironclads, to adopt a gold currency, and to educate her people on modern lines. It would be merely the logical following out of her policy of putting herself on a level footing in all respects with the rest of the civilized world."

"Even if Japan had not a constitution which renders such an outlook wholly impossible, only a little knowledge of the nation's mood is required to understand the fallacy of the forecast. It is a pity that this chapter on the 'Prospects of Christianity' was not omitted from Mr. Ransome's otherwise most valuable and instructive volume."

RELIGIOUS NOTES.

THE official residence of Mgr. Falconio, the Apostolic Delegate to Canada, has been fixed at Ottawa, instead of Montreal or Quebec, in accordance with the rule that the delegates of the Pope shall reside in the capital cities.

THE Græco-Roman branch of the Egypt Exploration Fund has for its object the discovery of precious papyri in the remains of ancient Egypt and to publish these with translations and notes. One volume has already been published containing fragments of a copy of St. Matthew supposed to date from the year 150-200, a fifth-century manuscript of St. Mark, the Logia or "Sayings of Christ," and various classical, municipal and legal documents of great value to scholars. *Bibla*, the official organ of the fund, announces that a second volume is now in press, containing, among other things, fragments of a manuscript of the fourth gospel far antedating our version.

FOREIGN TOPICS.

THE MILITARY SITUATION IN SOUTH AFRICA.

THE actual position of the contending forces in South Africa is practically what it was at the end of October. The Boers still hold the British armies in check all along their frontiers, and every attempt to defeat them results in serious loss. Even where the advancing British troops are momentarily successful, as at Elandslaagte, Belmont, and Graspan, it is found

A NIGHTMARE SANTA CLAUS.

Punch in a cartoon this week suggests that President Kruger has 'pooled' Father Christmas's show this year for this country. We are afraid that Santa Claus has also suffered by distortion in the dreams of some of those who have pushfully hung out their stockings.—*Westminster Gazette*.

that the small force of defenders have sacrificed themselves for a definite object. The British Government and people are now thoroughly conversant with the fact that large sacrifices must be made if the conquest of the two republics is to remain within the range of probability. The *London Daily Mail*, one of the most active of jingo organs, whose circulation is now said to rival that of the *Petit Journal* of Paris, believes that England will now really astonish everybody by the manner in which she will proceed to crush her foe. "Officers and men, arms and stores, will be sent across the sea in quantities that shall astonish the world. The world has never witnessed anything like it. And this gigantic power will be placed in the hands of England's best general." The *London Spectator* says:

"Briefly, the Government decided to do the following: (1) To call out the remainder of the reserves; (2) to send out the seventh division, now being mobilized, as well as more artillery, including a howitzer brigade; (3) to authorize the commander-in-chief in South Africa to raise as many local mounted troops as he thinks fit; (4) to allow twelve battalions of militia to volunteer for service abroad, and to embody twelve more for service at home; (5) to form out of volunteers from the yeomanry a strong mounted body for service in the field; (6) to select from among volunteers offering their services enough men to add a company to every regular battalion now in the field; (7) to accept as far as possible the patriotic offers of help made from the colonies, especially as regards mounted contingents; (8) to send out Lord Roberts to take supreme command, with Lord Kitchener as chief of the staff. . . .

"That is all excellent, and will give us another fifty thousand men in South Africa, but we wish the Government had done three things more—i.e., given the order (1) to mobilize the navy; (2) to form a special territorial army at once of one hundred thousand men who have already seen service; (3) to buy artillery of all descriptions from private English or American, or even foreign, firms."

The Saturday Review says:

"Success has made us careless and overconfident. This being

so, it might have been excusable had we underestimated the Boer strength slightly, and discovered, say, that we wanted 30,000 more men. But in the present case we originally underestimated the requirements of the situation by some 100,000 men! As regards regular troops, no more infantry—after the eighth division has started—can be spared from the United Kingdom. Our reserves have all been called up. If the drain of men for South Africa continues much longer, militia divisions must be sent out."

The announcement that something will be done has inspired the press throughout the empire with confidence, which is well illustrated by the following remark in *The Westminster*, a Canadian weekly:

"The Australian colonies are sending a second contingent and Canada is doing the same thing—this time one of cavalry and artillery. There is nowhere a symptom of despair or of faint-heartedness. The moral effect on those European nations which depend on huge standing armies, kept up at enormous expense, must be very great and on the whole beneficial. The world will move on all the more satisfactorily for knowing that the most civilized of empires is also the strongest."

We search, however, in vain for more definite evidence that anything like the number of men mentioned in British papers is as yet available. The papers are singularly reticent now as to the regiments which are actually going. The military editor of *The Westminster Gazette*, who enjoys considerable reputation, declares, on the contrary, that Lord Roberts must call himself lucky if he has an army of 60,000 men at his command. "To send out 100,000 more men, presuming that the three arms are in due proportion and that the administrative services are not neglected, would be a task entirely beyond our powers." According to the *London Broad Arrow*, the sixth division could not be supplied with the necessary artillery without robbing what batteries remain in England of their best men and horses. Most of the British papers, however, describe such criticism at present as unpatriotic. The continental papers, which have, of course, no such scruples, follow up the movement of every British battalion, and the conclusions they profess to have reached do not correspond to the claim that Great Britain has increased her prestige by her promptness in supplying troops. We summarize the following from the Berlin *Deutsche Tages-Zeitung*:

The fifth division, commanded by Sir Charles Warren, is probably the last that can be termed complete. It is 11,000

They exhibit a uniformed Dog Brigade in London. Mr. Joubert presents the Transvaal species with his compliments.—*Kladderadatsch*, Berlin.

strong, with 13 guns. But of these only 7,200 infantry and 150 cavalry are really fighting men. The rest belong to the commissariat, the hospital corps, etc. Moreover, the designation fifth division conveys a false impression, as one of the other four is locked up in Ladysmith, and hardly available for practical purposes. Only the three battalions sent to take the place of those taken prisoners are really in the hands of the commander-in-chief. The artillery is now numerically much stronger than that of the

Boers. It has 192 guns. But of these many are already captured. The reports published in the Transvaal papers tell of more guns taken from the British than the British themselves admit. The grand cavalry division of 4,200 sabers with which General French was to work wonders has been torn into shreds, and the fragments distributed among the forces of the other commanders. General Joubert's estimates of the British forces are probably correct. More than 80,000 to 85,000 efficient troops can not be sent, and of these only 40,000 to 45,000 will really be available for a decisive blow.

About 8,000 men have already been lost to the British. This number does not include the sick, but only the killed, wounded, and missing. However, there are not wanting people, even in England, who insist that the main question is not a quantitative one. Colonel Hanna, in the *London Times*, writes that large numbers would only be hampered by the difficulties connected with providing the necessary food and munitions. *Truth* warns the Government that a very large force, provided it can be got together, might share the fate of Napoleon's army in Russia. This paper argues to the following effect:

Suppose Pretoria is reached and the siege begun. Then the difficulties of the commissariat commence. The Germans—and they know what they write about—think a double line of railroad, well guarded, necessary to provide for an army of 40,000 men. In South Africa there are none but single lines. That the Boers will lock themselves in at Pretoria need not be imagined. They will leave an efficient garrison there and busy themselves destroying our communications. The safety of an army besieging Pretoria is not assured.

Examination of the journals of other countries in Europe continues to reveal only a monotonous reiteration of the opinion that Great Britain has so far failed to show the strength of even a second-rate power. England's army, so it is claimed, and indeed the claim has been made by such journals for years, is largely a "paper force." The yeomanry, it is asserted, number only about 10,000, and are considered by continental critics as dangerously inefficient. The volunteers, if the estimate of the same critics be correct, can not compare with our own militia, whose members, generally speaking, know the use of a rifle. Of the British volunteers, many are "honorary members," who contribute to the funds of their corps for the privilege of wearing its uniform, but do not drill. Of the militia and militia reserve many belong to the regular army reserve, and are counted twice. The *Nieuws van den Dag* (Amsterdam), a paper which expressed some misgivings for the Boers before the first engagements had been fought, now says:

"When one reads the English papers, one would almost imagine that the Boers will have hard work to shoot all the men that will be sent against them. Countless legions are to be raised in Great Britain, in Ireland, in the colonies. But when we examine more closely, we see that the Boers have got past the worst. They have beaten what England had in the shape of warriors. If they can take prisoner entire battalions of her best troops—to the everlasting shame of the British army—they need not fear her play-soldiers. Sending out a lot of 'chappies' will not insure success. . . . No! The Boers are through with the most difficult part of their task. They have vanquished Britain's best troops. What are now scraped together may be nice, good fellows, but in a military sense, and especially in South Africa, against a people defending their homes in positions which can not be taken, these last troops of Great Britain will prove to be a—job lot!"

The military critics of the *Journal des Débats*, the *Temps*, the *Rome Tribuna*, the *Frankfurter Zeitung* express themselves in similar terms. So does Major von Wissmann, a noted German explorer and ex-governor of East Africa, in the *Steirische Alpenpost*.

The Boers say but little about their position. The *Randpost*, *Volkstem*, *Standard and Diggers' News*, and others of their papers show that they have prepared for a long war, and allow

their men to take turns in gathering the harvest. The Cologne *Kölnische Zeitung*, one of the few German papers inclined to favor Great Britain, expresses itself in the main as follows:

Briefly put, the fundamental principle of Boer tactics is: Be saving with your men! At the most the Boers have 75,000 men to lose. The English can risk 150,000 and more. Hence the Boers will expose themselves as little as possible. They will inflict loss without risk whenever they can. They will avoid battles which, tho the chances of victory may be in their favor, would entail heavy losses. Neither Cronje nor Joubert will be imprudent. They will be content with cutting the enemy's communications. Whether this will have the result the Boers hope for remains to be seen.—*Translations made for THE LITERARY DIGEST.*

MILITARY ATTACHES IN EUROPE.

THE German Emperor, as commander-in-chief of the army, has recalled the military *attaché* of the embassy in Paris. He has done so from a conviction that the post is not one of honor, that the information which can be obtained by the uniformed *attaché* is very meager, and that the suspicion with which he is regarded tends only to disturb the good relations with the country to which he is sent. The recall is, therefore, an attempt to please France. The *Berlin Echo* says:

"Probably all the members of the Triple Alliance will follow this precedent. The first cause of the recall is undoubtedly the manner in which these gentlemen were followed and watched by French agents, as the Dreyfus trial has shown. But it would be a mistake to suppose that the recall of their military *attachés* means that the powers of the Triple Alliance are less friendly to France. The contrary is the case. The cabinets of Berlin, Vienna, and Rome are anxious to remove everything that could cause the slightest friction. A definite abolition of the post of military *attaché* is probably not yet contemplated, altho the French will recall their own representative of this kind."

In the French papers the Emperor's decision also finds much approval. Charles Malo, the military member of the staff of the *Journal des Débats*, writes in the main as follows:

The position is a very pleasant and desirable one when the *attaché* is sent to the capital of an allied or avowedly friendly country. He is then received everywhere, and may prove his ability in a legitimate manner by assisting in the organization of the combined forces. Few staff officers would desire the abolition of such posts, from which they generally are transferred to important commands. But the case is very different if the power at whose capital the *attaché* is stationed is inimical, or likely to become so. Then the *attaché* is transformed into—an observing person, to use no harsher term. The Emperor's decision is therefore very acceptable. As master of his forces, he has taken hold of the occasion to establish a precedent.

It is well known that the Kaiser reads the newspapers a great deal, and an article in the *Vienna W'age*, from which we quote below, is said to have influenced him in forming his decision. The paper says:

"The use and necessity of international military espionage has so far only been asserted, never proven. Will not somebody give us an historically authenticated instance of war experience in which the secrets purchased by a military *attaché* caused victory, or even influenced the outcome of the war? War is decided by the physical ability of the troops, the sterling knowledge of the officers, the ability of the army leaders. *Stolen documents never won a battle!* . . . The French general staff merely wasted their time. . . . Common sense tells us that honesty is the best policy, and common sense tells us that the best men are honest men. . . . We may be told that no state can afford to risk the chances which its neighbor gains by dishonorable practises. But that is an argument always employed against reform. . . . The state that means to try need do only one thing: abolish the rights of military spies employed in the shape of *attachés*. The extra-territoriality of these spies should neither be granted nor asked for. The state which dares to do this will itself be rid at once of all prying military *attachés*. He who declares that he

will not admit treachery of any kind will not be asked to house traitors."—*Translations made for THE LITERARY DIGEST.*

STATUS OF CATHOLICS IN THE TRANSVAAL.

EVER since the trouble between the British and the Boers reached an acute stage, one of the subjects of dispute has been the degree of religious freedom prevailing in the Transvaal, and especially the freedom accorded to Roman Catholics. The *Statesmen's Year Book* for 1899 (American edition, p. 1003), compiled in England, in stating the provisions of the constitution of the South African Republic says:

"The supreme legislative authority is vested in a parliament of two chambers, each of twenty-seven members, chosen by the districts. Bills passed by the second chamber do not become law until accepted by the first. Members of both chambers must be thirty years of age, possess fixed property, profess the Protestant religion, and never have been convicted of any criminal offense."

British papers publish a number of letters in which the writers tell of their success in converting Irishmen who have sympathized with the Boers, by telling them of the hostility shown to Catholics in the Transvaal.

On the other hand, Mr. W. J. Leyds, the European agent of the Transvaal, in a letter to Mr. William Redmond, M.P., declares that while discrimination has been made against Roman Catholics in the past, those discriminations have been removed. His letter (which we quote in full from the *London Times*, December 8) is as follows:

"8, RUE DE LIVOURNE, BRUSSELS, November 30, 1899.

"DEAR SIR—With reference to my letter to you of the 11th inst., and having seen some correspondence in the newspapers asserting that no Roman Catholics can hold government appointments in the South African Republic, I think it may be useful to inform you with the following: By Article 20 of the Grondwet of 1858 it was stipulated that the Dutch Reformed Church should be the church of the state, and in Article 21 it was laid down that the nation would admit no Roman Catholic churches in their midst, and no other Protestant churches than those in which the same Christian doctrine should be preached as mentioned in the Heidelberg catechism. These clauses, however, were cancelled by resolution of the Volksraad of June 1, 1870, Article 151, whereby absolute religious freedom was granted.

"With regard to the appointment of government officials, it was stipulated by Article 68 of the Grondwet of 1859, that all officials must either be enfranchised burghers or be able to produce satisfactory testimonials. By resolution of July 21, 1894, the Volksraad instructed the Government to appoint no persons belonging to the Roman Catholic Church, but this resolution was cancelled within two years by resolution of the Volksraad of June 10, 1896, Article 874. By Article 93 of the Grondwet of 1896 it was laid down that only enfranchised or naturalized burghers could be appointed as government officials. In case of a vacancy in the government service a notice is inserted in the government *Gazette* for that purpose, in which applicants are also requested to state to which religion they belong, but the assertion that in such a notice it is stated that applicants must be of the Protestant religion is untrue.

"I am, dear sir, yours faithfully.

"W. J. LEYDS."

A statement of the encouraging progress made by the Catholic Church in the Transvaal appears in the *Germania* (Berlin), one of the most influential Catholic organs of the world, as follows:

"Formerly the Boers were intolerant. The first Catholic priest who came to the Transvaal, P. Hondewanger, was forbidden to celebrate the mass. This was in 1868. But in the following year the ordinances against the Catholics were declared void. To-day there are five churches and eight chapels in the Transvaal. P. Alois Schoch, the apostolic prefect, has under him fifteen missionaries, three members of the Trappist Order, eleven Brothers of the Piccoli Fratelli di Maria, seventeen Sisters of Loreto, thirty-nine nuns of the Holy Family, twenty-two Dominican nuns, and six of St. Ursula. There are no less than 113 priests, monks,

and nuns altogether. Four boys' schools have together 720 pupils, eight girls' schools have 820. Of high schools, there are four, with an attendance of 450. The mission has an orphanage and home with 180 inmates, and the Catholic hospital at Johannesburg is the largest and most imposing establishment of its kind in South Africa. This progress is all the more pleasing and remarkable as there are only 6,300 Catholics in the Transvaal. The stubborn, conservative Boers have discovered the practical value of these institutions, and make use of them, however much they may have originally feared 'Papist invasions.' Intolerance has given place to complaisance, one might almost say to love of Catholic institutions. True, the law still prohibits the election of a Catholic President or Catholics as members of the executive council. But, since 1896, Catholics may be placed in all other positions. To-day about twenty-five per cent. of the officials are Catholics. Dr. Leyds, the diplomatic representative of the South African Republic in Europe, is a Catholic. One of the councillors of the cabinet, Dr. Farelly, is a Catholic, and so is Mr. Hogan, the secretary of the commander-in-chief, and many other high officials."

On the other hand, *The Tablet*, the Catholic organ of England, in its issue of December 30, publishes what purports to be the law of 1899 in the Transvaal, which seems to exclude Catholics from all government positions. *The Tablet* gives as its authority Mr. J. P. Fitzgerald, author of "The Transvaal from Within," and secretary, if we are not mistaken, of the reform committee of Johannesburg which has been held responsible for the Jameson raid. The law, as published in *The Tablet*, is as follows:

"LAW 2, 1899.

"Regarding the appointment, the suspension, the discharge, the leave of absence, and the securities of officials in the service of the Government of the South African Republic.

"Article 15.—Applications must be written in the language of the country, and must be written in the applicant's own handwriting. They must be accompanied by a certificate of burghership from the field-cornet of the district, which must state clearly whether the applicant is entitled to vote as a full burgher or as naturalized; and proof must be enclosed that applicant is a member of a Protestant church."

The Tablet publishes further (on the same authority) a plea from President Kruger, dated August 22, 1899, addressed to the first Volksraad, in favor of the abolition of religious disabilities imposed on Catholics and Jews. President Kruger in his message proposes to substitute in Article 31 of the Grondwet, pertaining to eligibility as a member of the first or second Volksraad, the provision that a candidate must "believe in the revelation of God as set forth by His word in the Bible," for the provision requiring that the candidate be a Protestant. The article as proposed by the President would then read as follows:

"CONCEPT-GRONDWET.

"C.—ELIGIBILITY (VERKIESBAARHEID).

"Article 31.—To be eligible as a member of the first Volksraad or of the second Volksraad, and to be eligible to take a seat in that capacity and to retain the same, a man must be a burgher of the Republic, as respectively stipulated in the law indicated in Article 9 of the Grondwet, must be thirty years of age, must live in the Republic, and be an owner of real estate, and believe in the revelation of God as set forth by His Word in the Bible; he must have had no dishonoring sentence passed on him, he must not have lost control of his goods wheresoever they may be, either in consequence of permanent sequestration or having them put under guardianship (*onder curatele stelling*), nor have been deprived of his eligibility (*verkiezbaarrheid*) from any cause whatever, and, moreover, the stipulations put forth in the Kieswet must be followed."

In the argument that follows, President Kruger pleads for the admission of Jews and Catholics to burgher privileges. In regard to the Catholics he says:

"Furthermore, on the principle of liberty of religion, for which the Protestant has striven so much, he can not exclude people

who think differently. Therefore, altho the Roman Catholics persecuted us in former years, we may not now go to work in the same way and try to exclude them from burgher rights. That exclusion would appear alone to give the idea of persecution and to be in opposition to the whole tendency of Christianity and Christian love. This was not the principle of the Savior. His word was: 'Make your friends from among the unjust Mammon.'

"If one excludes all Roman Catholics and admits all Protestants, then we would lose sight of the fact that there are in our days Protestants who are deniers of God, and who simply call themselves Protestants merely as being in opposition to Roman Catholics."

According to *The Tablet*, the Raad postponed action on the subject for one year. "In other words," says *The Tablet*, "Catholics in the Transvaal are still, as in the past, disqualified by reason of their religion from holding office in any public department, and may not be members of either Raad."

There the dispute seems, for the present, to rest, with Dr. Leyds and the *Germania* on one side and Mr. Fitzgerald and *The Tablet* on the other flatly contradicting each other.

POLITICAL COST OF INTERNATIONAL EXHIBITIONS.

IT has long been a maxim that a nation, when preparing to invite the world to a great exposition, must be eminently peaceful. Bearing this necessity in mind, the Germans, after due deliberation, came to the conclusion that the position of their country in Europe was too dangerous to permit the risking of millions in a world's fair. And France, it is said, begins to doubt that the economical advantages of a great fair balance its political losses. The Paris correspondent of the Berlin *Vossische Zeitung*, who has made inquiries regarding the subject, says:

"It does not require much shrewdness to discover that the French Government is ruled mainly by this thought: all complications must be avoided until the Exposition of 1900 is a thing of the past. It may be apparent to all that, in order to secure future advantages, the Government should form political decisions. But however great these advantages may seem, they are not as near at hand as the Exposition, and they must be given up for the Exposition. A thousand millions are at stake upon the success of the World's Fair. A panic will be the result if the many who have put their capital into this venture are disappointed. The break-down of the Panama Company would be a mere bagatelle in comparison. Hence the first lesson of the political catechism of France is to-day: 'Every consideration shall be subordinated to the success of the Exposition.' But there are many Frenchmen, and their number is increasing daily, who ask themselves whether the game is worth the candle. Louder and louder are the protests of those who do not believe that it is wise to conduct the internal and external affairs of the country merely in the interest of the fair. The sacrifices are too great. Since 1875 France has nearly always been busy with an exposition—in 1875, in 1889, and now. Each of these has thrown its shadow far ahead; for four or five years preceding, all other undertakings have been smothered. Those politicians who rise above the considerations of mere shopkeepers now ask whether France has no better mission to fulfil than that of a showman who thinks of his exhibition, and shivers at the thought that some unforeseen contingency may prevent the public from thronging around the ticket office. It is not yet the majority who think and speak thus; but if the minority keep on increasing as they have of late, then the Exposition of 1900 will be the last one which France will prepare for the edification of the world. The country is tired of placing its whole political existence in jeopardy for the sake of these fairs."

The Paris *Temps* declares that France would have been spared the humiliation which followed the Fashoda incident had it not been known in England that a great deal of provocation would be necessary to justify risking the success of the Exposition. Similar views are expressed by many other influential French papers.—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

AN AMERICAN WOMAN IN CHINA.

THE right of Mrs. Archibald Little, author of "Intimate China," to record her observations of the Chinese folk, of town or country, from the standpoint of intimacy may not be fairly questioned. She has been quite at home in Peking, she has made several more or less intrepid tours in Western China, and she has audaciously adventured into Chinese Tibet. She observes with the quick, discerning glance of cleverness and gumption, and she writes with fairness and sympathy.

We find her a trusty and entertaining guide to follow through the streets of a Chinese town—Chung-King, for example; narrow streets, thronged with foot-passengers, with sedan chairs, and vociferous coolies, with ponies and mules, and donkeys with loads, and Chinese porters with wicker-baskets borne on the ends of a long bamboo. Everything is done in the street; pedlars are hawking their wares, men are mending broken pottery and porcelain with rivets, barbers are shaving heads and plaiting tails, quaintly clad women are patching garments; there are artisans busy at embroidery-frames, and cobblers mending shoes; there are pigs, there are fowls; there are babies in hen-coops; there are cats tied to the shop-counters; in the afternoons there are crowds discharged from theaters, and in the evening street-preachers expounding the sacred edicts:

"The coal-dust and the smoke and the drippings and the bustling crowd all make the streets unpleasant to walk in. Every one told me it was impossible for an English lady; but I felt it was impossible for me to live in Chung-King unless I did. So after showing myself about as much as I could, in a sedan chair with the curtains up, I determined to attempt to walk, with my chair following behind, to show that I had some claim to respectability."

To the Chinese, a foreign woman's tight-fitting dress, outlining her figure, is very indecent, and it is shocking for a lady to go abroad unattended by a maid; even to stand sturdily on her feet, and step out like a man, is most indelicate. They are greatly concerned for the foreign women, on the score of decency; they have heard that no European woman wears trousers, and what would a Chinese woman be without them? And the dress of the European man is even more scandalous; when they would be charitable, they say "the poor person had not cloth enough to cover him."

Mrs. Little thinks that the life of a Chinese child in a Chinese city must be very pleasant. Has he not the New Year and the Dragon Feast, when there are visits to the graves, and all the family go out into the country together; when the beggar-children have a high day, with fancy dresses over their rags—sometimes representing the conquered tribes, sometimes even Englishmen, in their short, square coats and tight trousers? The elders are very kind to the Chinese child; they never bother him with cleaning up, or dressing to go out. He strips to the waist, or even to the "altogether," in summer, and in the winter he keeps putting on one garment over another until he is as broad as he is long.

"Then he need never be afraid of breaking anything or spoiling anything; for most things are put away, and Chinese things are not like European; the polished black table, for instance, can have a hot kettle put upon it, and be none the worse. No one ever tells the Chinese child to hold himself up, or not to talk so loud, or to keep still; he shouts and wriggles to his heart's content."

Outside the city, in the springtime, every woman has a white flower in her glossy black hair, and the blue river laughs back at the blue sky. But in the streets all is dark and dank, and all is pervaded by the sickly, sweet odor of the opium-pipe; everywhere are the lean ribs and the yellow faces of the opium-smokers. With opium-dens here and there, and all the coquetries of the opium-tray in the houses of the rich, "how is it," says Mrs. Little, "that we give warning to a servant when we discover that he has taken to the pipe? How is it that the treasure, on a journey, is never confided to a coolie who smokes?" And this in a land where all important affairs are concluded over the opium-couch, where alone is privacy to be had—in a land where important

military posts are confided to opium-smokers, and even most of the higher civil offices. People refuse to employ the moderate smoker to sweep out their rooms, but they will set him at the head of an army.

Europeans prate of the "mock modesty" of Chinese women. "Doubtless," says Mrs. Little, "the ladies of the land discuss certain subjects with the freedom that was usual in the days of Queen Elizabeth"; but how can women be called mock-modest who remain fully clad in the steamy heat that compels the men to strip to the waist in their shops. Mrs. Little has never seen a Chinese woman indecently clad, or caught one in the act of a gross breach of decorum:

"It is not in accordance with their etiquette that they should talk with men—not even with their own kinsmen; yet whenever I have seen them in intercourse with foreigners, or even with Chinese men, in matters of business, I have been struck with their ease of manner, and their quiet dignity. . . . Doubtless, there are in China, as in other countries, women who prefer vice to virtue; but if I am any judge of expression or of manners, these must be rarer in China than in any other country with which I am acquainted. . . . The coarseness and directness of Chinese women often shock European ladies, but I have never felt sure that the fine ladies of Queen Elizabeth's court were not more modest really than the fine ladies of Queen Victoria's."

Crime, says Mrs. Little, is not rife in China, and they have no police. They contribute but a small percentage to the criminal roll of the world. In business dealing the Chinaman commonly keeps his word, even to his own loss. Merely to say "Puttee book!" without signature or seal, held good as a legal transaction all through China "until a long-established English firm, probably foreboding the failure that afterward overtook it, repudiated a transaction of which there was no further record than those two sacred words."

While it is usual, we are told, for people of other nationalities to denounce the vicious characteristics of the Mongolian, there is hardly a European living in China who has not one or more Chinese whom he would trust to the utmost, and whom he regards as the embodiment of all the virtues—as he regards no European of his acquaintance. "We rarely believe," says Mrs. Little, "in one another's Chinaman, but we are, each of us, absolutely convinced of the fidelity, trustworthiness, and shrewdness of our own particular Chinaman."

Speaking of missionaries, Mrs. Little draws a curious picture of Jesuit Fathers—"pig-tailed Frenchmen in white Chinese clothes." These reckon as many as one hundred thousand converts in Kiangnan; they have whole villages of Christians—"but Chinese still";

"Not to be forgotten is that French priest at Peking who, just returned from a long sojourn up-country, at the one word *France* broke down, and could not recover himself. And once more I felt a tightening at the heart, thinking of that large house building at Ichang, to receive Italian Sisters—simple, loving women, who, for the sins of others, not their own, will live and die so far away from that beloved Italy, for which Filicaja wished, 'Ah! wert thou but more strong; or if not that, less fair!' They all get sick; they can not love the people; they long for Italy; and till now they have been compelled to bind the feet of the little girls confided to them, yet unable to bear the pain for them. . . . I recollect one French priest in a remote village showing me—half excusing himself, half proudly—his one great luxury: a little window with glass panes he had put in near his writing-desk, so as to see to read and write till later in the evening. There was barely a chair to sit on, in his large barrack-like room."

A circuit of the shops of Itu would have been entertaining, but for the incessant cry of "Kill the barbarians!" "We were stoned at Ichang," says Mrs. Little, "and one of the party wounded." And yet the cry of "Kill the foreigner!" was a novelty that year. It has become quite common since. "If you go into the shops, and begin asking prices, all the rabble of the street pours in after you. You can not make yourself heard; you can not breathe; you can not see."

The missionaries are accustomed to say "the students are swaggering about"; but Mrs. Little affirms that she has never seen the swagger so familiar at home in the gait of a military student:

"I know the mandarin swagger [says Mrs. Little], and the Tientsin swagger, which is the most audacious of all, and would make every one in Bond Street turn round to look; and I know the young merchant swagger, which is amusing, and not unlike

a very young clubman's swagger in London, when he does swagger. But the students I have seen have been mostly pale, anxious-looking young men, who drop in at our lunch-time, and look with much interest at our foreign things, sitting on forever when they find we have actually books of that most useful Society for the Diffusion of Christian and General Knowledge."

There are brilliant students who pass every examination, and are going up for the Hanlin College. Even these are afraid to look into histories of the nineteenth century, or of the Japanese war, lest their attention should be distracted from the classics. They know all about the Roentgen rays, but they dare not be interested. More than the weight of empire seems bearing down on their young shoulders. Mrs. Little undertook to teach English to one of them in a six weeks' holiday in the New Year season. He learned easy words, but why *c-a-t* should spell *cat* because *b-a-t* spells *bat* was beyond his comprehension.

The very idea of an alphabet is bewildering to a Chinaman. He thinks what you want him to do is to learn by heart, and he conscientiously learns so. As to spelling, he can not be made to understand it, until he has learned to spell; till then, it is all a riddle to him. There are probably 700,000 Chinese graduates now living. The desire to learn, and his exalted respect for learning in others, surpass the love of money in a Chinaman's breast. But the young literati hate foreigners, and are dissipated. They love fine clothes, and are cleaner and nicer in their ways than the people of other classes. Mrs. Little likes them, and finds them easy to amuse. They are the hope of China, she declares; "but they do not show their best side to the missionaries, any more than rather arrogant young agnostics, fresh from the learning of the schools, would show theirs to hard-working evangelical curates."

Mrs. Little protests against the notion, which has found a firm footing in the European mind, that the Chinaman is without sentiment. The young student who had tried to learn English under her instruction took leave of her when she departed for England, in very elegant Chinese verse. He regretted her departure, wondering how he could do without her; for to him she had been "like the snow, which by covering and protecting the plants, made the tender shoots grow, as she had encouraged his mind to burgeon." No literary man would think his writing-table complete without a vase to hold one lovely blossom, and no woman is "dressed" without a flower in her hair. "Lu-pe-ya's Lute," Englished by Mrs. Augusta Webster, expresses the sentiment for friendship and for music that is so dear to the Chinese heart. "It is, perhaps, because I am so unmusical," says Mrs. Little, "that I rather enjoy Chinese music. It seems to me very merry—especially in its funereal chants." "The Rats' Plaint," translated from the original Chinese by her husband, and beautifully illustrated by Mr. Hasegawa, might be circulated by the Society for the Prevention of Cruelty to Animals.

Here are verses from a Chinese drinking-song, by Li-tao-po, who wrote it in the year 720 A.D.:

Here are flowers, and here is wine;
But where's a friend with me to join,
Hand to hand, and heart to heart,
In one full cup before we part?

Rather than to drink alone
I'll make bold to ask the Moon
To condescend to lend her face
To grace the hour and the place.

Lo! she answers, and she brings,
My shadow on her silvet wings!
That makes three, and we shall be,
I ween, a merry company.

Mrs. Little's description of Buddhist worship in a temple near Ningpo is picturesque and impressive: the dim religious light, the mellow booming of the bell, the shaven priests, with their long cloaks of old gold or ashen gray folded across the left breast, leaving the arm bare:

"They elevated the Host, or at least a cup, one ringing a bell meanwhile, the others prostrate in adoration. They chanted a monotonous strain—to me it sounded Gregorian; and after many bowings and prostrations and beatings of a dull wooden gong in the form of a skull, they processioned round and round before the altar. . . . Was I not in the far-away Madeira of my childhood? Were not those Portuguese Roman Catholic priests, rather than Chinese Buddhists? Were they praying really—to Our Father in Heaven? Or are there more gods than one? And had this worship gone on after this fashion for thousands of years even before Christ walked the earth, and lived and died for man?"

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul-General Mason, of Berlin, under date of November 8, 1899, sends the following translation from *The Leather Market*, of Frankfurt (November 4, 1899):

"The steadily increasing shoe production of the Middle Western American States, through which the market in that country is to a large degree supplied, compels the shoe manufacturers in New England to look more and more carefully into the conditions of foreign markets where they may find sale for a portion of their product. The American shoe-export trade has in fact grown much more rapidly in the last five years than it did during the same period just preceding, as is shown by the following table, which exhibits the statistics of American shoe exports during the fiscal years 1893 to 1899, inclusive:

Year.	Pairs.	Value.
1893.....	318,736	\$85,908
1894.....	387,408	100,974
1895.....	531,733	141,343
1896.....	745,144	204,974
1897.....	493,087	139,754
1898.....	647,328	177,354
1899.....	802,412	200,008
1900.....	1,036,835	243,686
1901.....	1,224,404	270,724
1902.....	1,307,011	281,618
1903.....	1,835,287	371,385

Of the exports of 1899, \$325,245 worth went to England, \$504,095 worth went to the West Indies and Bermuda, and \$409,067 worth went to British Australia. Nearly one half of the entire amount exported came to Europe, whereby it is to be observed that a great portion of the shoes sent to England did not remain there, but were reexported to other countries.

The Canadian Government has shelved for at least two years its ambitious project of running an all-the-year-round 21-knot mail service between Great Britain and the Dominion. A contract has just been entered into between the Canadian and Imperial governments and Elder, Dempster & Co., of Liverpool, for the carrying of the Canadian mails for two years, the service to

be weekly. Elder, Dempster & Co., have for some months past been carrying specially directed letters to Canada from Bristol. The new contract goes into force on the 11th of November. Liverpool, instead of Bristol, will be the English port of new service. This is a great disappointment to the local authorities of Bristol, who have announced that in consequence of the change the contemplated improvements in the harbor at Avonmouth will be abandoned. During the summer season, the new service will resume landing the mails at Rimouski, on the south shore of the Lower St. Lawrence. Rimouski is not a harbor, properly speaking, but only a landing-place. After stopping at Rimouski the steamer will go on to Quebec and Montreal. During the winter months the Canadian terminal will be Halifax, Nova Scotia, and St. John's, New Brunswick. Altho the fast-mail scheme has been abandoned, at least for the present, the intention of the authorities is that the new service shall be exclusively British-Canadian. The public understanding here is that the contract of the new service specifically prohibits Elder, Dempster & Co.'s mail boats from calling at any United States port. However this may be, it seems to be agreed that in the future the ships carrying the Canadian mails from Great Britain and Ireland will touch only at Canadian ports, both winter and summer. The Irish port of call for the new service will be Moville, in the north of Ireland.

Consul Stowe of Cape Town writes, October 28:

The increase in goods shipped from the United States to British and Portuguese South Africa for the year ended June 30, 1899, was £150,250 (\$1,747,968.60). *The British and South African Export Gazette* gives the following:

*Bars or rails for railways show the greatest increase, the imports amounting to £65,350 (\$755,-

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

932.60), against only £13,147 (\$67,996.67) in the previous year. Agricultural implements showed an augmentation of £24,201 (\$116,413.37); builders' hardware, £6,208 (\$29,252.46); cycles and parts, £713 (\$3,472.31); and sewing-machines, £208 (\$9,431.08). In foodstuffs, canned beef was imported to the value of £9,284 (\$47,843.26), an excess over the previous year of £10,052 (\$78,178.11); lard, £4,206 (\$20,146.22), against £2,004 (\$9,412.47) of the year before. There was also improvement in the trade in bacon, hams, pork, fruit, nuts, sugar, and molasses. Mineral oil was shipped to the value of £207,632 (\$1,005,197.06), compared with £200,707 (\$971,673.04) for 1899; paraffin, £2,300 (\$10,900.00), an increase of £1,210 (\$5,800.00); and vegetable oil, £15,698 (\$77,240.26), against £17,146 (\$79,601.02) for 1899. There were also heavier shipments of resin, tar, etc., and spirits of turpentine. Timber and unwrought wood were imported in increased amount by £66,547 (\$325,011.50); unmanufactured tobacco, by £14,307 (\$69,475.94); manufactured tobacco, by £20,664 (\$100,608.14). The importation of leather and its manufactures increased from £31,067 (\$152,299.29) to £32,709 (\$159,000.11), and there was also an increase in books, maps, and engravings, clocks, watches, and seeds. Among the decreases, that of £16,558 (\$80,000.72) in corn (including wheat) was especially noticeable; other foodstuffs figuring for diminished exports being salted and pickled beef, butter, and flour. There was a decline of £3,478 (\$16,917.86) in scientific instruments (including telegraph and telephone instruments and materials), and £264 (\$1,279.07) in typewriting machines. Carriages, cars, etc., showed a decrease of £5,795 (\$28,371.05), and furniture £2,576 (\$12,590.71). There was also a falling-off in cotton manufactures of £1,007 (\$4,907.09), and a decreased importation of horses.

The imports into Cape Colony for the nine months ended September 30, 1899, exclusive of specie, are:

Description	1898	1899
Merchandise	\$1,395,557.34	\$1,712,600.93
Exports:		
Colonial products	15,141,700.11	11,791,149.37
Diamonds	17,060,700.89	15,323,097.89
Gold (unrefined)	11,003,900.09	97,170,000.44
Rebate trade:		
South African Republic	46,114,712.00	10,004,000.00
Other territory	1,990,000.42	1,075,100.00
Total	\$1,555,197.96	\$1,924,348.14

The Financial Record says:

"The news of the establishment of a new line of German steamships to trade along the coast of South Africa will further accentuate the agitation against the 'shipping ring.' The new line is said to have a subvention of £200,000 (\$979,000) from the German treasury, and, if this be a fact, its competitive force will be largely strengthened, as it will be able to run vastly cheaper rates than even the present German lines do. Hence the dissatisfaction prevalent in South Africa against the ring will possibly result in a loss of custom to the latter, and in a serious impairment of British trade."

PERSONALS.

WHEN the Vice-President of the Transvaal Republic was visiting in this city in 1898, says the *Chicago Evening Post*, he and his wife and little granddaughter were the guests of a well-known Boer sympathizer. One evening, sitting around the fire, Mrs. Joubert, who is very proud of her husband, told the story of the British attack and defeat at Majuba Hill, telling how she aroused her sleeping spouse and fairly pitched him (she is a woman of powerful physique) out of the tent before he would believe the British were fairly upon them. She took credit for the victory, and when she had finished the story, her husband, who had never taken his eyes from her during the narration, said:

"It is true; she is right, and but for her the story of Majuba Hill would have been very different."

Mrs. Joubert speaks no English. Her little

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.

CAPACITY 35,000 ACATE LINES.

Size of Book, 4 1/2 X 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it was inserted. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 35 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. HARR, Brooklyn, N. Y., says: "The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the 'reaper' over the old-fashioned 'sickle'."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled.

granddaughter translated what she said into French for the benefit of the host and hostess. According to her story, the wives of the soldiery and officers had come, as is the custom of the Boer *troop* in times of war, to the camp to remain over Sunday and attend "meeting" with the men. Bright and early she was up Sunday morning to make the coffee for her husband. Going outside, Mrs. Joubert looked up the hill, and saw something gleaming in the sunlight, which she at once decided were bayonets. The night before it had rained hard, and the thick fog which followed was now disappearing in a thin mist. She rushed back into the tent, and called to her husband: "The British are on the hill. Get up quick, and out."

"Go back to bed, woman," was the sleepy retort of her husband; "the sand isn't out of your eyes yet. What do you think the sentries are doing?"

With that he turned over, and was about to resume his nap, when his wife shook him. She is a powerful woman, as has been told, and her grasp roused her now irate lord. She made him go to the door; and with his own eyes he saw she was right. Cronje was hastily summoned, and within thirty minutes Joubert (without his coffee) and 160 sharpshooters were climbing up the almost perpendicular face of the hill, while the main body of between six and seven hundred Boers advanced in the regular way to sham attack.

The British had taken advantage of the dense fog and by a rapid march had passed inside the sentry line. They advanced, about 600 strong, to meet the Boer force, never dreaming that any one could attack them from the walled hill behind. Down on their knees Joubert and his 160 sharpshooters dropped, and after one volley 120 British soldiers fell to the ground. The British turned and attempted a charge. Only one more volley was sent into their ranks by the Boers. Then there were many more dead or wounded on the field. Their comrades turned and fled. The Boers returned to camp and had their coffee.

A VERY rich man and a very plain man passed away in the death of Hugh-Lupus Grosvenor on December 23, says the *Buffalo Express*. His wealth is estimated as high as \$175,000,000; but nothing is more uncertain than estimates of wealth. He was Duke of Westminster, and his daughter married a Prince of Teck.

He was an aristocrat of the best British type—kindly, benevolent, unassuming in some ways, jealous of his dignity and position, but, as a rule, caring little for any outward manifestation of his grandeur. The duke was full of schemes for bettering the condition of the population on his estates, and was a judicious but munificent patron of art.

Part of his fortune came from an ancestor in the seventeenth century who married a woman who owned a farm of some 300 acres on which the wealthiest portion of the West End of London now stands. It is estimated that the income is at least £500,000 a year from this property now, and as it has all been built over upon the short-lease system the revenue within the next quarter of a century may come to exceed £1,000,000.

Westminster was considered the best judge of horseflesh in England. The Grosvenor stables have been celebrated for more than a century. Their colors were first carried by Touchstone, a Derby winner in 1790.

THE following story on Lord Roberts gained great currency in the British army a few years ago, says *Collier's Weekly*. The dirtiness of the Afghan is proverbial, and it is said that on one occasion General Roberts captured a soldier who was so exceptionally dirty that it was thought necessary, for the safety of the whole camp, that he should be washed. Two genuine Tommy Atkinses were told off for this purpose. They stripped the prisoner, and scrubbed at him for two hours with formidable brushes and a large quantity of soft soap. Then they threw down their brushes in disgust and went to their captain. "What is it, men?" "Well, sir," they replied, somewhat excitedly, "we've washed that ere Afghan chap for two hours, but it warn't

Egypt's Ink has brought down the history of the ages past

Carter's Ink

secures the history of the present to the ages to come

Permanency is not a visible quality in ink, neither is a lack of it a visible defect, but it is often claimed where it does not exist. Carter's Ink has stood the test of time and the official test of governments. Its permanency is beyond question.

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

SOLD ONLY IN A YELLOW BOX—for your protection. Curved handle and face to fit the mouth. Bristles in long,ular tufts—clean between the teeth. Hole in handle and hook to hold it. These mean much to cleanly persons—the only ones who like our brush. Adults' 30c, Children's (3 sizes) 25c. By mail or at dealers'. Send for our free booklet "Tooth Truths".
FLORENCE M'F'G CO., 14 Pine St., Florence, Mass.

any good. After scrubbing him, sir, till our arms were like to break, blessed if we didn't come upon another suit of clothes!"

SIR CHARLES NICHOLSON, who has been called the "Grand Old Man" of Australia, has entered on his ninety-second year. He emigrated to Australia in 1834, and is now the sole surviving member of the first Australian Parliament.

MORE OR LESS PUNGENT.

Whipped Cream.—"I see that the cream of the British army is now in the Transvaal." "Yes, the whipped cream."—*Life*.

A Good Name.—"What are you going to call your new office building?" "I think I'll call it the 'Serial,' on account of its continued stories."—*Philadelphia Record*.

Dire Vengeance.—**SHE**: "I heard about the elopement. Has her mother forgiven them?"
HE: "I think not.—I understand she has gone to live with them."—*Collier's Weekly*.

The Real Thing.—**SON**: "Pa, is a diplomat a man who knows how to hold his tongue?"
FATHER: "No, my boy; a diplomat is a man who knows how to hold his job."—*Puck*.

Those Religious Metaphors.—"Only a little while ago she was claiming she had been born again, but now she is as cross and hateful as ever!" "Well, perhaps, she is leeching again, now."—*Puck*.

She Misunderstood Him.—"We are here today and gone to-morrow," quoted Mr. Linger, at 10 P.M., at the orchestra. Thereupon Miss Gazzam was aghast. "You don't intend to stay that long, surely?" she asked.—*Detroit Free Press*.

A Real Sincere.—**Tired Tompkins**: "There's one job I wouldn't mind havin', Horace."
Hungry Horace (in amazement): "What's that?"
T. T.: "Lineman fer er wireless telegraph comp'ny."—*Life*.

On His Knees.—**MAUD**: "Tell me all about it."
MAHEL: "Well, when it began he was on his knees."
MAUD: "And how did it end?"
MAHEL: "In the end—er—I was on his knees."—*Town Topics*.

New Year's Morning.—"That shall it, offishur. But what I wanter know is—what century am I in, nineteen or twenty?" "I dunno nothin' about centuries, but yet can take your choice of cells. Both nineteen and twenty is empty."—*Cleveland Plain Dealer*.

The Safest Way Out.—**SHE**: "Are you still engaged to Maude?"
HE: "No."
SHE: "I congratulate you! You're well rid of her. How did you break it off?"
HE: "By marrying her."—*Collier's Weekly*.

A Practical Motive.—**ACNT GERTRUDE**: "And what will you do when you are a man, Tommy?"
TOMMY: "I'm going to grow a beard."
ACNT GERTRUDE: "Why?"
TOMMY: "Because then I won't have nearly so much face to wash."—*Collier's Weekly*.

He Wanted to Help.—A burglar who had entered a minister's house at midnight was disturbed by the awakening of the occupant of the room he was in. Drawing his knife, he said: "If you stir, you are a dead man. I'm hunting for money."

Have you Eaten Too Much? Take Horsford's Acid Phosphate.

If your dinner distresses you, a few drops in half a glass of water gives quick relief.

THE GREAT MUSICIAN.

Remenyi, the famous violinist, when asked on one occasion why he abstained from flesh foods of all kinds, instantly seized his violin, and after producing one of his marvelous soul-enchanting productions, remarked, "That is the reason—if I ate meat I could not do that." A diet of fruits, properly prepared cereals, with the addition of a few nuts or nut products, is necessary to produce that fine quality of brain and nerves necessary for the highest attainments in music or morals,—all that is best and most glorious in humanity,—and for the simple reason that these food products constitute the natural diet of man. Man is not naturally carnivorous, and his life is shortened and his maladies multiplied by the use of animal flesh as food.

The perfect way in diet is made easy by the remarkable inventions and discoveries of the Battle Creek, Mich., Sanitarium Health Food Co., which have enabled them to produce foods unequalled for nutrient qualities, gustatory properties, and all that goes to make up a perfect nutrient. For a quarter of a century the foods of this company have stood the crucial test of practical experience, and have been the means of saving thousands from untimely graves.

Granola, one of the leading products of this company, is now to be obtained from first-class grocers. It has a rich, nutty flavor, and three times the food elements of beef, thoroughly cooked, ready for immediate use, with the addition of fruit juice, or milk.

A free sample will be sent to any reader of THE LITERARY DIGEST who will send the name of a grocer who does not sell Granola, to the Battle Creek, Mich., Sanitarium Health Food Company.

FEED CHILDREN

THEY NEED the rich, flesh-making gluten and bone-making phosphates. As well feed children laundry starch as many white-flour starchy foods. Infant mortality is largely the result of too much starch in the food.

For Children and for Grown Folks WHEATLET

is a remarkably healthful food. Wheatlet contains only the nutriment of the whole wheat. Sold in 2 lb packages.

If your grocer does not keep Wheatlet have him order some for you, or send us his name and your order—we will see that you are supplied. Avoid substitutes.

Send for booklet.

The genuine bears our label and name and is made only by the

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"Let me get up and strike a light," said the minister, "and I'll hunt with you."—*Universalist Leader.*

Persistency Won the Day.—CANNASSER: "I have here a work—"

MASTER OF THE HOUSE: "I can't read."

CANNASSER: "But your children—"

MASTER OF THE HOUSE: "I have no children" (triumphantly), "nothing but a cat."

CANNASSER: "Well, you want something to throw at the cat."

He took the book.—*Tribune.*

He Asked a Favor.—An old farmer who was in the habit of eating what was set before him, asking no questions, dropped into a café for dinner. The waiter gave him the dinner-card and explained that it was the list of dishes served for dinner that day. The old gentleman began at the top of the bill of fare and ordered each thing in turn until he had covered about one third of it. The prospect of what was still before him was overpowering, yet there was some things at the end that he wanted to try. Finally he called the waiter and, confidentially marking off the spaces on the card with his index finger, said: "Look here, I've eat from that to that. Can I skip from that to that and eat on to the bottom?"—*Exchange.*

The Editor Was Not Appreciative.—"I have called on you to-day," said the professional humorist, with a glad smile, as he approached the desk of the great editor and made himself comfortable in the precarious office-chair that once had a cane bottom in it, "to propound to you a scheme that seems to me to be up to date and well worthy of consideration."

"Umph!" growled the great editor. Thus encouraged, the humorist proceeded:

"For some time past, as you have doubtless observed, the progress of the world has developed a peculiar phase, which may be spoken of as that of lessening. It seems to be the ambition of all inventors to add the word less to everything that has been invented in the past. We now have smokeless powder, painless dentistry, horseless carriages, wireless telegraphy, and many other things have undergone a change that may be similarly described; but I will not trouble you with a complete list. Now, it seems to me that the time is ripe for a similar stride forward in the field of humor, and I have come to you to-day with a bundle of specially prepared pointless jokes."

And in less time than it takes to write this a hatless and breathless humorist was fleeing wildly down the cheerless street.—*Harper's Bazar.*

Different Ideas of Providence.—A famous lecturer, John B. Gough, had occasion in one of his addresses to refer to the indiscriminate and

GET Macbeth's "pearl top" and "pearl glass" lamp-chimneys; they are made of tough glass, tough against heat; they do not break in use; they do from accident.

They are clear, transparent, not misty. Look at your chimney. How much of the light is lost in the fog?

Be willing to pay a little more.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address **MACBETH, Pittsburgh, Pa.**

arbitrary, yet consoling, doctrine of Providence. He said: "Some people have strange ideas on this matter. Once, when a ship was in danger, a lady went to the captain in great distress. 'We must trust in Providence, madam,' said he. 'Goodness gracious! is it as bad as that?' she cried. A washerwoman had her little shanty burnt down. She stood before the wreck, and lifting her eyes to heaven and shaking her fist, exclaimed, 'You see if I don't work on Sundays to pay for that.' In the Firth of Forth a vessel struck on a rock, and a tug was drawing nigh to the rescue. A boy, much alarmed, was clinging to his mother. She said, 'Ye must pit yer trust in Providence, Jamie.' 'I will, mother, as soon as I get into that other boat.' In New York a Deichman with a companion went into Delmonico's to get lunch. They were charged six dollars. One of the men began to swear, as he thought the charges excessive. 'Don't you swear,' said the other; 'Providence has punished that man Delmonico very bad already.' 'How is that?' How has he punished him?' 'Why, I've got my pockets full of his forks and spoons.'"

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

EAT

Quaker Oats

AND KEEP YOUR STOMACH SWEET

"Man has been misled by the stimulating properties of animal tissues and their extracts into an exaggerated belief in their food value. Beef tea is nearly as pure a stimulant as a glass of wine."
—Dr. Haig in "Food and Diet."

Quaker Oats PUDDINGS

PUDDINGS.—To two cups Quaker Oats Porridge add the yolks of two eggs, two teaspoonfuls sugar, half a teaspoonful salt, some grated lemon or other flavoring, and finally the well-beaten whites of the eggs. Bake for fifteen minutes in a hot oven, or, if preferred, steam one hour. Serve hot with sauce, cream and sugar, or raspberry or strawberry syrup.

A very nice fruit pudding can be made by adding peaches, apples, or other fruit to the above recipe.

EAT MORE Quaker Oats LESS MEAT

At all Grocers in 2-pound Packages

QUAKER OATS makes not only the best breakfast porridge in the world, but also delicious and wholesome Bread, Muffins, Cakes, Soups and Puddings. Write for our Cereal Cook Book, edited by Mrs. Rorer. THE AMERICAN CEREAL CO., Normaltown Building, Chicago, Ill.

A CHANCE TO ECONOMIZE
and attain better results in house-heating than your present system affords.

The Jackson Ventilating Grate

sends the heat into the room and not up the chimney. Will heat several rooms on different floors in the coldest weather. Burns either coal or wood, and can be fitted in any ordinary fireplace.

Our Ventilating system is similar to that of the human lungs. Fresh air is breathed into the house to replace the foul air that passes out.

Catalogue "D" shows why our Grate is the most sanitary and economical heating apparatus in the world. Send for it.

BROWN'S Bronchial Troches

the popular cure for
IRRITATED THROATS.

For-Single Signature of *John D. Brown* on every box.

The Mission of Cleanliness.

Internal as Well as External Essential to Health.

We wish to send every reader of the LITERARY DIGEST a treatise on this subject—of apparent and paramount importance when once called to mind, but on which the densest ignorance usually prevails. Not one man in ten knows more of the internal anatomy than a few names. How then can he live intelligently or have any wisdom in his precautions?

Here we can give only the slightest hints of the vast scope of usefulness of the Internal Bath and its appliance, the **J. B. L. Cascade**. Universally used in Europe, it is indorsed and prescribed by advanced physicians in this country, such as **Daniel Lewis, M.D., Prest.** N. Y. State Board of Health; **Dr. Cyrus Edson, Dr. W. B. De Garmo, Prof. Hermann J. Boldt, M.D.,** Professor at the Post-Graduate Hospital, New York, and others equally eminent. While essential to the treatment of numerous dangerous diseases, the Internal Bath is a better preventive of illness and preservative of health than any other single means.

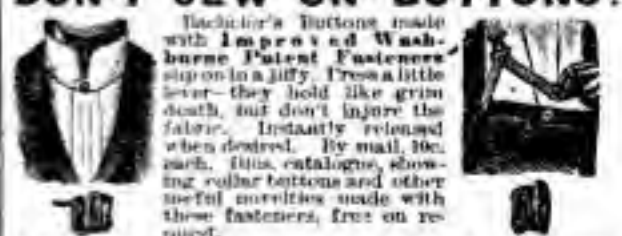

One other hint: Can you name a single disease that is not due to the retention of waste matter in the system? Is not the greatest portion of this waste retained in the colon?

More than this, the **J. B. L. Cascade** should be found in every home, if not for serious diseases, or if not for prevention, at least for its remarkable tonic effect, far more beneficial and stimulating than the glow of an external bath.

The book which we wish to send you is full of most valuable information and should open to you a new field of thought concerning the laws of health—throwing, for instance, great light on the prevention of appendicitis. Those living in New York are cordially invited to call at our building.

Tyrrell's Hygienic Institute,
1562 Broadway (near 46th St.), New York.

DON'T SEW ON BUTTONS!

447 (only): the Rev. S. M. Morton, D.D., Effingham, Ill.; C. R. Oldham, Moundsville, W. Va.; H.

A. Horwood, Hoboken, N. J.; T. R. Denison, Asheville, N. C.; Dr. O. F. Blankingship, Richmond, Va.; F. L. Hitchcock, Scranton, Pa.; C. B. Tilton, Quincy, Mass.; B. Moser, Malvern, Ia.; D. W. and C. C. Leet, Milwaukee.

Comments (446): "Good, but quite easy"—M. W. H.; "Shows the hand of its maker,—the masterly McKenzie"—I. W. B.; "Can't be improved"—F. S. F.; "Excellent"—F. H. J.; "Fine"—M. M.; "Characteristic of the blind problematist"—J. G. L.; "Rather simple"—W. R. C.; "Full of surprises"—G. P.; "Fine, beautiful, artful"—A. K.

(447): "Delicate and artistic, but easy"—M. W. H.; "Have seldom found a prettier gem"—I. W. B.; "Deserves all the praise you gave it"—F. S. F.; "A model in every respect"—F. H. J.; "Unusually fine"—M. M.; "A fine piece of Bohemian strategy"—J. G. L.; "Very correct, neat, and economical. One is likely to miss solution in seeking for a subtlety that is not there"—W. R. C.; "Very interesting indeed"—G. P.; "Fine strategy"—A. K.; "A subtle composition"—C. R. O.; "Too easy"—T. R. D.; "Without a flaw"—O. F. B.; "A fine New Year's nut"—F. L. H.

Concerning 446, very many solvers consider it an easy problem, and yet we have not published a problem for a long time that has caught so many solvers as this little easy (?) one by McKenzie. Some of our experts who very easily got the three-er were vanquished by the two-er. The blind problematist laid several traps, by which many of our friends were caught. For instance: (1) R-R 4, answered by R-K 4; (2) Q-Kt 5, answered by R-K sq ch; (3) P-Q 5 (Q), answered by R-K B 2; (4) Q-Q R 5 ch, answered by R x Q ch.

B. M. got 438 and 439; D. W. and C. C. L., Prof. A. M. Hollister, Corinth, N. Y., 439; F. S. F., 438; W. J. Lachner, Baker City, Ore., and F. C. Mulkey, Los Angeles, Cal., 437.

Intercollegiate Chess.

The following letter from *The Sun*, New York, is of special interest:

TO THE EDITOR OF THE SUN—Sir: The larger colleges, as a rule, have maintained superiority over the lesser in athletic sports, but if the Chess teams from Harvard, Yale, Princeton, and Columbia, which competed in one tournament last week, should meet the teams of Pennsylvania, Cornell, and Brown, which were engaged in another tournament, the Harvard-Yale combination, I am sure, would be floored. There are some men in the second group who really "played the game." Several of them might be called veritable young masters.

Inasmuch as a match has been arranged between Oxford and Cambridge on one side and a Harvard-Yale-Columbia and Princeton combination on the other, it would seem proper that the American representatives should also include the strongest players of Pennsylvania and Cornell. The application in behalf of Pennsylvania, Cornell, and Brown for places on the American team should be granted. And, by the way, there should be but one Inter-University Chess League.

PLAYER.

Amateurs vs. Masters.

An incident showing the far-sightedness of a master occurred recently in Louisville, Pillsbury and Showalter were playing a game. Members of the Louisville club thought that the Kentuckian would have had the advantage if he made the move they expected him to make. He did not make the move, and they audibly expressed their

disappointment. "Yes," he said, "but suppose Pillsbury makes *this* move, then how?" And the illusion of the amateurs vanished instantly.

Morphy's Mastership.

As an instance of Morphy's marvelous Chess, the *New Orleans Times-Democrat* gives the extraordinary exhibition of simultaneous play in the St. James Chess-Club, London, April 26, 1859, against five master-players, nearly every one of the first rank—Arnous de Riviere, Barnes, Bird, Boden, and Löwenthal! Morphy won two games (de Riviere and Bird); two Draws (Boden and Löwenthal); and lost one game (Barnes). "Imagine Lasker, for example, playing simultaneously Berger, Showalter, Bird, Schlechter, and Steinitz! We say without hesitation that we have always considered that memorable joust as perhaps the most unique contest in Morphy's career, if not, indeed, in the history of Chess master-play."

The following is the game with de Riviere:

Two Knights' Defense.

Notes.

(a) As Mr. Morphy much prefers attacking to defending, he chooses this mode of play in order to obtain the Cozio Counter attack.

(b) This move has the recommendation of being much less hazardous than checking with K B, and subsequently moving Q-K B 3, as recommended in the books.

(c) Analysis has convinced us that this move, at the present juncture, only strengthens White's game.

(d) Had White moved 14 B-Q B 4, Black could have played 14... P-Q B 4, and then 15... R-K sq, gaining time, and threatening to double the Pawns on White's Queen's side very disadvantageously.

(e) Had Black captured Q P with Kt, White would have taken K Kt P with Kt, maintaining his Pawn and having a better game.

(f) Playing this Pawn one square appears to have some advantages; but the consequences of White's immediately advancing his P to Q B 3, were so various and complex that we do not wonder at Black's preferring a less perplexed line of play.

(g) Very well played, threatening, if Black capture Q and then Kt, to take Q and B in return, remaining with an attack on Black's Q R.

(h) All these moves are singularly beautiful and interesting.

(i) Much better than taking the Kt with B, for in that case Black would have taken R with R ch, and then moved B-Q Kt 4.

(j) These moves with the Kt are remarkably clever, and are replied to with equal tact by Mr. Morphy.

A Blackburne Brilliant.

The Literary Digest

VOL. XX., No. 4

NEW YORK, JANUARY 27, 1900.

WHOLE NUMBER, 510

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$5.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE FIGHTING IN NATAL.

AS General Buller's attempt to turn General Joubert's right flank is still in progress at the time of our going to press, but little comment on the situation is to be found in the American press, either on the editorial or news pages. All seem to be waiting anxiously for the expected general engagement. General Buller cabled to the British War Office Sunday night: "It is difficult to say exactly how much we have gained, but I think we are making substantial progress." The war correspondents whose opinions are reproduced in our papers declare that the crossing of the Tugela River is in itself an immense gain. Sir Charles Warren, who led the advance across the Tugela and who seems to be leading the British flanking force, is credited with another important success in gaining a position on the edge of the great plateau on which the Dutch republics are situated. The London *Telegraph* says of his encounter with the Boers last Saturday:

"General Warren's forces have fought a deliberately planned and successful battle. This important engagement occurred to the west of Spion Kop and practically resulted in our securing the rough tableland which constituted the key of the Boer position."

The comparatively slight resistance which the British have met in the early stages of the flanking movement leads some to the belief expressed by the *Boston Herald* that "the burgher army around Ladysmith is not as strong as it was in the early weeks of the siege." The *Herald* continues:

"The wear and tear of war has not been made good. How could it be, seeing that the Boers had no reserves, or, at any rate, none worth mentioning, to draw upon? Nor is it only through the waste of war that the number of the besiegers has shrunk. There have been intimations that 7,000 men, 5,000 at one time and 4,000 on another occasion, have been detached to strengthen General Cronje's force on the Modder River and hold the line to the south of the Orange River, now gravely menaced by Generals French and Gatacre.

"It is this depletion of the besieging force which has opened for General Buller an opportunity to turn Joubert's right flank, and it is in the numerical superiority which he now possesses that the English commander finds his only chance to bring relief to Sir George White. If the Boers could muster for the defense of their entrenchments an army anything like as large as Buller has led across the Tugela, we fancy that Sir Redvers would have before him a task too great for his powers. But on the supposition that the Boer force has been cut down to 20,000 men, General Buller—who is credited in the despatches with a total strength of 35,000 men, in addition to the 8,000 men whom Sir George White is believed to have in Ladysmith—ought to be able to accomplish something of moment for the relief of Ladysmith."

A British victory or defeat would, it is thought, be of importance politically in England just now in view of the assembling of Parliament next Tuesday. If there is no improvement in the British outlook, so the New York *Sun* says, "we are likely to witness several changes in the Salisbury cabinet." It is believed that the wisest plan for the Boers, whatever the outcome of the present movement in Natal, will be a continuance of their defensive tactics. Says the Philadelphia *Ledger*:

"The Boers can not well afford to make an attack; they must remain on the defensive, as Lee did in his retreat before Grant. That campaign was a succession of flanking movements, attended by battles in which Grant's army suffered great losses. The victories were dearly bought, but Lee managed to prolong the war for a year, tho his force was greatly outnumbered at the start and he had no means of recruiting his army. The Boers are in a similar condition, and their only chance of prolonging the conflict is to fight discreetly on the defensive and retire when outflanked, husbanding their resources and avoiding a general engagement in the open."

The situation in the western part of the field of war remains comparatively quiet. The little garrison at Mafeking is reported to be holding out as stoutly as ever, with a relief column approaching from the West. From the Modder River there is no report that an advance is even in preparation. General Wauchope's rumored criticism of General Methuen just before the battle in which General Wauchope was killed seems to have stirred the press and people of England very deeply. The criticism and its result are thus described by I. N. Ford, London correspondent of the New York *Tribune*, in a cable despatch:

"The report published at Liverpool that General Wauchope on the eve of the battle of Magersfontein wrote a letter stating that he had been ordered to perform an impossible task, against which he had vainly remonstrated, and that he had either to obey or to surrender his sword, has been followed at once by statements in print that Lord Methuen would be superseded. The War Office has not been in ignorance of these reports, with which every London club is now filled, and decided to recall Lord Methuen fully a week ago, as was announced in these despatches. This step was necessary in order to maintain the *morale* of the British army at the Modder River, whose confidence in the leader has been fatally impaired, as is proved by private letters from the officers and men constantly appearing in print. It is one of the most painful affairs in military annals."

The New York *Sun* thinks that the story of General Wauchope's letter and another report—to the effect that his last words were that he was not responsible for the terrible situation of his troops, but was compelled to obey orders—are too improbable for belief. But, it adds, "that they should have been sent from the seat of war and received with widespread credulity in

LIEUT.-GEN. SIR CHARLES WARREN,
Who led the first British column across the Tugela.

BRIG.-GEN. NEVILLE GERALD LYTTON,
Who led another column across the Tugela.

MAJ.-GEN. ANDREW G. WAUCHOP,
Killed at the Modder River.

MEN WHO HAVE MET THE BOERS.

England suggests a state of great demoralization, if not insubordination, in the army of General Lord Methuen, and of hysteria in the English public."

The British losses in killed, wounded, and captured, up to the beginning of the present British advance, are reported to be 7,937 men; and the Boer losses, 6,425.

The Boer Not Superior.—"Man for man, in fighting, nothing has happened which indicates that the Boer is in any way the superior of his English opponent. For weeks past the 1,500 English soldiers at Mafeking have held out against more than twice their number of Boers; for practically the same time the 1,500 English soldiers at Kimberley have held that place against three or four times their number of the enemy; for an almost similar time General White, at Ladysmith, with 5,000 or 9,000 English soldiers, has held at bay a Boer army of somewhere from 25,000 to 30,000 men, altho the latter have been supplied with far better artillery than that which the English general has had at his command. General Methuen, in his advance on Kim-

berley, took three different defense positions held by a Boer force substantially of the same strength as his own. It cost him severely to do this, but he did it, and the Boers were forced to retire. There has not been an instance in the war in which a force of Boers making an advance has taken a position, entrenched or otherwise, held by an equal number of English troops."—*The Boston Herald*.

After the War.—"Mr. Andrew Carnegie's prediction in *The North American Review* that the Boers would ultimately dominate South Africa, regardless of the immediate result of the present war, is not an entirely original thought on his part. Many intelligent Englishmen familiar with the country and with the nature of the virile race which chiefly occupies it have long been of the same opinion. Persons who estimate the lasting qualities of the race merely upon its present activities and upon what is called its civilization and its aggressive power are very apt to overlook the profounder qualities which make for multiplication and continuance. It is a serious question if a high civilization, such as we understand it, be not rather against than in favor of the lasting domination of a race in a given environment, if it stand in rivalry with another of coarser fiber, of less cultivation, but of sound stock, whose intellectual development has been retarded by a long period in pioneer agricultural or semi-pastoral conditions. . . . Some people now believe that the French-Canadian type of man will ultimately be the prevailing type not only in Canada but through considerable of our own Northern territory. . . . This advantage of the French-Canadians is precisely that of the South African Boers. The latter have families of patriarchal size. They marry early and live long, and their physical constitution is of the very best. Disease is unknown among them. The hardships in which several generations have grown up have extirpated all weaker types, and they now breed children who can stand anything. They are in the numerical majority in every province of South Africa, except the Transvaal itself, and there the mining population of the Rand alone puts them in the minority. But this latter population is scarcely a permanent one, and therefore offers but little enduring danger to their ultimate numerical predominance even in that territory. There is little immigration to South Africa except of miners and adventurers seeking wealth in the mines. The Boer is the only farmer or ranchman there, as a rule, and agriculture must be the real backbone of the country's permanent prosperity. If the imperial Government succeeds in suppressing the present forcible effort toward independence, as it assuredly must, it will have to provide South Africa with parliamentary institutions on the British model. There will be no thought of governing the country permanently as a crown colony from London. With representative institutions, the Boers, made more solid than ever by their present struggle, will easily control every provincial parliament,

UNCLE SAM: "Some of my folks want me to interfere, but I think this olive branch would get pretty badly mussed up if I should try it just now."
—*The Minneapolis Journal*.

and must also control a federate parliament, whenever federation shall come, as come it must in the natural order. Even under the British sovereignty, it will be still a Dutch federation, and when it grows strong enough to cast off the colonial stage, it will be a Dutch republic."—*The Detroit News*.

DID SENATOR HOAR CAUSE THE PHILIPPINE REBELLION?

A STATEMENT made by John Barrett, ex-United States ex-Minister to Siam, in a speech at Lake Forest University, charging Senator Hoar with the responsibility for the Philippine insurrection, has stirred up a considerable discussion. Mr. Barrett said in the course of his speech:

"Senator George F. Hoar's anti-expansion speech, delivered in the United States Senate and cabled to Hongkong at a cost of \$4,000, was the culminating influence that brought about the insurrection against this Government by Aguinaldo and his followers."

Continuing, Mr. Barrett said that official investigation had discovered that Senator Hoar's speech was cabled in cipher and in fragments to Paris, where it was put together and forwarded to Hongkong. Mr. Barrett said that he saw the speech in the hands of a member of the Filipino junta and tried to dissuade him from sending it to the Filipino army, but without avail. "The speech was published and distributed among the soldiers," he concluded, "and I believe that it was the culminating influence that brought about the open insurrection."

The speech in question was delivered in the Senate January 9, 1899, in reply to a speech by Senator Platt, of Connecticut. Senator Hoar's speech was an argument to prove that "the power to conquer alien peoples and hold them in subjugation" was contrary to the Constitution and the Declaration of Independence. The *Philadelphia Press* (Rep.) published a despatch last week alleging that Andrew Carnegie paid the \$4,000 cable tolls on the speech. Mr. Carnegie promptly denied this charge, adding that the Filipinos did not need the speech, but that the American people did, and that he would gladly contribute money to promote the circulation of it at home.

Part of the expansion press accept Mr. Barrett's words as conclusive proof of Senator Hoar's guilt. "It is a terrible responsibility," says the *Brooklyn Times* (Rep.), "and one which not many men would like to have resting upon their shoulders."

Says the *New York Mail and Express* (Rep.): "When the reckoning comes, the moral responsibility for the hideous folly which has reddened the soil of Luzon with American blood will not rest a whit more heavily upon Aguinaldo than upon certain of his reckless sympathizers here at home." The *Philadelphia Press* (Rep.) says that whoever paid the cable tolls on that speech "sped across continents and under seas the spark that fired the powder magazine of the Philippines and cost every life on both sides from General Lawton under our flag down to the humblest Tagal soldier, all slain in causeless, needless conflict." The *Philadelphia Evening Telegraph* (Rep.) urges the Government to "take such measures as will make treason odious, and will prevent hereafter the extension of aid and comfort to our enemies from within the chamber of the United States Senate." The *Minneapolis Tribune* (Rep.) goes so far as to compare the Senator from Massachusetts with Judas Iscariot and Benedict Arnold. It says:

"Senator Hoar can hardly hope to escape the curses of those who have lost sons, fathers, brothers, or husbands in the war in the Philippines, so needlessly precipitated by his taking sides with the seditious natives. The blood of American soldier-citizens is upon his soul. The blot will never be effaced, either during his life, or during the immortality of the reputation he may leave behind him. The names of Judas Iscariot and Benedict Arnold still live, altho, if the perturbed spirits of those wretched traitors are still sentient, they would wish men to forget that they ever existed. Senator Hoar, after a long life of usefulness, has achieved a bad immortality as the instigator, aider, and abettor of insurrection and rebellion against his country. It is sad to see a hitherto bright reputation overwhelmed in such a pall of blackness in the closing days of the man who was fitted by nature to be the ornament rather than the scourge of his country—but the truth of history must stand, and Senator Hoar must remain forever in the eyes of the truly patriotic

"A fixed figure for the time of scorn
To point his slow, unmoving finger at."

The anti-expansionist press, of course, strongly resent Mr. Barrett's charges or dismiss them as too ridiculous for serious consideration. Not a few expansionist papers, too, think that Mr. Barrett has gone farther than reasonable people will follow. Thus the *New York Times* (Ind.) says that while Mr. Barrett may be right, it may well be that Aguinaldo "would have gone on with his plans all the same had it [the speech] not been made and circulated." The *Brooklyn Eagle* (Ind. Dem.), which indorses the Administration's expansion policy, says that "to im-

DID HE DO IT?

—*The St. Paul Dispatch*.

THE FORBIDDEN BOOK.

—*The Chicago Chronicle*.

THE SEARCH FOR THE CAUSE OF THE WAR.

agine that without his speech there would have been no revolt of the Filipinos is pushing the deduction too far." The *Boston Herald* (Ind.), another advocate of expansion, says:

"We fail to be convinced that the Filipinos were incited to resistance by anything that came to them in this country short of that sent from the highest official quarter. If the motive for the course they took is logically to be traced, it must be found in the Paris treaty and the President's proclamation growing out of it. It is forced and gratuitous to attribute their action to any other source while the obviously controlling facts in the case are so plain here.

"The resistance of Aguinaldo was brought on because a government which he expected to control was taken from him by the United States. His disappointment and his chagrin led to his resistance. Here was the clear cause of it, and it is only a forced construction that places it anywhere else. There is no justification in reason for placing it anywhere else. To attempt to deceive the American people on this point is, to our mind, no better than trickery. To undertake to interfere with the free speech of an American Senator, in order to create a false responsibility, is immeasurably worse."

The point brought out by *The Herald* in the last sentence is also expressed by many other papers which agree that the right of a Senator of the United States to express his opinion of an act of Government is in question. Thus the *Indianapolis News* (Ind.), another expansionist paper, says:

"In the present case we, all of us, expansionists and anti-expansionists alike, admit that the problems involved in the Philippine situation are of the gravest importance. To attempt to settle them without a full and free discussion would be a serious mistake. We want all the light on the matter that we can get. And further than that, we want to decide them in the good, old American way—that is, by discussion. For our part, we should dislike to believe that there was a man in the country who was not entirely free to speak his mind on this question, as on all other questions. We have no right to assume that the policy of the Administration is, until it is officially adopted, the policy of the country, or even of the majority party."

The anti-expansionist press recall that the President's famous "benevolent assimilation" proclamation to the Filipinos was issued a few days before Senator Hoar's speech, was cabled to Manila at Government expense and issued to the natives by our own officials. This proclamation, they think, had much more to do with the outbreak than any words of Senator Hoar. As to the effect of the President's proclamation, says the *Baltimore News* (Ind. Dem.), "this may be judged by the published and official statement of General Otis that he found it necessary to tone down the President's language for fear of the inflammatory effect it might be expected to have." The *Detroit News* (Ind.) says that the insurrection "was the consequence of a series of Government blunders rather than of any man's utterances." The *Baltimore Sun* (Ind.) says that "those who would muzzle every man who does not agree with them should remember that free speech is still the right of every American, and will be exercised until it vanishes with the principle of the consent of the governed." The *Chicago Journal* (Ind.) says, in the same strain:

"When a man representing the people of an American State, in the United States Senate, is afraid to open his mouth and speak his convictions on a subject of such vital importance to the nation as that of Oriental expansion, for fear of what a lot of poor barbarians may do to the United States army, it will be time for American institutions to go out of business. When free and open discussion of any question that ought to be discussed is suppressed in either branch of Congress, Congress ought to be abolished and its legislative function turned over to the one-man power of the President. It is opposed to the fundamental principles of Democratic government that representatives of the people shall be gagged and choked when the nation is in need of their conscientious, honest views.

"The right or wrong of Senator Hoar's position is not under discussion. He may have been mistaken. But he had a right

to get up and say what he thought was true, whether it was true or not, without being charged, like a criminal, with responsibility for the bloodshed that has followed. Believing as he did, he could do no less, and no man, not even an ex-minister to the court of Chulalongkorn I. of Siam, has a right to accuse him."

THE DISPUTED SEATS IN CONGRESS.

THE news that the special committee of the House of Representatives on the case of Brigham H. Roberts, of Utah, has agreed upon his unfitness to occupy the seat to which he was elected is accepted by practically all the press as insuring his rejection by the House. The only difference of opinion in the committee relates

to the manner of the rejection. Six members of the committee would not permit him to take his seat at all; while the other two would have him sworn in and then expelled, as they believe that every man regularly elected and meeting the constitutional requirements must be granted his seat, the House reserving the power to expel him afterward if it sees fit to do so. The *Hartford Courant*

BRIGHAM H. ROBERTS.

agrees with the latter view, and declares that stopping Roberts on the threshold "was illegal, needless, stupid, and an outrage on some thousands of qualified American voters. We don't like to see tricks of this sort, or any sort," continues *The Courant*, "played with the American Constitution." Most of the press, however, consider this a minor point. "What interests the people," says the *Washington Star*, "is that the institution of polygamy in this country has received a serious blow, from which it will probably never recover." The *Baltimore Herald* says:

"Through the person of Mr. Roberts polygamy has made a bold and shameless effort to flaunt itself in the halls of national legislation. The rebuke which it is to receive will be productive of the most salutary influences. Whether the House excludes or expels the claimant, the Roberts case will be an invaluable precedent. It is a final notice that the monstrous doctrine of plural marriage can never hope for either social or official recognition in this land of Christian civilization."

The *Boston Advertiser* says that Mr. Roberts "probably realizes by this time that it would have been wise to accept the advice offered him some months ago, when it was suggested that he resign to avoid a public scandal." The *Utah Eastern Advocate* predicts that "the unseating of Roberts means, if the Republican Party is consistent, the removal of a good many polygamist postmasters in Utah." The *Provo (Utah) Enquirer* says:

"After the whole Roberts case is ended, and the uproar created by his election has finally subsided, good Latter-Day Saints will look about and wonder what principle has been vindicated by his election. The whole case will go down in history as a colossal political blunder, through which the whole State had to suffer."

Another bit of news that has attracted considerable attention

JOHN HENRY GEAR (REP.),
Reelected Senator from Iowa.

JOSEPH C. S. BLACKBURN (DEM.),
Elected Senator from Kentucky.

WILLIAM V. ALLEN (POP.),
Appointed Senator from Nebraska.

NEWLY CHOSEN SENATORS.

is the rumor that Mr. Clark (Dem.), of Montana, and Mr. Quay (Rep.), of Pennsylvania, have joined forces in their campaign for Senate seats, hoping to gain strength by the combination. Some of the Washington correspondents, however, say that some of the Senators who have been favoring Mr. Quay or Mr. Clark disapprove of the alliance between a Republican and a Democrat and now will not vote for either. The *Boston Advertiser* (Rep.) thinks that if the Republican Senate should vote to seat these two men, the effect would be seen in the November elections. "Quay and Clark combined," says *The Advertiser*, "would make a very heavy load for any political party to carry." The *New York Evening Post* (Ind.) says of the reported alliance: "That admission to the Senate of the United States should be secured by bargains of such character is extremely improbable, yet Senators would render a public service if they would resolve all doubts against both these candidates." The *Chicago Inter Ocean* (Rep.) thinks that Mr. Quay, at least, ought not to be denied his seat. "The question before the Senate," says *The Inter Ocean*, "is whether the State of Pennsylvania shall be deprived of its proper representation by refusing a seat to a man whom the people of Pennsylvania are certain to send back to Washington if he lives." The *Philadelphia Inquirer* (Rep.) thinks that Mr. Quay's Pennsylvania opponents have lost their

fight and that he is still supreme in Pennsylvania politics. It says:

"Envy and malice have exhausted their power. Vindictiveness and spite have added to the work of envy and malice. And still the combination has not been able to impair the prestige of the man who, assuming the charge of a national campaign when the result hung trembling in the balance, led the party to a glorious victory and redeemed the nation from the evils which followed Cleveland's first election."

THREE NEWLY CHOSEN SENATORS.

THE Republican majority in the Senate suffers a loss of one vote and the opposition gains one by the choice of the three Senators whose pictures accompany this article. John H. Gear (Rep.), of Iowa, is reelected for a second term; Joseph C. S. Blackburn (Dem.) succeeds William Lindsay, who was also a Democrat; and William V. Allen (Pop.) succeeds M. L. Hayward, who was a Republican.

Senator Blackburn was a member of Congress from 1874 to 1885 and a Senator from 1885 to 1897. He a leader in the free-coinage movement and was a valuable ally of William E. Goebel in the recent campaign in Kentucky. Senator Allen has taken his seat in the Senate and is actively pushing several measures, one of them looking toward the recognition of the Boers by our Government. Another is a bill providing for postal savings-banks. Every postmaster, by his plan, will have power to receive deposits, four fifths of which he shall transmit to the Treasury, where the money will be used "in paying the current obligations of the United States," any surplus remaining after this is done to be used to call in and cancel Government bonds. The 20 per cent. kept by the postmasters would be used to pay off such depositors as might wish to withdraw their money. As Senator Allen does not belong to the majority party, it is not thought likely that his bill will become a law. Senator Gear is greatly esteemed in Iowa for his uprightness of character. The *Boone (Iowa) Republican* says: "He has been the servitor of this State for a quarter of a century, and no man has had the hardihood to accuse him of dishonesty or incapacity." The *Cedar Rapids Republican* says:

"One can not pass Senator Gear's life in review without making note of its integrity. He has been scrupulously true not only to the ordinary political obligations, but to the higher obligations of public life. No one can show that Senator Gear has even benefited himself by his conduct of public business. He has

"THE OPEN DOOR."

—The New York Herald.

worked for the public and for his salary. His opportunities have been many, and some of them he might have improved without being untrue to his public obligations, but he has resisted all of them, if he was ever so much as tempted by them, which does not appear to have been the case. When he was defeated for Congress, following the McKinley bill, he was compelled to return to private employment for a living. The man who had been speaker, governor, and Congressman, returned to almost manual labor. Had he been defeated in Des Moines on Monday night, he would hardly have had more than enough of worldly wealth to finish his worldly life withal."

JOHN RUSKIN.

THE American press, in commenting on the life and work of John Ruskin (whose death occurred January 20), lay stress upon the immense influence that his books have had upon the thought of our time; and while in most cases his social theories are repudiated as unsound and extravagant, the purity of his

JOHN RUSKIN.

literary style and the value of his artistic writings are universally admitted. The *New York Sun* asserts that "whatever judgment be passed on Ruskin's ideas, he set people to thinking who had never thought before, and what he had to say he said in phrases that will live as models of English prose." The *Philadelphia Public Ledger* declares that "his life and his works are significant as protests against the overwhelming and mastering materialism of his day." The *New York Tribune* says:

"He believed himself a critic, but he was far more a poet. Nature spoke to him as she never speaks save to the initiate few. The qualities which in 'Modern Painters' first drew attention to the young Oxonian were not critical ones. His analyses were indeed brilliant, but neither sober nor profound. The true secret of his literary power was the marvelous insight—an insight as of mystic exaltation—into the deep meanings of natural phenomena. For him the cloud, the blue sky, the lightning flash, the mountain torrent, the whisper of the breeze among the trees, the majesty of uplifted crags, had a language and significance such as perhaps no other modern man has been instructed in."

The *Philadelphia Press* says:

"To appreciate the value of the great writer who has just

passed away we have only to fancy what the body of contemporary English literature would have been without his powerful and splendid contribution thereto. Within the covers of his numerous volumes there is to be found some of the very noblest English that has ever been written, some of the most pious and reverent admiration for the true, the beautiful, and the good that has ever been expressed, some of the most quickening and stimulating 'criticism of life' which has ever stirred the higher emotions of humanity. He was, first of all, a great writer. Ordinary distinctions of prose and poetry lose their significance and seem barren beside the impassioned eloquence of much that he wrote. His writing was thus stimulating because it was, first of all, the perfectly natural overflow of a full heart and a well-stored mind. Classical prose it is not but it throbs with earnest feeling, and persuades and elevates through its winningness, its humanity, its quality of raising any subject in which it interests itself out of the sphere of 'the wholly common' into the upper air of frank emotion by considering its real rather than its accidental characteristics. Who has ever moved us in writing of nature, that one subject, perhaps, which is original with modern literature, as Ruskin has? To find his compeers in this respect we must look to the poets—and to a very small group of poets at that. Shakespeare (in such passages as that of the last act of 'The Merchant of Venice'), Wordsworth and Keats are very nearly all."

The *New York Journal* says:

"Ruskin proved his faith by his works. Inheriting a fortune of a million dollars, and earning a large income almost all his life, he reduced himself nearly to poverty by his efforts for human betterment. Born to luxury, his sympathy with the poor was keener than that of many a man who has risen from their own ranks. Wherever earnest workers are striving for better social conditions his writings are a gospel. When some earnest young men at Oxford wished to found a college whose teaching should look toward the dawn, they named it Ruskin Hall. When some people in this country wished to try the experiment of a town in which all work should be directed to the common good, they called it Ruskin. Whether such experiments succeed or fail, the torch that was lighted by him who is gone will not go out."

INTERSTATE COMMISSION AND A COMING RAILROAD TRUST.

THE Interstate Commerce Commission, in its annual report, just issued, views with alarm the increasing consolidations of railroad systems, and fears that at some day, perhaps not far distant, the people will find themselves in the power of a great railroad "trust." Says the report:

"It is a matter of common knowledge that vast schemes of railway control are now in process of consummation, and that the competition of rival lines is to be restrained by these combinations. While this movement has not yet found full expression in the actual consolidation of railroad corporations, enough has transpired to disclose a unification of financial interests which will dominate the management and harmonize the operations of lines heretofore independent and competitive. This is to-day the most noticeable and important feature of the railway situation. If the plans already foreshadowed are brought to effective results, and others of similar scope are carried to execution, there will be a vast centralization of railroad properties, with all the power involved in such far-reaching combinations, yet uncontrolled by any public authority which can be efficiently exerted. The restraints of competition upon excessive and unjust rates will in this way be avoided, and whatever evils may result will be remediless under existing laws."

The *Chicago Record* says:

"The case is none too strongly stated. Competition as an effective factor in the control of the railway-rate situation is rapidly disappearing. Injurious discriminations are common, and of course these discriminations are usually in favor of the large concern or trust, at the expense of the small shipper, who therefore finds it difficult to continue in business. Unless Congress takes action soon along the lines recommended by the commis-

sion the people presently will find themselves subject to a railroad trust that can fix prices to suit itself."

The *Philadelphia Press* believes that this matter is of such pressing importance that if the present Congress does not provide a remedy, the people may take affairs into their own hands and elect a radical Congress that will treat the railroads in a manner far worse than the treatment given by the present Congress. "If the railroads are wise," says *The Press*, "they will now favor a conservative measure."

There is now before Congress a measure, the Cullom bill, which gives the commission power to change railroad rates when it considers them unreasonable. Among other things this bill proposes to amend Section 15 of the present Interstate Commerce act to confer on the commission the power—

- "(a) To fix a maximum rate covering the entire cost of the service;
- "(b) To fix both a maximum and a minimum rate or differential in rates when that may be necessary to prevent discrimination under the third section;
- "(c) To determine the division between carriers of a joint rate and the terms and conditions under which business shall be interchanged when that is necessary to an execution of the provisions of this act;
- "(d) To make changes in classification;
- "(e) To so amend the rules and regulations under which traffic moves as to bring them into conformity with the provisions of this act."

The Cullom bill also provides for the preparation by the commission of—

"a classification of freight articles and rules, regulations, and conditions for freight transportation, which shall be known as the National Freight Classification. . . . At the expiration of one year and three months from the passage of this act the said classification as at that time amended shall be in effect and shall be, as subsequently amended by the commission from time to time, observed and invariably applied to interstate freight transportation by all common carriers subject to this act."

The *New York Journal of Commerce* believes that such an act would "confer upon the commission such powers as might in some hands easily amount to confiscation." Absolute regulation of rates, too, says the same paper, might eventually result in absolute government ownership. The *Newark Evening News* thinks that "the general proposition bestowing such arbitrary power, free from judicial review, on a body of federal appointees, is not one to commend itself to public judgment." The *Baltimore Sun* thinks the commission is needlessly alarmed, and that the proposed remedy would be worse than the disease. It says:

"In view of the fact that large railroad consolidations have been going on for thirty years, concurrently with large rate reductions, the inference that the new consolidations will have an effect that former consolidations did not have seems by no means clear. . . . It is more likely, in fact, that the commission, by fixing rates, would arrest the downward movement, and it would be certain to do this, or even advance them, if its possession of the power of bankrupting all the railroads should make it seem desirable to the railroads to capture the commission and its new power."

The *Boston Transcript* proposes publicity as a cure for the present evil. It says:

"The secret compact puts the unfavored shipper at the mercy of the railroads and such parties as may possess the means of obtaining these special concessions. Publicity is the great safeguard of the people. They have a right to know all the factors for which they must make allowance. It is not so much a question of preventing such concessions as of compelling their publicity when made, thus enabling all shipping interests to act understandingly, at least."

The *Chicago Chronicle* publishes a report that the entire transportation system between the Mississippi River and the Atlantic seaboard is being reorganized, and that these formerly competing lines will be run in harmony. The following roads are said to be in the combination:

New York Central, Pennsylvania, Boston and Albany, Boston and Maine, Fitchburg, New York, New Haven, and Hartford, Erie, Lehigh Valley, Lackawanna, West Shore, New York, Ontario, and Western, Rome, Watertown and Ogdensburg, Lake

Shore, Michigan Central, Nickel Plate, Baltimore and Ohio, Wabash, Big Four, Chesapeake and Ohio, Lake Erie and Western, and Monon, and all auxiliary lines of these systems.

The reported scheme contemplates joint ticket offices instead of the present separate ones in all the large cities east of the Mississippi, in which tickets will be sold for all the roads in the deal. About 50,000 freight and passenger agents and solicitors in the United States, Canada, and Europe will become superfluous, it is said, and will be discharged. Two joint agencies, in New York and Chicago, are to give each road an agreed percentage of the total business, and a board of control in New York will give final rulings on disputed questions. Several fast passenger trains, demanded by competition, will be abandoned, it is said, under the "harmonious arrangements," and a common schedule for passenger trains will be made. The freight schedules are to be similarly changed. It is said that many heads of departments will be no longer needed.

Gambling Employees and the Surety Companies.

—President Miller, of the Sacramento Chamber of Commerce, outlined in a recent message to that body a way to keep employees from gambling. He said:

"Many of the surety companies of the United States have recently adopted one and the same form of bond for universal use. This contract provides that when the employer is in possession of the knowledge that his employee is an habitual gambler, then the bond becomes void."

"It seems that the damage to employers from gambling is so serious that no annual payment will justify any company in knowingly assuming that risk. Of course the inference is plain—each employer must protect himself against known gamblers."

The Coast Review, of Sacramento, says of this plan:

"Merchants the world over will find much food for thought in the scope covered by the concluding paragraph. *The Coast Review* suggests that every other organized commercial body in existence in the United States would accomplish far-reaching results by emulating the action of Sacramento's Chamber of Commerce."

"The surety companies, while seeking self-protection in adopting this form of bond for universal use, have builded better than they knew. Merchants desiring to protect themselves from the consequences of employees addicted to the gambling habit have but to require such employees to procure surety bonds from a surety company, using the correct form. Employers and the surety companies acting in unison in this matter can do as much toward ridding the country of the evil consequences of the gambling habit among men holding positions of trust as can be done by any other known force. It is the solution of common sense to a problem of vast import to the social fabric and to the commercial world."

AN AGGRAVATED IMPRESSION.—"Kentucky is one of the liveliest States in the Union," remarked the young man. "It is," answered Colonel Stillwell, "beyond a doubt. When I was last there every man I met was running for office or running for his life."—*The Washington Star*.

THE Government sells bonds to get money.

Then it takes back the bonds to get rid of money.

It pays interest on the money it gets, and the New York bankers charge more interest on the money it gets rid of.

It is wonderful system!—*The Chicago Journal*.

LETTERS AND ART.

AUTHORITY AND LITERARY TASTE.

THREE notable men of letters have lately given their views on the subject of literary canons. The first of these, Mr. Augustine Birrell, lectured at Edinburgh on the theme, "Is It Possible to Tell a Good Book from a Bad One?" He was followed by the chairman of the meeting, Lord Rosebery, who in a witty and satiric speech treated rather skeptically most of Mr. Birrell's canons and methods, and denied that rules can be laid down for enabling readers to become accomplished literary judges. Somewhat later, Professor Courthope, who holds the chair of poetry at Oxford, lectured on "Law in Taste." In a recent article, the *London Saturday Review* comments on all three of these pronouncements. It says:

"What they are all in search of is some principle of authority whereby each reader may range under the categories of good or bad everything calling itself literature. Is it to be independent private judgment, every man having equal authority with another to make the category of good equivalent to what pleases himself, and the category of bad what he dislikes? Lord Rosebery seems to leave the question in this condition. He takes his analogy from the dinner-table. A man finds out what he dislikes or what disagrees with his feelings in reading in the same way that he finds out what gives him comfort or the disagreeables of dyspepsia in eating. He tries experiments; and another man's experiments are no more help to him in the mental than they are in the physical sphere of operations. Literature is thus in the same case as other things with which we have to do:

And other's errors teach us not,
Not much their wisdom teaches;
And most of sterling worth is what
Our own experience preaches.

"It is, apparently, as hopeless, but not a whit more so, to get a standard for literature as for practical conduct. We must go about to obtain it in the same way, if it is to be obtained at all, for our reading as for other things. Private judgment must be surrendered in certain cases—for example, let us say those of the four great epic poems of the world as mentioned by Professor Courthope, 'The Iliad,' 'The Æneid,' 'The Divine Comedy,' and 'Paradise Lost.' Here we are in the august presence of authority to which we must bow. If we ask why, there does not seem to be any other intelligible answer than that we are irresistibly bound to render our homage to that which has preserved vigor and vitality while other things in a mutable world have gone into oblivion. . . .

"Some of us may not understand those noble qualities by virtue of which the greatest become immortal. Professor Courthope will speak in an unknown tongue to the great majority of us of the canons to which a poem conforms which satisfies the requirements of greatness in the art of poetry. It may be the majestic work moves us not; we can not breathe the pure serene. What the eminent critics term second rate, perhaps gives us more pleasure than those works which 'have become part of the law of fine art.' Yet modesty and the habit of deferring in so many departments of life to the authority of that which has established itself through the ages serve us here also; and we must bow tho we may not comprehend. The great classic is established reverently in the minds of many who never read him, as Voltaire said of Dante. Professor Courthope rather confuses his account of authority by introducing 'the universal and enduring consent of the best critics.' We never know who they may be; at different periods they give totally different reasons for admiring the great classic. . . . But the great writers are as independent of the most cultivated of critics as they are of the opinions of the ignorant who fail to perceive their beauties owing to the badness of their own taste. In Professor Courthope's phrase they become part of the law of fine art; they established their authority by their own inherent virtue through all changes of human thought, and all variations of outward circumstances. Rules of criticism are only more or less plausible reasons for submitting to the authority; the rules will, from time to time, be shown to have been mistaken; and the authority itself will appear calmly surviving. So that the question of taste is ultimately decided by

authority, as so many other perhaps more important matters are settled. Bad taste and good taste are, in themselves, as vague as heresy or treason without reference to some authority. Like other authorities, the authorities of taste establish their claims by surviving the vicissitudes of time. The reader of taste is the reader who feels vividly their power and charm; the reader who is without taste is one who is irresponsible to their influence; who feels no touch of emotion, and no stimulation of thought in their presence. We can not get beyond this by any definition of taste. In the case of modern literature we have to refer to the same standard indirectly. Partly from the defect of natural ability to enter into the minds of the great writers, partly through defect of education, most readers find their intellectual wants satisfied by reading which would not be tolerable if the spirit of the great writers were upon them. It is thus possible, without arrogating any individual right to have one's own preferences dubbed good taste and another's bad, to say that, tried by this standard, their taste is, in fact, bad. Without this standard it would be at least impolite to make any assertion about their taste at all. They are pleased, and it would not be for any one else to question their pleasure. But with this standard we are justified in answering Mr. Birrell's question, 'Is it possible to tell a good book from a bad?' by saying, unfortunately to most people it is not possible. They have no standard of authority."

LETTERS OF SIDNEY LANIER.

SIDNEY LANIER, before his death, had won a small following of impassioned votaries; since his death, his fame has extended through circles that are continually becoming broader and more resonant. A few years ago, a French critic, writing in the *Revue des Deux Mondes*, presented him to the Parisian world as the poet of the most rare and distinctive genius, with the exception of Edgar Allan Poe, that has appeared in America. There are wide differences of opinion, even among his warmest admirers, as to the ultimate value of Lanier's poetical achievement, in comparison with that of the great masters of the art. There is no difference, however, on one point—that his nature was of the purest and sweetest; that as a man he was one of the most noble and gentle, one of the most heroic and unstained.

The volume of his letters will still further exalt the estimate in which he is held. The book consists of four series of letters. The opening series (letters to Mr. Gibson Peacock) are the glowing effusions of a young man of exquisite sensibility to the publisher who was first to greet him with appreciation. They tell of his early struggles, testify to the nobility of his aspirations, and are already shadowed by the doom suspended over him. From Brunswick, Ga., in 1875, he writes:

"I am just stopping here a day, after the woods of Florida. I have all your letters. Out of what a liberal sky do you rain your gracious encouragements upon me. In truth, dear friend, there is such large sweep and swing in this shower after shower of your friendliness, it comes in such big rhythms of generousities, it is such a poem of inner rains, that I can not at all get myself satisfied to meet it with anything less than that perfect rose of song which should be the product of such watering. I think I hear one of these growing now down in my soul yonder, somewhere; presently the green calyx of silver shall split and you shall see your flowers."

In another, written from Philadelphia the same year, he says:

"I can only scrawl a line. My work has been rudely interrupted by a series of troublesome hemorrhages, which have for some time prevented me from reading, or speaking, as well as from writing. I am crawling back into life, however, and hope to be at work in a few days."

Through the kindness of Mr. Peacock, Lanier was presented to Charlotte Cushman, and she became greatly attached to him. While he was in Philadelphia she urged him to come to Boston to visit her, and he thus describes their meeting (Charlotte Cushman, at this time, was already suffering from the painful malady that caused her death):

"On arriving here [Parker House] at six o'clock in the morn-

ing, half frozen and very sleepy, I found a pleasant room with a glowing fire ready for me, and so tumbled into bed for another snooze before the world should rise. About nine I rose again;

Copyright, 1899, by Charles Scribner's Sons.

SIDNEY LANIER IN 1857.
From the "Letters of Sidney Lanier."

and while I was *in paris naturalibus*—midst of the very crisis and perilous climax of ablution—came a vivacious tap at my door; I opened the same with many precautions; and behold, my eyes—which were all in a lather, what time my beard was in strings that shed streams around my path, and, as it were, 'writ my name in water' wherever I walked—rested on the bright face of my good Charlotte Cushman, shining with sweetness and welcome.

"I had expected to find her all propped up with pillows; and was therefore amazed to see how elastic was her step, and how strong and bright she is in all particulars. She sleeps 'beautifully,' she says, and as we meet at the breakfast-table each morning she is fairly overflowing with all manner of bright and witty and tender sayings, altho in the midst of them she rubs the poor swollen arm that gives so much trouble."

After endless delays, the young poet, always struggling with cruel poverty, succeeds in getting his little family established in a little house of their own, and thus vents his gladness:

"We are in a state of supreme content with our new home; it really seems to me as incredible that myriads of people have been living in their own homes heretofore as to the young couple with a first baby it seems impossible that a great many other couples have had similar prodigies. Good heavens! how I wish that the whole world had a home."

"I confess I *am* a little nervous about the gas bills, which must come in, in the course of time; and there are the water rates, and several sorts of imposts and taxes; but then the dignity of being liable to such things is a very supporting consideration. No man is a Bohemian who has to pay water rates and a street tax. Every day when I sit down in my dining-room—*my* dining-room! I find the wish growing stronger that each poor soul in Baltimore, whether saint or sinner, could come and dine with me. How I would carve out the merry thoughts for the old hags! How I would stuff the big wan-eyed rascals till their rags ripped again! There was a knight of old times who built the dining-hall of his castle across the highway, so that every wayfarer must perforce pass through; there the traveler, rich or poor, found always a trencher and wherewithal to fill it. Three times a day, in my own chair at my own table, do I envy that knight and wish that I might do as he did."

The sudden death of his warm friend, Bayard Taylor, soon after having been appointed Minister to Germany, calls out the following comments:

"Bayard Taylor's death slices a huge cantle out of the world for me. I don't yet *know* it at all; it only seems that he has gone to some other Germany, a little farther off. How strange it all is. He was such a fine fellow, one almost thinks he might have talked death over and made him forego his stroke. Tell me whatever you may know, outside of the newspaper reports, about his end."

The second part of the book, "A Poet's Musical Impressions," consists of selections from Lanier's letters to his wife touching upon musical subjects. Here, indeed, the door of the inner world of his life is thrown open. It must be remembered that Lanier was even more a musician than a poet. Music was his true vocation, for which his natural endowment was exceptional. Yet he was without musical training, and had not had the privilege of hearing classical music of a high order. The violin was his instrument of predilection. This was taken from him when a mere child because of the extravagance of his passion for it, and he had had no instruction and but little practise on the flute permitted him as compensation for that loss. It was, therefore, with almost delirious ecstasy that, on visiting New York, he listened for the first time to the creations of the great composers. He writes (in 1869):

"I have just come from the 'Tempest' at the Grand Opera House, corner Twenty-third Street and Eighth Avenue, newly built; and my heart has been so full, . . . In one interlude between the scenes we had a violin solo, adagio, with soft accompaniment by orchestra. As the fair tender notes came, they opened like flower-buds expanding into flowers under the sweet rain of the accompaniment. Kind heaven! my head fell on the seat in front, I was weighed down with great loves and great ideas and divine inflowings and devout outflowings, and as each

SIDNEY LANIER IN 1870.
From the "Letters of Sidney Lanier."

note grew and budded, and became a bud again and died into a fresh birth in the next bud tone, I also lived these flower-tone lives, and grew and expanded, and folded back and died and was born again, and partook of the unfathomable mysteries of flowers and tones."

A year later he wrote as follows:

"Ah! how they have belied Wagner! I heard Theodore Thomas's orchestra play his overture to 'Tannhäuser.' The 'Music of the Future' is surely thy music and my music. Each harmony was a chorus of pure aspirations. The sequences flowed along, one after another, as if all the great and noble deeds of time had formed a procession and marched in review before one's ears, instead of one's eyes. These 'great and noble deeds' were not deeds of war and statesmanship, but majestic victories of the inner struggles of man. This unbroken march of beautiful-bodied triumphs irresistibly invites the soul of a man to create other processions like it. I would I might lead a so magnificent file of glories into heaven!"

"Flutes and Horns and Violins—celestial sighs and breaths deep-drawn, penetrated with that heavenly wo which the deep heart knoweth when it findeth not room in the world for its too great love, and is worn with fastings for the beloved: fine purity fiercely attacked by palpitating fascinations, and bracing herself and struggling therewith, till what is maidenly in a man is become all grimy and sweat-beaded like a warrior; dear love, shot by some small arrow and in pain with the wound thereof: divine lamentations, far-off blowings of great winds, flutterings of trees and flower leaves and airs troubled with wing-beats of birds or spirits: floating hither and thither of strange incenses and odors and essences; warm floods of sunlight, cool gleams of moonlight, faint enchantments of twilight; delirious dances, noble marches, processional chants, hymns of joy and of grief. Ah! amidst of all these I lived last night, in the first chair next to Theodore Thomas's orchestra."

"'Twas opening night of Theodore Thomas's orchestra at Central Park Garden, and I could not resist the temptation to go and bathe in the sweet amber seas of this fine orchestra, and so I went, and tugged me through a vast crowd, and, after standing some while, found a seat, and the baton waved, and I plunged into the sea, and lay and floated. Ah! the dear flutes and oboes and horns drifted me hither and thither, and the great violins and small violins swayed me upon waves, and overflowed me with strong lavations, and sprinkled glistening foam in my face, and in among the clarinetti, as among waving water-lilies with plexile stems, I pushed my easy way, and so, even lying in the music waters, I floated and flowed, my soul utterly bent and prostrate."

In 1873 Mr. Hamerik, director of the Peabody Conservatory of Music, Baltimore, engaged Lanier as first flute in his orchestra, at a salary of sixty dollars a month. To this artist soul, the position opened the gates of heaven. From this time he dilates upon his orchestral raptures, and the swift thronging triumphs of the admired "Flauto Primo." All who knew him at this period testify that his playing was marvelous. He writes to his wife

"Thou wouldst not know my playing now for that which thou heardst in Marietta. The instrument begins to feel me, to grow lithe under my fingers, to get warmed to life by my kiss, like Pygmalion's stone, and to respond with perfect enthusiasm to my calls. . . . It is like a soul made into silver. How can the people but respond if I have its exquisite inner self speaking by my lips!"

In the third section of the book, "Letters between Two Poets: Bayard Taylor and Sidney Lanier," we see Lanier as the devoted student, the original thinker, the trenchant critic, the exquisite poet. He was still harassed by his two life-long foes, poverty and consumption, but continued to catch, by stealth, as it were, seasons of rare happiness, and to advance in his art.

Lanier was still comparatively unknown, but Bayard Taylor had a world-wide reputation. He was crowded with profitable engagements, and yet there is something ominous in the sense of *weariness*, the consciousness of being overworked, the longing for leisure in which to do his *dear unpaying work*, that his letters constantly express. When nominated Minister to Germany, he writes (in 1878):

"MY DEAR LANIER: There's a rewarding as well as an avenging fate! What a payment for all my years of patient and unrecognized labor! But you know just what the appointment is

to me. It came as a surprise after all—and a greater amazement is the wonderful and generous response to it from press and people. I feel as if buried under a huge warm wave of congratulation."

But his reward had come too late. He was still in the very prime of life, but the strain of a quarter of a century had undermined his constitution, and on the threshold of the new career he fell. Lanier's first letter to Germany, addressed, "My dearest Minister—always a minister of grace to me," received no reply.

The concluding section of the book is entitled, "A Poet's Letters to a Friend." The friend was the Southern poet, Paul Hamilton Hayne. In one of them, speaking of the deep despondency to which artistic natures are peculiarly liable, Lanier writes (1869):

"These wonderful hells into which we descend, at such times—who will picture them to one who has not dwelt in them? It is idle to discuss colors with a blind man. So for me, however, the good God has seen fit to arm me, very singularly, against the dark hosts of temptations that dwell in these places. The longing for stimulants, which I feel in common, I suppose, with all men of like nature, always defeats itself in my particular case, by awakening a certain *pride of pain*, a certain self-gratulation of sorrow (how foolish this sounds!) which enables me to defy the whole damnable troop with a power which seems thoroughly anomalous, in view of the fact that, ordinarily, I do not think my *will* is very strong because my *sympathies*, which are strong, easily override it. . . .

"At any rate, these present spring breezes are blowing on my soul as on a young green leaf, and I wave and sway and rise and fall, in the midst of the heavens, with a wonderful love and happiness upbearing me. Ah! the exquisite, intense calms, which are yet full of a strange quickening and stir of birth! I have a boy whose eyes are as blue as your Æthra's. Every day when my work is done I take him in my strong arms and lift him up and pore on his face. The intense repose, penetrated somehow with a thrilling mystery of *potential* activity, which dwells in his large open eyes, teaches me new things. I say to myself, where are the strong arms in which I, too, might lay me, and repose, and yet be full of the fire of life? And always, through the twilight, come answers from the other world: 'Master, Master, Master, there is one, one Christ; in His arms we rest.'"

PETRONIUS: THE EARLIEST OF REALISTIC NOVELISTS.

SINCE the publication of the "Quo Vadis" of Sienkiewicz, the Latin novelist Petronius has not been wholly unknown to popular fame; yet the important position he holds as the first realistic novelist, and the creator of a new *genre*, is not generally recognized. In *The Swanee Review*, Mr. Frank Frost Abbott gives an account of this Roman of the first century, and of his book. Little has come down to us of the novelist himself. He lived in the time of Nero, and was director-in-chief of the imperial pleasures under that monarch. Only a part of his work has been preserved—hardly a fourth of the original book. Yet Mr. Abbott regards it not only as the first example of a prose romance, but as "one of the greatest pieces of realistic fiction." He says:

"The action of the story in its complete form, as the contemporaries of Petronius had it, took place in certain Italian and provincial towns. Three principal episodes of considerable length have come down to us, and in them the scene is laid in two Italian towns. Some one has said that our own novelist Howells was the first writer to reproduce accurately the local color of different towns within the borders of the same country. I am afraid that Howells's supporters must yield to Petronius his claim to this distinction. When one follows the hero in the novel of Petronius from the shores of the bay of Naples, where the scene is at first laid, to Croton, in Southern Italy, he comes into an entirely different atmosphere. He passes out of the circle of Rome's influence. The provincial aristocracy of the little

Campanian village, making its crude attempts to imitate the manners of the metropolis, gives place to the elegant depravity of a town which was essentially Greek in its mode of life, and the differences which existed between the two types of society are presented in so subtle a fashion that even a close student, like Zola, of the characteristics which society of the same grade shows in different modern cities might admire the result.

"The hero of the romance is a Greek freedman who lives by his wits. Gathered about him in the story is a picturesque group of adventurers, parvenus, tradesmen, professional poets, fortune-hunters, and petty provincial magistrates. It is an interesting fact that in this novel of Petronius women for the first time, in so far as I know, play an important part in literature. The narrative literature of the earlier period deals mainly with the doings of men and their relations to one another, and it is primarily addressed to men. A late writer has acutely surmised that the romance of chivalry was written for women, and that we owe to them the beginnings of the modern novel. What has just been noted of the 'Satiræ' of Petronius would indicate the same origin for the ancient novel with equal probability.

"One of the fundamental principles of modern realism as enunciated, for instance, by Zola and Howells and Garland is that the characters of the persons concerned should be revealed to the reader by their words and actions, without comment or explanation on the part of the author. This principle has been scrupulously observed by Petronius, and there is not a single instance in his novel where the artist destroys the illusion by obtruding his own personality into the scene he is painting. As for his characters, they stand out with marvelous distinctness—the *roué* Encolpius, the poetaster Eumolpus, the parvenu Trimalchio, and the shrewd housewife Fortunata. Even the minor characters are portrayed with as much clearness and individuality as the figures in one of Meissonier's pictures."

IS KIPLING VERILY THE VOICE OF THE "HOOLIGAN"?

SIR WALTER BESANT is an optimist of optimists, and any crabbed attack on the present perfection of men, manners, or literature hurts his soul. Mr. Robert Buchanan recently had the temerity to make such an attack, in an article in *The Contemporary Review* entitled, "The Voice of the Hooligan" (see THE LITERARY DIGEST, December 23), and in the course of it to express in terms not overburdened with respect the opinion that Mr. Rudyard Kipling is *par excellence* the voice of the "Hooligan," meaning that he stands for and expresses all that is obstreperous, and vulgar, and barbarian in our present-day civilization.

Sir Walter will not, in the first place, admit that civilization is in a bad way. "In all directions," he says, "is visible the working of the most real philanthropic endeavors that the world has ever seen; the nearest approach to practical Christianity that has appeared, I believe, since the foundation of the Christian religion." What else, he asks, is the meaning of "free schools, free libraries, factory acts, continuation schools, polytechnics?" Sir Walter then turns to the second object attacked—Mr. Kipling—and his fervent appreciation has just now something of the charm of novelty, coming as it does after so many articles of more or less hostile criticism in the reviews of the past few months.

The first of Mr. Kipling's many titles to praise, says the writer, is his possession of realism, of convincing power and inherent magnetism:

"These conditions are all found in Kipling's work, and in full measure, without any reservations. He has this magnetic force; he compels us to listen; he tells his story with directness, force, and simplicity. So real is the story, with such an air of reality does he present it, that we see it as we see the moving pictures which the new photography throws upon the canvas.

"It is in writing as in drawing. One man produces his effects with many strokes and careful elaboration; another produces the same effect with a single bold stroke or with the least possible curve or deflection of a line. The effect is produced in Kipling's

work by the one bold stroke; without apparent effort the right word presents itself; the right phrase which others seek, and seek in vain, without apparent hesitation takes its place; it belongs to the story.

"He also believes his own story; that faith is necessary if he would make his hearers believe it. And because he believes it he is enabled to tell it simply and directly without seeking to add the artificial stimulus of a labored style.

"These reasons for the popularity of a writer are elementary. Yet they have, in this case, to be set forth, as the best answer to any assailant. Another reason, not so obvious to the ordinary reader, is his enthusiasm for humanity. Probably Kipling never gave it, consciously, so fine a name; is ignorant perhaps that this attribute can be found in his work. Yet the thing is there. Always, in every character, he presents a man; not an actor; a man with the passions, emotions, weaknesses, and instincts of humanity. It is perhaps one of the Soldiers Three; or it is the man who went into the mountains because he would be a king; or the man who sat in the lonely lighthouse till he saw streaks; always the real man whom the reader sees beneath the uniform and behind the drink and the blackguardism. It is the humanity in the writer which makes his voice tremulous at times with unspoken pity and silent sympathy; it is the tremor of his voice which touches the heart of his audience. And it is this power of touching the heart which causes men and women of all classes and of every rank to respond with a greater love for the writer than for any other writer living among us at the present moment."

Next Sir Walter Besant considers Kipling as a poet, particularly as "the poet of the empire." He says:

"He is emphatically not a Londoner; he does not seek inspiration in the smoking-room of a West End club; he does not observe in Piccadilly; he does not evolve humanity out of an easy-chair with the aid of a cigarette. He is a son of the empire; he has brought home to the understanding of the most parochial of Little Englanders the sense and knowledge of what the British empire means. What Seeley taught scholars Kipling has taught the multitude. He is the poet of the empire. Not the jingo rimer; the poet with the deepest reverence for those who have built up the empire; the deepest respect for the empire; the most profound sense of responsibility:

Fair is our lot. Oh! goodly is our heritage!
(Humble ye, my people, and be fearful in your mirth!)
For the Lord our God most High,
He hath made the deep as dry,
He hath smote for us a pathway to the ends of all the earth!
Yea, tho we sinned—and our rulers went from righteousness—
Deep in all dishonor tho we stained our garments' hem,
Oh! be ye not dismayed,
Tho we stumbled and we strayed,
We were led by evil counselors—the Lord shall deal with them!

"That is, I suppose, the 'Voice of the Hooligan.' Again, is it the Hooligan who sings of the Last Chantey to the text, 'And there was no more sea'?"

After briefly alluding to "The Recessional" and "The White Man's Burden" as poems whose ethical content is the very opposite of Hooliganism, Sir Walter turns to Kipling's attitude toward war, and concludes thus:

"Kipling, in verse and in prose, is one to whom war is an ever-present possibility and an ever-present certainty. There is a time to speak of war and a time to speak of peace. At this moment it is well that some one who has a voice should speak of war. It seems that in the present stage of civilization, just as in the past, there falls upon the nations, from time to time, the restlessness which can only be pacified by war. The French nation, at this moment, seems to be restless to the highest degree under this obsession. We ourselves are in the throes of the biggest war since the Indian Mutiny. Two years ago, the most pacific country in the world, the Great Republic of North America, was seized with this restlessness, which it is still working off. A time may come when war will not be a necessity—but that time is not yet. For my own part, I entirely agree with Archbishop Alexander in the words quoted by Mr. Buchanan:

And as I note how nobly natures form
Under the war's red rain, I deem it true
That He who made the earthquake and the storm
Perchance made battles too.

There are worse evils than war. There are
 —the lust of Gold
 And love of a Peace that is full of wrongs and shames.

"It is a threadbare commonplace to write that there are worse evils than war, but it must be said over and over again, especially when the horrors of war are upon us. The poisonous weeds that grow rank in times of peace corrupt the national blood; they deaden the sense of honor; they encourage the ruthless company promoter who trades upon the ignorance of the helpless; they lower the standards of honor; they enlarge the slough of indulgence and the unclean life. War does not kill these things; but it may restore the sense of duty, sacrifice, patriotism; it may bring back the nobler ideals; it may teach the world that there are better gods than the idols they have fashioned with their own hands; it may seize on the hearts of the young and preserve their instincts of generosity:

Tho many a light shall darken and many shall weep
 For those that are crushed in the clash of jarring claim

And many a darkness into light shall leap,
 And shine in the sudden making of splendid names,
 And noble thought be freer under the sun,
 And the heart of the people beat with one desire.

"This potency of war; these possibilities; this necessity of war when the cause is just; this ennobling of a people by war are present in the mind of Kipling as in the mind of Tennyson. The time, indeed, has come again when we are called

—To wake to the higher aims
 Of a land that has lost for a little the lust of gold.

"It is not on the side of those who are ruled and led by this lust that Kipling stands; nor is it for barbaric conquest and the subjugation of free peoples that he sings."

RESULTS OF THE HIGHER EDUCATION OF WOMEN.

AT the recent meeting of the New England Association of Colleges and Preparatory Schools, which met at Cambridge, Mass., the principal subject of discussion was the "advisable differences between the education of young women and young men." A remarkable unanimity of opinion appeared to prevail that (to use President Eliot's phrase) "there must be a real, essential, wise difference" in the education of the two sexes, but that as yet no one has discovered what this difference should be. All are agreed, said Dr. Eliot, that "the means of discovery is to be an absolute freedom of studies for both men and women."

In the course of the debate, Mrs. Alice Freeman Palmer, late president of Wellesley College, made an interesting contribution to the discussion, expressing her unbounded confidence in the good results of higher education for women, derived from her long experience of this education in colleges both East and West. She said in part (we quote from the *Chicago School Review*, December):

"It is not possible to-day, any more than it was possible a hundred years ago, to annihilate the womanliness of our American girls by anything that you can do to them in education. I really can not find that it makes much difference in their love of womanly ideals whether they are in a Western coeducational college, or under the shadow of the oldest Eastern university, or alone in the estates of a woman's college by themselves. I have found everywhere womanly girls, keen in their ambitions for usefulness, and tender-hearted in their desire to be good comrades of the American men, with whom they expect to live their lives. . . .

"Twenty-five years ago we were all sure—I was sure—that when women began in large numbers to go to college, and were free to choose, they would turn mainly to languages and literature; to history, fine arts, music; the esthetic side of life. I thought of their sympathy, their imagination, their affection, and I expected they would excel in the humanities. I never foresaw that they would turn impassioned to pure mathematics, to physics, chemistry, biology, astronomy. Yet that is the evidence of twenty-five years. New England, as well as old England, has her Phillippa Fawcetts, and women in Europe, as well as in this

country, in the few years they have had a little freedom of opportunity, have shown such particular aptitude for mathematics and the exact sciences, that I am sometimes afraid they are going to leave all the poetry and philosophy to men, and claim the accurate sciences for themselves.

"We old teachers know that girls differ among themselves in mental tastes and powers, quite as much as they differ from boys. My experience in teaching both makes me confident that whatever our own individual ideals may be, the only way to show what is the ideal college, or to find out the advisable college studies for women, is to give the widest possible freedom in election of subjects and methods to our daughters, to let the girls who are fed by mathematics have mathematics, and the girls who long for music and art have music and art as their specialties; and, to be sure, all the time, that we shall 'fit them to be good wives and mothers' when we fit them to be fine and cultivated women."

Adopting the admirable definition of true education given by one of the speakers—"self-realization"—President Eliot proceeded to apply this test to the higher training of women. He said:

"Self-realization! Now, are the selves the same in men and women? That seems to me to be a fundamental question—whether these selves which are to be as perfectly realized as possible in this life are the same in the two sexes. Mrs. Palmer said with great truth that it was impossible to extinguish or annihilate womanliness, no matter to what training exercises you may subject the woman. What is that womanliness which is so indestructible! What is the manliness which is equally indestructible? Are they alike? Are they not essentially different, and do we not all recognize that essential difference; and is not the charm of human life and the greatest happiness of life due to that essential difference? Then it seems to me that function should ultimately determine education. If we know what the function of a human being is to be, have we not in that knowledge a good guide to the education of the individual? Now, is there not a profound and eternal difference between the function of the woman and the function of the man in this world? Look at them physically between the ages of twenty-five and forty-five. How profoundly different are the functions of the woman and the man? We must consider masses in discussing this question, not individuals. Look at the great mass, and is not the function of the woman between twenty-five and forty-five deeply different from that of the man? I say that education should regard function. Therefore, must it not be that the right education of a woman, or of women in general, should be different from the right education of men in general? And, again, should not education be determined by environment? It has been determined by environment for the millions of the human race. How must it be in the future? Does not environment determine education, and should not education prepare for environment? Now, how different is the environment through life of every woman from that of every man? Are we not all sensible of this profound and eternal difference in environment? Therefore, must we not all think it probable that there should be a difference in education corresponding to that difference, that inevitable difference, of environment?"

NOTES.

"BEN HUR" continues to be one of the chief popular successes of the season in New York. At the Wednesday matinee on December 27, the largest application for seats ever recorded in New York for a mid-week matinee was received.

KIPLING's ballad of "The Absent-Minded Beggar," sung nightly in the London music halls for the benefit of the British soldiers' relief fund, has already brought in nearly \$500,000. Mrs. Beerbohn Tree alone has earned over \$500 a week for the fund by reciting the poem.

THE jubilee year of *Harper's Magazine* is marked by the publication of several notable series of articles, particularly by Mrs. Humphry Ward's novel of "Eleanor," which begins in the January number. In the same number are also two poems by the author of "David Harum," found after Mr. Westcott's death.

IBSEN's "The Master Builder" was brought out at the Carnegie Lyceum, New York, on the evenings of January 17 and 18, in Mr. John Blair's *Course of Modern Plays*. In this play Mr. Blair did not himself act. His part was taken by William H. Pasco. Miss Florence Kahn, who was "discovered" by Mr. Blair and who has been winning much praise for acting in the *Course of Modern Plays*, has been engaged for next season by Richard Mansfield.

SCIENCE AND INVENTION.

IS THERE A GREAT ANTARCTIC CONTINENT?

THE two expeditions that are about to start for the South Pole may be expected to throw light on the vexed question of the Antarctic continent, which is so strongly believed in by Sir John Murray and other equally eminent geographers. The plans of the two expeditions—one English and one German—are outlined in *Cosmos* (Paris, December 2) by M. Paul Combes, who expresses his belief that no adequate evidence of such a continent has yet been adduced, altho it may, for all that, be in existence. We translate the greater part of M. Combes's article below. Says the writer:

"The general physical phenomena of the globe depend largely on the local phenomena of the polar regions, and can be completely elucidated only when we have precise data regarding these latter.

"In the case of the North Pole, which is much more accessible than the South, this study is already considerably advanced. On the contrary, the Southern regions of the globe, because of the obstacles that they oppose to investigation, have been neglected, and the information that we possess about them is of the most rudimentary kind.

"It is to fill this void that the English and German Antarctic expeditions have been organized. The payment of their expenses is now guaranteed, their plans are formulated, and their *personnel* has been selected.

"The English expedition, following the so-called South American route, will proceed from the Shetlands southward to Alexander L. Land. There, at about latitude 70° S. and longitude 90° W., a first station will be established, if that is possible. Then, following the route, the expedition hopes to be able to establish on Cape Adair, on Victoria Land, a second station, whence an attempt will be made to get closer to the South Pole, and near which the chief scientific work of the expedition will be carried out.

"The German expedition will leave the Kerguelen Isles, situated in the Indian Ocean at latitude 50° S., longitude 70° E., which are open to navigation during the whole year. Thence, moving southwest, the expedition will reach a point on Wilkes Land, where a winter station adapted for systematic observations will be constructed. At the beginning of spring, an attempt will be made to advance on the ice, with sledges, in the direction of the magnetic pole. At the end of the season the little known shores of Wilkes Land will be explored perhaps as far as Victoria Land, the southernmost of known lands, discovered by Ross in 1842.

"Dr. von Drygalski, chief of the German expedition, thinks that the time could not have been better chosen for exploration in these high latitudes, because of the conditions that now obtain near the South Pole.

"It is known that there are great variations, from year to year, in the state of the ice in the Antarctic regions. Thus, while Captain Weddell, in 1823, starting from the New Orkneys, was able to advance without trouble as far as latitude 74°, and saw from that point an ice-free sea as far as the eye could reach, all the explorers who followed him have found before them an unbroken barrier long before they reached this point.

"Now, in 1891 and 1894 an unusual quantity of floating ice appeared in the South Atlantic, and then in the Indian Ocean from 1894-97, advancing each year toward the East. It has now reached the Kerguelen Isles, which are generally beyond the northern limits of floating ice. An examination of the ice shows

that it comes from terrestrial glaciers, which have broken up after years of adherence to the continent—a well-known phenomenon, which takes place at long intervals in the northern parts of the globe."

In consequence of the breaking up of these vast glaciers, M. Combes tells us, von Drygalski believes that it will be possible, for several years, to push much farther poleward than could have been done while so great a mass of coast ice was still in existence. What is the character of the land to which these great glaciers so long adhered? Sir John Murray believes that there is a single vast south-polar continent, and he has even drawn a chart of this continent, which is shown herewith. M. Combes says of the way in which Murray's map was made:

"His method was the simplest possible. It consisted in first marking on a map of the Antarctic regions all the points where land has been found, and in then joining these scattered frag-

MURRAY'S HYPOTHETICAL ANTARCTIC CONTINENT.

ments by a dotted line. Perhaps this method would have been a safe one if more land had been discovered in the south polar regions. But in Murray's map there is four times as much dotted as continuous line. This is giving to mere hypothesis a proportion that makes it seem rather improbable.

"Are there other arguments to justify this belief? The reader may judge for himself.

"What we know of the configuration and structure of icebergs in the austral regions, says Murray, seems to show that they are formed on an extended land surface, and that they then slide off into the sea. Ross sailed for nearly 500 kilometers [313 miles] along a great wall of ice, 48 to 60 meters [150 to 200 feet] high; near which soundings showed a depth of 240 to 720 meters [800 to 2,400 feet]. This was plainly the face of a great glacier in process of sliding downward, and ready to produce, at any point, one of the icebergs several miles long described by these travelers.

"All this is quite probable; but it does not justify Murray's conclusion that a single vast Antarctic continent extends around the Pole. . . .

"Most of the land discovered near the Antarctic circle is flat, and on a surface of this kind no great extent of glacier is necessary to make its face present a height like that seen by Ross. Greenland furnishes numerous examples. The argument from the length of the coast is therefore insufficient.

"Murray also brings up the nature of the rocks collected on Antarctic shores, which he regards as 'continental rocks'—I know not why."

These rocks, M. Combes tells us, are gneiss, granites, mica-

schist, quartz diorites, quartzites, and limestones, probably dropped to the ocean bed by icebergs and brought up by the drag-nets of the *Challenger* expedition. But similar specimens may be found on plenty of small islands. Fossils collected by Donald and Larsen show that the Antarctic lands once had a fine climate, but they do not, as has been asserted, prove anything with regard to the extent of these lands. M. Combes concludes:

"All this is not brought forward to combat Murray's hypothesis, but to show that the arguments that support it are insufficient. We really are at present very poorly off for knowledge about the importance, the configuration, and the nature of the Antarctic lands. We have seen only their coasts, and only portions of these; and no one knows whether the coast line is continuous, or whether there is only an archipelago.

"This is one of the problems that the approaching Antarctic expeditions will have to solve."—*Translation made for THE LITERARY DIGEST.*

A SANITARY TREE.

NOW that the United States is extending its realm into the tropics, any means of waging successful warfare upon malarial diseases, which, next to filth diseases, are the most frequent and destructive in tropical regions, becomes a subject of national interest. Dr. John Gifford, the founder of *The Forester*, writes, in the January number of that paper, of the high value of the eucalyptus as a sanitary aid. He refers not to the medicinal quality of its oil, nor to the mysterious influence in counteracting malaria which some persons attribute to its aromatic fragrance. Its chief efficacy, he thinks, is due to the fact that it promotes drainage, acting upon the soil like a powerful pump. What is most needed in fever districts, we are told, is drainage, and this can be obtained most quickly and economically by planting the eucalyptus. He writes:

"The cause of malarial fever is known. It is due to a minute ameboid organism which breeds in warm, stagnant, marshy places. Just how this is communicated to the human body is a question. Some say that the disease lurks in miasmatic vapors and that breathing the night air in certain places is sufficient; others claim that drinking-water is the vehicle, and others that mosquitoes carry it from the marshes and inoculate our blood. No matter how it reaches the human body, the indirect cause remains the same. Once eliminate the marsh-land and you deprive these pestiferous organisms, including the mosquito, of their breeding-place and thus indirectly reduce the amount of fever.

"The malarial condition of our South is mainly due to the ill-treatment of forest lands and the formation of stagnant marshes in consequence. It is a noteworthy fact that densely forested swamp regions, such as the Dismal Swamp of Virginia and North Carolina, are free from malaria and perfectly healthy, while the adjacent burnt-over pine and savanna lands are famous for their unhealthfulness. Just as the sanitary conditions of the Landes of France and the Italian Campagna were rendered healthy by tree growth, so is it possible to improve the sanitary condition of the southern United States and West Indies.

"Only reflect that the leaves of a medium-aged beech-tree if spread out would cover eight times the area that the growth in question occupied, and it will be quite apparent that even in the hardest down-pours almost one fifth of the water is intercepted by the foliage and thence flows slowly down the trunks or passes off in vapor. Add to this the immense quantities of water transpired by the leaves, often, as with the eucalyptus, several times the amount which falls on its surface in the form of rain.

"That the aromatic fragrance of the eucalyptus has some mysterious influence in preventing malaria is probably fiction, altho the oil has medicinal qualities; but it is true that every eucalyptus-tree is a powerful pump which is constantly at work sucking the water out of the soil in a degree which varies of course with the condition of the atmosphere."

The eucalyptus grows with remarkable speed, Dr. Gifford tells us, sometimes at the rate of ten feet a year. Its wood is almost

indestructible, and in appearance it is notably beautiful. Dr. Gifford closes with references to the beneficial effects of the eucalyptus on the health of Jamaica, Australia, and the Roman Campagna. In Australia, especially, the immunity of the country districts from malaria is attributed to its action.

HOME-MADE WINDMILLS IN NEBRASKA.

A NEW type of windmill has been evolved by the Nebraskan farmer. The home-made windmills of that State appear to be marvels of rustic engineering, so far as simplicity, cheapness, and perfect adaptability of means to end are concerned. These mills are described by Erwin Hinckley Barbour in *The Scientific American Supplement*, and a brief notice of the more extended article appears in *The Scientific American* (January 13). From this latter we quote the paragraphs that follow:

"To those who may be unfamiliar with these windmills they will be a revelation, and the importance of this movement inaugurated by the inventive farmers of Nebraska is made manifest, in that many acres of garden truck, fruit-land, and even farm-land are irrigated at a trifling expense. Stock is supplied with water, ranchmen and sheepherders are benefited, dairy products are increased and improved, and the comfort of the village and the rural home is often enhanced. The merits of these home-made mills have enjoyed such prompt recognition that they are going up daily, not to the detriment, however, of windmills which are made by regular manufacturers, but in addition to them."

Those who build these mills, Mr. Barbour tells us, are generally "the wealthy and more progressive among the older and well-established farmers, or else younger men just making a start, and not the roving, unsettled, or shiftless class." The mills may be used for the irrigation of the garden and for supplying the house, or put to work in various ways to save hand labor, such as running a grindstone, churning, working a feed-grinder, corn-sheller, the wood-saw, and other farm machinery. The mills cost on the average but four or five dollars, not in-

A MERRY-GO-ROUND WINDMILL, LINCOLN, NEBR.

cluding labor. They are usually put up at odd times and made out of material at hand. Some cost but \$1.50, and from this there is every gradation in price up to \$150, which will build an eight-horse-power mill, capable of grinding 200 to 300 bushels of grain per day. Mr. Barbour divides the mills into "Jumbos," "Merry-go-Rounds," "Battle Ax," "Holland," and "Mock Turbines." To quote again:

"The 'Jumbo,' or 'Go-devil,' as some call it, is very like an old-fashioned overshot wheel. They lend themselves readily to construction, being very simple in design, and they are very economical. . . . The efficiency of the Jumbo mills is low, but this is compensated for by the fact that they are comparatively inex-

pensive to build, for a good mill of this type can be built for \$3, and a better one for \$5. Some have been built large enough to irrigate ten acres of orchard. The smaller Jumbos, termed 'Baby Jumbos,' are very small mills. They are generally mounted on abandoned towers or upon buildings, while the larger mills of the

HOME-MADE "JUMBO" WINDMILL, LINCOLN, NEBR.

same class are set upon the ground and securely anchored there. They are all set so as to catch to best advantage the prevailing wind of the place, which is north and south in Nebraska.

"The construction of the Jumbo mill will be understood by reference to the above engraving, which shows one which was made at an expense of \$5. The sails are made of old coffee-sacks, and the cut-offs or wind-guards may be seen at either side. They are raised and lowered by pulley and rope. The dimensions are 13 feet long, 9 feet wide, and 13 feet high. This mill successfully irrigates a five-acre garden. The reservoir supplied by this mill is 150 feet long by 4 feet wide and 2 or 3 feet deep. The sliding doors may be raised or lowered so as to cut off more or less of the force of the wind from the fans, as is rendered necessary by winds of varying velocities. Sometimes these Jumbo windmills are built one north and south and the other east and west, so as to insure service whatever the direction of the wind.

"In the 'Merry-go-Round' mill is found another attempt at the construction of mills of unlimited size. These mills are rather complex in construction and are not put up by the farmer, but by a carpenter and at a considerable expense. Mounted upon towers like ordinary turbine mills of the manufacturer, they soon reach a size at which the wind can upset them, however well anchored. This has led to the towerless mills, which stand low upon the ground, and consequently are capable of a greater circumference. These mills consist of a number of fans revolving about a central axis. About the same axis usually revolves a semicircular hood, thus exposing half of the fans and shielding the other half, the shield running upon friction rollers. When the mills are to be thrown into gear, the hood simply revolves until it covers all the fans on the windward side."

To Save the Colorado Cliff Dwellings.—The famous cliff dwellings of the West, it appears, are in danger of destruction at the ruthless hands of amateur archeologists. A recent resolution, adopted in Denver by the League of Colorado Municipalities, calls on Congress to legislate for the protection of the cliff dwellings from relic-hunters. Says the *Denver Republican* (December 17):

"The first step toward the preservation of the ruins is their protection by national law. When this is done the promiscuous digging and unearthing of valuable pottery by thousands of tourists from every part of the country will be stopped. Later, the Government may take steps to have the ruins included in a national park, but, unless the protective legal steps are first taken, there will soon be no ruins to preserve. The worst effect of the visits of the relic-hunters is not so much in the carrying away of pottery as in the unscientific manner in which the dig-

ging is conducted. The masonry of the ancients is battered down and walls and ceilings are left in a crumbled mass, while rooms that have been sealed for years are opened to the destructive action of the outer air. Under scientific treatment the cliff dwellings could be so opened that their architecture would be preserved and they would be practically restored as they existed ages ago. The only way in which a crusade can be successfully waged against the destructive relic-hunter is by arousing public sentiment and by making Colorado's statesmen realize that the people are in earnest in their desire to preserve the cliff dwellings. Action has already been put off too long, and if the ruins are to yield their treasures of knowledge to future generations every influential body in the State should follow the lead of the League of Colorado Municipalities in demanding legislation by Congress."

CAN WIRELESS TELEGRAPHY REACH OVER THE OCEAN?

NOTHING is easier than to multiply a fact by any convenient factor and to assume that the result still represents a fact—if not realized, at any rate realizable. This is a most unsafe process. We are telephoning over thousand-mile circuits; but New York can yet call up neither London nor Honolulu. Marconi can send his wave messengers over distances measured by scores of miles; but we need not necessarily conclude that they will ever traverse thousands, or even hundreds. A protest is made by *The Electrical Review* (January 3) against some unjustified conclusions of this nature. It says:

"There has been much loose talk about the bending of the radiations, whatever may be their nature, that are used in wireless telegraphy, around obstacles and around the curvature of the earth's surface. Over the comparatively smooth and unobstructed surface of the sea it is certain that signals have been exchanged over a distance implying a bending of the electrical impulses about one and one-half degrees from a rectilinear course. From this premise certain investigators have jumped to the conclusion that sufficiently powerful electrical disturbances emanating from a wave-radiating source would bend around the curvature of the earth between this country and Europe. If this is possible it implies diverting the electrical impulses by nearly a right angle from their initial course. If they will turn through one right angle it is perfectly reasonable to suppose that they may be made to turn through two, three, or even four, which begins to look a little like an absurdity."

The writer thinks that we have no evidence that these influences travel as electric waves, with a wave-front capable of swerving when it meets an obstacle. He goes on to say:

"In all the wireless-telegraph work that has been done so far the vertical elements of the sending and receiving circuits have been approximately parallel, or in the most favorable position for mutual electromagnetic induction. Is not a perfectly sufficient explanation of the actions noticed found in ordinary induction? When currents rush up and down in a vertical wire the whole surrounding neighborhood is filled with complex surges of magnetic potential. A parallel wire receiving them exhibits electromotive forces corresponding exactly to their movement with relation to it. Now it is, of course, true that equipotential surfaces of magnetic potential moving out from a current-carrying wire are, in a sense, wave fronts, but they are certainly not what are commonly called electric waves or Hertz waves. They fill the whole of space, theoretically speaking, except where conducting substances exist, and it is difficult to screen an object from them—to form an electromagnetic shadow—except by actually enclosing it in a good conductor. Hence, to argue that a dome of sea-water, requiring the influence to bend only about one or two degrees, means the possibility of transatlantic wireless telegraphy seems meaningless, because if actual electric waves of the Hertzian variety are in question the deduction is on too slender a premise, and if electromagnetic induction is the explanation, vertical wires on the two sides of the Atlantic would be neatly perpendicular to one another, or in the least favorable position. It seems worth while for some one to try the transatlantic experiment and set the whole matter at rest."

ELECTRICITY AS A DUTIABLE PRODUCT.

A RECENT decision of the German courts that theft of the electric current could not be punished as such, because electricity, not being a material substance, could not be stolen, was recently noted in these columns. A similar question has now come up in our own country. The Ontario Power Company at Niagara Falls has of late been extending its lines into this country, and, as the Niagara Falls Power Company, whose plant is just across the river on American soil, does not desire to see American machinery operated by Canadian power, it has claimed that currents brought across from Canada must be made to pay duty. Says *Electricity* (January 3), in a leading editorial on the subject:

"In a communication to the Treasury Department, officials of the Niagara Falls Power Company claim that inasmuch as the electric current is a thing of value, bought and sold, and that since it comes into actual competition with an American industry by reason of the extension of the lines of the Canadian company to as many points as possible in the United States, and the selling of its light and power to as many customers as it can get, it should be made subject to duty.

"On the other hand, the Ontario Company declares that the electric current can not be regarded as an 'article' within the meaning of the tariff law, despite the representation of the Niagara Company that electricity is a thing that can be measured as accurately as potatoes or wheat or cotton cloth."

This is not the first time that the question has been raised, altho it has never been brought up so prominently before. To quote again:

"Several years ago a letter was received by the Treasury Department from a resident of Watertown, N. Y., in which it was stated that the writer had obtained a concession to build and operate an electric-power plant on the Canadian side of the Niagara Falls, and inquiring if in the event of the current being transmitted across the border tariff duty would be imposed. At that time the Assistant Secretary of the Treasury placed himself on record as stating that no tariff charges would be assessed. Now, however, the Treasury Department is said to be inclined to take a different view of the matter, but it has submitted the question to several leading collectors of customs in various parts of the country in order to secure their ideas on the subject. If it is finally decided that the electric current should be assessed, it would be at 20 per cent. *ad valorem* under the paragraph for unenumerated manufactured articles."

The Washington correspondent of *The Western Electrician* (December 30) quotes a case that may have some legal bearing on the question. He says:

"Some years ago a similar measure was proposed in connection with natural gas piped across from the Canadian side, but it was upset by the decision of the board of general appraisers, which maintained that gas was not an 'article,' which decision was upheld by the Supreme Court of the United States; and the Government is now refunding money to the gas company on duties that were assessed on natural gas by a collector during the early part of the present year."

The conclusion of *Electricity* in the matter is as follows:

"The simplest way out of the difficulty would be for the Treasury Department to adhere to its original decision not to levy an assessment on electric current, for in our opinion the Ontario Power Company will have difficulty enough in meeting the rates of the Niagara Falls Power Company on United States territory without it being necessary to protect the American company by means of a 20-per-cent. tax imposed on its rival."

How to Catch Cold.—The various ways in which a cold may be brought on are thus described by Dr. J. H. Kellogg in *Good Health*, December: "A little knife-blade of air blowing in through a crack in a window, upon some part of the body, will chill that part, and the blood-vessels of that region will become contracted, affecting, somewhere in the interior of the body, an area in reflex relation with this portion of the surface of the body.

For instance, the blood-vessels of the skin of the top of the shoulders and the chest are associated with the blood-vessels of the lungs, so that whatever happens to the blood-vessels of the skin of the shoulders and chest happens also to the blood-vessels of the lungs. If there is a contraction of the blood-vessels of the back of the neck, there will be a contraction of the blood-vessels of the nose and throat, and if there is a contraction of the blood-vessels of the top of the shoulders and the shoulder-blades, there will also be a contraction of the blood-vessels of the lungs. When the influence of the cold is continued, this contraction is followed by congestion. When one puts his hands into cold water for a few minutes, they are first pale, and then red. This is reaction. The longer the application and the more intense the degree of cold, the greater will be the contraction and the congestion. So if the back of the neck is exposed for a long time to the influence of cold, one is likely to have a cold in the nose and throat; if the shoulder-blades and the tops of the shoulders are exposed, one is likely to take cold in the lungs, and suffer from congestion of the lungs. If the cold is long continued, it may cause not only a congestion but an inflammation of the nose or the lungs. So, if the bottoms of the feet become wet or chilled, a weakness of the bladder may result if there has ever been a trouble there; or a weakness of the stomach, if there has been a catarrh of that organ."

A New Cure for Alcoholism?—These are the days of serums. The latest is an anti-alcoholic serum said to have been devised by two French physicians, Dr. Sappelier and Dr. Thébaud. It is reported in *The Herald* (New York, December 27) that, in a paper just read before the Paris Academy of Medicine, these gentlemen describe the preparation of such a serum extracted from the veins of a horse primarily rendered alcoholic by artificial means. "It appears," the report goes on to say, "that the serum confers on dipsomaniacs an unconquerable distaste for alcoholic drinks." Commenting on this report, the *Hartford Times* says in its editorial column: "It would appear that this new medicine may be administered to a person without his knowledge, and in that case many a jolly toper may hereafter discover, to his vast surprise, that his incessant desire to guzzle alcoholic liquor has left him. . . . Such a cure as that announced in the cable despatches from Paris should put an end to the gold-cure business, of which we hear little in these days, but which still flourishes to a considerable extent. However, it is possible that the discoverers of the new serum may keep the exact method of preparing it a secret, and it is by no means impossible that the gold-cure men may be smart enough to obtain control of it." The medical journals have not yet reported or noticed the new serum.

Gas Mantles of Artificial Silk.—Artificial silk has found an unexpected use, according to a note in *Cosmos* (December 30). With the collodion that is to be drawn out into threads are mixed the salts of rare earths, and with the resulting threads are woven mantles for incandescent gas-burners. "The artificial silk industry," the note goes on to say, "is becoming more extensive daily. The factory at Besançon turns out 300 kilograms [660 pounds] a week, and can not supply the demand. Of course this does not all go to make incandescent mantles. This factory is about to be enlarged, and soon after the opening of the present year its production will be nearly 1,000 kilograms [2,200 pounds] a day. At Sprietenbach, a factory is now delivering 270 kilograms [594 pounds] daily, and the approaching opening of new factories in Belgium and Germany is announced."—*Translation made for THE LITERARY DIGEST.*

PROF. H. A. HOWE, of the University of Denver, writes us that the statement concerning his meteoric observations at Denver, quoted in THE LITERARY DIGEST of December 2 from *The Scientific American*, is incorrect. The quotation ran as follows: "Professor Howe, of the University of Denver, reported that he counted 38 Leonids besides a large number of meteors in other portions of the sky." Professor Howe says: "The facts are that on the morning of November 16th, I was busied with photographic observations, while the counting was done by a number of students who were under the direction of Prof. E. B. T. Spencer. The number of Leonids counted was 204, of which, however, a number must have been duplicates, so that 150 may be a fair estimate of the number of separate ones recorded. The work was considerably hindered by clouds, as also on the nights of November 15, 16, and 17, on which the writer saw 10 Leonids."

THE RELIGIOUS WORLD.

PRESENT DRIFT OF BIBLE STUDY.

THE impression prevails in England and the United States that the alleged overthrow of the Tübingen theory on the Continent has practically brought criticism of the New Testament, particularly the Gospels, to a standstill. This, however, is an error, according to the Rev. Dr. James Stalker. Even orthodox German writers do not hesitate to characterize a saying of Christ as unauthentic if it does not square with their own opinions. Weiss, well known as a conservative critic, has formulated a theory of the Gospels that has a scale of ascending (and descending) values to the several "documents" in the four evangelists; and Holtzmann, another conservative writer, author of the "Hand Commentor," a book of world-wide and commanding influence, ascribes the incidents of Gospel history to various legendary origins. Says Dr. Stalker (in *The Contemporary Review*, January):

"Even St. Mark, which to the ordinary eye seems to bear the stamp of a very simple and unique authorship, is not now allowed to be all of a piece, but has to be decomposed by a critical process and rearranged before it can be accepted as a correct representation of the events. St. Matthew and St. Luke are based on an earlier document, which can be reconstructed in its entirety, and the testimony of this primitive Gospel has to be carefully distinguished from the magnified and amplified contents of the canonical books. Even in St. John, which most readers would declare to possess the literary unity and perfection of a crystal, altho a Johannine element is now recognized, there is discovered also the work of an editor, who has arranged and altered the whole in accordance with peculiar ideas of his own. It is more than possible that within the next decade the Gospels may be issued from the press printed in all the colors of the rainbow, to indicate the different documents of which they are composed, as is happening to the books of the Old Testament at the present hour. The materials already exist in abundance for such an effort; and only a bold hand is required to appropriate them.

"The total result of the critical processes, as they are usually applied on the Continent, is undoubtedly to attenuate the figure of Christ. His mightiest works and grandest sayings are taken from Him; and what is left reduces Him to a size very different from that in which He appears to the faith of the church. It is not a question whether this or that saying of His may be more correctly reported in one Gospel than in another, or whether the details of this or that miracle may have been modified by transmission from mouth to mouth, but whether the real Christ is He who was born of a virgin and rose from the dead, who raised Lazarus from the grave and walked on the waters, who said, 'All power is given unto me in heaven and on earth,' and, 'Lo, I am with you alway, even unto the end of the world,' who gave His life for the sin of the world and will be the Judge of men at the last day; or whether Jesus was merely the son of Joseph and Mary, merely healed a few sick people, mainly of nervous disorders, by the influence of His imposing personality and perhaps with the help of some simple remedies of which He possessed the secret; merely rose from the dead in the same sense in which all souls of men, at the death of the body, pass to God, and can claim the worship of the world merely by a title a little higher than that under which, in the Roman Catholic Church, worship is rendered to the saints.

"That the battle of faith in the Gospels will have to be fought over again in the not distant future—and that under conditions extremely different from any under which it has ever been fought in this country before—I have no doubt whatever. But a great deal will depend on whether it will be have to be fought soon or not. If the constructive work on the mind of Christ, which I have attempted to outline, comes first, there will be erected a four-square citadel of faith which will be the best defense against unbelief; because the demonstration of the unity and coherence of all the main masses of Christ's thought is the best antidote to the disposition to niggle at the details. But the premature withdrawal of attention from the substance and the concentration of it on the form of His words would land us in an era of subjec-

tivity, when the boldest and the most arbitrary would command the greatest attention, and the most sacred elements of our faith—the words of the Son of God—would be subjected, under the eyes of the public, to the processes of mangling and permutation which are painful enough when applied to the commoner parts of Scripture, without the control of a coherent and well-established conception of Christ's teaching as a whole. These things are, however, on the knees of the gods; the church must meet the questions which are providentially submitted to her as they arise, and she has always much both to learn and to unlearn. The literary origin of the Gospels is a problem of almost infinite intricacy which has not yet by any means been solved, and, till it is solved, she can not, of course, know how far her opinions may require to be modified."

JAMES MARTINEAU: A PROPHET OF NON-SECTARIANISM.

RELIGION in the widest sense of the word loses an eminent confessor in the death of Dr. James Martineau at the patriarchal age of ninety-five. For the greater part of the century, Dr. Martineau has stood for a conception of religion which

DR. JAMES MARTINEAU.

he preferred not to limit by the use of any doctrinal names or formulas. He was called a Unitarian, but he was unwilling to ally himself formally with any organization carrying a theological distinction in its name. In responding, upon his eightieth birthday, to the greetings of the National Conference of English Unitarians, he declared his belief that "the true religious life supplies grounds of sympathy and association deeper and wiser than can be expressed by any doctrinal names or formulas, and that free play can never be given to these spiritual affinities till all stipulation, direct or implied, for specified agreement in theological opinion, is discarded from the bases of church union." For sixty years he was a contributor to the leading reviews, and his keenness of intellect and width of learning gave him a place beside his contemporaries—Mill, Darwin, Spencer, Newman, and Carlyle—in the discussion of the great ethical, philosophical, and religious controversies of the century.

James Martineau was born in Norwich, England, on April 21, 1805, and after studying at Manchester New College and the Uni-

tarian Seminary at York, he held a Unitarian charge at Liverpool for twenty-five years. It was his "Rationale of Religious Belief," published in 1836, which first shocked the conservative school of religious thought. From 1840 to 1885 he was, in succession, professor and principal at Manchester New College. It was not until the latter year that he published his "Types of Ethical Theory," regarded by many as the most able discussion of philosophical ethics of the century. In 1890 he published his greatest work, "The Seat of Authority in Religion."

The *New York Evening Post* (January 13) thus speaks of the latter half of Dr. Martineau's career as a philosopher, preacher, and man:

"All Martineau's energy in matters philosophical was bent to the destruction of those theories [necessarianism and empiricism] which had been the glory of his youth. He had other than dead men to fight. Hamilton and Mantell and Mill and Spencer defended the cause which he had abandoned. The Neo-Kantians and Neo-Hegelians had not yet sprung up, and, when they had, his way was not their way. He was often very much alone. He fought a good fight and he experienced the joy of battle. But the uncommonly well furnished in science at the start, it is impossible to read his 'Study of Religion' and not feel that his instinctive opposition to Darwin and the evolutionists in general prevented his appreciation of the significance of their work. The easygoing materialism of Tyndall found in him a critic which obliged its author to modify it so much that it surrendered almost everything that Martineau desired.

"But whatever the worth of Martineau's philosophical writings, it was as a preacher of morals and religion that he did his most valuable work. The quality of his pulpit work has ample illustration in the two series of 'Endeavors after the Christian Life,' published in 1843 and 1847, and the two series, 'Hours of Thoughts on Sacred Things,' published in 1876 and 1880. The sermons in these four volumes are very different from the ephemeral products of ordinary pulpit eloquence. Their style is extremely beautiful, tho sometimes too ornate and not without defects in its articulation. It was as natural for Martineau to express himself in simile and metaphor as it was for him to breathe. These sermons have all the ethical intensity of Newman's without his paradoxes. They are as religious as they are ethical, summoning men to the worship of a living infinite Moral Ideal, the postulate and the necessity of our moral life. The 'Hours of Thought' suffer in comparison with the 'Endeavors' as more controversial and not free from the irritation of one who feels himself to be fighting a losing battle. In all his later writings Martineau was on the defensive, and he is less invigorating and inspiring in them than in the cheerfully aggressive writings of a less ripe manhood.

"Personally, he was a man of great refinement, delicacy, and charm. There was a faultless neatness in his dress and in the methods of his work. He had the look of an ascetic in his face and form. His frail appearance masked a vigorous constitution, and at eighty-three he could climb any mountain in Scotland, where he made his summer home. Among his friends he counted some of the wisest and best men of England and America."

The *New York Tribune* (January 13) says that it is not as a philosopher that Dr. Martineau will be remembered, but as "a prophet of what may be called rational religion." His religion was preeminently a human religion, yet it was not emptied of its divine element:

"Quite the contrary. But the divine element in religion was to him very much akin to the divine element in nature, something that always existed and always will exist, rather than a factitious relationship established at some given point of time. His belief in God was a positive enthusiasm. So profound, indeed, was it that it seemed to him sacrilegious to limit the divine Being to a trumpety relationship with some special race or some particular church. He would have had the church include in her membership all men of every creed who unfeignedly loved God and tried to do His will. Yet this great thinker, whose life was lived in the very spirit of Christian saintship, was in the eyes of official England only the minister of an obscure heretical sect, and spent many years of his life preaching to a handful of people in a dingy chapel in a back street of London.

"Nevertheless, his life has not been in vain. Institutions die with difficulty even in this age of individualism. Dr Martineau himself did not expect any realignment of ecclesiastical organizations in his day, but his teachings have had a profound effect on the thought of organized Christianity, sweetening, humanizing, and, if we may say so, Christianizing it. So that, while the old forms are still retained, and perhaps wisely, the spirit animating them is less mechanical and less intent on merely perpetuating the ecclesiastical machine as the supreme function of religion. This much he has done, and to-day his memory is cherished by a vast multitude of men and women who, according to the strict reading of their creed, would have to think of him as cast into the outer darkness of spiritual death."

THE FUTURE OF PRESBYTERIANISM.

IN the opinion of many leading men in the Presbyterian Church, a study of the recent statistics of that denomination furnishes food for some serious reflections as to the future of Presbyterianism in America. The *New York Observer* (December 28) devotes an article to this subject, taking the ground that it behooves Presbyterians to be wakeful and alert, not to rely too much on the past, but to use new armor and new weapons in meeting the changed conditions of the day. It says:

"The number of persons added to the entire church on examination has decreased by regular steps from 75,000 in 1894 to 48,000 last year. The number added by certificate has decreased with like regularity in the same time from 42,000 to 35,000. The net gain in membership has shown an even more marked decrease; in 1895, the net gain reported to the Assembly was 27,000; in 1896, 21,000; in 1897, 17,000; in 1898, 15,000; in 1899, only 8,000. This last was a gain of five sixths of one per cent. of the previous membership; four years ago the net gain was three per cent.

"Last year the strong synod of New Jersey suffered a net loss in membership of 423, and in two years' time it has made the pathetic increase of 23 persons. The great synod of New York made a net gain last year of 48 souls, just four per month, but the year before it lost more than it gained last year; and it is therefore smaller by 885 than it was two years ago. The synod of Indiana suffered a loss last year of 132, and in three years has gone back 1,124 in membership. The synods of Wisconsin and Nebraska, situated in the growing West tho they are, both fell off in membership last year. The synod of Pennsylvania, the largest in the church, presents a somewhat better record, for it reports a net gain of 2,203, and yet that is only a trifle over one per cent., and the presbytery of Philadelphia is one of five presbyteries within its bounds to report a decrease.

"A study of our Sabbath-school statistics is equally suggestive. A year ago last May, the General Assembly commenced the Twentieth Century Movement, and strongly urged presbyteries and churches to adopt it. This movement contemplated the addition of 500,000 scholars to our rolls before April, 1901, that is, in three years' time. At the end of the first year our Sabbath-school membership had decreased, in spite of the indefatigable labors of the Rev. Dr. Worden, secretary of the Sabbath-school Board, by 4,935. How long, at that rate, will it take to accomplish the coveted 500,000 increase? Our surprise and our sorrow are increased when we note that the synod of Pennsylvania contributes one fourth of this loss, and that the city of Philadelphia shows a balance on the wrong side of the account. There is something startling in the fact that Philadelphia, the very citadel of Presbyterianism, should show a net loss in the same year both in church and in Sabbath-school membership, and that the very center from which has sounded forth the trumpet call of progress to our Sabbath-schools throughout the land should itself fail to respond to that call.

"It is impossible to find sufficient explanation for these remarkable facts either in the country's excitement over war, or in the supposition of a general purging of the rolls, or in the hard times that have prevailed. The condition of war could not account for a decline dating from five years ago; the most thorough purging of the rolls would not diminish the number added to the church; and hard times have been wont to turn men's souls toward religion, however much they may straiten their pocket-

books. Exceptional causes would account for particular cases, but the general conspiracy of so many facts extending over such a period of time can not be laid to chance, not to anything but a diminished vitality in the church. If it is the license of thought in matters religious, and the general secularity of the time, that are at fault, then it is no time to be calling the roll of our dead heroes and reciting their great achievements; it is the time to be alert and aggressive students of present problems, and wise and prompt in meeting new emergencies with new weapons. It will not do to put on the armor of Saul, glorious tho its record be; we must go into the conflict with such armor and such arms as the wisdom of the hour directs."

DISCOVERY OF THE BIRTHPLACE AND BONES OF BUDDHA.

THE lieutenant-governor of the Northwestern provinces of India in his recent annual report gives a most interesting description of the discovery of the authentic remains of Gautama Buddha in Northern India. According to all traditions, Buddha was born at Kapilavastu, capital of the Sakya clan, of which his father was prince or chief. At Buddha's death, a portion of the sacred relics was entrusted to the Sakyas; but for many centuries even the site of Kapilavastu, which had been destroyed by a rival clan, was a subject of dispute. During the winter of 1897-98, however, Dr. A. Führer, archeological surveyor to the Indian Government, began a series of excavations upon the spot best supported by tradition, in the Terai, a swamp that stretches for many hundreds of miles along the foothills of the mighty Himalayas. We quote the following account of the discovery from *Bibliotheca* (January):

"Attention was devoted to two spots, both of which are indicated by the detailed description of Hsien Tsiang, the Pausanias of ancient India. He states that several thousand tombs of the Sakyas, who fell in battle in defense of their city, were to be seen in his day outside the northwestern gate. Here Dr. Führer began digging, and was immediately rewarded with the discovery of a large number of small *stupas*, or relic shrines, arranged in symmetrical lines around a large central *stupa*. All of these *stupas* are square, which fact at once distinguishes them from any others hitherto known. It is confidently asserted that they are the oldest monuments yet unearthed in India. They are built of large, well-burnt bricks. The large *stupa* measured 43 feet 6 inches each side. On the level of the foundations, exactly in the true center, the relic chamber was reached, which contained a cylindrical red earthenware casket, with an ornamented copper lid. Inside the casket were found several small pieces of human bone, and a series of the precious things usually placed with the relics of a great man—such as two heavy triangular bits of gold and silver, two small images of Nagas (snake gods) worked in gold, pieces of pale greenish crystal, a garnet and a ruby, besides some grains of rice and fragments of white and black talc. Adjoining this *stupa* were disclosed the solid foundation walls of a large monastery, built in the form of a cross, 79 feet from north to south and 52 feet from east to west. The smaller *stupas* vary in size from 19 feet square to less than 8 feet square. Seventeen of them were opened, each of which contained the ashes of a Sakya warrior. In this case the relic casket consisted of a beautifully worked bronze or copper urn, enclosed within a brick chamber. The bricks were impressed with well-executed designs, showing either the sacred lotus, the *svastika*, the trident, and the thunderbolt, or the military weapons of the Sakya warriors—swords, daggers, javelins, battle-axes, shields, and standards.

"The second spot excavated was also pointed out by Hsien Tsiang. Outside the eastern gate he says that there was a Saiva temple, with an image of the tutelary goddess of the Sakyas, sculptured as if 'rising in a bent position.' This temple and this image were duly found as described. The site of Kapilavastu, the birthplace of Gautama Buddha, is thus satisfactorily determined.

"But this is not all. The actual bones of the Buddha, given on his death to his Sakya kinsmen, have also been found. Dr.

Führer visited the spot and reports upon it; but the credit of this discovery is due to Mr. W. C. Peppé, a European gentleman, who owns an estate in the adjoining district of Basti. Here, only twelve miles from the ruins of Kapilavastu, rises an immense mound, more than 20 feet high and 116 feet in diameter. On excavation, this also was found to be a *stupa* of solid brick, pierced by a narrow shaft or well. The relic chamber was not in the center of the structure, but 31 inches to the east of it. It consisted of a huge chest, 4 feet 4 inches long, by 2 feet 8 inches wide, and 2 feet 2 inches high, made out of a block of white sandstone. Inside were four urns of mottled soapstone, or steatite; an exquisitely finished casket of rock crystal, with a fish handle; and the remains of a wooden box, which had contained bones. The urns were filled with a marvelous collection of gold-leaf stars and squares with the impression of a lion (the emblem of the Sakyas), thin-plated gold images of Mahamya, seed-pearls, star-shaped beads of white and pink coral, and various minute leaves delicately wrought in cornelian, crystal, agate, beryl, topaz, garnet, and amethyst. More important than all, one of the urns has an inscription scratched around the lid, in cursive characters of a pre-Asoka type, which is thus read by the first authority on the subject, the late Georg Bühler:

"This relic-shrine of the Lord Buddha [is the gift] of the Sakyas, the brethren of the Distinguished One, in association with their sisters, their children, and their wives."

"Mr. Peppé generously presented the stone chest, and the greater part of the objects contained in it, to the Indian Museum at Calcutta. And the Government of India has offered the relics to the King of Siam, as the royal representative of modern Buddhism."

IS IMMORTALITY CONDITIONAL?

THE doctrine of conditional immortality, or the ultimate annihilation of the hopelessly erring, has obtained considerable vogue in recent years, and has commended itself especially to a class of Christian theologians who have been unwilling to believe in a doctrine of unending torture, yet who have been unable to believe that all beings will eventually be reclaimed from evil. It is held, in connection with the Christian doctrine of the Fall, that sin has made man mortal, and that an immortal life is a gift of God, "conveyed to mankind only through the channels of the incarnation." The leading exponent of this doctrine in Germany is Richard Rothe; in England, Dr. Edward White; in America, Dr. Hudson. For some reason the canny Scotch will have none of it, and follow the lead of that ebullient North Briton who, in the midst of a lecture upon "Eternal Hope," by Dean Farrar, cried out wrathfully from the gallery: "That's all weel enough, but gie me back my *Hell*!" The Rev. David Reid, of Calcutta, sides with the Scotch and prefers his hell to annihilation. In *The Homiletic Review* (January), he proceeds to assail the doctrine of conditional immortality by three lines of argument. In the first place, he says, it is only a narrow literalism which can find any Scriptural support for the doctrine:

"When St. Paul speaks of the disobedient as suffering 'eternal destruction from the face of the Lord,' he means not their annihilation, but their ruin and their deprivation of all that makes for well-being, or for 'life' in the full sense of the word. Elsewhere the apostle speaks of 'sudden destruction' coming upon the wicked at the Day of Judgment, and there, as the annihilationists would themselves admit, the word does not mean annihilation, for annihilation on their own showing does not come until after a period of punishment.

"Even if the whole question were to be decided by the meaning of particular texts and phrases, the decision could hardly be in favor of the annihilationists. Not only do these texts and phrases, on which they lay stress, fail to bear out their contention, but there are others which point in a wholly contrary direction—e.g., 'eternal punishment,' 'an eternal sin,' 'the wrath of God abideth on him.'"

Mr. Reid says, further, that the doctrine implies an unworthy conception of man, for it puts him on the plane of the beasts.

which perish. Neither does it imply a worthier conception of God:

"According to the doctrine of conditional immortality, all except those who are saved through Him must regard Christ's coming to the world as a positive curse. For, according to this doctrine, if Christ and His work of redemption had not intervened, men, all men, godly and ungodly alike, would, as the result of Adam's sin, have perished at death. The resurrection, the judgment, the time of punishment for the ungodly after death, are all the direct consequence of Christ's intervention. Through the provisions of the plan of salvation, it is held, all are to be brought forth from their graves. Christ, as Dr. Salmond points out, becomes on this theory the very Author of the sufferings of the lost. Had there been no incarnation, sinful men, after a brief life of limited responsibility here, would have past at once into the non-existence which is of their nature. . . .

"Immortality is not conditional. It does not depend on whether we accept Christ or reject Christ. It rests not with us to have it or not have it. We shall have it whether we will or no. And the great question for every one of us personally to decide is, whether it shall be a boon to us or a curse; whether it shall be an immortality of well-being and joy and peace in the presence of God, or an immortality of misery and loss in banishment and alienation from God."

WAS MARTIN LUTHER THE "FATHER OF MORMONISM"?

A RECENT Roman Catholic writer thinks that modern Protestants are inconsistent in their spectacular hostility to Mr. Roberts and the doctrine of polygamy. They venerate Luther and the fathers of the Protestant Reformation; yet these very fathers, he asserts, preached a doctrine not appreciatively different from that of the Latter-Day Saints upon this point. "Civil legislation," he says, "has effected locally a check upon simultaneous bigamy, but the evil is to-day by no means confined to Utah. Its emissaries are to be found in almost every State of the Union zealously planting the seeds of Mormonism, as is ignorantly supposed, but, in truth, the seeds of Lutheranism in one of its most destructive phases on society." The writer asserts that Martin Luther "is the father of Mormonism," and that neither Joseph Smith nor Brigham Young can make good that claim. In support of this assertion, he quotes (in *The Catholic Mirror*, December 23) from the original Latin of Luther's collected works (pp. 119, 123, Württemberg edition), and continues:

"Here we have the principle of divorce, obsolete and forgotten in the history of Christianity for fifteen centuries, once more brought to light and promulgated by the apostle of the Reformation in Germany, before Cranmer started the divorce demon in England. But Luther and his coadjutors in the dissemination of the pure (!) gospel of the Reformation did not confine themselves to the trifle of divorce in their practical sympathy with aspirants to the gratification of unbridled lust. Philip, Landgrave of Hesse, appealed to Luther, Melancthon, and other minor apostles of the Reformation in Germany to oblige him with permission to have a second wife *simultaneously with his lawful wife*. The grounds given by the applicant were, that he had never loved his wife; that he had not been faithful to her more than three weeks; and that he could not abandon the dissolute life in which he lived. For these reasons he begs a dispensation to have two wives. In their answer these eight patriarchs of the Reformation reply thus:

"But if your highness be fully resolved to take another wife, we judge that it ought to be done secretly; that is, that none but the lady herself and a few trusty persons obliged to secrecy under the seal of confession, know anything of the matter. Hence it will not be attended with any important contradiction or scandal. For it is not unusual for princes to keep mistresses; and altho the vulgar should be scandalized, the more prudent would understand *this moderate method of life and prefer it to adultery, or other brutal and foul actions*. There is no need of being much concerned for what men will say, provided all go right with conscience. Your highness hath, therefore, not only the approbation of us all, in a case of necessity, but also the consideration we have made hereupon. We are most ready to serve your high-

ness. Dated at Wittenberg, the Wednesday after the feast of St. Nicholas, 1539.

'MARTIN LUTHER,	'ADAM,
'PHILIP MELANCTHON,	'JOHN LENINGUE,
'MARTIN BUCER,	'JUSTICE WINFORTE,
'ANTHONY CORVIN,	'DIONYSIUS MELENTHIER.'

"Our fellow citizens of the United States will find in the above precious documents the true inwardness of 'the Apostle of the Reformation' and his equally zealous *confrères* in introducing into Christianity, after an absence of fifteen full centuries, the doctrine of polygamy simultaneous (Mormonism) and consecutive polygamy (divorce)."

The Protestant argument in favor of divorce was given in *THE LITERARY DIGEST* (June 10, August 26, 1899).

A "Heresy" Case in Boston University.—The case of Professor Mitchell, which has been causing some stir in Methodist circles, appears to have proved so far a veritable boomerang for the nine undergraduate students of the Boston University who drew up a series of charges of heretical teaching and proposed to have Dr. Mitchell removed from his chair. Says *The Independent* (January 18):

"The amusing nature of the charges of heretical teaching, brought by nine theological students in Boston University against the teaching of Professor Mitchell, is exposed in *Zion's Herald* [Meth. Episc.]. Their first charge was that Professor Mitchell 'denies the omniscience of Christ.' What he denied was His omniscience when the Gospels declared that He was increasing in wisdom and knew not the day and the hour of the end of the world. Pope's Compendium also declares that there was during Christ's humiliation a 'self-abnegation of divine attributes' until after the ascension. The second charge was that, according to Professor Mitchell, 'belief in the deity of Jesus Christ is not necessary to salvation.' John Wesley was guilty of the same heresy. The third charge is that the work of redemption might not have proven a failure if the Jews had repented and accepted Him as their true Messiah instead of crucifying Him; as if there was no other way in which God could possibly save a human sinner except by these sinners first having slain our Lord. *Zion's Herald* declares that 'no hyper-Calvinistic or Pantheistic fatalist ever taught a doctrine more shockingly un-Methodistic than this,' and that these students are 'too heterodox to be tolerated in a soundly Methodist theological seminary.' They withdrew after bringing charges, and the university has refused them honorable dismissal to other seminaries. They were coached to their action by some older preachers. The faculty and the trustees have unanimously supported Professor Mitchell."

RELIGIOUS NOTES.

CONTRARY to the prevalent notion, religious works sell to a far greater extent than does fiction. No novel, *The Cruise* remarks, has ever reached the sale of "The Imitation of Christ," or of Dr. Sheldon's "In His Steps"; and a hundred million copies of Mr. Spurgeon's sermons are said to have been sold. Even now his publishers sell twenty thousand copies every week.

ONE of the many testimonies to the growing spirit of good will among those of different religious beliefs is an editorial in *The Hebrew Standard* on the death of the famous Brooklyn priest, Father Sylvester Malone. The article is enclosed in mourning leads, and refers to him as "a noble American," a "true priest of the Church Universal," who "has gone to his reward, a faithful servant of God and the kindly helper of his fellow man."

A CURIOUS condition of affairs lately existed in the town of Dalton-le-Dale, near Sunderland, England. The discovery was made by the authorities that all the marriages performed in the old parish since 1877 are of doubtful legality. It appears that upon the completion of a new church in that year, all the privileges were transferred from the old church to the new, and it was only recently learned that thus a necessary link in the sacred legal abracadabra had fallen out. A special act of Parliament is proposed to remedy this shocking desideratum.

THE past year has not been a good one for the Baptist, Methodist, Presbyterian, and Reformed churches in New York. All of them, according to their own records, have lost in the membership of both church and Sunday-school. On the other hand the Protestant Episcopal Church, tho it has lost Dr. De Costa, has made larger gains than any other religious organization. Its total advance in the borough of Manhattan, according to the *New York Evening Post* (January 6), was 4,870. The Lutheran Church also gained in all the boroughs of the city. This would apparently indicate—what has often been claimed—that the liturgic churches are more adapted to meet the needs or the tastes of urban congregations than are the non-liturgic bodies.

FOREIGN TOPICS.

DELAGOA BAY AND CONTRABAND OF WAR.

THE Berlin *Lokal Anzeiger*, which now and then makes an effort to emulate real "yellow" journals, claims to have discovered the text of that much-mentioned secret treaty regarding the partitioning of Portugal's colonial possessions between Great Britain and Germany. Officially it is announced that the treaty is still secret. The semi-official *Hamburg Correspondent*, however, publishes the following:

"1. The treaty will not come into force except under certain very closely defined circumstances. These circumstances depend entirely upon the development of affairs in Portugal. If the Government and the Parliament at Lisbon agree that Portuguese finances could best be balanced by the sale of some colonies, England and Germany will obtain them, having already agreed upon the division, to prevent quarrels. The time, however, has to be determined by Portugal.

"2. Only the African, especially the East African, possessions of Portugal are mentioned. That the West African colonies will later be specified is probable. But the treaty contains not a single stipulation by which Germany has lost her freedom of action with regard to the future of Egypt, Asia Minor, or China.

"3. Germany will obtain the land to the south of her East African possessions as far as the Zambesi. England will have the refusal of Delagoa Bay.

"4. The treaty has been confidentially referred to the St. Petersburg cabinet. Russia declares that it contains nothing at variance with her interests."

So far Portugal does not seem to be in a hurry. On the contrary, in the speech from the throne, mention is made of the successful expedition against the rebellious tribes of Mozambique, "which proves that the nation which has opened this region to civilization is also able to hold and defend its possessions." The best-informed European papers agree that the Portuguese Government could not at the present time part with the last vestiges of Portugal's former greatness, without incurring the danger of a serious rebellion. But Portugal is in a difficult position, as her territory is the only neutral one bordering on the South African Republic, and England is anxious to prevent her adversaries from obtaining succor of any kind through this channel. The Portuguese Minister of Foreign Affairs, in answer to a question in the Upper House, replied that Portugal would not discriminate against either of the belligerents. England certainly can not complain. The *Amsterdam News van den Dag* says:

"England may search neutral ships, but she may not, on mere suspicion, interfere with the trade of the whole world. Those who ask that the coast of the Portuguese possessions be blockaded forget that England herself has declared that this should not be allowed unless war is declared against the nation whose ports are to be shut. England is therefore restricted to friendly remonstrances. Portugal has made no formal declaration of neutrality, and this is in England's favor, for British ships may enter Portuguese ports, coal there, and use them as a basis for her surveillance."

English, French, Dutch, and German vessels have been stopped and searched. The Germans are excited about the matter, as no less than three of their regular East African mail steamers were stopped. No contraband was found, tho the majority of English papers had alleged that thousands of saddles for the Boer army were on the *Bundesrath*, thousands of rifles, and hundreds of men. Nothing more formidable than an ambulance corps was found. The *Saturday Review* (London) says:

"By the seizure of the German liner *Bundesrath* to the north of Delagoa Bay the question of what is and what is not considered contraband of war by England seems likely to be brought to a direct issue. There appear to have been three German officers and twenty men in khaki on board, nominally an ambulance

corps, an obvious means of passing fighting men into the Transvaal which the Boers have by no means neglected. Lord Rosebery in a letter to *The Times* of the 30th December called attention to the reported seizure of flour and foodstuff cargoes as a matter involving grave issues in the future to this country. The question is one of expediency more than of strict right, and there are numerous precedents for treating foodstuffs as contraband when they are destined to assist the enemy. If food is going into an enemy's country it is easy to show that this must be the effect directly or indirectly. But this is not an argument which satisfied England at the time of the Franco-Chinese War of 1885, when rice was declared contraband. We protested then and maintained that food generally could only be so declared when it was clearly destined for military use. It would not be wise to extend this principle in our own favor at present. In the event of a great war we might find the rule which we had helped to establish operating very much to our disadvantage."

The *London Globe* says:

"We can not tolerate this use of a neutral port as the basis of operation for the enemy. The 'open door' of the Boers must be closed, and closed quickly. It is as much the duty of our Government to see to this as to take care that our armies are properly reinforced. The thing most necessary at present is to take possession of Delagoa Bay. The country expects that Lourenço Marquez shall cease, once for all, to serve as a magazine for the Boers."

The *Standard* is a little more moderate. It expresses itself in the main as follows:

We would ask the German people to place themselves in our position, and we are convinced that the German Government would have acted in precisely the same manner under such circumstances. Would not the Germans do everything in their power to prevent the enemy from obtaining supplies from abroad? Can any one blame us if we prevent the best trained officers of the world from joining our enemies in Africa?

The majority of Germans regard this reasoning as sound as regards articles of war; but the Woermann Line had informed the authorities that no contraband was on board the ships, and the Germans demand that an examination of the bills of lading should be regarded as sufficient. Mr. Adolph Woermann expresses his belief that trade jealousy is at the bottom of the whole matter. England wishes to prevent Germany from establishing markets during the war. The Berlin *Vossische Zeitung* says:

"We earnestly hope that this question will speedily be settled, and that the British Government will make such reparations as the aggrieved steamship company has a right to demand. We trust that at the same time the German Government will take advantage of the occasion to inform the British Foreign Office that we expect different treatment of our ships in future. The attitude of the authorities at Durban is characteristically English in its arrogance, and altogether the manner of the British before Delagoa Bay is likely to cause Europe to resist."

The Amsterdam *Handelsblad* points out that the Dutch and Belgian ports also are likely to be blockaded at some future time if the rule which England seeks to establish holds good. The *Kieler Zeitung* asserts that England herself never conforms to any rules which may seem to her derogatory to her interests. "When Germany complained of the importation of arms into France during the war of 1870-71," says that paper, "*The Times* sarcastically remarked: 'Why don't you send your fleet to stop it?'"

The seizure of the ships certainly does much to overcome the resistance of the German Parliament to the Emperor's demands for a large navy. Curiously enough, the chief offenders in this contraband trade are reported to be Britons themselves, and *The St. James's Gazette* comments on that fact as follows:

"The warning issued by the Foreign Office on the subject of trade with the Boers deals with a highly important subject. In this circular residents upon British soil, whether British citizens or foreigners, are reminded that they are not allowed to trade

with the enemies of the state under very severe penalties. The necessities of a people in a practical state of siege, as the Boers are now, are the traders' opportunity. Blockade-runners and gun-runners have played a large part in every recent war; but British subjects should realize now that they must forbid themselves the excitement and profit to be reaped in this field, or they are guilty of the blood of their fellow citizens. Even as it is, the flow of munitions by Delagoa Bay affords a sufficiently hard nut for our authorities to crack without being further hampered by our own traders. In the Afridi war there were rumors that rifles reached the tribesmen by way of the Persian Gulf, and when the Government laid an embargo on the trade a representative deputation of manufacturers waited upon Ministers to represent that their action hampered an important interest in obsolete fire-arms. This is pure selfishness, and must be recognized as such. Every British merchant who now imports a rifle or cartridge into the Transvaal is potentially guilty of the death of a British soldier, and deserves to be hung if he is caught."

A pretty story, never mentioned in the British papers, and never denied, made the rounds through the German press just before the outbreak of hostilities. We summarize as follows from the Breslau *Schlesische Zeitung*:

Not long before the war, two large German barks discharged cargoes of "hardware" at East London and Durban. The goods were intended for the Transvaal, were passed by the custom house, and reached Pretoria in safety. English papers complained that these were cartridges, and they were right. But their indignation with the Germans was groundless. German firms, it is true, had made a bid. But an English firm made a more advantageous offer. Not an obscure firm, be it understood, but Kynoch & Company, London. And the head of this firm is—Mr. Chamberlain, brother of the colonial secretary!—*Translations made for THE LITERARY DIGEST.*

GERMAN AND DUTCH CRITICISM OF OUR CONSUL IN PRETORIA.

THE differences arising between Consul Macrum and the Transvaal Government are discussed with some irritation by friends of the Boers abroad, the more so because it is understood that young Hay, Macrum's successor, sides openly against the Government to which he has been sent. The *Tages Zeitung* (Berlin) does not see "what the Americans can gain by their attitude, as the Boers are not likely to be frightened even by demonstrations of ill-will." The *Echo* (Berlin) says:

"Macrum evidently made himself unnecessarily obnoxious, and he started a row with the Pretoria authorities because he was not permitted to give the British prisoners money. It has repeatedly been acknowledged by the English themselves that the prisoners are treated exceptionally well. Yet the American Government supports its representative. One can not help thinking that the United States is anxious to pick a quarrel with the Boers, for the benefit of England. The Americans have started upon a colonial career which makes them dependent upon the good-will of England."

The Pretoria correspondent of the *Illustrirte Zeitung* (Leipzig) relates that the Government of the South African Republic showed great consideration to Macrum until he wished to supply the prisoners with money in large quantities. This the authorities thought dangerous. Moreover, the President believed that it would be more in keeping with the dignity of the two republics if the British Government conferred direct with the Pretoria authorities regarding the welfare of the prisoners. The Amsterdam *Nieuws van den Dag* says:

"Mr. Macrum was instructed by his superiors to inform President Kruger that 'in the opinion of the United States Government, the customs of civilized nations and the dictates of humanity require that a neutral should be permitted to watch over the welfare of the unfortunate prisoners.' Why all this eternal humbug, all these grandiose words, when addressing the Transvaal? As if the Boers were less civilized than other people."

The *Amsterdamsche Courant* asserts that the treatment of the Boer prisoners in the hands of the British is far worse than the treatment accorded the English prisoners at Pretoria. Yet the Dutch consul at Cape Town, who did not show the arrogance displayed by Macrum, is very much hampered in his attempts to assist the unfortunates of the *Penelope*. "The latter," adds the same paper, "are mostly cultured men, not hirelings of the lowest classes; but we do not hear that the 'dictates of humanity' are referred to on their behalf by the Americans."—*Translations made for THE LITERARY DIGEST.*

GERMANY'S INDUSTRIAL PROGRESS AND THE REASONS FOR IT.

IT requires no juggling with figures by German officials to demonstrate the prosperous condition of their nation. The condition is generally conceded, and the publicists of other nations are commenting upon it and setting forth reasons for it. Thus the Vienna *Freie Presse* finds the secret of German prosperity in the national love of work. It says, in substance:

If you want to see a happy, prosperous people, go to Germany. As often as one goes there, one is filled with wonder at her prosperity. Much of this may be outward only, and the microbes of decay may be found when one has a chance to go deeper; yet it is impossible to believe that all is a bright lacquer only. For we must remember the cause of this prosperity. It has been created by a national love of work and enterprise such as the world has hardly witnessed before.

M. Charyer, in an article in the Paris *Figaro*, asks, "What is the cause of Germany's power?" and proceeds to answer the question as follows. In addition to German industry, he finds that thoroughness of education and personal purity are important causes. He writes, in substance:

We French have always a lot of phrases to explain the merits of others and our own failings. This saves us the trouble of thinking. Thus we say that Germany is prosperous because she was victorious. But, after the battle of Jena, Prussia was crushed, yet she went to work at once to build the present empire. It is the German's industry and energy that has raised him, combined with self-discipline. No body of teachers know so well how to develop the best qualities of the young as do the German school-masters. Their influence goes far beyond the school into the home. . . . There is a noisy set of students in Germany, no doubt. But it is not true that they kill their intellect with drink. They love their teachers, and listen to advice. Above all the young German avoids that destructive company of women which hurts the youth of France. It is not an exception to find that the bridegroom presents his bride with a virgin heart. The young German of the middle classes does not regard the boast of amorous victories favorably, and even his mild flirtations with the waitresses are carried on as if these girls belonged to the best society.

George N. Barnes, general secretary of the Amalgamated Engineers, declares that the excellent care which Germany takes of her workmen is in a large measure responsible for her success. He doubts that the Germans work longer than the English (the hours being merely differently arranged), or that they are worse paid. Their personal comforts certainly receive greater attention, and quality rather than quantity is demanded, even in piece-work. *Reynolds's Newspaper* (London), which is extensively read among workingmen, expresses itself in the main as follows:

German work is preferred to English work, and nothing we can say will alter the fact. It is better work. The German employer is the more intelligent, the German workman is the more intelligent. All the technical schools in England are not worth as much as one establishment like the Hannover Institute. The German workman is encouraged and assisted to study at his employer's expense. The German works less hastily, but more

thoroughly, and he is not so much in a hurry to get to his amusements.

The London *Times* also suggests that Englishmen are less inclined than Germans to give their employer good value for his money. Speaking of clerks in business houses, and other employees who like to be classed above workingmen, *The Times* says:

"We fear it must be confessed that in some of these respects a young German starts with a distinct advantage over his English competitor. The standard of living for the class in question is plainer and less expensive in Germany than in England; there is a stricter home discipline, and much less devotion of time and money to amusement. It must be regretfully admitted that the young Englishman who earnestly desires to master the work in which he is engaged, and to become proficient in performing it, is less typical than he who is chiefly desirous to get through the day without blame, and to betake himself to his bicycle or his football club. We are perfectly sensible of the value of sports in any system of education; and athleticism is probably the best possible corrective of the effects of office hours and of office atmospheres. But there is proportion in all things; and excellence is never to be attained without strenuous effort."

Considerations like these lead men like Joxall to exclaim that "Germany, marshaling her educated battalions, is preparing for England a commercial Sedan. In England we are like children in a nursery, 'playing at school.'" The Amsterdam *Handelsblad*, which says that "Germany's progress reads like a fairy tale even when presented by her rivals rather than by herself," suggests honest competition in lieu of abuse of everything German as the only tonic for British industry. A considerable number of Englishmen point out that the German's aim for thorough work rather than for showy success is likely to produce astonishing results even in colonial enterprise, and that their methods should be studied. The London *Speaker* says: "With great intelligence and perseverance, tho' as yet with anything but financial success, the German Government is developing its colonial estates. Subsidized lines of steamers, of course, run thither; colonization is hoped for on the healthier plateaus; seeds and plants of all sorts are being introduced on trial; and railways are being made, connecting the interior with the coast." Sir Charles Oppenheimer, British consul-general at Frankfort, dwells upon the beneficial effect of Germany's laws in the interest of laboring men. He writes:

"A disinterested observer will gain the impression that German industry hardly suffered any injury by the workmen's legislation. These laws have raised the social position of the working classes, have strengthened the laborer in his confidence as to the future, and have thereby made him decidedly more capable. If German industry shows any considerable rise, it has not been hindered by those contributions given to the workmen; but, on the contrary, furthered. The German workman was formerly far behind in comparison to the English workman in respect of his standard of life, usefulness, and ability. If this difference has now been overcome, it may lie partially in the severe discipline which he undergoes in the rigorous school of the obligatory army service, but also in the legal compulsion of employers having to increase for the laborer, in the form of subscription to the insurance laws, the laborer's share in the profit of the produce."

In an article in *The Nineteenth Century* Mr. Charles Copeland Perry points out that Germany's progress is due entirely to the efforts of her people, her natural advantages being of the most meager kind. But this he regards as one of the best excuses for placing the subject of Germany's progress before the British public. He says:

"To many, no doubt, it may appear that we have already heard too much of Germany. What more need we know of a country which, within recent memory, has been an eight-days' wonder in our music-halls, and which will be always associated in our minds with impertinent telegrams and shoddy goods? Let those that think so be assured that they have not heard the last of Germany. Our relations with her are only at their commencement,

and are destined to form one of the most important chapters of the history of the twentieth century."

There are, however, some British papers which are convinced that the industrial competition of the Germans can be checked by other than industrial methods. The Toronto *Telegram*, commenting upon Mr. Chamberlain's recent attitude toward France, says:

"There are many Canadians also who imagine that it would be better business for Britain to go to war with Germany than with France. France is not a commercial rival to be dreaded. There would be no money for Britain in a war with France. Germany would be put back twenty years in the industrial race by war with Britain, and the results of the hostilities would be to divide Germany's share of the world's markets between Britain and the United States. There is reason to hope that the war in the Transvaal may end Britain's fighting for the next hundred years; but if Britain must fight with a European nation, better for Canada and the empire that Germany rather than France should be the enemy."—*Translations made for THE LITERARY DIGEST.*

THE "MAFIA."

FEW if any Americans are inclined to defend, in cold blood, the lynchings to which Italians have more than once been subjected in this country. Yet it is worth knowing that, even in this respect, we are not sinners above all the rest of the world. In France and Switzerland, and even in the cold climes of northern Germany (during the building of the Kaiser Wilhelm Canal), workmen from Southern Italy have been killed by the enraged populace. Some explanation, if not an excuse, is naturally looked for in the character of those who have thus become victims of mob law in districts where Sicilians and Neapolitans are found in large numbers. A clue to this explanation is furnished by the investigation of the "Mafia" at present being carried on in Rome. In the Hamburg *Correspondent* a writer describes the "Mafia" to the following effect:

The "Mafia" is very old. In former centuries, when Bourbon misrule oppressed the Sicilians, its mission was to defend the weak against the strong, the people against their corrupt officials. When the revolutions against the Bourbons began, the "Mafia" became a political power. But after the establishment of Italian unity its comparatively honest occupation was gone, and it became merely a society for the protection of criminals. In 1876 universal suffrage was established, and as no candidate could be elected without the help of the "Mafia," its influence increased enormously.

To understand this it is necessary to study the Sicilian's character. He is by nature silent, morose, and the tyranny of centuries has made him more so. He believes that it is dishonorable to call in the aid of the law. He remains silent in order to revenge himself in person. "One tells the truth to one's confessor, to no one else," is an old Sicilian maxim. All this is part of the Sicilian code of honor, the *"omertà."*

To-day it is not necessary to defend the innocent and the weak against unjust judges or tyranny in Italy. But, like the rapidly vanishing "bad man" of the Western States in America, the ambitious Sicilian has a desire to "kill his man," and does not mind "dying in his boots." To become a real, fine "Mafioso," you must commit a murder or two. Then you become a *giovane d'onore*, a young man to be respected. The "Mafia" is not a close organization with a written constitution. But the Mafiosi know each other at a glance, and assist each other, tho they may be at enmity among themselves. Sometimes one group of Mafiosi demands the obedience of another. If it is denied an ordeal of battle follows. Three or four of each side fight the matter out with daggers and pistols, after the manner of Dumas's heroes.

After the foregoing, it will not be difficult to understand why the Notarbartolo case is dragging on so long. Notarbartolo was, six years ago, president of the Bank of Sicily. He was a man of irreproachable character, and refused to betray his trust. He

was murdered in a railroad carriage for his pains. Palizzolo, member for Palermo, being in the conspiracy. De Felice, Radical member for Palermo, describes the influence of the "Mafia" as follows:

"There are three distinct sections: that of the peasants, the police, and the men in kid gloves. The peasants are not naturally criminals. But their endeavors to protect themselves against the Mafiosi makes them such. The revolt of the *fasci* was nothing but a revolt against the 'Mafia.' Premier Giolitti at the time had to confess that theft had decreased where the *fasci* had the upper hand. The 'Mafia' has so much influence that no honest policeman, no honest judge, is sure of his life. An energetic public prosecutor, asked to order the arrest of persons suspected of complicity in the theft of \$125,000 from a bank, replied: 'I know the culprit. But I must have the assistance of private individuals. If I tell the police, he escapes.'"

According to the lengthy accounts in the *Gazette del Popolo*, which remind one strangely of the Lexow investigation, but are too long to be quoted here, Deputy Palizzolo belongs to the "kid-gloved" Mafiosi. He has protected everyone connected with the dastardly murder of honest Baron Notarbartolo, and it is only since the matter has passed into the hands of the northerners that his arrest has become possible.

The "Mafia," "Camorra," and other equally baneful secret societies, we may add, flourish below the Monte Vettore, increasing in power as one approaches the regions where Greek and Phœnician, Moor and Egyptian have battled for centuries to possess the most beautiful and fertile spots of the earth. The Sicilian differs as markedly from the Lombard as does the New Orleans Creole from the icy Vermonter.—*Translations made for THE LITERARY DIGEST.*

WHY AUSTRIA SHOULD BE PRESERVED.

THAT tumultuous collection of nationalities which forms the empire of the Hapsburgs has often before seemed on the eve of a break-up, but never before has its existence been so much endangered as now since the hegemony of the Germans is likely to become a thing of the past. Europe, however, may interfere to preserve the monarchy, for as independent states the different parts of the empire would be likely to be very restless. Moreover, Austria's neighbors are not in a hurry to become her heirs. Charles Benoist, in the *Revue des Deux Mondes* (Paris) sets forth why neither Russia, Germany, nor Italy wishes for the disruption of Austria. We condense his article as follows:

The partitioning of Austria, always regarded as a probability, is not in the interest of the other powers. Germany, indeed, would obtain a very handsome addition to her territory—some 113,000 kilometers square [43,600 square miles], with 9,000,000 inhabitants. She would probably also annex Trieste, in order to get an outlet to the south. But the prospect can not be pleasing to the German Government. The very complications which Bismarck sought to avoid would then arise, for, instead of a Prussian and Protestant Germany, there would be an Austrian and Catholic Germany. The old antagonism between Berlin and Vienna, so baneful in its effects in the past, would be revived. Russia, on the other hand, is becoming more and more an Asiatic power. It can not be to her interest to absorb a conglomeration of Slav nationalities which would never become satisfactory subjects. Russia and Germany would have a much more extensive border, and this would undoubtedly increase the friction between these powers. It is not to their interest to heighten the possibility of a conflict. Italy has still less reason to wish for the partitioning of Austria. Italy would doubtless obtain some territory inhabited by Italians; but Trieste would be lost to her for good. Yet the dream of the Italians is the possession of Trieste. Rumania can not hope to obtain more than a few small settlements of her own nationals. Europe without an Austria would be anything but pleasant. It would contain two all-powerful empires: Russia and Germany. The former would endeavor to monopolize Asia, the latter would impose her will upon the West.

Hence every European country is interested in the preservation of Austria, the ideal buffer state.

The French writer's view is indorsed especially in Prussia, where the inevitable increase of the Catholic Party, attendant upon the annexation of the German parts of Austria, is not considered desirable.—*Translation made for THE LITERARY DIGEST.*

WILL AMERICA SWALLOW EUROPE?

THE easy conquest which the United States achieved over the Spanish forces has wrought mightily upon the imagination of at least one Spanish writer. It seems that all Europe is in danger of being "swallowed" in the near future unless she takes measures of protection. Pérez de Guzmán, writing in the *Epoca* (Madrid), refers to the rumor that President Kruger has addressed the United States to request its intervention. Suppose this were true, asks Señor Guzmán, what then?

Suppose the European powers permit intervention on the part of the United States. The gravest complications would follow. England herself would suffer most. The present struggle in South Africa, we may suppose, will end in favor of England, whose resources are so much greater than those of the Boers. But then, Great Britain has not near her in South Africa a colossal and powerful empire, ever ready to assist her enemies, always willing to render negotiations difficult, arming hordes of semi-barbarous tribes against her, yet keeping sufficiently in the background to escape the discomforts which belligerency would occasion. But signs are not wanting that England will not be in future free from the influences of so unscrupulous a neighbor, ever ready to foster discontent within her dominions. Her interference with American cargoes disturbs American trade.

The writer then proceeds to set forth the ultimate consequences of American intervention as follows:

"If the intervention of the United States in the affairs of South Africa produces the substitution of a North American protectorate for that of Great Britain, it is not only England who will be humiliated; all Europe will be placed in an alarming position. We are blind to the teachings of history if we can not see that when the United States moves nearer to our continent, we approach the most dangerous crisis in the history of the world. Thoughtful persons are well aware that the new century will witness two great struggles, one between the two predominating races inhabiting the American continent, the other for the mastery of the sea and the freedom to colonize. Unless prevented, America will swallow Europe, according to the inexorable laws of history."—*Translation made for THE LITERARY DIGEST.*

INTERNATIONAL POSITION OF THE POPE.

THE Dutch Minister of Foreign Affairs was attacked by the Catholics because he did not send the Pope an invitation to send a delegate to the International Peace Congress. The Minister replied that this would have been done had not the Italian Government objected. The Amsterdam *Standaard* thereupon published a series of articles intended to show that many other valid reasons should have prevented the invitation to the Pope. We condense the following argument:

The Pope is no longer a monarch; that in itself should have been enough. As a pretender, he could not well expect to hold the same rank with established powers. Had he been invited to cooperate, the ex-King of the two Sicilies and the Pretender of Hanover also could have claimed an invitation—clearly an impossibility. Next comes the claim of the Pope as spiritual head of Christendom. This the Pope was once, but he is so no longer. He is not even the spiritual head of the most powerful governments. His secular influence does not, therefore, warrant that he should receive the consideration of a power.

It should further be considered that in such cases either the secular or the spiritual authorities, or both, are summoned. The Pope can not pass for both. But if his cooperation had been asked as head of a church, the assistance of the head of 300,000 Confucians should have been invited, as well as the head of the Greek Church, the Moderator of the Pan-Presbyterian Council, etc. But such considerations would have been of little avail. The Pope has no intention to take his place among stars of equal magnitude. He recognizes no coordination of churches; he claims to be the head of the one and only Christian church.

In the case of a purely European congress, an invitation to the Pope could have been defended on the grounds that only an old conventional habit was being followed. But a world's congress would not permit such excuse.—*Translation made for THE LITERARY DIGEST.*

MISCELLANEOUS.

MEMORIES OF A PRINCE, SCIENTIST, AND REVOLUTIONIST.

THERE are at this moment only two great Russians who think for the Russian people, and whose thoughts belong to mankind—Leo Tolstoy and Peter Kropótkin. Tolstoy has often told us, in poetical shape, part of his life; Kropótkin gives us here for the first time, without any poetical recasting, a rapid survey of his whole career.

PETER KROPÓTKIN.

These words of Dr. Georg Brandes at once direct attention to Prince Kropótkin's "Memoirs of a Revolutionist" as a book of very special importance and interest. Its chief importance lies in the fact that it presents as no other book has presented "the psychology of official Russia and of the masses underneath, of Russia struggling forward and of Russia stagnant." But in addition to the history of Russia dur-

ing Kropótkin's life-time, we get a history of the labor movement during the last half-century.

Prince Kropótkin was born in Moscow in 1842, and lived the first fifteen years of his life in that city "of slow historical growth." He tells us that his father was very proud of the origin of his family, and would point with solemnity to a piece of parchment which hung on a wall of his study:

"It was decorated with our arms—the arms of the principality of Smolénsk covered with the ermine mantle and crown of the Monomachs—and there was written on it, and certified by the Heraldry Department, that our family originated with a grandson of Rostisláv Matislávich the Bold (a name familiar in Russian history as that of a Grand Prince of Kieff), and that our ancestors had been grand princes of Smolénsk."

His mother, a very beautiful and cultivated woman, died when he was three and a half years of age, and two years afterward his father married again. He tells us that his father had "cast his eyes upon a nice-looking young person, when the Fates decided another way." The "Fates" came in the person of General Timoféeff, the commander of the Sixth Army Corps, to which the elder Kropótkin belonged. The portrait of this general is sketched with few words: "This favorite of Nicholas I. was a terrible man. He would order a soldier to be flogged almost to death for a mistake made during a parade, or he would degrade an officer and send him to Siberia as a private because he had met him in the street with the hooks of his high, stiff collar unfastened." This general came to propose his niece as wife for Kropótkin's father, and his proposition was accepted, because of "that one-eyed devil, as we used to call him, coming himself to propose."

When Kropótkin was in his eighth year, Nicholas visited Moscow and made the boy an imperial page. The next year an event occurred characteristic of Russia in those days:

"One night, while all the household was plunged in deep sleep,

a three-horse carriage, ringing with the bells attached to the harnesses, stopped at our gate. A man jumped out of it, loudly shouting, 'Open! An ordinance from His Majesty the Emperor.' One can easily imagine the terror which this nocturnal visit spread in our house. My father, trembling, went down to his study. 'Court-martial, degradation as a soldier,' were words which rang in the ears of every military man; it was a terrible epoch. But Nicholas simply wanted to have the names of the sons of all the officers who had once belonged to the regiment, in order to send the boys to military schools. . . . And thus, owing to the will of Nicholas I., we [Kropótkin and his brother] had both to receive a military education, tho, before we were many years older, we simply hated the military career for its absurdity."

From M. Poulain, the French tutor, Kropótkin received his first "Republican tendencies":

"M. Poulain's opinions about revolutions were those of the Orleanist *Illustration Française*. . . . For a long time I could not imagine a revolution otherwise than in the shape of Death riding on a horse, the red flag in one hand and a scythe in the other, mowing down men right and left. . . . The title of prince was used in our house with and without occasion. M. Poulain must have been shocked by it, for he began once to tell us what he knew of the great Revolution. I can not now recall what he said, but one thing I remember, namely, that Count Mirabeau and other nobles one day renounced their titles, and that Count Mirabeau, to show his contempt for aristocratic pretensions, opened a shop decorated with a signboard which bore the inscription, 'Mirabeau, tailor.' For a long time after that I worried myself thinking what trade I should take up so as to write, 'Kropótkin, such and such a handicraft man.' Later on, my Russian teacher, Nikolái Pávlovich Smirnéff, and the general republican tone of Russian literature influenced me in the same way; and when I began to write novels—that is, in my twelfth year—I adopted the signature P. Kropótkin, which I have never departed from, notwithstanding the remonstrances of my chiefs when I was in the military service."

In writing of serfdom as it existed fifty years ago, Kropótkin reproduces scenes which because of their brutality were stamped indelibly upon his mind—"not what I heard, but what I saw." Here is part of a scene:

"Father will not be appeased. He calls in Makár, the piano-tuner and sub-butler, and reminds him of all his recent sins. He was drunk last week and must have been drunk yesterday, for he broke half a dozen plates. In fact, the breaking of these plates was the real cause of all the disturbance. . . . My father takes his seat at the table and writes a note. 'Take Makár with this note to the police-station, and let a hundred lashes with the birch rod be given to him.' . . . Tears suffocate me, and immediately after dinner is over I run out, catch Makár in a dark passage, and try to kiss his hand; but he tears it away, and says, either as a reproach or as a question, 'Let me alone; you, too, when you are grown up, will you not be just the same?' 'No, no, never!' Yet father was not among the worst of the landowners. On the contrary, the servants and peasants considered him one of the best."

Kropótkin has but one word with which to describe the military service of those times, and that is "terrible." He says that the cruelty to officers as well as to common soldiers surpassed all imagination.

When nearly fifteen, in 1857, he was taken to St. Petersburg to enter the corps of pages, at the time when "all Russia awakened from the heavy slumber and terrible nightmare of Nicholas I.'s reign." "Our school also felt the effects of that revival. I do not know, in fact, what would have become of me, had I entered the corps of pages one or two years sooner. Either my will would have been totally broken, or I should have been excluded from the school with no one knows what consequences." It was at this time that he took note of his intellectual development, and altho an imperial page and intended for the army, yet his literary tastes and inclinations were already determined. He was at that early age interested in literature, and he speaks of the "wild censorship" of Nicholas I. under which many works of the best writers could not be published.

One of the most interesting chapters of the book is that which deals with the emancipation of the serfs. It groups together several of the important factors that led to the great result. Kropótkin speaks of the years 1857-61 as of rich growth in the intellectual forces of Russia, and tells us that in 1859 or early in 1860 he began to edit his first "revolutionary" paper; but he called himself at that time a "constitutionalist," and his paper advocated the necessity of a constitution for Russia. But the supreme question then was the abolition of serfdom. The Em-

peror, Alexander II., was averse to serfdom, and he took the first steps toward its overthrow:

"In November, 1857, the famous 'rescript' to the governor-general of the Lithuanian provinces, announcing the intention of the Emperor to abolish serfdom, was launched, and we read, with tears in our eyes, the beautiful article of Herzen, 'Thou Hast Conquered, Galilean,' in which the refugees at London declared that they would no more look upon Alexander II. as an enemy. . . . But after these moments of general rejoicing, years of incertitude and disquiet followed. Specially appointed committees in the provinces and at St. Petersburg discussed the proposed liberation of the serfs, but the intentions of Alexander II. seemed unsettled. A check was continually put upon the press, in order to prevent it from discussing details. . . . The old nobility centered their efforts in obtaining a postponement of the reform, on reducing the size of allotments, and on imposing upon the emancipated serfs so high a redemption tax for the land that it would render their economical freedom illusory; and in this they fully succeeded. Alexander II. dismissed the real soul of the whole business."

And so matters stood until January, 1861, when it was hoped that something would be accomplished. But more than two months passed away:

"A fortnight later, on the last Sunday of the carnival (March 5, or rather March 17, New Style), I was at the corps, having to take part in the military parade at the riding-school. I was still in bed when my soldier servant, Ivánoff, dashed in with the teatray, exclaiming, 'Prince, freedom! The manifesto is posted on the Gostnoi Dvor' (the shops opposite the corps). 'Did you see it yourself?' 'Yes. People stand round; one reads, the others listen. It is freedom.' In a couple of minutes I was dressed, and out. A comrade was coming in. 'Kropótkin, freedom!' he shouted. . . . Crowds of peasants and educated men stood in front of the palace, shouting hurrahs, and the Czar could not appear without being followed by demonstrative crowds running after his carriage. Herzen was right when, two years later, as Alexander was drowning the Polish insurrection with blood, and 'Muravíoff the Hanger' was strangling it on the scaffold, he wrote: 'Alexander Nikoláevich, why did you not die that day? Your name would have been transmitted in history as that of a hero.'"

From the life at court, Kropótkin, in 1862, goes into the army, choosing as his regiment the mounted Cossacks of the Amor. His companions thought that he was mad. But there was a method in his madness; not only for scientific purposes did he wish to go to Siberia, but also, he reasoned, "there is in Siberia an immense field for the application of great reforms which have been made or are coming." He further says: "The five years I spent in Siberia were for me a genuine education in life and human character." He traveled over fifty thousand miles during these years. At this point we quote from Edward Garnett's eloquent review of the book in the *London Outlook*:

"Having distinguished himself by his discoveries and explorations, he throws up his commission in the army, and returns to St. Petersburg to devote himself entirely to science. In St. Petersburg, however, the reactionary forces of the autocracy have turned the tide against Liberalism. Kropótkin is drawn little by little to sacrifice his scientific career, and enter into the great movement of Liberal propaganda which all intellectual Russia espoused in the late 'sixties and early 'seventies. He becomes a 'political'; he organizes with Young Russia political circles for the study of the immense social problems that the Russian bureaucracy, by self-interest and apathy, year by year, automatically suppresses. Kropótkin—one of thousands—is arrested and imprisoned. He escapes from the great fortress in St. Petersburg, leaves Russia, and settles in Switzerland. Here he develops his political and social creed; he joins the International, and strives to create throughout Europe new societies of workers, organized in free communities and trade associations, cooperating by means of free agreements—societies which would annihilate the centralized state governments, and would destroy the existing structure of capitalism and labor."

"Behold the anarchist! Kropótkin and the creators of the ideal of free communes, the friends of free order, speedily became anarchists in the public mind, or the foes of all order, and the name they had chosen helped to destroy them. It was easy for the governments to trace every outrage against society to anarchist plottings, and the avowed struggle of the International against modern capitalism led every government in Europe to crush, by exile or imprisonment, the leaders of the new labor movement. The laws promulgated against the Internationalists intensified their militant defiance of the state, and smothered more and more their constructive propaganda of a society of free communes and federated associations. And Kropótkin, the man of genius, the *savant* of a new social order, the divinator of a society that looms for us, far, far ahead of our epoch, it is true,

but still looms there ahead, waiting the march of Europe; Kropótkin, the scientific discoverer of new economic laws which society will formulate after the capitalistic epoch is past; Kropótkin, as revolutionist, was seized upon by the French Government for participation in the terrible Lyons strike of 1882, and was imprisoned at Clairvaux for three years."

CORRESPONDENTS' CORNER.

"Is the Earth Alive?"

Editor of THE LITERARY DIGEST: Recently there appeared in THE LITERARY DIGEST an article under the above head, in which it was stated that a certain Russian author advances the idea that the earth may be a living animal organism, and his remarks are in part quoted. In this connection it may be interesting to your readers to quote the words that Kingsley, in his novel, "Hypatia," puts in the mouth of the cynical Jew, Raphael Aben-Ezra (A.D. 411):

"And as for your palaces, and cities, and temples—look at this Campagna, and judge. Flea-bites go down after a while—and so do they. What are they but the bumps which we human fleas make in the old earth's skin? Make them? We only cause them, as fleas cause flea-bites. What are all the works of man but a sort of cutaneous disorder in this unhealthy earth-skin, and we a race of larger fleas, running about in its fur, which we call trees? Why should not the earth be an animal? How do I know it is not? Because it is too big? Bah! What is big, and what is little? Because it has not the shape of one? Look into a fisherman's net and see what forms are there. Because it does not speak? Perhaps it has nothing to say, being too busy. Perhaps it can talk no more sense than we. In both cases it shows its wisdom by holding its tongue. Because it moves in one necessary direction? How do I know that it does? Oh, what a base satire on ourselves and our notions of the fair and fitting to say that a thing can not be alive and rational just because it goes steadily on upon its own road, instead of skipping and scrambling fantastically up and down without method or order as do we and the fleas, from the cradle to the grave. Besides, if you grant, with the rest of the world, that fleas are less noble than we, because they are our parasites, then you are bound to grant that we are less noble than the earth, because we are its parasites. Positively, it looks more probable than anything I have seen for many a day. And, by the by, why should not earthquakes and floods and pestilences be only just so many ways which the cunning old brute earth has of scratching herself, when the human fleas and their palace and city-bites get too troublesome?"

The philosophy taught by the school of which *Hypatia* was the last and most brilliant representative was that the universe is instinct throughout with Deity itself, a philosophy epitomized by Wordsworth in the immortal lines:

"All are but parts of a stupendous whole;
Nature is the body,—(God the soul)."

AUSTIN, TEX.

P. E. DANIEL, M.D.

The "Chemical Production of Life" a Delusion.

Editor of THE LITERARY DIGEST: In a recent issue I noticed an article entitled "The Chemical Production of Life." Such headings are misleading to many readers who are not sufficiently posted in the science of lower forms of life, and it seems to me that the article mentioned should have had more editorial comment or more contradictory quotation. It does not seem to me that a scientist would claim to have "produced life chemically" from the facts or data there given. Where is the writer's basis for such a claim? How does he know that the eggs were *not* fecundated? May he not have simply discovered another mode of reproduction heretofore unknown to the Ichthyoderms? May there not have been in this case a sort of hermaphroditic fecundation, as there is in the next order, the Polyzoa? Granted that the eggs were not fecundated by the male milt, it seems to me only a case of some form of parthenogenesis, as suggested by one critic. Granting *all* he has claimed, there is still no "chemical production of life," for he did not create the eggs nor the cells which took on growth when given the proper medium or soil.

JAMES N. BUCKHAM.

FLINT, MICH., December 31.

Flooding the Sahara.

Editor of THE LITERARY DIGEST: On page 719, in "Remodeling the Face of the Globe," you refer to the old scheme for flooding the Sahara desert by means of a canal, sixty miles long, from the Atlantic. The project is impracticable. The canal could not possibly furnish enough water to compensate for the evaporation in that latitude. The lake, large or small, which would be formed, would soon become a bed of salt, and that would be the end of it. You can not go on evaporating sea water without getting salt. There's an escape for the water by evaporation, but none for the percentage of salt.

Take the Karaboghar gulf, on the eastern side of the Caspian Sea, which has an inflow, but no outflow. Von Baer has calculated that it withdraws from the Caspian 100,000 tons of salt per day.

If the Sahara canal were *large enough*, and if sea water were fresh and not salt, the project would be practicable.

ANDREW VAN BIRNER.

CINCINNATI, December 17.

The Name "Multiphone."

Editor of THE LITERARY DIGEST: In your issue of December 9 you describe a "Multiphone," by M. Dussaud. Allow me to call your attention to it, that this name was used by me early this year (1899), and published in *The Scientific American* (April 1, 1899), for a machine using simultaneously several record disks (gramophonic) of the same selection. Of course it may be that M. Dussaud used the name before I did, but it seems not.

E. BERLINER.

WASHINGTON, D. C., December 9.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul-General Gudger writes from Panama, November 27, 1899:

A decree has been promulgated by the Colombian Government making the slaughtering of cattle and the sale of meat of government monopoly. It prohibits all owners of cattle from selling meat except to employees of the Government, under a penalty of \$100 for each head sold. Rules and regulations are to follow later. The reason for this step is the necessity for an increase in revenue. It is supposed that the order will go into effect at an early date. Some Americans have complained to this office that the enforcement of the decree will have the effect of partially, if not entirely, confiscating cattle in their hands.

Consul Roosevelt transmits from Brussels translation of a royal decree, forbidding trade in fish, fresh or preserved, which has been mixed with matters other than spices, condiments, aromatic jellies, the principal ingredient of which is gelatin or gelose, or substance produced by glazing, unless a plain label shall indicate the nature of the foreign substances used. Conserved products must have a label showing the kind of fish, and also, if necessary, the kind of oil, etc., used. Fish, shell-fish, etc., caught with Indian berry (*Cocculus indicus*) or other poisonous substances, and those mixed with antiseptics, are declared injurious. No substances injurious to health are allowed to be used. Recipients containing fish must bear the name and address or the mark of the maker or seller. It is further forbidden to sell or keep in the same premises with food products fish not intended for alimentary purposes, unless these are clearly marked "not eatable" or the like.

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5.

OUR Spring Catalogue of Tailor-Made Suits and Skirts is now ready. We picture in it all of the newest styles, and will mail it free together with samples of the materials, to the lady who wishes to dress well at moderate cost. No ready-made garments, but everything made to order; we show you exclusive things that cannot be found elsewhere.

Our new Spring Catalogue illustrates:
 Tailor-Made Suits, \$5 up.
 New Skirts in the latest Paris cut, \$4 up.
 Wash Suits, \$4 up.
 Wash Skirts, \$3 up.
 Rainy-Day Suits and Skirts made of double face materials.
 Bicycle Suits, Capes, Jackets.
 Riding Habits, Golf Suits, and Skirts.

We also make finer garments and send samples of all grades. We pay express charges everywhere. If, when writing, you will mention any particular kind or color of samples that you prefer, we shall be glad to send you an assortment of the kind you wish.

Write to-day for Catalogue and samples—we will send them to you free by return mail.

THE NATIONAL CLOAK COMPANY,
 119-121 West 23d Street, New York.

Extraordinary Reduction! SENT ON APPROVAL IF DESIRED.

IN ORDER TO SEND OUT BALANCE OF
 Augusta-Victoria Empress Shoulder-Shawls,
 handwoven, in December, the price for a limited time is \$5.50 instead of \$7.50. Color to choose from: light green, white, and cherry red.

SUSACUAC WEAVING CO., --- BETHLEHEM, PA.

Kotedsilk Underwear

FOR MEN AND WOMEN

We have not yet spoken of KOTEDSILK, in its relation to evening dress, except of course when we referred to its perfection of fit.

KOTEDSILK

is just the thing for ball-room or theatre wear, as its peculiar construction prevents the sudden chill so often experienced on leaving those places.

When winter is over, there is no packing away with evil smelling moth balls or camphor. Leave it in any drawer—moths won't eat it.

KOTEDSILK

TRADE MARK - REGISTERED

The full text of the law has been transmitted to the Department of Agriculture.

Consul Bergh of Gothenburg writes, November 23, 1899:

Many business men here think that the import of motor carriages into Sweden, if once properly started, will be considerable, provided they can make durable, neat in appearance, safe and easy to handle, and not too expensive. Cab owners, especially in Stockholm, are considering the advisability of purchasing motor carriages, and a short time ago they sent experts to Berlin to study and examine motor cabs manufactured in Germany. The report they made on their return was not altogether favorable. They said that automobiles which in catalogs seemed to be ideals of perfection in reality did not come up to expectations. The chief objection to the motor cabs, with accumulators or storage-batteries, was that they could not make sharp enough turns. The cabs were built with the batteries placed close to the back wheels. The steering power of the front wheels was so small that the carriages could turn only in very large curves, making them unfit for use on narrow streets. Another inconvenience was that as soon as the cabs got on a road covered with a layer of sand an inch thick, they stopped helplessly.

Besides these inconveniences, common to French and German motor cabs alike, it was said that few of the carriages exhibited were of the type desired—that is, with room for from two to four passengers. Hunting wagons, motor cycles, delivery wagons, etc., for sportsmen and business houses were plentiful; but cabs were fewer and, as a rule, clumsy in appearance. A German manufacturer promised, however, to remedy the faults mentioned; but it is not yet generally known whether the prospective purchasers and the manufacturer can agree on terms. Manufacturers of motor carriages usually demand one fourth of the price for thirty days' trial; while the cab owners in question desire free trial before purchase, because they are unwilling to buy such expensive machines without being sure that they are practically useful. At present, there is only a petroleum-motor carriage and a light motor cycle in Gothenburg, both of French manufacture. I believe there is an American motor carriage in Stockholm; but American manufacturers ought to pay attention, also, to the markets in the other cities of this kingdom, especially Gothenburg and Malmo. It would be of great advantage for American firms to be represented here at once.

Another thing of importance is electrical ma-

JAMES McCUTCHEON & CO.
 14 West 23d Street, N. Y.

chinery in general, which will be in great demand as soon as the people have fully learned the value of their numerous waterfalls. A large electric-power plant will soon be built at Trollhättan; electric railways and tramways are being planned for Gothenburg, Lund, Bjerröd, and Jönköping. In this line, as in everything else, the Germans are always watchful; they pay close attention to details, and, if necessary, send experts here to study plans, etc., whereby they greatly increase their chances to introduce machinery. If it is not practicable for Americans to do likewise, they could possibly employ active agents to represent them here. Electric-motor carriages are preferred for city traffic. Those with benzine motors are said to be noisy and to emit offensive gases.

Consul Goding of Newcastle, N. S. W., writes November 1, 1899:

I am making every effort to introduce American-manufactured goods into this consular district. A few years ago, no American manufactures could be seen in this city, but now they are displayed in the various shop windows and are well liked. Some time ago I arranged to have a specimen shotgun sent here, having given the best bank references. A sale of perhaps thirty of the highest-priced guns might have been made if the specimen had been sent and had proven to be as represented, but it never came. At another time I sent an order for about \$1,000 worth of rubber goods to an American firm, but my letter remains unanswered. An order for 500,000 envelopes remains open, because the manufacturers have failed to reply to letters addressed to them. It is decidedly disheartening for consuls who are trying their best to bring American goods to the attention of local business men, to find their efforts fail because of the lack of interest at home. It is all the more discouraging when the main portion of letters received by consuls are inquiries made by these firms, who later fail to second our efforts.

Burpee's Farm Annual for 1900.

This popular catalogue is more attractive than ever, in a particularly dainty cover for 1900. Of particular interest is the new feature for 1900 of giving "a plain talk" as to the relative value for different purposes of all varieties of vegetables. "New Creations" of intrinsic merit are offered in both vegetables and flowers. Altogether the catalogue shows most painstaking care in the effort to "tell the plain truth about seeds," as proved at Fordhook Farms, the largest trial grounds in America. It will be mailed free to any of our readers who mention this paper when writing to the publishers, W. Atlee Burpee & Co., Philadelphia, Pa.

RHEUMATISM QUICKLY CURED.

In an article contributed to the London Lancet, a Philadelphia physician says: "Tartaric acid has given me results beyond all comparison superior to any preparation which I have tried. The promptness of its action is in many cases astonishing, a subsidence of distressing symptoms quickly following the administration of three doses of five grains each, taken four hours apart in a half pint of water on a reasonably empty stomach. The use of the preparation in the quantities named has sufficed in all cases so far treated, about twenty in number, to practically cure the disorder, temporarily at least."

Even as it is, the increase in the amount of United States goods sold here is something enormous, but it might be much more. If there is any way of letting our exporters know that consular officers would like to have their suggestions followed up, the consular service would be still more valuable to the business interests of the United States than it now is.

PERSONALS.

GEN. F. V. GREENE, when he arrived in Manila with reinforcements, went on board the *Olympia* to pay his respects to Admiral Dewey. After the two men had exchanged compliments, Dewey said: "Come into my cabin, general. I want to show you my family." In one corner of the cabin was a great pile of photographs, dozens upon dozens, and each was the picture of a baby boy. There were fat babies and lean babies, pretty babies, and ugly babies, sad babies, and smiling babies. "What in the world are these?" asked General Greene, somewhat bewildered. "Why," said Dewey, "it's just the family of my namesakes. They are Joneses, Smiths, and Jenkinses, but every one's a George Dewey, and their parents want me to know it."

WU TING FANG, the Chinese minister at Washington, is a social favorite because of his genial humor and companionable ways. At a little dinner the other night he had to answer a toast. He began with a complimentary allusion to American ways, but said there are a few things about Oriental civilization superior to our own. There had been some wretched weather that week, and he turned to Willis Moore, the weather bureau chief, who sat close by. "For instance," he said, nervously, "we in China would long ago have cut off this young man's head." It dazed the company for a minute, but they soon grasped the playful allusion to the weather-maker, and roundly greeted the remark.

DR. COLLES, an eminent surgeon of Dublin, who died in 1843, was remarkable for his plain dealing with himself. In his fee-book he had many such candid entries as the following:

Moller's Oil is different

from other cod liver oils, as it is never sold in bulk. It is bottled when manufactured, thus passing direct to the consumer without the possibility of adulteration. Each bottle of

Peter Moller's Cod Liver Oil

bears on the label, in perforated letters, the date of manufacture, so that the purchaser may always insist on having oil of the latest season's production, and know that he is getting it.

Moller's Cod Liver Oil is put up only in flat, oval bottles, and bears our name as sole agents.

"For giving ineffectual advice for deafness, one guinea."

"For attempting to draw out the stump of a tooth, one guinea."

"For telling him that he was no more ill than I was, one guinea."

"For nothing that I know of, except that he probably thought he did not pay me enough last time, one guinea."

AMOS J. SLEDGE and Thomas W. Hammer are the names of the editors of a Western newspaper whose motto is, "Nothing but sledge-hammer blows!" Georgia once had two editors, Frank Stanton says, whose names were Hay and Oates, and they took both on subscription.

M. GASTON ROUTIER, a well-known French writer, has just been received by Queen Maria Christina of Spain, and his impressions of the Spanish royal family have been sent to the London *Morning Post* by its Paris correspondent. The Queen Regent received the journalist in the large red drawing-room, and presently the young king, Alfonso XIII., and his sisters entered. "The young king," says M. Routier, "is no longer a weakling. There is plenty of strength in his fingers, as I found out when he grasped my hand. 'See how tall and well he is,' said the queen. 'I am very pleased with him. He is industrious and a good boy.' In fact," continues the writer, "the young monarch is no longer a child. He is tall for his age, well developed, and has a good healthy color in his face. His eyes are quick and intelligent. He looked me straight in the face, as a king should, without pride, but without embarrassment. He is much better looking than he appears in his portraits. He wore the uniform of an infantry cadet, with a little Golden Fleece at his throat, and from time to time his fingers toyed carelessly with his military cap. The youthful monarch is accustomed to all bodily exercises. He rides on horseback every day, sometimes taking out five or six different horses. He practices in the gymnasium, and has already had several tumbles in trying to learn too quickly to ride the bicycle. He speaks French, English, and German well, and is well up in Latin. The young king rises at seven o'clock all the year round, and his time is fully occupied. From 8:30 to 10 A.M. he studies, one day in English and the next in French; at 10 A.M., a riding-lesson is taken; from eleven to noon lessons in physics, chemistry, geography, or military tactics; at noon comes luncheon with the professor on duty and one of the generals who direct the studies; from 1 to 2 P.M. comes German conversation or the drawing class; thereafter rhetoric, poetry, and universal history. The king is very fond of history and geography. Sometimes his majesty goes riding with the queen regent, and thrice weekly he drills with other boys of his age. The king dines at seven o'clock with his sisters; at 8:30 P.M. he takes a music lesson, and at 9 P.M. goes to bed, after the usual prayer."

King Alfonso, we are further told, is very obedient and respectful to the queen. He is being brought up very plausibly, but without bigotry. The queen, who keeps far from the pomp and etiquette of the court—etiquette dating from the time of Philip II., which ought to be modernized—desires that the king shall take a continuously increasing part in the general life of the court. In two and a half years' time King Alfonso XIII. will be king in reality. The queen expressed to M. Gaston Routier her opinion of the economic situation of Spain in the brief inquiry: "Is it not true that Spain is being transformed daily, and that everything is being developed?" Mr. Routier declares that such is the case, and that a few years of peace and labor will result in great prosperity.

GENERAL LAWTON, according to the Chicago *Journal*, never wearied of repeating the following

If You are Tired

Use Horsford's Acid Phosphate.

Dr. M. H. HENRY, New York, says: "When completely tired out by prolonged wakefulness and overwork, it is of the greatest value to me."

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets and by touching the spring, a new hand is before each player. The advantages over trays are, no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price for one table, \$7.00, for three tables to one address, \$18.00, delivered free. Send for circular.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
 CAPACITY 35,000 ACATE LINES.
 Size of Book, 4 1/2 X 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

DODD, MEAD & CO., - New York-Chicago.

story, which, he said, illustrated the irrepressible good humor of the negro soldier:

"The night of the El Caney," said the general, "when my division was marching back to El Paso to take up a new position the next morning, I was sitting with Major G. Creighton Webb, inspector-general of my staff and one of the pluckiest men I know, at the side of the road. The men were filing past, and we watched them. They were tired out but full of ginger. The day was just beginning to dawn when we heard some one coming down the road, talking at the top of his lungs. He talk and laughed and laughed and talked, and the men with him were chattering and joking. "Here come the colored troops," said Webb, and, sure enough, the Twenty-fifth Infantry came along. The man who was doing the talking was a six-foot corporal; he carried two guns and two cartridge belts loaded full, and the man to whom the extra gun and belt belonged was limping along beside him. The tall corporal was weighed down with his blanket and haversack, but in his arms he carried a dog, the mascot of his company. "Here, corporal," said Webb, "didn't you march all last night?" "Yes, sir," said the corporal, trying to salute. "And didn't you fight all day?" "Sure, sir." "And haven't you been marching ever since ten o'clock to-night?" "Yes, sir," said the corporal. "Well, then," shouted Webb, "what in thunder are you carrying that dog for?" "Why, boss, the dog's tired," was the reply. Webb just rolled over in the dirt and laughed and cried like a boy."

JULES VERNE lives at Amiens, France. The famous story-writer is nearly seventy-one, but he carries with ease the burden of his years. He believes in work. An interviewer recently complimented him upon his activity, whereupon he made reply: "You have no cause to praise me. Work is to me the source of the only true happiness. When I have finished one of my books I am unhappy until I have begun another. Idleness is torture to me." Jules Verne's daily life is carefully planned out. He is up at dawn, writes until eleven o'clock, and after lunch repairs to a reading-room.

Whence does Jules Verne draw his subjects, and by what process does he put them in hand? He did not hesitate to satisfy his interviewer's curiosity on this point: "Don't think for a moment that my work is easy. It costs me a considerable effort. I write and rewrite my books several times before I put them into the printer's hands." He showed his visitor a manuscript in course of execution. Each chapter was weighted with numerous notes relative to the character of the personages and of the dialog; after which he corrected it with a pencil. This then served as a rough sketch to be rewritten.

M. Verne's library is described as "strictly for use," and well-worn copies of such intellectual friends as Homer, Virgil, Montaigne, and Shakes-

peare are there; editions of Foulmore Cooper, Dickens, and Scott show hard and constant usage; and there also, in newer dress, many of the better-known English novels have found their way. All his life M. Verne has delighted in the works of Sir Walter Scott. As to other English books, he speaks with affection of "Robinson Crusoe" and "The Swiss Family Robinson." He thoroughly enjoys Captain Marryat's breezy romances, and was much struck with the enormous power and freshness of Stevenson's "Treasure Island."

THEODORE CHARTMAN has returned to this country, bringing with him a large historical painting which is to be hung in the Capitol at Washington. It was ordered by Henry C. Frick, of Pittsburgh, before Chartman left this country last spring. The artist went to Washington and studied the character and faces of the men who figure in the group. President McKinley, William R. Day, Secretary of State at that time, Jules Cambon, the French ambassador, M. Thiebaut, his secretary, and Messrs. Moore, Allen, and Criddle, of the State Department, will be seen in a group which represents the signing of the Spanish-American peace protocol in Washington. If the picture is not hung in the Capitol, it will be presented to President McKinley. Mr. Frick paid \$5000 for the painting, which is to be exhibited by M. Chartman at the Paris Exposition.

Brain Workers

Business men and students require a food which, while of the very highest nutrition, is palatable and easily digested. Mind and body are accounted entirely distinct. Yet, that which best nourishes the one is the best aliment for the other.

Cream of Wheat

chiefly gluten phosphates, is the ideal food for this class of people.

FRANKLIN MILLS CO.,

LOCKPORT, N. Y.

NUTS AS FOOD.

We have little idea in this country to what a considerable extent the nut is used for food in a few foreign lands. Nuts, when properly prepared, are very nutritious and fattening, containing certain food elements that make them a very desirable article of diet. With most people, however, they are hard to digest, and cause distress after eating.

The Sanitas Nut Food Co., at 71 Washington Ave., Battle Creek, Mich., has discovered a unique process whereby nuts are manufactured into a score of dainty, delicious, and nutritious foods, easy of digestion and assimilation by the weakest stomach.

Sanitas nut foods mark a new era in food elements, and are becoming the most popular prepared foods on the market.

One of these delicious new foods is Protose, a vegetable meat containing 25 per cent. more food elements than beef, a food that the dyspeptic and rheumatic can eat and relish with no fear of the ills that follow when one suffering from these diseases eats flesh foods. Six cents sent to the maker will secure a sample can free.

him charged with suspicious conduct, and the constable swore, among other things, that he was wearing a "republican hat." "Does your honor know what that means?" inquired the prisoner's lawyer of the court. "I presume," said Barry, "that it means a hat without a crown."—*Argonaut.*

A Lawyer's Advice.—"Before I agree to undertake your defense," said the eminent criminal lawyer who had been called in, "you will have to be perfectly frank with me and tell me the whole truth. Did you embezzle the \$50,000 you are accused of having taken?"

"Yes, sir," replied the accused man. "I'll not attempt to conceal the fact from you. I stole every cent of it."

"How much of it have you still?"

"It's all gone but about \$100."

"Young man," said the eminent lawyer, buttoning his overcoat about him and putting on his gloves, "you'd better plead guilty and throw yourself on the mercy of the court."

"I'll do it if you say so, sir. What are you going to charge me for the advice?"

"Ten dollars."—*Chicago Tribune.*

She Was Present at the Birth.—Evidently the law has its humorous side, as well as the rest of life. A young man recently went to Reading to secure a license to wed the girl of his choice, but the clerk of the court refused to issue it on account of the bridegroom's youthful appearance. Accordingly he secured an affidavit from his mother, which read as follows:

"William Jenkins Brown, twenty-one years old, and I was there when he was born."

"His mother,

"SUSAN JENKINS BROWN."

While this document is a singular one, we can think of one still more remarkable. If the mother had declared that she knew her son was twenty-one years old, altho she was not present at his birth, such a testament might have taken its place in the archives of the State and at the head of the list.—*Philadelphia Inquirer.*

Current Events.

Monday, January 15.

—Sir Charles Warren makes a forward movement with eleven thousand men; Poitigleter's Post is occupied; General French reports reconnaissance along the Orange Free State borders.

—Mr. Macram, former United States consul at Pretoria, reaches Port Said on his way home.

—There is a spirited debate in the Senate on the Philippine question, in which Senators Wolcott, Berry and Pettigrew take part.

—The annual report of the Interstate Commerce Commission is made public.

—The national convention of the United Mine Workers of America is opened at Indianapolis.

Tuesday, January 16.

—Heavy firing is heard along the Tugela River; Boers who attempted to rush a hill occupied by General French's troops are repulsed with heavy loss.

—The Philippine debate is continued in the Senate; Senator Pettigrew's amendment calling for the President's instructions to the peace commissioners is tabled by a vote of 41 to 20.

—Secretary Long and Rear-Admiral Bradford appear before the Senate Committee on Naval Affairs to advocate the construction of a Pacific cable by the navy.

—Ex-Congressman David G. Colson, of Kentucky, kills three men in a hotel brawl at Frankfort.

—James H. Gear is chosen by the Iowa legislature to succeed Linsley in the United States Senate.

—The New York Rapid Transit Board awards

The Internal Bath

The One Perfect Tonic—The Surest Preventive of Illness—A Noteworthy Advance in Treatment.

A new field of thought—interesting and important to all, sick or well—is opened up by the study of the theory, mission, and effects of the internal bath. These are set forth in a booklet entitled "The What, the Why, and the Way," which we desire to send free to every reader of this paper. It is a most noteworthy statement of what progress has been made toward a medical system without drugs—an end which is naturally desired by all.

The fundamental principle of the internal bath and its appliance, the **J. B. L. Cascade**, is, roughly stated: Every disease arises from the retention of waste matter in the system, Nature's drainage being clogged. In the vast majority of cases the clogging is in the colon or large intestine. Positively the one harmless and efficient means of clearing away this waste is the internal bath given with the **J. B. L. Cascade**.

The statement of fact in the last sentence is deceptively simple, for there is no device or invention in medicine which, for far-reaching beneficence, for scope of usefulness to sick and well, surpasses the **J. B. L. Cascade**. They is room here merely to touch upon its field, the vastness of which may be suggested to you by pondering on the question: "If external cleanliness is essential to health, how much more important is internal cleanliness?"

The internal bath is a sovereign remedy for ninety-nine per cent. of all digestive derangements; of its action in preventing appendicitis our booklet speaks, as also of its benefit in numerous other dangerous diseases. Its use is a perfect tonic, with no after-depression; more beneficial and exhilarating than the glow of a Turkish bath.

If you are a physician or know the leaders in the profession, you will recognize a proof of preeminent merit in the fact that the **J. B. L. Cascade** is endorsed and prescribed by the following men: President of the New York State Board of Health, Dr. Daniel Lewis, Dr. W. B. De Garmo, Professor Herman J. Boldt, M.D., of the Post-Graduate Hospital, New York, Dr. Cyrus Edson, Dr. G. W. Brooks, and many others eminent in their calling.

While the **Cascade** is essential to the treatment of many serious diseases, its chief importance, perhaps, to the great majority of people lies in its power of preventing scores of ills, and in its perfect mastery over the common troubles which afflict every home. It is as much a household necessity as the bath tub.

Such is part of the "wonderful mission of the internal bath." Perhaps it is wise for us to make no stronger claims here; for if we told the half of what we have seen of its benefits in our own experience, or of what comes to us every week from physicians, nurses, ministers, and persons whose education and standing give unequivocal weight to their testimony, we should be charged with exaggerating.

We hope that you are sufficiently interested to write for our booklet (asking any questions as to the benefit of the internal bath in your own case), or, if you live in New York, to call at our building.

20. P-B 3	20. B-B 2

Mr. Griffith has adopted a slow development which is not congenial to his style, and the result is that Black now assumes the role of first violin.

White now commits a technical mistake in pushing his K R P and thereby weakens his position. In defending, keep your Pawns as far as possible unmoved.

Now, by virtue of his P-R 3, White has a hole at Kt 3.

It fits like the paper on the wall.

A Fine "Blackburne."

The following game, from Mr. Blackburne's "Games of Chess," is, says *The Westminster Gazette*, interesting from the fact that on this occasion originated the beautiful variation of leaving a Rook en prise for the attack. Tschigorin is very fond of this variation, and played it successfully on various occasions, notably at the Hastings Tournament against Pillsbury.

Mr. Blackburne says that the variation commencing with 10 Q to Kt 3 occurred to him on the spur of the moment, and took Professor Andersen by surprise. He did not venture upon Kt x P 5 and Kt x R 4, as he naturally assumed Mr. Blackburne had sprung upon him a variation well considered beforehand. The capture of the Rook, however, is not an unalloyed pleasure either as Black is subjected to a most violent attack, which White can temporarily disregard, the absence of the Queen's Rook. Black had a good enough game afterward; but he compromised with the advance of the K Kt and Q Kt Pawns, and White manoeuvred very skilfully against the formidable opposition. The latter part of the game, commencing with 18 Q-R 7, is well worth careful study. He cleverly pinned Black's K-Kt K sq, drew off Black's Queen from the defense threatening 26 B-B 2, and brought his Black P into play by force after 27 Q-R 8. The game was then easily won.

The Literary Digest

VOL. XX., No. 5

NEW YORK, FEBRUARY 3, 1900.

WHOLE NUMBER, 511

Published Weekly by
FUNK & WAGNALLS COMPANY.

50 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

GENERAL BULLER'S RETREAT.

THE total failure of General Buller's attempt to turn the right flank of the Boer force in Natal is admitted upon every hand to make still more serious a situation already very depressing for Great Britain. The London correspondent of the Associated Press says that the news brought the "utmost gloom" to the British public. "Open talk is heard," he says, "of the absolute necessity of abandoning Ladysmith to its fate." The London *Standard* is quoted in the cable despatches as saying: "That there has been a failure is obvious, but, if we are to believe the Transvaal report, there has been a disaster." The Transvaal report has it that General Warren's men, who had taken Spion Kop (the small mountain which General Buller described as "the key to the Boer position"), "gave way and broke" when attacked by the Boers, "abandoning the position," and leaving 150 men captured and 1,500 killed. General Buller's report said that Warren's men found Spion Kop "very difficult to hold, as its perimeter was too large," and water was deficient, and therefore the officer in command "decided . . . to abandon the position." General Buller then viewed the Boer defenses, and, he says, "decided that a second attack upon Spion Kop was useless and that the enemy's right was too strong to allow me to force it. Accordingly I decided to withdraw the force to the south of the Tugela."

The London correspondent of the New York *Tribune* says that this means "the complete collapse of General Buller's campaign for the relief of Ladysmith." The London *Times*, whose comment is reported by cable, takes a decidedly serious view of the situation. It says:

"The most carefully planned and executed movement of the whole campaign has entirely failed, and it can hardly be necessary to dwell upon the extreme probability that we shall learn, a little sooner or a little later, of a catastrophe almost without precedent in our military history, a catastrophe, indeed, without a parallel except in the surrender at Yorktown.

"We are checked at every point in the campaign. In fact, the campaign is still to begin. We wish we had clearer proofs that

even now the Government has any adequate comprehension of the situation. The utterances of responsible ministers have done nothing to reassure the country on this point.

"Heavy or light, the thing has to be done, and the Government ought to prepare for the immediate despatch of 50,000 men and to take steps to send yet another 50,000, if those should be needed. The hopeless attempts to carry on the campaign with four widely separated columns, each unequal to its task, must be abandoned for a concentration of force and of purpose."

General White, who is beleaguered in Ladysmith, has sent a message through the Boer lines to General Buller, saying that the sanitary conditions of the town are greatly improved, provisions are plenty, and the defenses are, he thinks, impregnable. The London correspondent of the Associated Press, however, reports that "such authorities as Maj.-Gen. Sir Frederick Carrington, who is under orders for South Africa, and Lord Gifford, who won the Victoria Cross while scouting for Lord Wolseley during the Zulu war, would not be surprised to hear of the capture of General White's force within a week." Some of the London military experts are advising more reinforcements, as the only way of breaking the Boer resistance. The same correspondent says:

"The transport *Assaye* arrived at Cape Town last Friday with 2,127 officers and men. The first portion of the Seventh Division is afloat. Hence, with the 10,000 men of this division and about 9,000 others now at sea, it lies in the power of Lord Roberts to reinforce General Buller heavily. This course is advised by several military writers.

"Altho England's nerves are severely tried, her courage is absolutely unshaken, and probably nothing that can happen in South Africa will change in the slightest degree her intentions. She will continue to receive bad news, if it comes, with dignity, and will maintain her determination to win at last."

The *New York Times* thinks that the costly British mistakes and miscalculations in the Natal campaign show that "they are ignorant of the country they are operating in," a statement seem-

SCENE OF LAST WEEK'S CAMPAIGN.

BOER AND BRITISH COMMANDERS.

ingly confirmed by General Buller himself, who said recently: "I suppose our officers will learn the value of scouting in time, but, in spite of all one can say up to this, our men seem to blunder into the middle of the enemy."

The Philadelphia *Press* believes that the division of the British forces has been the cause of their ill success. "If General Kitchener is the man men think," says *The Press*, "Ladysmith, Kimberley, and Mafeking will be abandoned and the English army concentrated in an attack on the Boer army, wherever it is, with no reference to any ulterior purpose whatever. . . . All told, there are now in the three besieged towns and in Lord Methuen's stalled force nearly 25,000 English troops locked up and checkmated. The rest are spread over a vast territory, most of them doing nothing. With 120,000 men in Africa, the English have never yet had over 12,000 men under arms on any one battle-field, and this has meant defeat."

The Springfield *Republican* says of the British situation:

"It is probable that the Boers now have the whole distance be-

tween their present lines and Ladysmith carefully studied, with successive positions of great defensive strength marked out and ready to be occupied. Unless General Buller can now relieve Ladysmith by threatening the passes of the Drakensberg into the Orange Free State, the town is liable to fall, despite his utmost efforts to reach it in time.

"How long the campaign in Natal will continue is a very interesting question. While it rages British efforts elsewhere seem paralyzed; and, as for the Boers, the longer they can keep a large British army struggling in the foothills of the Drakensberg, the better for their end of the great game. Four and a half months have passed since hostilities began, and, with the fighting still on British soil, the world is observing in this contest the enormous value of securing the military initiative in war. The invasion of Natal by the Boers was a consummate stroke in strategy."

The New York *Tribune* gives the following table which shows "the terrible loss sustained by the British forces in South Africa since the opening of the war with the engagement at Dundee October 20." The figures are "taken from the reports made by

November 28	Modder River.....	70	393	2	465
December 9	Stormberg.....	11	11	11	33
December 11	Magersfontein.....	11	11	11	33
December 15	Tugela River.....	182	667	348	1,097
January 23	Upper Tugela (seven days' casualties).....	11	11	11	33
January 24	Spion Kop (Boer estimate, killed and captured).....	11	11	11	33
Total.....		1,000	1,000	1,000	3,000

The Tribune adds:

"To make the list complete it is necessary to add the casualties of the Ladysmith garrison, 240, and the losses incurred by the garrisons of Kimberley and Mafeking, with the casualties in Rhodesia and in scattered places. The British losses up to January 24 in killed, wounded and captured, according to Buller's lists, total 8,216 men. A subsequent casualty list of 200 men was sent in by General Buller, but it was not known whether it was part of the losses of January 24 at Spion Kop."

THE EXPANSION POLICY AND THE PROTECTIONISTS.

ALARM and strong disapproval marked the temper of the more radical protectionist papers last week when the Administration and the House leaders seemed bent on giving Puerto Rico free trade with the United States. Such action by Congress seemed inevitable. The President had said in his message that "Our plain duty is to abolish all customs tariffs between the United States and Puerto Rico and give her products free access to our markets"; General Davis, the military governor of the island, had said: "Free trade with the home government I regard as a necessity for Puerto Rico"; and Chairman Payne, of the House ways and means committee, had introduced a bill to extend our tariff and internal-revenue laws to the island, providing for free trade with the mainland. All committees interested favored the measure and its passage seemed sure. Many Republican papers looked upon this free-trade step with favor, using the same altruistic arguments that have characterized the expansion movement thus far. Thus the *Chicago Evening Post* said that "every consideration of justice and expediency demands that we shall open our door to the peaceful Puerto Ricans and extend to them the blessings of free trade with our unexampled markets." The *New York Herald* declared that "considerations of humanity and of equity impel us to extend immediate relief to the suffering island." Cut off from the Spanish markets by the results of the war, and cut off from the United States and from Cuba by tariffs, all accounts agree that the island's industries are going to ruin.

At once, however, a formidable opposition appeared. The arguments of this opposition, said Albert Shaw in *The Review of Reviews*, "are numerous, but may be reduced to two, each of which may be expressed in a single word. The first of these arguments is sugar, the second is tobacco." The cane-sugar growers of Louisiana, the beet-sugar growers of California, and the tobacco growers of Connecticut made their influence felt at Washington, and men and newspapers of strong Republican principle opposed the Administration policy. They pointed out that while the relief of the Puerto Ricans was aimed at, a precedent was really being established for all our other new possessions, and the protectionists might flock in a body to the anti-

expansionist camp. Free trade with Puerto Rico, declared the *New York Press*, will result in "the shipwreck of the whole expansionist cause on the Caribbean reefs, toward which they now have it headed." The anti-expansionist papers rejoiced openly at the Republican dissension and tried to help widen the break. The *Hartford Times*, published in the center of the Connecticut tobacco-fields, said: "Puerto Rico heads the insular procession into the Union, and the Philippines follow, with Cuba, perhaps, bringing up the rear. How do the Republicans of Connecticut like the prospect?" The *New Orleans Picayune* urged the Louisiana sugar-growers to fight the free-trade proposition, warning them that "should the products of Puerto Rico be granted free admission, it would not be long before a similar privilege would be demanded in the case of Cuba and the Philippines, with the result that the important domestic sugar and tobacco interests would be irretrievably ruined." The *New York Evening Post*, after pointing out our treaty obligations to Spain in the matter of Philippine trade, our implied obligations to the other European powers in return for their pledges to maintain the "open door" in China, and the necessity of treating our other new possessions as generously as Puerto Rico, said:

"The conclusion can not be avoided that the Administration has involved itself in a tremendous tangle, legal, commercial, and political. Its policy of imperialism, or expansion, has brought it at loggerheads with the protectionists and in conflict with the Constitution of the United States. It contains also the germs of a quarrel with European powers over trade regulations in Eastern Asia."

Meanwhile Senator Platt (Rep.), of Connecticut, had given notice that he would present and push a measure to cut down by 20 per cent the present tariffs on imports from Puerto Rico. This, he argued, would give relief to the Puerto Ricans, would save the American sugar and tobacco industries, and would avoid committing the Republican Party to a free-trade policy. The *New York Tribune*, a strong advocate of protection, heartily indorsed this proposition, and urged that Congress adopt the policy of special legislation to meet the particular needs of each of our new possessions, and thus avoid the creation of precedents that might some day prove embarrassing. The extension of our tariff laws over Puerto Rico might lead to the extension of other laws until we should find undesirable States admitted into the Union. Said *The Tribune*:

"The principle of separate legislation for our new possessions is one essential to the preservation of this nation as the United States of America. Events have forced us, as they have forced other great nations, to take a hand in affairs far beyond our own borders, but that is no reason why we should dilute and dissipate our nationality. Absorption of Puerto Rico itself is nothing. The principle, however, is everything. Great Britain is still Great Britain, tho it rules India, and the United States of America should be nothing but the United States of America, no matter where its flag may be unfurled."

These arguments have not been without effect. Last Friday, according to the Washington correspondent of the *New York Sun*, a member of the President's Cabinet announced that the Administration will recede from its recommendation of free trade with Puerto Rico, and will favor, instead, the imposition of merely nominal tariffs on Puerto Rican products, thus giving relief without making a political precedent.

The Sun makes the following comment:

"With the tariff proposed the idea that Congress has not the power to regulate the affairs of territory recently acquired from Spain in a manner different from that prescribed for States and Territories already organized must cease to exist."

"Undisturbed by dispute over this constitutional question lie Puerto Rico's commanding right and imperative need of having her industry restored as only virtual free trade with the United States can restore it."

AGUINALDO'S VERSION OF THE PHILIPPINE TROUBLES.

THE appeal of Emilio Aguinaldo, who signs himself President of the Philippine republic, addressed "to the civilized nations, and especially to the great North American republic," gives his version of the causes of the Philippine conflict. He entitles his manifesto "An Authentic Review of the Philippine Revolution." The appeal, written in Spanish, was sent to this country and fell into the hands of Mr. Erving Winslow, of Boston, Eastern secretary of the American Anti-Imperialist League. Mr. Winslow, who says that it came into his hands accidentally, sent a translation of it to the *Springfield Republican*, which published it the morning of January 25. *The Republican*, which is one of the leading anti-imperialist journals, says of Aguinaldo's review:

"Aguinaldo's statement must go out for what it is worth. That his is a partizan relation goes without saying. There is bitterness in it, of course, for this could not be otherwise under the circumstances; the statement of facts will be open to dispute at many points; people opposed in an armed contest never see alike; but the value of this Filipino presentation is twofold. It offers an opportunity for sizing up the man whose leadership his people have invited and welcomed, and to which they adhere under extraordinary stressful circumstances with dogged loyalty, and it presents the other side. . . .

"Undoubtedly there are inaccuracies in this narrative by the Filipino leader, while the discrepancies with the testimony of American officials are often sharp and irreconcilable. He writes with a national bias, just as General Otis or Professor Worcester writes with a bias equally strong. It will be the task of the impartial historian to discover, if possible, the actual truth as between the conflicting witnesses."

As Aguinaldo's review repeatedly avers that Admiral Dewey promised the Filipinos independence, *The Republican* sent a set of proof-sheets to the admiral, asking for such comment as he might care to make. Response was received through his private secretary as follows:

"The admiral, after examining this article, adheres to his determination not to talk of the matter, at least until after the report of the commission is made public."

Aguinaldo's statement, in a few words, is that he was induced to cooperate with the American troops against the Spanish by definite and repeated oral promises from Admiral Dewey and others, guaranteeing Philippine independence; but that after Manila was taken by the combined forces, it became evident that American control of the islands was contemplated, an impression soon confirmed by President McKinley's proclamation issued January 4, 1898. Aguinaldo protested, "threatening also to open hostilities at once," but, reassured by General Otis, he did not do so. The American forces, however, he says, unexpectedly attacked the Filipinos the night of February 4, 1899, when most of the Filipino officers were away on furlough. The war has continued from that time to the present, General Otis refusing all requests for an armistice. The Filipinos are determined, says Aguinaldo, to defend their country's liberty "to the death," and he appeals to the American people to recognize the justice of their cause.

The first promise of Philippine independence, says Aguinaldo, was made to him in Singapore, where he was in hiding. When Consul Pratt asked him to renew the rebellion against Spain, Aguinaldo asked "what advantages the United States would concede to the Filipinos?" The consul said he would cable Commodore Dewey, and, continues Aguinaldo—

"in the morning the conference was renewed, Consul Pratt stating that Admiral Dewey had answered with regard to my wishes, that the United States would at least recognize the independence of the Philippine Islands, under a naval protectorate,

and that there would be no necessity for putting down this agreement in writing, as the word of the admiral and the American consul was sacred and would be kept, being not at all like that of the Spaniards, adding finally that the North American Government was very honorable, very just, and very powerful."

When they parted, a few days later, the consul "suggested to me that I should name him as representative of the Philippines in the United States in order to obtain promptly the official recognition of our independence," and Aguinaldo promised to do so. Reaching Manila on the *McCulloch*, May 19, 1898, Admiral Dewey sent his launch for him at once. Aguinaldo continues:

"The admiral received me in his saloon, and after the first exchange of courtesies, I asked him whether all the telegrams which he had sent to Mr. Pratt, the consul at Singapore, in regard to me were authentic; he answered me in the affirmative, and added that the United States had come to the Philippines to protect the natives and to liberate them from the yoke of Spain. He said, besides, that America was rich in land and money, and had no need of colonies, finally assuring me that there would not be any doubt with regard to the recognition of the Philippine independence on the part of the United States."

Aguinaldo says that he mentioned to Admiral Dewey the fear felt by some of the Filipino leaders that the United States might turn upon the Filipinos after the war with Spain was over, and deprive them of their independence; but the admiral reassured him with new promises of independence and encouraged him to devise a Filipino flag, which he did, flying it over towns taken by the native troops and over Filipino boats in the bay. When the independence of the Philippines was proclaimed by the dictatorial government on June 12, 1898, in the town of Kawit, however, "the admiral, through his secretary, excused himself from being present, alleging that this was his mail-day." During an interview in July, however, Aguinaldo says that Admiral Dewey said to him:

"Trust to my word, which I pledge, that the United States will recognize the independence of this country. But I recommend that you maintain the greatest reserve with regard to all that we have said and agreed upon."

Manila was captured on August 13, the Filipinos attacking at the same time as the American troops, altho Aguinaldo does not say that they were ordered or asked to cooperate, or were even notified of the time of the attack. General Merritt asked Aguinaldo to order his troops not to enter Manila, a request which Aguinaldo refused, because the native troops had been fighting severely for months for the very purpose of entering Manila. When General Merritt insisted, however, Aguinaldo gradually withdrew his forces to the edge of the city. "Until then," he says, "and even until the day on which the Americans openly started hostilities toward our people, I had cherished in my soul the most well-founded hopes that the American generals would maintain in behalf of their Government the agreements made verbally with the chief of the Philippine revolution, notwithstanding the symptoms to the contrary."

"These hopes, however," he says, "vanished entirely" on learning that Mr. McKinley, "at the instigation of the imperialistic party, had decided to annex the Philippines." This news, says Aguinaldo, "struck like a lightning bolt into the camp of the revolution. Some cursed the hour and the day on which we had verbally negotiated with the Americans; others censured us for having given up the suburbs." The majority wanted to send an ultimatum to General Otis, but Aguinaldo restrained them. Aguinaldo still believed that the promised independence would be given them. He says:

"I was also confirmed in this opinion by the circumstance, not less evident and notorious, that the other American generals who arrived after the glorious victories of the admiral, Generals Merritt, Anderson, and Otis, proclaimed to the Philippine people that

"America had not come to conquer new territories, but to liberate their inhabitants from the oppression of Spanish rule."

"Joy and satisfaction returned again to the hearts of all the Philippine revolutionists" when they heard the glad tidings that the United States Government had decided to send a civil commission to treat with the Filipinos in regard to the government of the islands; but meanwhile "the abuses of the Americans became in many cases unbearable." Aguinaldo says: "I could fill a whole book if I continued to relate one by one all the abuses and brutalities committed by the American soldiers in these days of general anxiety." These abuses, he thinks, were "ordered, or at least officially tolerated, with the evident intention of provoking a fight" before the commission arrived, so that they would see the country in a state of war and think the imperialistic policy necessary. Aguinaldo says that the Filipinos "would have come to a friendly understanding and settlement with the said commission, if the same on arriving had found the country at peace." He continues:

"We Filipinos would have received this commission with proofs of true friendship and complete adherence as honored agents of great America. The commission would have traveled through all our provinces, seeing and observing directly the order and tranquillity throughout our territory. They would have seen the fields plowed and sown; they would have examined our constitution and public administration quite at their ease."

But on the 4th of January, 1899, a proclamation was issued, "establishing in the name of the President, Mr. McKinley, the sovereignty of America in these islands, threatening ruin, death, and desolation to all who failed to recognize it." Then, he says:

"I, Emilio Aguinaldo, humble servitor of all, but President of the Philippine Republic, charged as such to watch over the liberty and the independence of the people which has elected me to that high but thorny position, mistrusted for the first time the honor of the Americans; comprehending at once that this proclamation of General Otis had passed the boundary of all prudence, and that there was no other remedy than to repel by force of arms such an unjust as well as unlooked-for proceeding from the chief of a friendly army."

"I protested against that proclamation, threatening also to open hostilities at once, as the whole nation was crying 'Treason.'"

Now General Otis resorted to conciliatory measures. He appointed a commission to confer with the Filipinos, heard what they had to say about the abuses and about independence, and promised to inform the Government at Washington of their desires. At this the expectations of the Filipinos ran high again, "the majority giving themselves up to the most flattering hopes." Most of the Filipino generals went home on furlough. Then, says Aguinaldo, "came the fatal day of the 4th of February, on the night of which the American troops suddenly attacked all our lines, which were practically abandoned."

The anti-imperialist press have long asserted that at this point Aguinaldo sent a message to General Otis saying that the hostilities were not begun by the Filipinos, and asking for an armistice that the misunderstanding might be settled peaceably; but General Otis, the story goes, replied that as the fighting had now begun, it must go on to the bitter end. Aguinaldo, in this review, makes no mention of this alleged incident. He does say, however, that while our civil commission was in the Philippines, he asked General Otis three times for a suspension of hostilities so that he might confer with them, but General Otis replied "that he would not suspend the hostilities as long as the Philippine army would not lay down their arms." Aguinaldo makes no mention of having received assistance, directly or indirectly, from the anti-imperialists in this country.

Aguinaldo then asks if General Otis and the Administration have forgotten their promises and the services of the Filipinos.

Pointing to the Cubans, he says: "Are we less worthy of liberty and independence than these revolutionists?" The closing paragraphs are an appeal to the honor and sympathy of the American people.

The *Hartford Courant* says:

"The one really important question raised anew by this missive from Tarlak is whether George Dewey recognized the insurgents as allies of the United States and repeatedly promised Aguinaldo on his honor that they should have political independence. Aguinaldo reaffirms that he did. George Dewey has told the President and the country that neither on May 19, 1898, nor on any other day did he give Aguinaldo any such promise. It is the word of a Malay adventurer—a Malay 'patriot,' if you please—against the word of an American admiral and gentleman. Erving Winslow and the Springfield paper are at perfect liberty to make their choice. We made ours some time ago. We believe George Dewey."

FOR A SIXTY-MILLION-DOLLAR CANAL.

TWO committees authorized by the New York State legislature made reports last week on the subject of the canal system of the State. One was a committee appointed last March for the special purpose of considering the entire canal question; the other was a committee appointed two years ago to investigate the causes and remedy of the relative decline in the export trade from New York City. The latter committee reports that the decline is in large part due to the differential rates agreed upon by the railroads, which rates operate against this city and in a measure counteract its natural advantages. The New York Central is expressly censured for being a party to such agreement. The remedy, the committee finds, is in the development of our canal system, and it recommends the completion of the plans entered upon when the recent appropriation of \$9,000,000 was made. The completion of these plans, it is estimated, would cost \$15,000,000 additional.

The canal committee, on the other hand, recommend a far more elaborate development, at an estimated cost of \$60,000,000 additional. This report is submitted by Governor Roosevelt to the legislature with an emphatic and unqualified indorsement; the New York Produce Exchange has decided to inaugurate a campaign of education in behalf of the committee's recommendations; and the press of New York City (the taxpayers of which will have the greater part of the financial burden to bear) are, so far, nearly unanimous in support of the report.

The committee canvassed three plans for enlargement. (1) The completion of the plan already begun, at an expense of \$15,000,000; (2) the more elaborate plan of enlargement to enable barges of 1,000 tons to pass through the canal, involving an expense of \$60,000,000; (3) a still more elaborate plan for a ship-canal enabling ocean-going ships to pass through, involving an expense of \$100,000,000. The first is discarded as inadequate, the last as impracticable; the second is unanimously approved. The only voice as yet heard in opposition is that of President Callaway, of the New York Central, who in defending his road against the charges made, touches incidentally on the canal question and asserts that the interest charges and operating expenses entailed by the adoption of the committee's plan would be equivalent to an extra charge of three cents a bushel for all the wheat we could hope to transport; and wheat, he claims, would of necessity be the main reliance of the canal.

The *Journal of Commerce* calls the canal committee's report "extremely lucid, candid, and able," finds weak points as well as strong points in it, and reserves a decided opinion upon the plan proposed.

The *Evening Post*, after "attentive perusal" of the report (than which we seldom see one "more methodical, painstaking, and convincing"), concurs in its conclusions as "wise and proper," provided the committee's strong insistence on a reform

Yankee. Slavery killed all the Yankee instinct in the South's strong, brave American. In 1810 the South was more Yankee than New England, so far as manufacture was concerned, for the manufactured products of the Carolinas and Georgia were worth more money than those of all the States north of New York. But cotton agriculture alone could never make an American people happy, as I have already intimated. The people of Charleston, in the days of their pride, never knew what it was to be happy intellectually, as the people of Boston did, for these people by the Southern sea certainly suffered from intellectual interruption.

"Now we have a recrudescence or renaissance of the original Yankee spirit in the Southern white man's bones. It is coming out in the bracing air of these foothills, where motive power is abundant, where living and labor are cheap, where the bale of raw cotton almost falls from the gin into the mill, and where progress does not depend upon the inclination of the negro. Here invention and specialism have begun to show their hand, and polytechnic schools are rising in many places. The dignity of labor takes on a new meaning for the young masters of these enterprises. Young men from the university and college have begun to don overalls and go into the greasy mills to learn the business."

The writer sees, as a result of all this, a splendid future for the South:

"Nature probably intended this section to manufacture finally all the Southern cotton crop, which is now and probably will remain nine tenths of the world's supply. Cotton manufacture can now defy climate, but the true 'cloth climate' is there. Organization is fast developing. Skilful labor will be evolved and imported. The conveying of electric power from the falls of these great rivers is fast being undertaken. The coal is near by. The cotton is at the door, both the coarsest and finest that grows. . . . Through the Southern Yankees and their New England preceptors, the Nicaragua canal, the acquisition of the Philippines and a foothold in China, America will take the cotton trade almost completely away from Europe."

Far from regretting the change that is making Yankees out of the Southerners, he says:

"Here's to you, nature's favorite continent, and to you, warm-hearted fellows on its southeastern mountainsides. How delightfully new and interesting you are! Cut-throat competition has not yet marred your innocence, nor great greed your happiness. You have not yet learned to shut the door on your meetings, and the soft word 'combine' is not yet too familiar to your ears. Such is your present compensation for your long adversity."

THE LYNCHINGS OF A YEAR.

THE *Chicago Tribune*, which makes an effort each year to keep record of criminal statistics in this country, presents the following interesting table showing the annual number of lynchings during the last fifteen years:

1885.....	184	1891.....	200
1886.....	138	1892.....	190
1887.....	122	1893.....	171
1888.....	142	1894.....	131
1889.....	176	1895.....	166
1890.....	117	1896.....	157
1891.....	107	1897.....	107
1892.....	215		

It will thus be seen that the practise of lynching is distinctly on the wane. The number last year was lower than that of any preceding year, equaling about one in 650,000 of the nation's population. More than 90 per cent. of those occurring in 1899 took place in the Southern States, Georgia, Mississippi, Louisiana, Arkansas, leading the list in the order named. Of the total number of victims, eighty-four were negroes and twenty-three were whites. The alleged crimes for which they were killed are classified as follows:

Murder, 45; complicity in murder, 11; assault, 11; charges of assault, 6; bad reputation, 5; arson, 6; race prejudice, 5; robbery, 5; unknown offenses, 4; aiding criminals to escape, 3; sus-

pected arson, 1; inflammatory language, 1; no offense alleged, 1; mistaken identity, 1; highway robbery, 1; arson and murder, 1.

Commenting on this list, the *Rochester Democrat and Chronicle* says:

"It will be noticed that what has been called 'the unspeakable crime' was the cause of only 11 mob murders, while 6 victims were merely charged with that crime. The common impression regarding Southern lynchings, and the argument usually urged in their defense, is that the negroes are so given to crimes of violence against women that this summary punishment is imperatively necessary to restrain them. But the figures show, on the contrary, that but 11 out of 107 lynchings were due to positive knowledge of that class of crimes on the part of the lynchers, and but 17 were either known to be guilty or suspected. It will thus be seen that the most plausible defense of lynching does not cut much of a figure in the light of the records."

The *Philadelphia Public Ledger* says:

"It is worth recalling that one of the strongest and most convincing appeals ever made to the people of a State to unite for the suppression of this enormous crime against law and order was made by Governor Atkinson, of Georgia, in 1897, in his message to the legislature. It did not prove to be effective in destroying the preeminence of Georgia as a lynching State. Governor Atkinson, in this memorable message, mentioned numerous instances in which persons who were lynched, or were about to be lynched when rescued, were innocent of the offense for which they were sacrificed, or to be sacrificed. In one case a man in peril of his life from mob violence sought refuge and found it in Governor Atkinson's own office. It was afterward conclusively proved in a court trial that this person was innocent of the charge against him. The practise of lynching brutalizes communities in which it is frequent. It retards their material progress. It drives out a desirable population, and prudent people will not move into such degenerate neighborhoods and settle there. Business can not flourish outside of the protection of a law-abiding community."

The *New York Evening Post* adds:

"Public sentiment against lynching has been growing steadily throughout the country, and especially in the South, where the practise has been most common. The result is that the press gives much greater publicity to reports of all such outrages now than formerly, and 107 cases during 1899 consequently attracted more notice than would twice as many fifteen years ago."

LETTERS AND ART.

SHAKESPEARE AND THE MODERN STAGE.

A SWEEPING reform in the staging of Shakespearian plays is needed, thinks Mr. Sidney Lee, author of "The Life of Shakespeare." The enormous cost of a Shakespearian production upon the elaborate scale to which the public has become accustomed of recent years stands in the way of a wide and real popular appreciation of the great dramatist's art. Sir Henry Irving lately announced that he had lost a hundred thousand pounds on his Shakespearian productions, and added that it is "almost impossible for any manager—I don't care who he is—to pursue a continuous policy of Shakespeare for many years with any hope of profit in the long run." In the face of this authoritative pronouncement, says Mr. Lee, "it must be conceded that the spectacular drama has been given every chance of succeeding of late years, and has been, from the commercial point of view, a failure." He continues (in *The Nineteenth Century*, January):

"Foreign experience tells in favor of the contention that, if Shakespeare's plays are to be honored on the modern stage as they deserve, they must be freed of the existing incubus of scenic machinery. French acting has always won and deserved admiration. There is no doubt that one cause of its permanently high repute is the absolute divorce in the French theater between drama and spectacle. Molière stands to French literature in the same relation as Shakespeare stands to English literature. Molière's plays are constantly acted in French theaters with a scenic austerity which is unknown to the humblest of our theaters. A French audience would regard it as sacrilege to convert a comedy of Molière into a spectacle. The French people are commonly credited with a love of ornament and display to which the English people are assumed to be strangers, but their treatment of Molière is convincing proof that their artistic sense is ultimately truer than our own.

"The mode of producing Shakespeare on the stage in Germany supplies an argument to the same effect. In Berlin and Vienna and in all the chief towns of German-speaking Europe Shakespeare's plays are produced constantly and in all their variety under conditions which are directly antithetical to those prevailing in the West-end theaters of London. Twenty-eight of Shakespeare's thirty-seven plays figure in the *répertoires* of the most respected companies of German-speaking actors. A few years ago I was in the Burg-Theater in Vienna on a Sunday night—the night on which the great working population of Vienna chiefly take their amusement, as in this country it is chiefly taken by the great working population on Saturday night. The Burg-Theater in Vienna is one of the largest theaters in the world. It resembles Drury Lane Theater or Covent Garden Opera-House. On the occasion of my visit the play produced was Shakespeare's 'Antony and Cleopatra.' The house was crowded in every part. The scenic arrangements were simple and unobtrusive, but were well calculated to suggest the Oriental atmosphere of the plot. There was no music before the performance, or during the intervals between the acts, or as an accompaniment to great speeches in the progress of the play. There was no making love nor any dying to slow music, altho the stage directions were followed scrupulously, and the song 'Come, thou Monarch of the Wild' [vine], was sung to music in the drinking scene on board Pompey's galley, and there were the appointed flourishes of trumpets and drums. The acting was competent, tho not of the highest caliber. The character in the cast of whom I have the most distinct recollection was *Enobarbus*, the level-headed and straight-hitting critic of the action—a comparatively subordinate part, which was filled by one of the most distinguished actors of the Viennese stage. He fitted his part with telling accuracy. The whole piece was listened to with breathless interest, and, altho the performance lasted nearly five hours, no sign of impatience manifested itself at any point. This was no exceptional experience at the Burg-Theater. Plays of Shakespeare are acted there repeatedly—on an average twice a week—and, I am credibly informed, with identical results to those of which I was an eyewitness."

The simple method of Shakespearian production has never of

late years been given a serious chance in England or America, says the writer. On the few isolated occasions when it was tried it did not fail, and there is every reason to believe that a fair trial of it now would result in a great and healthy growth of sentiment in favor of the legitimate drama of the English tongue, so fraught with glorious memories. Mr. Lee gives an interesting account of the Shakespearian revival at Sadler's Wells Theater in England, in 1844, when Phelps and Mrs. Warner, in a period of eighteen years, produced no less than thirty-one of Shakespeare's dramas, besides many other English classic plays:

"No long continuous run of any one piece was permitted by the rules of the playhouse. The program was constantly changed; the scenic appliances were simple, adequate, and inexpensive; the supernumerary staff was restricted to the smallest practicable number. For every thousand pounds that Charles Kean laid out at the Princess's Theater on scenery and other expenses of production, Phelps in his most ornate revivals spent less than a fourth of that sum. For the pounds spent by managers on more recent revivals Phelps would have spent only as many shillings. In the result Phelps reaped from the profits of his efforts a handsome unencumbered income. During the same period Charles Kean grew more and more deeply involved in oppressive debt, and at a later date Sir Henry Irving made over to the public a hundred thousand pounds above his receipts. Why, then, should not Phelps's encouraging experiment be made again?"

But if scenery is to be relegated to its proper place, the acting must be made more efficient from top to bottom of the cast. In no plays are the highest dramatic qualities more demanded than in those of Shakespeare:

"Not only in the leading rôles of his masterpieces, but in the subordinate parts throughout the range of his work, the highest abilities of the actor can find some scope for employment. It is therefore indispensable that the standard of Shakespearian acting should always be maintained at the highest level, and scenic excess, with its inseparable tendency to long runs, is to be deplored on no ground more seriously than on the ground that it tends to encourage the maintenance of the level of acting at something far below the highest. . . .

"The deliberate seeking after realism is thus antagonistic to the ultimate law of dramatic art. In the case of great plays the dramatic representation is most successful from the genuinely artistic point of view—which is the only point of view worthy of discussion—when the true dramatic illusion is produced by simple and unpretending scenic appliances, in which the inevitable 'imperfections' are supplied by the 'thoughts' or imagination of the spectators.

"Lovers of Shakespeare should lose no opportunity of urging the cause of simplicity in the production of the plays of Shakespeare."

HOW TO PRESERVE THE SUPREMACY OF THE FRENCH LANGUAGE.

IS the French language losing its supremacy as the world's medium of diplomatic, polite, and literary communication? And if it is, are there any means of arresting the decline and restoring its ascendancy? French writers have been discussing this question for some time, and admitting that the influence of their mother tongue on the non-Gallic peoples is steadily diminishing, and the number of men learning in preference English and German, in addition to their own language, is increasing. As France has always claimed to be the center of artistic and literary art, this state of affairs is deemed alarming.

M. Jean Finot deals with the subject in the Paris *Revue des Revues*, and suggests a somewhat remarkable method of regaining or perpetuating the supremacy of French throughout the civilized world. His idea is briefly stated as follows:

"Great writers are not wanting in the smaller countries of the world, but they lack the means of making themselves known and

appreciated. Condemned to being read only by the small number of their compatriots, these authors, often very original, gifted, and capable of yielding great profit, are virtually lost to humanity at large. On the other hand, there are great countries that boast of rich, brilliant, and varied literatures that are doomed to neglect abroad, solely because of the unfavorable position of their languages as compared with the more popular and dominant tongues. Such countries are Russia and Italy.

"Does not this condition present a grand opportunity to France? Let her accept the noble and generous rôle of introducer of all the talents which are being stifled in the narrow atmosphere of their own country. Let our literature, besides her own virtues and beauties, become the godmother of the literatures and authors of the 'Great Unknown,' and she will thereby attach to herself and to her own destiny numbers of other tongues and cultivators of letters.

"In a word, we dream of making France once more the great reservoir of intellectual humanity, where every production or idea of value, elevation, or originality shall find a country of adoption. In this way Russians, Italians, Poles, Swedes, Danes, Greeks, Finlanders, Rumanians, Servians, Bulgarians, and many other peoples would, alike from necessity and gratitude, be induced to study French and its literature."

The undertaking is admitted to be rather large and difficult, but as worthy of France as it would be useful. No other country, it is supposed, would enter upon a similar mission. And all humanity, according to the writer, would bless France for rescuing and presenting to the world in accessible form the treasures of obscure peoples.—*Translation made for THE LITERARY DIGEST.*

A NEW PLAY BY IBSEN.

ONCE in an interval of two years—with "solemn periodicity," as Mr. Le Gallienne terms it—the "prophet" opens his lips, and a new play comes forth which, in the minds of the Ibsenites, makes all other literary events of the year pale in comparison. The end of the year 1899 was thus blessed, for in Copenhagen, on December 19, was published the text of Ibsen's long-expected and mystery-enwrapped drama. The very title inspires a sense of mystery—it is called "When We Dead Awaken." Mr. William Archer is busily engaged in translating the play from the Danish. In the mean time, Mr. Le Gallienne, writing in the *Boston Transcript* (January 13) gives the earliest published *résumé* of the drama. Referring to the title, he says:

"You will hardly guess its significance till you read the play, or are told—a significance all the more important as coming from so old a man, and a writer who is perhaps the last from whom we would expect the message. The 'dead' who 'awake' are those who at the end of their lives suddenly understand that they have missed the one thing in life worth living for. They have, maybe, lived lives of high idealism; they have been mighty servants of beauty or knowledge; but they have missed—LOVE. In fact the message of 'When We Dead Awaken' is the old message of 'Love Is Enough'—a message one hardly expected to hear Ibsen proclaiming, and one the more significant from him, as I have said, because he has waited till old age to proclaim it."

Mr. Le Gallienne gives the following outline of the plot:

"'When We Dead Awake' is in three acts, and the following is a list of the *dramatis personæ*:

Professor Arnold Rubek.....	Sculptor
Fru: Maja Rubek.....	His Wife
The Inspector at the Watering-Place.....	Ulfhejm
(A rich landed proprietor, and hunter of big game, particularly bears).	
A Traveling Lady.....	Nurse ('Diakonisse' in Norwegian.
A woman something between a Sister of Mercy and a hospital nurse. She wears religious garb, but is not in orders).	
Waiters, guests at watering-place, and children.	

"The first act takes place at a watering-place along the coast

of Norway; the second and third acts in the neighborhood of a mountain sanatorium.

"In a double sense the play is an epilog, for the formative action has taken place before the play begins, and the drama, so far as it is a drama at all—for it is rather a poem in dialog—is a drama of simple conclusions. Let me first sketch the story in a few words and fill in the sketch more fully here and there later on. Years before the play opens, Prof. Arnold Rubek, now a sculptor of world-wide fame, had known a great love which had inspired him to do his most inspired work, namely, 'The Day of Resurrection.' A great love—and yet not a love at all; for Rubek had been one of those men whom one might call the monks of art, and had loved beauty with so pure a flame that when Irene had given up all the world to live with him and inspire his great work, loving him humanly as women do, he, really loving her, too, had crushed down the mortal love in his heart and forbidden himself to lay human hands on the holy beauty which he was to immortalize. Into his great pure work must creep no single trait of common passion. Irene should be his divine model, and that alone. Rubek kept his vow too well, for, when the great work was finished, Irene, broken-hearted to be thus worshiped as an ideal, when she was longing to be taken into his arms as a woman, goes away. She exhibits Rubek's holy love in music halls, takes many lovers, callously marries, riots her life to ashes. Rubek pursues the path of his art, wins great fame and wealth, returns to his native Norway (which had not previously appreciated him—mark here one of several autobiographic touches) and marries a pretty little empty-headed bourgeois, of whom he is soon as thoroughly sick as she is of him. At this point the play takes up the story. At a Norwegian watering-place together they are mutually bored. They never had anything really in common, and now they make no pretense of it. Fru: Maja cares nothing for his art, great or little; she reproaches him with doing no great work nowadays. He only makes busts of celebrities at high prices. In the husband's answer to her reproach, the sardonic scorn of the artist toward humanity is cruelly direct.

"'There is something covert,' he says, 'something hidden behind these busts, something secret, which men can not see,'

Maja—'How?'

Rubek (decisively)—'Only I can see it, and I enjoy it immensely. Outside is the striking likeness, as they call it, at which people gape in wonderment. (Lowering his voice.) But, lurking far within, I see the good honest faces of the horses, the foolish shouts of asses, the skulls of dogs, low browed and crest-fallen, the loose muzzles of oxen, the fat heads of swine.'

Maja—'Oh, I see, all the dear farmyard creatures.'

Rubek—'Just so, dear Maja, all the dear farmyard creatures. All those beasts which men have distorted into their own image, but which have taken their revenge and distorted men in return.'

(Empties his glass and laughs.)

"Oh, yes! All these things are hidden in those masterpieces which the rich people come and order and pay for, for in good faith, and pay well for, too—pay their weight in gold, one might say.

"Now enters Ulfhejm, the rich landed proprietor, and hunter of bears, swearing coarsely at his footman, who follows with two hounds in leash. Ulfhejm is a large bully of a man, coarsely good-looking. He knows the Rubeks slightly, and a languid conversation springs up. Of course, Rubek and he have no interest for each other. With Maja, however, it is different. His brutality fascinates her, and she gleefully goes off in his company to see the hounds fed.

"Rubek is left alone, and presently a pair come by, a woman all in white, followed by a nurse all in black, with a cross on her breast. They pass in silence and disappear into a pavilion at some short distance. Rubek had seen, or thought he had seen, the same vision the night before, and it aroused old memories. Presently the white lady comes out of the pavilion and sits near. Yes! it is Irene! 'The Wandering Lady' is all that Ibsen calls her in the list of persons—and this name is no doubt meant to add the impression given by occasional phrases of her talk, an impression little insisted upon, that she is mad as well as 'dead.'

"The two recognize each other, and immediately fall to talking of the past and the interval between. They speak of his fame, of their 'child,' as they had always called his great work, and she tells of her life between the creepy touches of fantastic

phrase. The lute-strings in her breast have been broken, all her children are dead—she has killed them—she has killed every one who came into her life, and now she is dead herself. 'I am dead,' she says, 'but I am not quite ice all through. I will not make you shiver too much.' The act closes with this passage, in which she explains her meaning and makes her woman's charge against the artist in Rubek:

Irene—' . . . I had given you something no one should part with.'

Rubek—'Yes! You gave me three or four years of your youth.'

Irene—'More—more than that I gave you, spendthrift that I was!'

Rubek—'Yes! a spendthrift you were—you gave me your beauty in all its nakedness.'

Irene—'To look at!'

Rubek—'And to transfigure.'

Irene—'Yes—and thereby to transfigure yourself. And the child.'

Rubek—'And yourself also, Irene.'

Irene—'But you have forgotten the most precious gift of all.'

Rubek—'The most precious? Which was that?'

Irene—'I gave you my young soul, my living soul. Then I stood there with my empty body—my body without a soul.'

(She stares at him.)

'It was then I died.'

"The act closes with the dark nurse coming in and beckoning her away—and Rubek's sighed 'Irene!'

"In their talk Irene had asked Rubek to take her now at last to the mountains. The bear hunter, too, has invited Fru Maja to the mountains to see a bear hunt. So all meet again in a mountain sanatorium, and the action resolves itself into situations and a *dénouement* so simple as to be almost naked symbolism. Some of the dialog is very beautiful, with a beauty to which my translator tells me her necessarily hasty translations do but little justice; which is true, of course, of every great poet, but particularly of poets like Ibsen, who so carefully chisel down their expression to the last possible word. Here is a fragment of talk between Rubek and his wife:

Rubek (speaking of his soul)—'In here I have a tiny casket which no thief can steal. In that lie all the dreams of my art. When she left me the lock snapped to. She alone had the key—she took it with her. You, little Maja, you had no key—you. Therefore, all is lying unused in here. The years are going by—and it is impossible for me to reach the treasure.'

Maja—'Well, get her to unlock it.'

Rubek—'Maja!'

Maja—'Why not, she is here, and I suppose it is for the casket she has come.'

Rubek—'Oh no! she knows nothing of all this.'

"Now this between Rubek and Irene:

Irene—' . . . You, the artist who carelessly and without a thought took my body warm with its young life, took my young womanly lips and tore the soul out of it—just to create a masterpiece!'

Rubek—'And you can say that! You that lived in my work with such passionate, such holy devotion—that work in which we met every morning as at prayer.'

Irene—'I had never loved your art before I met you, and I have never loved it since.'

Rubek—'But the artist, Irene?'

Irene—'The artist I hate.'

Rubek—'The artist in me also?'

Irene—'Most of all in you. . . .'

Irene—' . . . But I was a woman also at that time, and I had a woman's life to live, a fate, too, to fulfil. All that I left to itself, threw it away, to be your slave. It was suicide, a crime unto death I had committed against myself. (Half whispering.) And for that crime I have to pay dearly. . . .'

Irene—'I should have borne children into the world. Many children. Real children. Not the kind one hides away in art galleries. The other should never have been my fate. I should never have served you—Poet.'

"I have only space now to indicate the *dénouement* and quote the speech in which the play closes as with a strain of spirit music. The bear-hunter is taking Maja, now frankly decided to throw her life in with him, up the hills to see the sunrise. Irene and Rubek decide that they, too, will go and see the sunrise. Midway up the mountain-side they meet the bear-hunter and Maja returning. A storm is rising, and already it is sweeping mists before it down the valleys. Ulfheim is taking Maja for safety

down again into the valley, but he can help no more than one at a time. Irene and Rubek must stay where they are and he will send help. This concluding passage tells how they never waited for such help as Ulfheim could send them:

Irene—'We see the irreparable first when—'

Rubek—'When?'

Irene—'When we dead awake.'

Rubek—'But what do we really see then?'

Irene—'We see that we have never lived.'

Rubek—'Then let us two dead live life to the last drop just for once before we again go down into our tombs.'

Irene—'Arnold.'

Rubek—'But not here in this half-darkness. Not here, where the ugly winding-sheet of the mist flutters about us in the wind.'

Irene—'No. Up in the light; up in all the radiant splendor—high up on the peak of oblivion.'

Rubek—'There we will hold our marriage feast, Irene, my beloved.'

Irene (proudly)—'The sun may look at us.'

Rubek—'And all the powers of light may look at us, and all the powers of darkness, too. Will you then follow me? You, angel of grace.'

Irene (transfigured)—'I follow willingly, and with you—my lord and master.'

Rubek (dragging her with him)—'Through the mists we must go, Irene, and then.'

Irene—'Yes! through the mists. And then—up to the shining peak glittering in the sunrise.'

"Then a great avalanche comes and sweeps them down into gulfs of snow. The dark nurse appears, makes the sign of the cross, and mutters '*Pax vobiscum*,' while from far down in the valley comes the voice of Maja singing 'Free, free, free'—safe on solid brutal earth with her bear-hunter, while the others have gone back to their dreams. *Pax vobiscum!*'

Dr. Edward Brandes, a brother of George Brandes, and himself a dramatic critic, has written an extended analysis of the play. We quote from his article as reproduced in the *New York Sun* (January 12):

"Unquestionably, there will be many objections made against this magnificent drama because the high-sounding prose at times may seem vulnerable to the attack of logical analysis. And it is quite certain that the objections will gather themselves into the pertinent question: Why did Henryk Ibsen show Irene as insane, and why does he let Rubek, who is not insane, prefer the abnormal woman to the beautiful and sensible Maja?

"To this may be answered: If Ibsen with such violence desired to emphasize that life in its entirety, even the most artistic, is to be counted as death, and that but the life of love is real love, to both Irene and Maja, then he was forced to employ the most drastic pictures of the kind of death that life without love assuredly is. Insanity, without a doubt, is both mental and physical death; tho the insane may exist, yet humanity does not consider such existence life.

"Had not Irene stood there, so heartbroken, so ill in mind and evil, so desirous and yet so afraid, with the black shadow of cell and restraint in her wake, the lesson of the play would not be too plain. Without love—no life. It is Irene, of course, who is the star character in the play. It is far from being the undecided Rubek who not until the hour of his death understood the love which Irene offered him, which in Maja's case was confined to the customs of conventional marriage.

"That Henryk Ibsen stands untouched by his weight of years, this drama will ere long announce to the entire world. It is quite true that the structure of the play can not be analyzed on the spur of the moment. The construction embodies a stage setting which will enhance the worth of the drama. Almost with the identical progress which Irene and Rubek make toward the mountain-top the acts unfold themselves lucidly and entirely comprehensible. The more the psychological problem is studied the better will it be understood why Ibsen is called great.

"'When We Dead Awaken' is a master's work and a masterpiece. Like none others is Ibsen, so grand, so mystical, and yet so entirely in agreement with the organic make-up of humanity. From the peak of the mountain he speaks to us, aged as to years, youthful in deed and daring. There is but one ruler, says Henryk Ibsen: the great Eros, and the poet is his prophet!"

THE AUTHOR OF "LORNA DOONE."

THE death of Mr. R. D. Blackmore, at his country home near London, on January 20 recalls the fact that to a greater degree than is the case with almost any other writer of recent times his fame rests upon a single book. Altho Mr. Blackmore practically began his literary career in 1852 with his novel of "Clara Vaughan" (not, however, published until 1864), and altho he has written many other novels since, the world knows him and will continue to know him almost solely as the author of "Lorna Doone." Indeed, that one book bids fair to assure him a per-

RICHARD DODDRIDGE BLACKMORE.

manent place in English literature, for its merits are not of an ephemeral order, and its popularity, after thirty years, is steady, perhaps even increasing. From the *New York Herald* (January 22) we quote the following account of Mr. Blackmore's career:

"Blackmore was intended for the law, but he soon turned from its severity in the Middle Temple to the lighter field of literature. After publishing a volume or two of poetry and a translation of 'The Georgics of Vergil,' he wrote his first novel, 'Clara Vaughan.' . . . He did not win success with a bound, and was not a particularly prolific writer. Nor did 'Lorna Doone' itself at first attract the favor of the publishers. For a year and a half, Blackmore says in his preface to its twentieth edition, the book shivered in the cold corner, without a sun ray. 'Your native land disdained your voice, and America answered, "No child of mine."' A fortunate coincidence turned the scale. The Princess Louise was married to the Marquis of Lorne in 1871, and the similarity of name brought the book to public bearing, and it quickly established itself as an English classic.

"Mr. Blackmore's intimate knowledge of shrub, tree, and fruit in orchard and garden, ranging almost from the hyssop on the wall to the herb of the field, came from his life-long love of gardening. For many years past he had passed a secluded life on the banks of the Thames, within easy reach of London. Market-gardening was his hobby and a pursuit. When he wanted amusement he went a-fishing, but his days were mainly spent behind his high brick walls, among his trees, flowers, and vegetables. When the vines went to sleep of an evening he began to write, bestowing such care on his work that sometimes he would complete no more than a paragraph at a sitting. A gray, rugged, seafaring man, kindly and gentle. Blackmore in this peaceful,

almost idyllic existence filled out the tale of his seventy-five years."

The *New York Tribune* (January 23) says editorially:

"It seems almost incredible that that beautiful book should have appeared only thirty years ago, for it has become an integral part of English literature, wearing that ageless aspect which we associate only with the incontestable classics. Within its pages a perfect English style fuses together all the elements of great romance. Character—well chosen to begin with—is studied with the keenest insight into its secrets. The enchanting landscape amid which the action passes is enchantingly portrayed. A thousand high thoughts on love and life are strewn along the narrative, transfiguring the experience of the humble personages but never exceeding the purpose of the author, which was not to preach but to give innocent delight. He held the mirror up to nature; he was as brilliant a realist as Victorian literature has known—if realism means truth—but for him the glamour of romance was the essential thing. 'Lorna Doone,' which abounds in truth, abounds also in beauty. . . . So long as a feeling for pure romance is kept alive the world will lovingly remember his name."

WHY ARTISTS ARE SOCIALISTS.

THOSE familiar with art circles in England and on the Continent are aware that in those circles, and to some extent in those of America, are to be found a large number of men in sympathy with Socialistic principles. Among the artists in England alone may be mentioned, among others, the late John Ruskin, who in "Fors Clavigera" called himself a "communist"; also William Morris, Walter Crane, Henry Holiday, W. J. Linton, and Cobden Sanderson, all of whom were avowed Socialists. Sir Edward Burne-Jones and George Frederick Watts, too, were in sympathy with Socialistic principles. A New York artist, Mr. F. W. Coburn, states briefly a few reasons why the artistic temperament, as notably in the case of William Morris, naturally turns to an ideal of society that promises to do away with the unequal and squalid conditions which characterize much of the life of to-day. Writing in *The Appeal to Reason* (Girard, Kans., January 20) he says:

"In the first place most artists would rather work for the state than for private individuals. They don't like to be upper servants of the rich. The position of a painter or a sculptor dependent upon the whims of some crusty old capitalist is not dignified. The man who does large work for the Government knows that it will be seen by everybody; the painter of small easel pictures is aware that what he does will be incarcerated in some aristocrat's private gallery. Public art is the art we need.

"Then, too, the artists do not like the looks of the world for which the present industrial system is responsible. It is nasty to look at—filled with cheap, tawdry display and ugly squalor. The artists believe that cooperation in industry will make clean cities and beautiful rural districts. They hold that ugliness is no necessary part of civilization. Not only is the external mold of to-day an eyesore; the lives of men have become stale and flat. Work used to be a privilege as well as an obligation; to-day the artists are almost the only class of hand-workers who can thoroughly enjoy their craft. The artists believe that Socialism will restore to all men the right to an interesting occupation. Under Socialism men will be able to pay more attention to the fine arts than they now can give. Cooperation will mean increased individual productiveness and greater industrial freedom from excess of labor. What the artist does will be better understood and appreciated under Socialism.

"Finally the artists feel that the coming age will be less cynical and ignoble than the present age. They are for the most part a sincere body of men; they take their art seriously. What they lack, however, is the inspiration of high national and social ideals. When an enthusiasm for mutual helpfulness shall have been established, when the industry of the world shall have been organized upon a basis of honor rather than dishonor, when the nobility of the many shall have asserted itself against the meanness of the few—then we shall have a great inspired art, an art

which shall be as comprehensible to the common every-day man as to the dilettante collector. It will be the art of humanity.

"Art is criticism of life. The nobler the life the finer the criticism. That is why the artists long for the reign of social justice."

MUSIC IN THE NINETEENTH CENTURY.

WHATEVER advances the art of music may make in the coming century, says Mr. W. S. B. Mathews, its evolution can hardly be more pronounced than has been that of the present century in comparison with its predecessor. He writes (in *Music*, January):

"At the beginning of the nineteenth century, the world of music was reveling in melody and in agreeable symmetries, with contrasts which, as compared with those of the century before, were sufficient, even luxurious; but which as compared with those which now prevail in music were of little force. The old cantor of the St. Thomas Church had been dead half a century, and his music just then seemed to have lost its force—to have become, in a word, old-fashioned and no longer valid. The taking symmetries of Haydn and the sweet melody of Mozart held the stage. Just in the foreground there was, indeed, a rising young giant, who was known as an artist of promise; a piano virtuoso as the times went, and a composer having in his music something rather new and striking. This was the young Beethoven, who had now been living in Vienna about ten years, and had printed several trios and other pieces and the pianoforte sonatas up to and including the 'Pathétique' and the two small ones in E and G major, opus 14. But as yet the Mozart spirit everywhere prevailed. Whatever there might have been felt in the melody of Beethoven to be unlike and something beyond that of Mozart, was interpreted as evidence of crudity and immaturity. 'When this young man gets older,' was the popular idea, very likely he will gain still more of the tonal beauty of the older masters."

"In the second quarter of this century, or, to be more exact, between 1830 and 1850, the art of music blossomed out in a multitude of new directions, so luxurious, so suggestive, so manifoldly expressive, that its like has never before been known in the history of our art; nor in that of any other art, saving possibly in painting during the Italian renaissance. After smoldering quietly and finding a modest expression through the divine melody of Schubert, all along during the last years of Beethoven and for one year later, immediately at the death of this young master, as yet unacknowledged, a number of new workers took up the strain, and for two-score years poured out a new musical gospel varied, far-reaching, universal in its appeal, and in every form."

"Thus came to expression the spirit of the modern romantic, through the combined genius of Schubert, Mendelssohn, Chopin, Schumann, Berlioz, Liszt, Robert Franz, and the rest—a roll of master-workers worthy to be blazoned in letters of gold in every music hall of the whole world."

After referring to the music of these and other composers, Mr. Mathews comes to Wagner:

"For a quarter of a century the musical world was by the ears over the ideas of this young and impudent upstart. The worse he was abused, the clearer Wagner wrote and composed. In his Swiss exile, where for the mere sake of hearing fragments of Beethoven's music and something of his own he conducted festivals in the little cities, like Zurich, Wagner went on with his development. Not only did he propose a 'music of the future' and tell what it would probably be like—he set himself to compose it. He wrote his book of the Niebelung Ring; and by way of interlude stopped a few years and interjected between the second and third acts of 'Siegfried' his colossal love story, 'Tristan and Isolde' and the beautiful and many-sided 'Master Singers.' By much pull-hauling the two new-comers got themselves heard imperfectly in Munich, in 1865 and 1868. Then he went on with the Ring, and in 1876, when his art had been the most persistent subject of discussion throughout the civilized world, he opened at Baireuth the Wagner theater and gave his first production of the four operas of German mythology."

"But this was not the end. Still one other opera followed later, his 'Parsifal,' a mystical religious drama. Meanwhile the world

went on predicting the end of all things in this overturning of form and this renaissance of paganism in music for the expression of pagan conceptions of morality. Here was Hegel's other side of art in earnest, the expression of everything in the way of passion, darkness, and death, to the end that the human spirit might stand confronted with its own image, not simply in its few good moments, but in its worst and in its commonplace and malevolent moods. Then the life of Wagner came to an end. But not the discussion of his works. The operas of the Ring, which he felt sure would never be played elsewhere than at Baireuth and under abnormal conditions, have entered into the repertory of the German opera-houses, and Wagner cycles are incidents of every season. The same thing happens again in London, and just now, after fifty years of resistance and the intervention of one war, in Paris itself, and not last of all here in America also."

"Thus the Wagner voice has filled the ears of mankind for the entire last half of this century."

Of another great name which has adorned the closing quarter of the century—Johannes Brahms—Mr. Mathews writes:

"Brahms abstained completely from the poetic frenzy. He found his moving inspiration in musical imagination itself, and he brought his conceptions to expression with a constructive technic not inferior to that of any artist since Bach. His master-work, 'The German Requiem,' as also the first which brought his name to complete recognition, was first heard in 1869. Later on he wrote four symphonies and many curious and remarkable compositions for the piano and for chamber instruments. Whether his name will at last be counted among the very greatest it is perhaps too soon to say. At least his star is of distinguished magnitude, and its rays will come brightly through the clouds and among the nebulae."

Among the latest movements of *fin-de-siècle* music, Mr. Mathews notes the pursuit of the sensational, and the entrance of the Russian to what with more than diplomatic propriety he terms "the European concert." Amid the details of this astonishing progress, Mr. Mathews notes that everywhere the program of art as laid down in the Hegelian philosophy is followed:

"The design is to bring everything to complete expression. But where then will be the beautiful? And wherein the nobility of art and its usefulness to mankind? To what end this awakening of the slumbering feelings, passions, and desires of all kinds, if no solution is afforded? Thus, after we have gone over the development of the nineteenth century in music in its details, we will still be confronted by the fundamental questions of musical ethics and esthetics."

NOTES.

MR. FRANK STOCKTON is to have the honor of a complete edition of his works, to be called "the Shenandoah Edition." It is published by Messrs. Charles Scribner's Sons, and is to comprise eighteen volumes.

ZANGWILL's play, "The Children of the Ghetto," was able to hold the stage only a week at the Adelphi Theater, London, and was followed by a drama entitled "Drink." "Abas," remarks an unfeeling Chicago journal, "that Mr. Zangwill should have driven the management of the Adelphi to this!"

ACCORDING to trustworthy foreign journals, there seems to be serious danger that M. Paul Deroulede, not being permitted to do any more talking in France for the next ten years on account of his banishment, will come to this country to lecture. It is said that he will try to help rehabilitate the literary fame of Kipling in America, an effort which appeals to him both as a lover of lost causes and as an imperialist.

A TRANSLATION of Zola's new novel "Fécondité" is, after all, to be made by Mr. Ernest Vizetelly, according to the *London Chronicle*. It will be remembered that Mr. Vizetelly, after first accepting the commission from Zola's publishers, concluded that the work would have to be so emasculated to satisfy Anglo-Saxon scruples as to render it a monstrosity. Now he has concluded to "edit" it for English tastes. If he succeeds in pleasing both the author and the British philistine, it will be a feat to be proud of.

A NEW review, *The International Monthly*, published in America and England by the Macmillan Company, makes its appearance with the January number. It aims to be a magazine of contemporary thought and to fill in this country a place somewhat similar to that of *The Fortnightly*, *The Contemporary*, and *The Nineteenth Century* abroad. The list of contributors for the coming year includes well-known men of science, art, and letters in the leading American, British, and continental universities. The editor is Frederick A. Richardson, Burlington, Vt. One unnecessary defect in its mechanical make-up is the failure to give the captions of articles at the top of the page.

SCIENCE AND INVENTION.

IS ALCOHOL A FOOD?

THE experiments of Prof. W. O. Atwater, of Wesleyan University, which were interpreted by him to mean that alcohol acts in many respects as a true food, have already been described in these columns. As might have been expected, they have stirred up much controversy. Professor Atwater's results were given to the public in June last, and in August following a committee was formed from the Northfield Conference of Christian Workers, "to meet this most recent attack upon the cause of temperance." National temperance committees of various religious denominations, national temperance societies, and others now join the Northfield committee in presenting to the public a sixteen-page pamphlet entitled, "An Appeal to Truth," which is a formal reply to the Middletown professor. The substance of his statements, accompanied by a commentary thereon, is thus given in this pamphlet:

"1. Professor Atwater says his experiments proved that alcohol is oxidized in the body. This is not denied, but it does not prove alcohol to be a food. Many poisons besides alcohol are oxidized in the body.

"2. The Middletown experiments are said to prove that alcohol in being oxidized in the body furnishes energy. This again is not denied, but it proves nothing in favor of alcohol because its injurious action at the same time far outweighs the value of the energy it liberates, as is the case with other poisons oxidized in the body.

"3. Professor Atwater claims that in his experiments alcohol protected the materials of the body from consumption just as effectively as corresponding amounts of sugar, starch, and fat. But this is not supported by his own figures in the tables of his official Bulletin 69. Such is the testimony of professors occupying the chairs of pathological chemistry in the University and Bellevue Hospital Medical School, New York City; of physiology in the Medical School of Northwestern University, Chicago; of hygiene in the Medico-Chirurgical College of Philadelphia; and of a former professor of materia medica in the Medico-Chirurgical College of Philadelphia, now professor in the Philadelphia Polyclinic and College for Graduates."

All these scientists, we are told, after careful study, arrive at the same conclusion, viz., that Professor Atwater's tables in Bulletin 69 do not show the protection he claims, but on the contrary a loss of nitrogenous material when the man experimented upon took alcohol. This and other testimony presented in this "Appeal to Truth," including that from a number of European physicians, go to show that Professor Atwater's experiments do not sustain his charge of error against the present temperance teaching that alcohol is a poison and not a food.

This pamphlet has of course called forth extended comment. Some papers content themselves with a brief statement of facts, without taking sides. Thus the *Philadelphia Press* says:

"When Professor Atwater, of Wesleyan University, after elaborate and costly experiment on a living subject, declared that alcohol was a food every thinking reader saw in it the germ of a battle. And the conflict has commenced sooner than many supposed. . . . The whole temperance world is up in arms, and it is not a difficult matter to foresee in the conflict thus begun a war that will last for years to come. The contention of the temperance element will be pushed with great zeal, if for no other reason than that if Professor Atwater's assertions are true the claim of every temperance text-book, that alcohol is poison, is untrue."

Other commentators say that they do not like the tone of the "Appeal to Truth." The *Boston Transcript* puts it thus:

"Certain advocates of temperance are spending considerable time and money in an effort to refute Professor Atwater's assertion that alcohol is a food. Professor Atwater himself, we believe, is an advocate of temperance (not prohibition), and has declared that alcohol, while a food, is not a food for all, and that

excessive indulgence in it is more harmful than in most foods. The intemperate tone of the reply to Professor Atwater's statement does not give that document the weight it would have if the subject had been treated in the scientific spirit."

It is pointed out in a long editorial in the *New York Sun* that the testimony of the experts quoted in the pamphlet seems directed against the exactness of the comparison with sugar and starch rather than against the statement that alcohol provides to the materials of the body a large degree of protection from consumption. They criticize the conclusion as too sweeping, says the writer of this editorial, without disproving its substantial accuracy. With this exception, therefore, the authors of the "Appeal" accept Professor Atwater's tests, but strenuously deny his inference that alcohol is probably a food. The editorial goes on as follows:

"Professor Atwater is going on with his experiments. He was the first to assert that those made were too brief and too few to be decisive. When the investigation is ended and the results known, they will be examined critically by competent scientific men. It may be that the instruments or the measurements or the methods are wrong, and in that case the mistakes will be shown up by chemists and physicists. There can be no doubt, however, of the importance of the investigation, and every new fact that Professor Atwater can discover or determine with regard to the action of alcohol on the body will be of value, particularly to those who are fighting against the evils of drink.

"It is not so much his scientific researches, however, that have brought down on Professor Atwater the wrath of the temperance organizations, as his objection to the misstatements made with regard to alcohol in the physiology taught in the schools and from the pulpit and temperance platform. His statement regarding a specific book is confessed and not avoided in the 'Appeal.' His protest against the assertion that 'alcohol is not a food but a poison,' in schoolbooks and from the pulpit, as being contrary to the teaching of the latest research, has caused the greatest irritation. It is met in the 'Appeal' by quotations from many eminent authorities, to which doubtless as many eminent authorities can be opposed on the other side. The question is at least an open one, and should be decided in the laboratory rather than by the dictionary or by obfuscation."

ASTRONOMY IN A BALLOON.

IN a recent article on the prize aeronautical competitions of the Aero Club, which we translated from the French, allusion was made to the employment of balloons for the purposes of astronomical observation. The advantages and disadvantages of such use are set forth in *Cosmos* (December 2) by M. W. de Fonvielle, who calls the new method of observation "a new road to the most sublime of the sciences." In the first place, M. de Fonvielle says, those who oppose balloons dwell on the gravity of the risk that those astronomers will run who make night-ascensions, and on the impropriety of exposing them to dangers so considerable. This objection, the author reminds us, is merely a caution to employ only the best balloons and the most skilled aeronauts, since the danger lies wholly in the absence of these. A more serious objection is that the body of the balloon hides part of the sky; but this trouble will probably soon be remedied. He says:

"M. Mallet is at this moment studying out a simple and sure arrangement that will allow the observer to view the whole sky, including the zenith. . . . But even supposing that this is proved impracticable and that we must content ourselves with what we have, there is no need of exaggerating the trouble. . . . It did not prevent M. Tikhoff from making excellent observations [of the Leonid meteors]. He estimated the extent of the constellation Leo that was hidden by the balloon and added a proportional quantity to the number of meteors that he actually observed. This is the method usually followed by astronomers in allowing for the presence of clouds."

In fact, M. de Fonvielle goes on to say, the advantages of the

balloon as an observatory outweigh its disadvantages. Its course is known and its forward motion can thus be allowed for; its rotation is almost zero, so that photography can be easily used. M. Tikhoff was able from his lofty station to see that the meteors were of different colors, instead of all white, as they appeared to one standing on the ground. Even if the impossibility of seeing

M. Mollet M. W. de Fonvielle Mile Klumpke.
ASCENSION OF THE "CENTAUR"

the zenith is not overcome, the balloon observations may, of course, be supplemented by zenith observations taken from the ground. Says M. de Fonvielle again:

"We believe that it will be possible greatly to reduce, or even to suppress, the invisible space. But what we seek to prove is that balloons, even in their present form . . . are in the way of rendering immense service to the exploration of the sky. There are both meteorologists and astronomers who do not wish to make use of them, but these objections only give rise to the invention of new means of observation."

M. de Fonvielle knows whereof he speaks, for he recently took part in an astronomical ascension in the balloon "Centaur"—the third accomplished by it. He describes his trip in *La Science Illustrée*, in which also appears the accompanying photograph of himself and his companions. He says:

"It has been finally shown by a memorable experiment that, notwithstanding the talent and assiduity of the astronomers who insist on despising balloons, they run the risk of neglecting some of the most remarkable astronomical phenomena. It is vain to multiply observation-stations; nature seems to take pleasure in multiplying obstacles to the proper use of all their magnificent celestial artillery. A few clouds, even a light mist rising from the earth's surface, are sufficient to make useless the most expensive preparations. . . ."

"The use of balloons in these astronomical studies is a scientific event of the first order, which will destroy in part the bad effect produced by the absurd and charlatanesque attempts at aerostation that are described daily in a host of journals having scientific pretensions. It was indispensable that a learned astronomer like M. Jansen should take under his patronage a series of rational, logical, and fertile observations, opening a new road to the most sublime of the sciences."—*Translations made for THE LITERARY DIGEST.*

HOW TO KEEP WARM IN COLD WEATHER.

THERE are all sorts of ways of preventing the undue loss of bodily heat in cold weather, but the best of all, according to M. Gabriel Prevost, who writes on the subject in *La Science Française* (December 8) is to do so "inside our own skins"; that is, to rely on the heat of our own bodies, keeping it in by proper treatment of the skin and increasing it by food and exercise, instead of wearing heavy clothes and living in overheated rooms. The preservative *par excellence*, M. Prevost tells us at the outset, is to accustom oneself to low temperature; but this requires patience, prudence, and good health. One can not begin the treatment when very young, or when very old. It can be carried far, however, with the healthy adult, as is shown by the fact that savage races endure, while almost naked, temperatures that would kill the civilized man. In general, it may be said that we wear too heavy clothing. Says M. Prevost:

"The garment is to prevent the loss of heat. It has no 'warmth' in itself. . . . Its thickness is a negligible factor. A covering of paper, hermetically sealed at neck and wrists, and separated from the body by a layer of air, would be 'warmer' than three or four thicknesses of flannel close to the skin. . . . The ideal garment—preservative and at the same time hygienic—would be that which, without keeping in the perspiration, should prevent the body from radiating its heat. This ideal is approached by using several layers of garments."

But bodily heat is not always sufficient to keep us warm. There must be some heat from the outside. Here, too, we go to extremes usually. To prevent all radiation from the body, we should live habitually in an atmosphere at the temperature of 25°-30° C. [77°-86° F.], which is of course far too high. The maximum temperature of a room, M. Prevost says, should be 15°-18° C. [59°-64.5° F.]. The best heater is in our own bodies: whether we are cold or warm depends largely on what we eat.

"To increase bodily heat, sugar and generally fat substances should prevail. Alcohol is eminently deceitful in this regard, and has the real heating value of so many sheets of cigarette paper. Two lumps of sugar have a hundred times the heating value of a glass of brandy. In general, sugar, oil, butter, and fats are the best heating substances."

The external application of grease and fats is also useful, and is used by many peoples of the extreme North. These prevent the loss of heat due to evaporation from the skin and are also insulating.

The same subject is touched on in *Good Health* (December) by Dr. J. H. Kellogg, writing on "winter diseases." His conclusion is that we "smother ourselves with clothing." We should wear lighter garments, and in particular we should not wear wool next the skin. This advice, which runs counter to that given by most physicians, is thus justified by Dr. Kellogg:

"The clothing should not be so heavy as to cause the skin to perspire. Many people smother themselves with woollen clothing. The writer has become convinced that it is not best to wear woollen clothing next to the body. It is only people so extremely feeble that they ought to be kept in an incubator in order to be safe from the hardships of cold, who need to wear woollen next to the skin."

"The peculiarity of wool is that it absorbs a large quantity of water before it appears to be wet. Wool is highly hydroscopic, as the physicists would call it; on the other hand, linen becomes wet and shows it as soon as water comes in contact with it. A woollen cloth or garment, upon being dipped quickly into a pail of water and removed, will not appear to be even moistened, whereas a linen garment will be wet through instantly. Linen has not the hydroscopic property of woollen. The latter is also irritating to the skin, while linen is not."

The practical difference in these fabrics, Dr. Kellogg goes on to tell us, is that linen next the skin takes up moisture quickly and passes it on quickly, while wool takes up perspiration slowly

and passes it on slowly. In the latter case, therefore, there is always a large quantity of moisture next the skin, the skin itself is saturated with moisture, and heat is given off easily. On this "very important point," Dr. Kellogg continues as follows:

"Dr. Hurtz, an eminent scientist of Vienna, has made extensive experiments with reference to the rate at which the skin gives off heat, and he finds that it does so almost twice as rapidly when moist as when dry, the reason for this being that the heat must be conducted to the surface before it can be given up. A dry skin is a poor conductor, but a moist skin is a good one. Heat is readily given off by both conduction and radiation when the skin is moist. Moisten the finger and pass it through the air; the finger cools quickly. By this means one can tell in which direction the wind is blowing. Wet the entire finger, and hold it up in the air; the wind causes evaporation to take place, and this cools that side of the finger. So it is with the whole body. When the entire surface is moist or damp, the heat is being thrown off with great rapidity, and one is likely to be chilled. With woolen underwear the moisture of the skin is retained for a long time, and since the heat is being constantly and rapidly brought to the surface and thrown off in this way, the surface of the skin becomes chilled, and the person is far more likely to take cold than if he wore linen, for the linen takes up the moisture and transmits it to the outer air, drying at once. Therefore I am becoming more and more satisfied that linen clothing is better suited for every season of the year and for all persons, with the exception of those who are very feeble. This is not a new idea, for Priessnitz, that remarkable genius who proposed the use of cold water in the early days, also made this discovery with reference to the clothing."

Nature, Dr. Kellogg concludes, requires of us all a tax for wearing clothes, and this tax we have to work out in frequent cold baths, to give our skins the vigor and tone that the Indian gets by going without clothing altogether. In short, we should bathe daily in cold water to antagonize the enervating influence of clothing.—*Translations made for THE LITERARY DIGEST.*

PACIFIC CABLES.

A PACIFIC cable has long seemed to be a necessity of the near future, and our recent acquisitions in the Pacific have now made it a necessity of the present. An English cable is now assured, and an American will doubtless follow soon. Capt. G. O. Squier, U. S. A., notes in a paper read before the American Institute of Electrical Engineers and printed in *The Electrical Review* (January 10), that the first transpacific cable was proposed by Cyrus W. Field nearly thirty years ago. This proposed

cable was to follow a route from California to Japan *via* Alaska and the Aleutian Islands. Since that time, the question has been constantly before the public. In a special message to Congress dated on February 10 last, President McKinley spoke of the necessity for speedy cable communication with our Pacific islands as "imperative."

The British, in the mean time, have not been idle; in fact, they are decidedly ahead of us. Says Captain Squier:

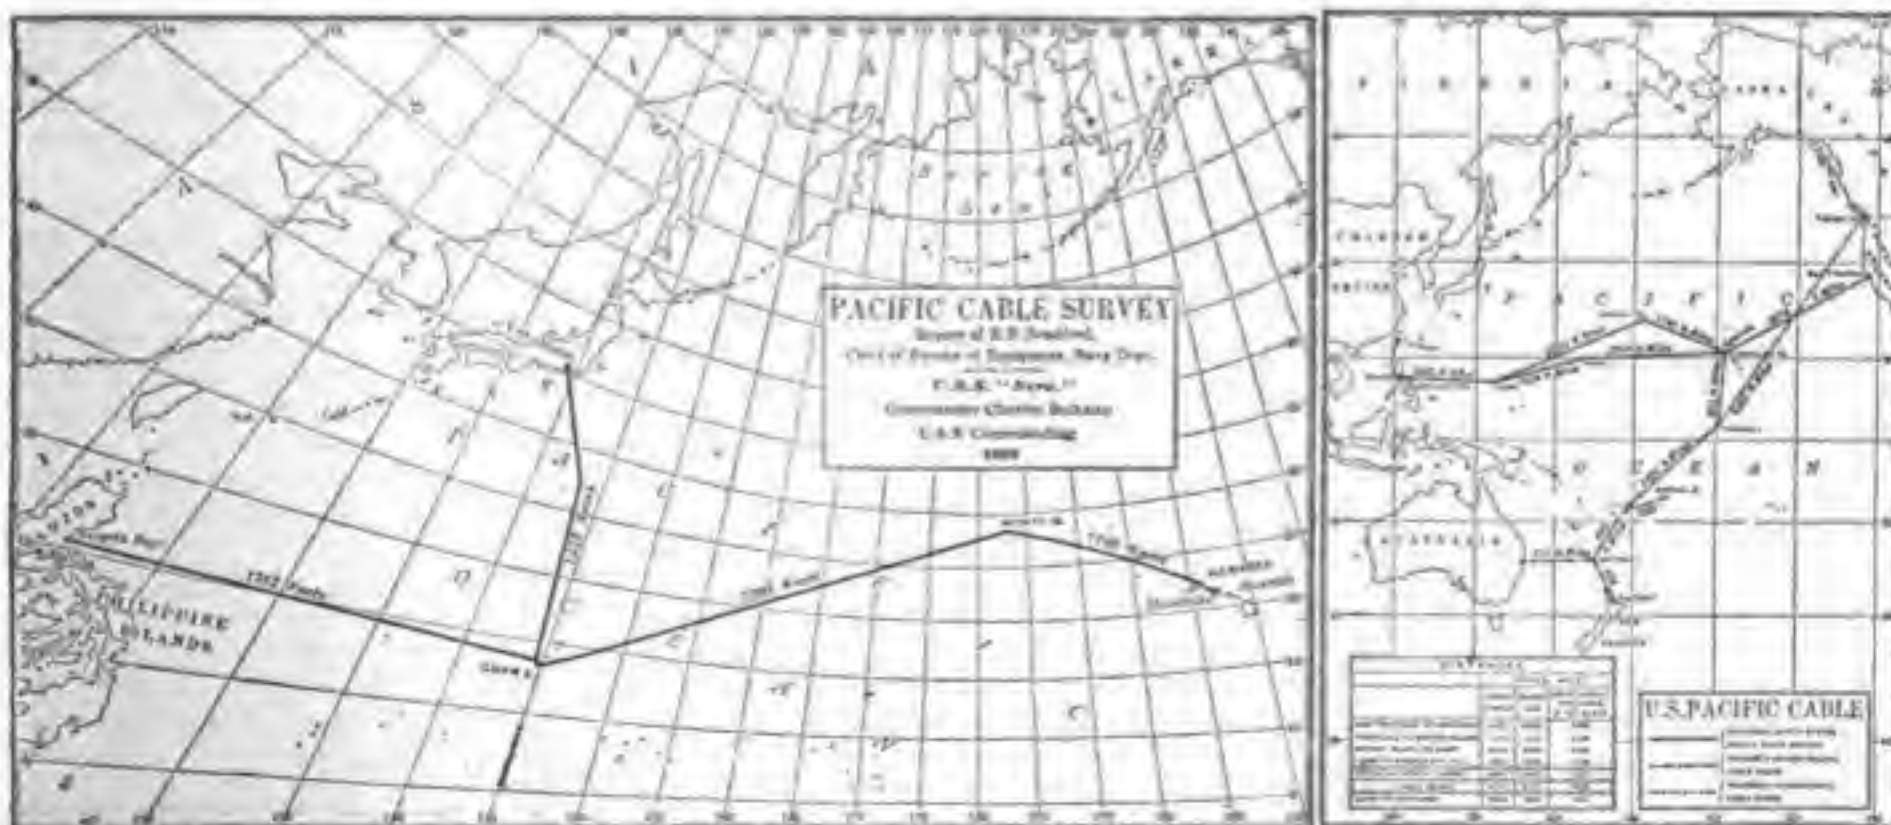

"The idea of a British Pacific cable, connecting the Dominion of Canada with the Australasian colonies, almost from the first has been discussed from a national standpoint. Her Majesty's Government and the colonial governments most concerned have been urged from time to time to consider the matter in its strategic and commercial aspects. At this moment a Pacific cable touching only soil belonging to Great Britain is assured, both Canada and Australasia recently having been reported as joining with England in pledging themselves to the enterprise as a government undertaking."

"The proposed route with surface distances involved is shown on the accompanying map, and is from Vancouver to Fanning Island, thence to the Fiji Islands, thence to Norfolk Island, and from there bifurcating to New Zealand and Queensland."

"Since a Pacific cable will at last complete the telegraphic circuit of the globe, it will give the peculiar advantage of placing each point thereon in cable connection with every other point by *two* distinct routes either east or west."

"The cardinal idea in the British system has been that all state cables shall touch only British soil, and this principle has placed British cable traffic in the Pacific forever at a disadvantage over the American cable for the reason that the only available route involves a single span of cable from Vancouver to Fanning Island, over 3,500 miles in length; whereas, by the annexation of the Hawaiian Islands, the United States, while following a similar principle, will have no span longer than the present Atlantic cables, or about 2,500 miles in length."

This smaller length of span, Captain Squier reminds us, constitutes a great advantage for us, since the speed of cabling decreases in general with the square of the length of the cable, and the speed of the whole system is limited by that of the slowest span. Recently, the author says, there has been a revival of interest in the northern route first proposed, as noted above. The growing commercial importance of Alaska has operated in this direction, and a third cable along this route is not an impossibility. It is excluded for us for the present, however, by the consideration that the first cable must be wholly on American territory. As to the practicability of a Pacific cable, considered strictly from the engineering standpoint, Captain Squier says

AN AMERICAN PACIFIC CABLE, THE ALL-AMERICAN ROUTE.

OTHER PROPOSED ROUTES.
Courtesy of *The Electrical Review*.

there is no longer any doubt. A preliminary survey between the coast of California and the Hawaiian Islands was completed by the Navy Department in 1892, showing that several approximately parallel routes are practicable. Commander Charles Belknap, U. S. N., has been engaged since April last in a survey of the bed of the Pacific along the proposed route of the cable from the Hawaiian Islands westward to the Philippine Islands and to Japan. This survey has disclosed the existence of a submarine mountain, a short distance westward of the Midway Islands, rising to within 82 fathoms of the surface from a depth of 2,200 fathoms; and also of one of the deepest submarine abysses yet found in the world, situated about 500 miles eastward of Guam and more than 4,000 fathoms in depth. These and other obstacles can, however, be avoided.

Night-Signaling by Means of Kites.—A system of night-signaling with flags held up by kites and lighted by a suspended searchlight was recently tried at Bayonne, N. J. The inventor is William A. Eddy, well known for his previous experiments with kites. Says *Electricity*, January 10: "The searchlight was of about one hundred candle power and was suspended within a few feet of the flags. The light, which weighed three pounds when loaded with carbide and water, was sent up at a quarter to seven o'clock, suspended two feet below the flags, each of which was two feet square. Both light and flags were supported by one nine-foot and two seven-foot kites. The flags were fastened to the kite cable by perpendicular staffs. To brightly light the flags the searchlight was rigidly braced on the kite cable in such a position that it pointed straight skyward. As the kites carried the cable upward the glare of the fiery pencil passed beneath the flying kites and upward into space. The rapid fluttering of the flags caused the effect of a stream of blue, white, and red fire extending ten or twelve feet beyond the searchlight reflector. It was a prismatic effect, with the red bar of the spectrum farthest away. As a means of war signaling at night the experiment shows that a great variety of color and light effects can be produced and seen from a great distance. The spectacular effect was impressive, and Mr. Eddy believes that, aside from war signaling, this singular and new night aerial effect would excite wonder at the Paris Exposition and at night carnivals."

Electric Pemmican.—The desiccation of meat at high temperature is an excellent mode of preservation, for it kills all ferments, which require a certain quantity of humidity. "Here," says *Cosmos* (December 30), "practice has preceded theory, as in so many other cases. The primitive races that inhabit hot countries have long used the heat of the sun for the preservation of meat. After having removed the fat, they cut it into strips and dry it on sticks. Meat thus prepared shrinks in volume to 26 per cent., and has the look and taste of india-rubber. With habit and appetite, one can use it for food. Meat thus prepared has been given the following names: 'pemmican,' in North America; 'carne seca' or 'tasajo,' in South America; 'biltong' in South Africa; 'kadyd' or 'kilila,' among the Arabs of the Sahara. An American chemist has discovered that the electric light is capable of producing pemmican, as well as the sun itself. The meat, thoroughly deprived of fat, is exposed to intense electric radiation and at the same time to a current of hot air. The meat dries, becomes desiccated, and shrinks to 30 per cent. of its original volume. But, what is most interesting, it becomes easily pulverizable, instead of remaining elastic. It can be reduced to fine powder, and thus two days' provision can be compressed into a single cake of electric pemmican."—*Translation made for THE LITERARY DIGEST.*

Hard-Rubber Nails.—According to the *Moniteur Industriel*, of Paris, the Harburger Rubber Company, of Hamburg, Germany, has just begun to manufacture what it calls *Hard-gummi-Nägel* [hard-rubber nails] made of a variety of this substance named by the makers "ferronite." "These are comparable in solidity to metal nails, and have the advantage that they can

be used in all circumstances where metal would be inconvenient, or would necessitate numerous precautions. They are not attacked by acids nor by alkalis, do not conduct electricity, and resist all magnetic influence. In the electric industries they are adapted for the assemblage of cases containing storage-batteries, for example, and for their exterior coverings, for chemical apparatus, galvanic piles, etc. They are secure from all danger of induced currents, which are always to be feared when metallic nails are used. The hooks used to suspend conducting wires can also be replaced to advantage with hard-rubber hooks. The insulating coverings are then less exposed to deterioration, and short-circuiting is completely avoided. Finally, the fact that these 'hard-rubber nails' are bad conductors of electricity, and that they are insensible to magnetic attraction, makes them valuable in the construction of delicate laboratory apparatus, measuring instruments, electric switchboards, etc. No spark can result from contact between these nails and a hammer or other tool, so that their use is specially recommended in the manufacture of explosives and in all places where these substances are handled."—*Translation made for THE LITERARY DIGEST.*

Touch-Needles for Assaying Gold.—The accompanying illustration of the "touch-neededles" used by goldsmiths in ancient times, which is reproduced from an old book on metals by *Cassier's Magazine* (January), has, says that magazine, a peculiar interest for the assayer of the present day. It "represents a set of touch-neededles and touch-stones of the kind used

ANCIENT GOLDSMITHS' TOUCH-NEEDEDLES.
Courtesy of *Cassier's Magazine*.

long years ago for determining the degree of fineness of any particular object of gold. The illustration practically tells its own story. Each of the several needles represented a special and known degree of fineness, and a mark, made with it upon the touch-stone, served as a standard for comparison with another mark made by the sample of gold to be tested. The approximation probably was close enough, and the outfit evidently served its purpose well."

SCIENCE BREVITIES.

"ELECTRICITY stimulates all the organs of sense," says Dr. J. Mount Meyer in *The Medical Times*. "Directed upon the retina, it excites it, producing sensations of glare and dazzling. When sent through the organ of hearing, it produces there a peculiar buzzing noise, and, if brought in contact with the tongue, it calls forth a very characteristic metallic and styptic sensation. And in the olfactory mucous membrane it creates a sneezing irritation, and also, it seems, an odor of ammonia."

THE amount of wood necessary to furnish paper for one day's issue of a big newspaper is thus estimated by Prof. G. H. Prescott, according to *Popular Science News*: "A cord of spruce wood is equal to 615 feet board measure, and this quantity of raw material will make half a ton of sulphite pulp, or one ton of ground wood pulp. Newspaper stock is made up with 50 per cent. of sulphite pulp and 50 per cent. of ground wood pulp. The best known spruce land, virgin growth, possesses a stand of about 7,000 feet to the acre. Twenty-two acres of this best spruce land will therefore contain 154,000 feet of timber. An average gang of loggers will cut this in about eight days. This entire quantity of wood turned in at any one of the large mills will be converted in a single day into about 150 tons of such pulp as goes to make up newspaper stock. This pulp will make about an equal weight in paper, which will supply a single large metropolitan newspaper just two days, so that newspapers as well as builders have a practical interest in forestry."

THE RELIGIOUS WORLD.

JUSTICE BREWER ON RELIGION IN THE TWENTIETH CENTURY.

THE judicial mind, trained in careful analysis of facts and in logical deduction, should be well fitted to take a broad and unprejudiced view of the future of religion in the coming century. The opinion of so eminent and scholarly a jurist as Mr. Justice Brewer, of the United States Supreme Court, is particularly worthy of attention, and his recent address before the Mount Pleasant Congregational Church of Washington on "The

Twentieth Century from Another View-point" has been much commented on. We quote a portion of his discourse from the *Washington Post*:

"The future is a sealed book, whose mysteries no man can read with the assurance which comes of after events. The era of prophecy has passed. And yet the lamp of the past casts some light into the future. We may discern the signs of the times. We may perceive the trend of human events. And first I predict

that the twentieth century will be noted for greater unity in Christian life. The present century has been one of denominational rivalry and strife; the next will be one of Christian unity. It is not unworthy of notice that the ancient enemies, Catholicism and Protestantism, are drawing closer together. The prelates and members of the two churches do not hesitate to affiliate in a thousand forms of labor.

"The time is past when the Protestant should look back upon the horrors of the Inquisition, and denounce Roman Catholicism on account thereof, or the Catholic, on the other hand, to look back at the burning of the witches, or the persecution of the Quakers, and denounce Protestantism therefor; but each should shake hands and join in a common effort to further the cause of a common Master.

"Again I predict that the coming century will be noted for greater economy in Christian work. Consolidation has become one of the significant facts of commercial enterprise. There is in this, if nothing else, a means of greater economy. The nations are feeling the spirit. The small states are consolidating into large ones. Russia, France, and England are reaching out the grasping hand to appropriate to themselves territory all over the world; and if this continues along the same line, it is not unreasonable to expect that the coming century will see the world with but half a dozen, or such a matter, of great nations, within whose territory and subject to whose dominion are all the races and peoples of the earth. We must learn to do business as the business man does. He eliminates every unnecessary expense.

"Again, I think the twentieth century will develop a clearer recognition of what religion is, and how its growth can be most surely promoted. Whether evolution be in all respects scientifically true, it is true that civilization is progressive. Humanity has been steadily through the centuries moving onward from barbarism to the present heights of civilization. No century has witnessed such advance as the present. Looking backward on the progress of Christianity, we notice two marked features. One is the struggle about creeds.

JUSTICE D. J. BREWER.

and he that believeth not is condemned already, the necessity of belief and what to believe has been among the great thoughts of the eighteen centuries. As a man thinketh, so is he. Creeds have their place and value. The clearer, the stronger, and the more profound one's convictions the more earnest and zealous he is apt to be. But something more than creed is essential to religion. It is not a question of intellectual advancement so much as one of moral growth. So religion that spends itself in creeds, and does not ripen into character and the richness of a pure and lovely life is like a barren fig-tree—covered with leaves, but fruitless.

"So I look, in the coming century, to see not merely a clearer conception of the fundamental truths—a putting behind us as of little significance the minor differences of creed and doctrine—but also a keener and more just appreciation of the means by which alone humanity can become fit to enter the new Paradise which one day shall dawn upon the earth."

There are many who agree and many who disagree with the justice in his optimistic forecast. The *Springfield Republican*, for instance, says:

"The time is past when Catholics should look back to Protestant cruelties or when Protestants should harp upon the horrors of the Inquisition. The distinguished jurist is justified in his optimism. The twentieth century will probably see great changes for the better along religious lines."

On the other hand, that always zealous controversialist, the religious editor of the *New York Sun*, says:

"But is there practically any evidence of such drawing together? Intolerance is less than it was a century ago. Religious discussions have lost their old acrimony; now even believers and infidels can argue together amicably, as the very remarkable religious debate in *The Sun* has proved so strikingly; but has the gulf of separation between Catholicism and Protestantism been filled up, bridged over, or even narrowed? Where are the two less radical in their conflict in 1900 than they were in 1800? . . .

"Justice Brewer speaks of 'minor differences of creed and doctrine' of little significance'; but there are no such differences between Rome and the Protestant world. The difference is deep and radical, full of great significance, and, as we have said, can not be bridged over by any gush of sentiment. The two can never come together except by Protestants yielding and becoming Catholics or Catholics turning into Protestants. You might as well try to mix oil and water as to attempt to bring these two radically conflicting and diametrically and essentially opposing religious systems into harmony, without the complete surrender of the one to the other; and the twentieth century will not lessen that impossibility by one whit."

Philadelphia's Religious Census.—A religious enterprise of a novel sort is to be undertaken in Philadelphia on February 22. Upon that day a complete census of the population is to be taken for the benefit of the Philadelphia churches. One of the leaders of the movement, Mr. William T. Ellis, thus writes of it in *The Presbyterian Journal* (January 18):

"The city has been divided into eighteen districts with capable chairmen. Diagrams have been prepared showing every house in the city, and when, on the morning of February 22, an army of church-workers go forth for the gathering of statistics, they will visit every home in the city, high and low, rich and poor.

"The first purpose of the census is to gather intelligence concerning the religious condition of the city. The questions asked will be as to whether the persons visited are members of any church, whether they have in times past been members of any church, whether the children attend Sabbath-school, and whether the family has any denominational or church preferences. The facts ascertained will be systematically arranged and placed in the hands of the pastors of the various churches, affording a rich field for further church work. Doubtless most pastors and churches will be quick to seize this privilege, and to carry to its proper conclusion the work begun by the census-takers. Probably for the first time in the history of most of the churches, the

pastors will be put in possession of full facts concerning all the families in their neighborhoods.

"The results should be great. We know that in every large city there are thousands of families, once church-members, who keep their membership letters in trunks and bureau drawers, and fail even to attend any church. The very visit of the census-takers will be a stimulus and a suggestion to these, besides putting the proper church authorities on their track. It is not unreasonable to expect from this notable census, which is a witness of the power and unity of a church in a community, many additions to the membership of the churches and a decided awakening on the part of Christians."

The executive body in charge of the census is the Philadelphia Sabbath-School Association, and in connection with its work a remarkable union of religious forces has been effected. "All the religious denominations and organizations in Philadelphia," Mr. Ellis writes, "are actively cooperating in the work—Presbyterians, Methodists, Baptists, Unitarians, Universalists, Swedenborgians, Salvationists, the Woman's Christian Temperance Union, the Christian League, etc. Even the Roman Catholic Church has given its full indorsement to the plan, tho its contribution of workers will be few or none, because, as the priests state, they have just gone over the ground on their own account."

ST. GEORGE MIVART: A ROMAN CATHOLIC "HERETIC."

SINCE Professor Mivart, the prominent English scientist and critic, wrote his unique article on "Happiness in Hell" a few years ago, he has been looked upon askance by many members of the Roman Catholic Church. In that article (in *The*

ST. GEORGE MIVART.

Nineteenth Century, December, 1893) he endeavored to show that there was nothing in the Catholic faith to prevent one from believing that hell is not a place of torment, but rather a place of "natural beatitude," in which souls are merely separated forever from the final "beatific vision" of the Godhead. These and other articles, showing the great freedom of interpretation which, Dr. Mivart believed, was open to Roman Catholics, met with the reprobation of the Curia. No single proposition was condemned,

but the articles as a whole were placed on the Index. Dr. Mivart submitted, without, however, renouncing, as he says, "any one of the opinions I had maintained." In an article in *The Fortnightly Review* (January) on "Some Recent Catholic Apologists," and in another in *The Nineteenth Century* for the same month on "The Continuity of Catholicism," Professor Mivart returns to the charge with renewed vigor. He explains that, altho six years ago he submitted to the right of the Sacred Congregation of the Index to condemn his articles, he is now free to act in further advocacy of them, since his request for a specific condemnation of any one of his utterances, including his statements about hell, has met with no reply. "My submission," he writes, "is withdrawn accordingly. I still regard the representations as to hell which have been commonly promulgated, in sermons and meditations, as so horrible and revolting, that a Deity capable of instituting such a place of torment would be a bad God, and, therefore, in the words of the late Dr. W. G. Ward, a God 'we should be under the indefeasible obligation of disobeying, defying, and abhorring.'"

After thus throwing down the gauntlet to the Curia, Dr. Mivart proceeds (in *The Fortnightly Review*) to analyze the arguments of some recent Roman Catholic advocates. He speaks of "that abstraction from an abstraction"—the "mind" of the church—as something too unreal to supply a fixed object of faith and loyalty. He characterizes Mr. Wilfred Ward's recent defense of the church in its attitude to Galileo (the contention that the church condemned Galileo not for his scientific views but for "intrusion on the theological domain") as a repetition of an "abominable falsehood."

Professor Mivart's article is not without evidences of rankling animosity. For instance, in speaking of the Curia's recent condemnation of the "Life of Father Hecker," he says:

"Poor Father Hecker (who has been so traduced by the Abbé Maignan) I knew well, both in England and also at Rome, where he had to undergo much vexation. He also had a faith which seemed, to me, in some respects, extravagant. I had a great regard for him, but I esteemed his noble and generous heart more than I did his intellect. Curious is the wonderful ignorance of Rome with regard both to England and America. Nor have the efforts of Cardinal Satolli done much to dissipate it. He is quoted by the 'Civiltà' (p. 41, Note 3) as an opponent of evolution in the name not only of metaphysics, but of the natural sciences. If my information is correct, the natural science to which Cardinal Satolli is most devoted is mineralogy, and especially metallurgy, he having acquired in the United States a very large collection of specimens in the form of dollars."

And a little further on, he writes:

"What, in my opinion, is the great peril which Catholicity now runs is occasioned by the deep and appalling disregard for, if not sometimes positive aversion to, scientific truth which is exhibited by Catholic advocates, and, high above all, by the Roman Curia, whereof some of the most recent manifestations would seem to imply, that if only power can thereby be retained, any amount of deception and of terrorism over weak, credulous minds and tenderly scrupulous consciences is abundantly justified."

He closes his article in *The Fortnightly Review* with this explanation of his position:

"Every apologist who proposes to advocate the cause of Catholicity is bound, above all things, to be frank and truthful. He must declare what he deems the truth, no matter what prejudices he ruffles, or what cherished and widespread delusions he may dispel. He is bound to try and give men higher and higher notions of the Divine, and promote an unhesitating trust in that noblest gift bestowed on man—the human intellect. Every educated man who would feel it a great trial to be forced from his conformity with Catholicity may surely take comfort when he considers the progress which, thanks to science, has taken place, and be grateful to the men who, age after age, have striven to facilitate progress. It would doubtless amaze and appal men of

narrow views if they could now see what that progress will one day be. In the words of the Rev. Dr. Hogan, we should not 'look upon that evolution of Christian doctrine . . . as having reached its term.' 'Many facts and views commonly admitted at the present day may have to be given up at some later period,' while quite others may, centuries hence, assume the form of unquestioned truths. The changes as to religious belief which have already become popular among Catholics are enormous, and much greater than will surely occur in the near future. Altogether, so far it appears to me that our best motto with respect to conformity is, 'Rest and be thankful.'"

In his lengthy article in *The Nineteenth Century* (which, he explains, is but a continuation of *The Fortnightly* article) he amplifies the idea of development of dogmatic interpretation contained in the paragraph just quoted. For instance, among the special doctrines with respect to which a complete change of belief has taken place, he writes:

"The first of these shall be the assertion '*Nulla salus extra ecclesiam*' ('Out of the church there is no salvation'). This dictum was long generally accepted in its most literal meaning, and not a few persons so accept it still. We all recollect the history of the Teutonic chieftain who was about to be baptized, but paused to ask what had been the fate in the next world of his pagan ancestors. When told there could be no doubt but that they were all damned, he refused the regenerating fluid; preferring to go where his ancestors had gone and abide with them. Now, however, it is admitted by the most rigid Roman theologians, that men who do not even accept any form of Christianity, if only they are theists and lead good lives, may have an assured hope for the future, similar to that of a virtuous Christian believer.

"This great change has been aided by the assertion that non-baptized persons, thus meritorious, belong not indeed to the 'body' of the church, but to its '*soul*.' Such an assertion is, however, a mere subterfuge. As we pointed out in our former article, 'the church,' *qua* church, is an ideal abstraction. What an utter nonentity then must be 'the soul' of this abstraction! There has indeed been a complete change of belief as to this matter, tho many persons are most unwilling to admit the fact.

"Another complete transformation is that which has taken place in the doctrine respecting the lawfulness of taking any interest for money. This was absolutely condemned by ecclesiastical authority under the name of 'usury' at the Council of Vienna, presided over by Clement the Fifth. It was condemned again and again; according to Concina, by twenty-eight councils (seven of them being regarded as General Councils) and by seventeen popes. The last formal decree of Rome on the subject is the celebrated encyclical of Benedict the Fourteenth. His definition is that usury is interest on a loan of money as a loan. The Pope evidently regarded 'usury' as intrinsically wrong—as a sin against justice and not merely against charity. The practise was so distinctly and emphatically condemned that no persons living in the Middle Ages could have had any apparently reasonable belief that such decisions would ever be explained away. Yet now, this has been done so completely that no pope, no Catholic priest, or corporate ecclesiastical body, scruples to accept the best interest obtainable for any capital which may be at their disposal.

"Ingenious evasions, such as could never have been anticipated, have been devised, and thus it has come about that what was formerly declared by the highest ecclesiastical authority to be a great sin, is now regarded as a perfectly innocent action, sometimes a meritorious one, and even, under certain circumstances, a course of conduct absolutely binding on conscience."

As to the Bible, he speaks of "the multitude of its statements scientifically false," of its two accounts of the deluge, "neither of them true." He declares that to his certain knowledge "there actually are devout Catholics of both sexes, well known and highly esteemed—weekly communicants and leading lives devoted to charity and religion—who believe Joseph to have been the real and natural father of Jesus." They do not think it necessary to alter a word of the creeds or the devotions now in use—they merely alter the sense of the words. "Virgin" they use "in the sense given to it by Isaiah and not in the strict modern sense

of that word." Further, Dr. Mivart says that he knows priests who share this view, and devout persons "who would prefer to worship God under one of His attributes, symbolized by representations more resembling Athene or Apollo. "There are persons who go to the Brompton Oratory to there worship the Madonna as the only available representative of Venus."

It is hardly to be supposed that the gauntlet thus thrown down with so much energy by Professor Mivart would not be taken up by the believers in traditional Roman Catholicism. The *London Tablet* (January 6), the official organ of Cardinal Vaughan, in the course of a three-page article entitled "Dr. Mivart's Heresy," says that it is no longer possible to doubt that he has "carried the issues far beyond the due limits of the domain of domestic controversy," and "we have no alternative but to regard him as an outsider and an opponent of the Catholic faith." It proceeds:

"Turning to the matter of the article, it is not difficult to discern what may be called Dr. Mivart's initial error—initial in the sense that it opens the gate to those that follow. Dr. Mivart informs his readers in *The Nineteenth Century* that he is not a theologian, and English Catholics have long been aware of the fact; but, it is significant, the error which is fundamental to his whole position is one from which even an elementary knowledge of the principles of Catholic faith ought to have saved him, and one which we should discover with surprise in any youth who had even a decent knowledge of the catechism. It consists in supposing that Catholic faith can in the course of time undergo such modifications that an altogether new and different meaning or sense can be read into or under its formulas. He says:

"Dogmas can not be explicitly called in question, tho sometimes they may be so explained (as we shall shortly see) that they thereby become (practically) explained away or even reversed. Sometimes, also, so changed a signification may be imparted to a word as to strangely modify the meaning of a doctrine wherein such a word plays an important part."

"All this is simply to imply that the Catholic Church maintains a sameness of the verbal dogmatic formula, but permits the sense or meaning contained in it to be gradually altered or even reversed. The primary principle of Catholic faith is just the reverse of this. Its sameness is essentially in *meaning* and not merely in wording. In the course of development, it is the verbal formula which may change and expand in becoming more full, definite, and precise, but the sense or meaning, while indeed becoming clearer and more explicit, remains essentially the same, and as the divine truth, it can never be altered, explained away, or evacuated or reversed. Every Catholic knows how vital and splendid is the principle of doctrinal development, and a Catholic theologian would of all men be the last to underrate its value and working. But every Catholic knows that 'sameness of sense and teaching' '*in eodem sensu et dogmate*,' as St. Vincent of Lerins and the Vatican Council express it, is the very essence of the principle, and that any development which involved alteration or reversal of the sense or meaning of doctrine would not be development at all. The teaching of the Catholic Church is the preservation by the Holy Spirit of the 'mind of Christ' in the faith once delivered to the saints, a consideration quite above all questions of Biblical criticism. It is not any paltry system of word-conjuring, by which under a fixed framework of parrot sounds or verbal formulas are fitted and substituted a series of changing and varying significations to suit the convenience or exigencies of the succeeding ages. Her dogmatic unity is in truth, and therefore in sameness of *sense*, and not merely of sound.

"Dr. Mivart's error in the reversal of this elementary principle of Catholic faith has not even the poor merit of being original. All who have followed the history of the church's defense of the Deposit know that almost from the beginning heresy attacked the faith in two ways. The first was the open teaching of new and strange doctrine, and this the church met by her dogmatic definitions and her trenchant '*siquis dixerit . . . anathema sit*.' The next, which may be called heresy's second trick, consisted in saying: 'Let us accept the words of the church's definitions, but attach to the words a new meaning which will include our doctrine.' The Semi-Arian played the trick with the word 'consubstantial,' and the heretics of subsequent ages have been quick

to avail themselves of the same covert strategy. The church has always met these assaults by plain and inexorable insistence on not merely the words or sound, but on the essential *sense* of her dogmas, which is but another name for that 'all truth' preserved within the mind of the church by the abiding of the 'Spirit of Truth.' While abandoning the Catholic continuity which lies, as we have said, essentially in sameness of sense, Dr. Mivart seeks to establish another and spurious continuity, which would consist in what?—in the facts, forsooth, that 'the changes were effected gradually!' and that there was 'no disruption of the Catholic body.' The first is obviously absurd, as a solution of breach of doctrinal continuity is not the less one whether it is slowly or suddenly effected. The second is merest confusion of thought, as absence of disruption means, *in se*, not doctrinal continuity, but mere organic continuity, which may belong to any heretical communion. It is, then, somewhat late in the day for Dr. Mivart to renew this ancient confusion of the introduction of a new sense, and reversal or change of the old sense or meaning of a doctrine, with the legitimate development by which the same sense or meaning becomes fuller and clearer as the ages proceed."

Among other English journals, *The Weekly Register* (Rom. Cath.) says: "He seems to us not only to distort the features of the case, but to reach an absolutely monstrous conclusion, by which the church is denied effective authority in every field of science, Scripture criticism, biology, questions concerning the antiquity of man, and the origin of his body and soul." *The Guardian* (Church of England) says: "There is, no doubt, much truth in his statement of the modifications of belief which have become current among Roman Catholics as to the fate of those outside their church, and among educated Christians generally as to the nature and scope of the inspiration of the Scriptures. But in his treatment of cardinal articles of the faith, such as the Virgin Birth and the Resurrection of our Lord, Dr. Mivart exhibits a levity and want of reverence totally alien from the Christian temper, even if he can be held entitled to evade responsibility for the heresies he puts forward by the plan of saddling them, at least in part, upon pious theologians or devout weekly communicants, whose names he is unable to mention."

In the mean time, Dr. Mivart has been inhibited by Cardinal Vaughan—a sentence equivalent to temporary excommunication. The controversy is doubtless not yet closed.

A New Zion for Chicago.—John Alexander Dowie, the apostle of "Divine Healing," a man called by some a fanatic and impostor, by others simply a religious enthusiast, is making great plans for the future of his new religion. The past year has brought a large access of membership and property, and now he proposes to found on the shores of Lake Michigan a city of New Zion, based on the principle of universal good, to be the capital of the coming kingdom of God on earth. The Chicago correspondent of the *Philadelphia Times* (January 14) thus tells of the plans of the new prophet:

"The city will outshine in glory any earthly city in the world, and will stand for all time to come the ideal, the beautiful, the virtuous, the true. The wickedness of other cities will lead them to sure destruction. The people of the Holy City will see from afar the walls of the modern Sodom—Chicago—crumble and fall. They will afford a haven to all who would flee from the wrath to come, but wo to him who puts his hand to the plow and turns back."

"Already his followers have numbered hundreds. They have organized themselves into a religious sect and have already framed the laws by which their new State will be governed. They have bought, or have an option upon, six thousand acres of land near Waukegan, Benton Township."

"Ground is to be broken for a temple early in May with most impressive ceremonies. The ill are to be healed, Dowie declares, and the world is to receive its first revelation of what the modern Zion is to be. Later, the building of two factories, the industrial beginnings of the city, is to begin. One is to be for the making

of shoes and the other is to be a lace factory, which Dowie says he will bring to the 'golden city' from England.

"Chicago will be as a neighboring village to the City of Zion, and London, New York, and Paris will sooner or later be almost depopulated by the tremendous flow of immigrants to the new city by the lake."

DR. MCGIFFERT'S FORTHCOMING TRIAL FOR HERESY.

CONTRARY to the general expectation, the Rev. Dr. Arthur C. McGiffert, of the Union Theological Seminary, New York, is to be tried for heresy, and has been formally cited to appear before the New York presbytery on February 12, to answer to the five charges made against him by the Rev. Dr. George W. F. Birch. These charges, with some of their specifications, are as follows (we quote from the *New York Tribune*, January 16):

"Charge 1—I do hereby charge that the Rev. Arthur Cushman McGiffert, Ph.D., D.D., being a minister of the Presbyterian Church in the United States of America, and a member of the presbytery of New York, publicly denies the fundamental doctrine of the immediate inspiration by God, and the truthfulness and authority of the Holy Scripture, as set forth in the Confession of Faith and the Scripture itself."

"Under this charge are fourteen specifications, filling thirty-two pages of the pamphlet and reciting in detail statements made by Dr. McGiffert tending to discredit the Holy Scriptures."

"Charge 2—I do hereby charge that the Rev. Arthur Cushman McGiffert publicly denies the fundamental doctrine of the Confession of Faith and Holy Scripture concerning Christ the Mediator by teaching that the Lord Jesus Christ during His earthly life was liable to err and did err."

"Charge 3—I do hereby charge that the Rev. Dr. McGiffert, etc., publicly denies the fundamental doctrine of the Lord's Supper as said doctrine is set forth in the Confession of Faith and the Holy Scriptures."

"Specification—In this that he teaches that it is not absolutely certain that Jesus Himself instituted the Lord's Supper and directed His disciples to eat and drink in remembrance of Him."

"Charge 4—I do hereby charge the Rev. Dr. A. C. McGiffert, etc., with publicly denying the fundamental doctrine of the Confession of Faith and the Holy Scripture concerning the justification of the believer before God."

"Specification—In this, that he teaches that the justification of the believer before God is not by the imputation to him of the righteousness wrought out by Christ, but by the impartation to him of a righteousness or righteous nature by God."

"Charge 5—I do hereby charge the Rev. Arthur Cushman McGiffert, etc., with a violation of his ordination vow; that is, that he has not been zealous and faithful in maintaining the truths of the Gospel and the purity and peace of the church."

"Specification 1—In this . . . the General Assembly, having called the attention of Dr. McGiffert to questionable statements in his book, and he having, in a letter to the General Assembly of 1899, said that 'many of my positions, together with the spirit and purpose of my book as a whole, have been seriously misapprehended,' and the General Assembly of 1899 having reasserted 'its deliverance of 1898 condemning the statements of said book as being such as to justify the interpretation so repudiated,' and the presbytery having, on December 18, 1899, 'resolved that the teachings of this book are in certain points erroneous and seriously out of harmony with the facts of Holy Scripture as they have been interpreted by the Presbyterian Church,' Dr. McGiffert, nevertheless, has not in any way modified said condemned statements or removed the serious misapprehension of which he is aware, but, on the contrary, asserts that he has not changed his views as expressed in said book."

"Specification 2—In this, that the said Dr. McGiffert published in *The New World*, of Boston, Mass., in March, 1899, an article denying the authority of the Apostles over the faith of Christians and the institution of the Lord's Supper by our Lord as a perpetual memorial of His death."

"Specification 3—In this, that Dr. McGiffert published a certain inaugural address, September 25, 1893, teaching views con-

tradictory to and irreconcilable with the Confession of Faith and Scripture as shown by citations therefrom."

It is impossible to forecast the probable outcome of the trial. The liberal party in the New York presbytery is said to be very strong, as was shown by the action of the presbytery some weeks ago in deferring any decisive action against Professor McGiffert (see *THE LITERARY DIGEST*, January 6), and the present motion for a formal trial was carried through only with the greatest difficulty after a vote which, it is believed, did not fully test the strength of the opposing forces. On the other hand, it is said by some of Dr. McGiffert's friends that he shrinks from the publicity and scandals of a heresy trial, and that rather than permit this to come to pass he will withdraw from the church. In case of a trial, however, an appeal by the unsuccessful party will doubtless be made to the General Assembly, and the final trial will take place before that body, which meets in May.

The *Springfield Republican* (January 14) makes the McGiffert case the text of the following generalizations:

"Among religious people who think—particularly those of the evangelical churches—the mental ferment in these matters was never so great as at the present time. The recent sudden eruption of letters to *The Republican* on the criticism of the Bible proves it. And the outbreak of 'higher criticism,' for and against, in some of the local evangelical churches was the cause of the letter-writing to the editor. Unless the signs are misleading, the situation among the Protestant evangelical churches of America seems to be this: After a long period of slow and almost imperceptible accumulation of momentum, the theological movement seems to be entering the avalanche stage. In the morning you wake up and find that the Roman empire is lost in a welter of barbarism, or that the Jesuits have stemmed the tide of Protestantism in Europe, or that Jupiter is bigger than the moon, or that the Declaration of Independence is a joke, or that war is a blessing, or that man descended from the apes, or that the whale did not swallow Jonah, or that high collars have again appeared on the fashion-plates. Great movements, whether forward or backward, toward the darkness or the light, often move in that way. When ready they rush with the sweep and force of the avalanche.

"The question of transcendent interest, of course, is the effect of the avalanche upon the mass of Christian men and women. This movement from the traditional theology has, in its earlier and slower stage, been accompanied by a marked falling-off in church attendance and popular interest in religious matters. The non-churchgoing class is enormous, and apparently growing. Can the churches win back that class when the 'higher criticism' has done its destructive work? It is not necessary to attempt an answer to such a question in an article of this character; the answer is hidden in the lap of the future, and involves the larger question of the kind of religion which the world of coming generations will require."

The *Boston Transcript* (January 18) says:

"No doubt any hierarchy has an undisputed right to hedge itself in with forms that preclude discussion and make dangerous investigation into the truths of Scripture. That the aggressive and earnest scholar is out of place in such a body seems to be equally self-evident, and it is not easy to understand why he should desire to remain there. The force of old associations probably accounts for it in most cases. We trust, however, that heresy will become an anachronism before the end of the twentieth century—an obsolete term except in connection with past historical events."

The *Brooklyn Times* (January 9) says:

"Dr. McGiffert is not yet forty years old. He is twenty years younger than Dr. Briggs, and has been teaching for little more than ten years. His case, therefore, is more significant of the intellectual tendencies of the coming generation of preachers, even in the most orthodox of churches."

The *New York Evangelist* (Presb.) openly accuses Dr. Birch of fomenting strife. It said at an early stage in the proceedings:

"It should be distinctly kept in mind that if he carries out next

Monday the announcement he has made, Dr. Birch is a disturber of the peace of the church. The presbytery had taken up the matter laid upon it by the General Assembly, and disposed of it, after full discussion and consideration. It took a course at once conservative, and yet consistent with the character and interests of the church. This decision has been hailed with approval, far and wide as a token of harmony, of 'peace and work.' And it is this completed action, this supposed final disposal of the long-vexed McGiffert case that is now to be set aside, if Dr. Birch has his way; declared of no effect as expressive of the mind of presbytery and of the church at large. We speak frankly, but certainly with the facts on our side, when we name him as a disturber of the church."

An opposite view of the case is taken by *The Presbyterian* (Philadelphia, January 17), which denies that Dr. Birch is the real disturber. It says:

"The disturbance was first created by the Union Seminary professor. He did not think of the peace of the church when he published his agitating book, 'A History of Christianity in the Apostolic Age.' He has not consulted her harmony and welfare since. He has not heeded the advice of her General Assembly. He has continued in her fellowship when asked to go out. He has been an agitator from the start, and it comes with bad grace from those who have upheld him from the beginning to characterize one who can not agree with him and them a disturber of the church's peace because he seeks to have the matter at issue constitutionally and fairly settled.

"*The Evangelist* may call Dr. Birch 'a disturber of the peace of the church,' but there are thousands of loyal Presbyterians who will look upon him as the upholder of her doctrinal interests, and as really opening up the way for an authoritative adjudication of a vexed question in a way that will evince the consistency, honesty, and courage of our church, and will tend to relieve her of notorious disturbing factors. It is the men who teach and write contrary to her standards who are her agitators and disturbers, not those who seek to call them to account, just as it is not the policeman who arrests the offender, but the man who is creating trouble, that is the disturber of the public peace."

RELIGIOUS NOTES.

Conscience is the name of a new monthly magazine "for the advancement of higher Christian thought and for the teaching of better economics" published at Berthoud, Colo., and edited by Mr. W. F. Phelps. It represents practically the economic and religious position held by Prof. George D. Herron, who was lately compelled on account of public disapproval of his views to resign the chair of Applied Christianity in Iowa College. Professor Herron is heartily in sympathy with the publication, and promises to contribute to it upon his return from Europe next summer.

THE appointment of Mgr. Sharretti, late auditor of the apostolic delegation at Washington, as bishop of Havana, altho at first arousing bitter opposition from the Cuban party, who naturally wanted a bishop of their own nationality and political faith, appears to have been a wise one, and is now generally acquiesced in by the people of Havana. Bishop Blenk, the sub-apostolic delegate who represents Archbishop Chapelle in Cuba and Puerto Rico, has just been in Havana and has succeeded in reconciling the Cubans to their new prelate. All Catholics are, he says, brothers, and no Catholic should look upon another as a stranger. In view of the great tasks which confront the head of the diocese of Havana, it was absolutely necessary, he said, that a man free from political affiliations should be appointed, one who could stand sternly and fearlessly on the vantage-ground of Christian faith and unbiased judgment. Bishop Blenk, after conferring the pallium upon the new Cuban archbishop of Santiago, has gone to take charge of his own diocese of Puerto Rico.

Some religious papers do not approve of the coming Congress of Religious History at the Paris Exposition, dreading the effects upon popular belief of the comparative study of all religions. *The Midland* (United Presb., January 18), referring to what it regards as the evil effects of the Chicago Parliament of Religions, says: "Missionaries tell us that their work has been made more difficult, in India at least, by the boasts of devotees of the false systems of religion there that in Chicago they had met and triumphed over Christianity. Tho not intolerant, the Christian religion is absolutely exclusive. It can have no fellowship with systems which insult the true God and know nothing of that blessed Name by which alone salvation comes to any human soul. Its mission is to expose and uproot all other systems and rescue men from their delusion and destructive influence. We are convinced that these parliaments tend to obscure the distinction between the only true religion and the systems of error it must seek to destroy. One such experiment was one too many. If a second is to be attempted we hope the good sense of Christian people will keep them from participation."

FOREIGN TOPICS.

THE CAPE DUTCH AND THE WAR.

THERE is a strong suspicion that the defection of the Cape Afrikaners to the forces of the two republics is much more general than the censored news received in Europe would lead one to suppose. Middleburg, Paarl, Victoria West, Worcester, Wellington, Malmesbury have not yet been invaded by the Boers, but the population is in a state of ferment, as the English correspondents inform their papers. Members of some of the best families have joined the Boers. The son of Mr. Theron, member of the Cape Parliament, wired to his father: "Farewell! I'm off

MAKING GOLD OF HUMAN BLOOD.

—W. J. Jacob, Munich.

to the front." Theron sent the message to Sir Alfred Milner with the short remark: "This is my only son!"

We summarize the following from the Gotha *Petermann's Mittheilungen*, as to the relative strength of the Dutch and Anglo-Saxon elements:

The official British statistics furnish no clew as regards the number of Dutch, but the church registers of the three great Dutch churches do. These are the *Nederduitse Gereformeerde Kerk*, the *Nederduitse Hervormde Kerk*, and the *Christelijke Gereformeerde Kerk*, with a registered membership of 350,000. All these may be reckoned as sympathizers with the Boers. Dutch Afrikaners of the towns and mines who have been Anglicized are not included in this estimate. But even with these, the English element number hardly 140,000, exclusive of the troops, as there are 10,000 to 20,000 of other nationalities. Of the white population in the republics, 280,000 are Boers, 60,000 British, and 40,000 other "Uitlanders." Throughout all South Africa there are 645,000 Boers, 245,000 British, and 90,000 other whites.

It is claimed that illiteracy is less common among the Boers of Cape Colony than in England, and that altho the wealthy Boers prefer on the whole to lead the life of country gentlemen, the percentage of highly educated men is greater among them than among the same class in England. The ideas that this class entertain concerning England are probably fairly well represented in the following communication addressed by an Afrikaner, then resident in London, to the *London Times* several weeks ago (we abridge the letter somewhat):

We are not as ignorant as British statesmen and newspaper writers, nor are we such fools as you British are. We wanted delay, we got it, and are now practically masters. We know facts, such as the following:

1. The powers do not intend you to get possession of the Transvaal gold. After encouraging you to believe that they will not interfere, they will assist us directly or indirectly to drive you

out of Africa. 2. We know that you dare not take the precautions necessary to prevent this, as your lazy, dirty, drunken working classes will not allow themselves to be taxed sufficiently to preserve the empire. 3. We know that you are permitted to exist as a power only on sufferance. You must truckle to the United States, or starve. If the Americans stop your food, there will be rebellion, for patriotism does not exist among your working classes. 4. For fifty years you have been too prosperous. There is no nerve in you. Your hired soldiers are the dregs of the population, deficient in all physical, moral, and mental qualities that make good fighting men. 5. Your officers are either pedantic scholars or frivolous society men. Even the Afrikaners were more than a match for you. 6. Your men are so weakened by loathsome diseases that they can not endure the hardships of war. 7. Your whole race is decaying. 8. Your statesmen lack will power and shirk responsibility as much as possible. 9. Your big navy is corruptly administered. 10. We know that your men are inferior as marksmen not only to the Germans, French, and Americans, but also to the Japanese, Afrikaners, Chilians, Peruvians, Belgians, and Russians. 11. We know that the British people would rather be conquered than be compelled to serve as soldiers. 12. We Boers know that it is not our destiny to be governed by British curs, but that we will drive you from Africa, leaving the other manly nations to divide the rest of your empire.

Talk no more of Boer ignorance. In a little while you will be imploring the great German Emperor to help you, for your humiliations are not yet complete. Three hundred thousand Dutch heroes will trample you under foot. We can afford to tell you the truth now.

A decisive British victory may retard or prevent a general rising of the Cape Dutch, who are very self-contained. Strong measures would precipitate a revolt and render the position of the British forces precarious. On the other hand, the Dutch count on retaining their power, even if the republics are beaten, unless restricted in their political rights. Meanwhile every Dutchman is at liberty to join the Boer forces. In the Amsterdam *Eigen Haard* J. A. Wormser describes how the thing is managed to the following effect:

Not two hours by rail from Capetown is the beautiful valley of the Paarl. Opposite the town of Paarl is Fransche Hoek, one of the oldest Huguenot settlements. Both places together have about 8,000 inhabitants. Over four hundred young men have already *vanished* from there. They go "on business" by rail to Worcester, Matjesfontein, Triangle, or Beaufort West, and write from there to papa:

"I am going a little farther. Never mind where." The "old man" can swear that he does not know where the boys are. Two days later they are with the Boer forces. The Afrikaner likes to manage these things in such a way that he does not, in more senses than one, "lose his head." He joins his compatriots, and hopes to come back with a conquering army. An open rebellion would be more dramatic, but the Boer cares nothing for advertisement. The republics did not advertise their armaments. The Cape Afrikaner does not advertise that he is tired of British oppression when he has a British garrison right near him. The Dutch mayor of this or

TURNING THE NEW LEAF.

—Black and White.

The republics did not advertise their armaments. The Cape Afrikaner does not advertise that he is tired of British oppression when he has a British garrison right near him. The Dutch mayor of this or

that town reads off some gubernatorial proclamation. But as he would like to be *burgermeester* when the Free States come, he does not inquire very anxiously whether his hearers are deeply impressed or not.—*Translations made for THE LITERARY DIGEST.*

"THE TRANSVAAL FROM WITHIN."

MR. J. P. FITZPATRICK, author of the book which Lord Rosebery in a recent speech advised his hearers all to read in order to get an insight into the South African situation, presents his credentials in his preface. He writes "as a South African by birth, as a resident in the Transvaal since 1884, and lastly as secretary of the Reform Committee." He breaks a silence of three years imposed upon him as part punishment for his complicity in the Jameson raid of 1896.

With every appearance of a desire to be impartial, he reviews the early history of South Africa. His account differs but little from those given by others. "In order to understand the deep, ineradicable aversion to English rule which is in the heart and the blood and the bones of every Boer, and of a great many of their kindred who are themselves British subjects, one must recall the conditions under which the Dutch came under British rule." The Dutch colonists denied that Holland had any right to transfer their allegiance to England. They trekked away into the wilderness. "They left their homes, their people, the protection of an established government and a rough civilization, and went out into the unknown. And they had, as it appeared to them, and as it will appear to many others, good reasons for taking so grave a step." They charged the imperial Government with liberating the slaves in an unjust manner, and then exposing the white inhabitants of the colony to the depredations of the blacks. They accused the missionaries of the London Society with usurping authority that should properly belong to the civil magistrate. Boers and British colonists were alike harshly and ignorantly treated by high-handed governors and an ill-informed and prejudiced Colonial Office:

"The story of the trekkers is one of surpassing interest, and must enlist for them the sympathy and unbounded admiration of all.

"By the middle of the year 1837 there were one thousand wagons between the Caledon and Vaal pines—truly a notable and alarming exodus; and the Boers then began the work of carving out new countries for themselves. Their history surpasses all fiction in its vicissitudes, successes, and tragedies. They fought and worked and trekked onward, always onward—never returning—on beyond the furthestmost outposts of civilization."

After the South African Republic had been in existence as an independent state for twelve years, it was annexed by Sir Theophilus Shepstone in 1877. The Republic owed £215,000, and had 12s. 6d. in the treasury. President Burgers assented to the measure, but was allowed to make a formal protest. "The fact seems to be that the people of the Transvaal were either in favor of annexation, or were overpowered and dazed by the hopelessness of the Republic's outlook; and they passively assented to the action of Sir Theophilus Shepstone and his twenty-five policemen."

The country's debts were paid, but the British Government failed to fulfil the conditions of annexation, and appointed unsuitable officials who did not understand the people or their language. Two delegations went to England to protest, and the agitation for the repeal of the act of annexation steadily gained ground. This tension of public feeling finally led to the war of independence in 1880-81. One British defeat followed another: Bronkhorst Spruit, Laing's Nek, Ingogo Heights, and, worse of all, Majuba.

After Mr. Gladstone had made peace with the Transvaal, the

condition of the British subjects who had entered the Transvaal and had invested their capital upon the promise that the Queen's authority would never be withdrawn, was very hard. There were various incidents connected with the war which left a bitter feeling between Boers and British, such as the murders of a Captain Elliot and a soldier Green; the violation of the white flag, and the firing on ambulances.

The government of the Transvaal was vested in a triumvirate, with Mr. Stephanus Johannes Paulus Kruger as Vice-President during the period immediately following the war; but in 1882 the old form was restored and Mr. Kruger was elected President, an office which he is now holding for the fourth term.

In 1882 the prospecting era began which opened up the valuable Witwatersrand, and by 1886 prospectors, speculators, traders, and adventurers were pouring into the Transvaal, with the effect of doubling its revenues, but at the same time increasing its political difficulties. The new arrivals demanded roads, bridges, titles, and claims. They founded the Witwatersrand Chamber of Mines. They formulated grievances, the principal ones referring to the Netherlands Railway Company, the dynamite monopoly, and the franchise.

On April 16, 1884, a concession of all the railways in the Republic had been granted to a group of Hollander and German capitalists. This Netherlands Railway Company was accused of wasteful building and management, of discriminating in rates against Cape Colony, and of holding the whole financial system of the Republic in its power. Various corrupt tendencies were ascribed to it.

The dynamite monopoly was felt to be a burden by the mine-owners, who needed the explosive for their operations. They complained that the terms of the monopoly increased the price enormously. Until 1882 the franchise had been granted "to any one holding property or residing in the state, or, failing the property qualification, to any one who was qualified by one year's residence." But in 1882 a law was passed which provided that aliens could only become naturalized and enfranchised after a five years' residence. This law created the class of *Uitlanders*. It was a result of the distrust awakened in the hearts of the Boers by the annexation of the Transvaal, and the subsequent immigration of aliens to the gold-fields. The *Uitlanders* who desired to become naturalized were obliged to register their names with the field-cornet of their district. As these records were very loosely kept, it was often impossible to prove residence after a lapse of the required five years.

In 1890 a further law was passed which made full electoral privileges obtainable only after fourteen years' residence in the state. A final hedging-in of the electoral privileges was made in 1894, of which Mr. Fitzpatrick writes "This was the coping-stone to Mr. Kruger's Chinese wall. The *Uitlanders* and their children were disfranchised forever, and, so far as legislation could make it sure, the country was preserved by entail to the families of the *Voortrekkers*."

In 1893 a petition for the extension of the franchise was signed by 13,000 aliens and sent to the Raad. It was received with laughter. In 1894 another, signed by 35,483 *Uitlanders*, only served to embitter the position.

"When remonstrated with on this subject of the refusal of the franchise, and when urged by a prominent man whose sympathies are wholly with the Boer to consider the advisability of 'opening the door a little,' the President, who was in his own house, stood up, and leading his adviser by the arm, walked into the middle of the street, and pointed to the Transvaal flag flying over the government buildings, saying: 'You see that flag. If I grant the franchise I may as well pull it down.'"

Mr. Kruger had had a most unfortunate experience with the flag in 1890, on the occasion of a visit to Johannesburg. The share market had virtually collapsed and many mines had ap-

parently failed. There was great distress. The President addressed a crowd of thousands of people from a platform at the Wanderers' Club pavilion:

"Later in the evening the crowd, which had hourly become larger and more and more excited and dissatisfied, surrounded the house which the President was occupying, and, without desire to effect any violence, but by simple pressure of numbers, swept in the railings and pillars which enclosed the house. Most fortunately the chief of police had withdrawn all the Boer members of the force, and the crowd, to their surprise, were held back by Colonial, English, and Irish 'bobbies.' This was probably the only thing that prevented a very serious culmination. As it was, some excited individuals pulled down the Transvaal flag from the government buildings, tore it in shreds, and trampled it under foot."

After the rejection of their petition for an extension of the franchise, the Uitlanders began to prepare for the use of force. They already contributed nine tenths of the revenue, but they were refused all voice in the affairs of the state.

Several incidents, trivial in themselves, served to further excite Boers and British. A native chief, Malaboch, had refused to pay his taxes. British subjects were commandeered—that is, requisitioned—to fight or to contribute in money or in kind toward the war. Five of them refused point-blank and were placed under arrest. The British high commissioner arrived in Pretoria to protest. The President met him at the station. An enthusiastic crowd of British subjects "shouldered aside the escorts provided by the Government, took the horses from the carriage, and drew it down to the hotel";

"In the course of the journey, an individual mounted the box-seat of the carriage with the Union Jack fastened on a bamboo, and in the excitement of the moment allowed the folds of England's flag to gather round the President. His Honor rose very excitedly and struck at the flag with his walking-stick; but, in blissful ignorance of what was going on behind him, the standard-bearer continued to flip His Honor with the flag until the hotel was reached."

The Reform Committee of the Uitlanders finally determined to act. The wealthy firms gave their adhesion.

"The fact is that Mr. Alfred Beit, of the firm of Wernher, Beit & Co., London, and Mr. Cecil Rhodes, managing director of the Consolidated Gold-Fields, may be regarded as the chiefs to whom the ultimate decision as to whether it was necessary from the capitalistic point of view to resort to extreme measures was necessarily left. Each of these gentlemen controls in person and through his business associates many millions of money invested in the Transvaal; each of them was, of course, a heavy sufferer under the existing conditions affecting the mining industry, and each, as a business man, must have been desirous of reform in the administration."

Arms and ammunition were purchased, and arrangements were made for smuggling them into the country concealed in machinery or gold-mining appliances. Messrs. Leonard and Phillips went to Cape Town to make final arrangements with Mr. Cecil Rhodes, prime minister of Cape Colony. He agreed to keep Dr. Jameson on the frontier as long as it was necessary as a moral support, and also to go to their aid if they found themselves in a tight place. The emissaries reported that Mr. Cecil Rhodes, when asked how he hoped to recoup himself for his share of the expense in keeping Jameson's force on the border, replied that, seeing the extent of his interests in the country, he would be amply repaid by the improvement in the conditions which it was intended to effect. We quote again:

"The arrangements with Dr. Jameson were made with him in person. During the month of September he visited Johannesburg, and it was then agreed that he should maintain a force of some 1,500 mounted men fully equipped, a number of Maxims, and some field artillery; that he was, in addition to this, to have with him 1,500 spare rifles and a quantity of spare ammunition;

and that about 5,000 rifles, three Maxim guns, and 1,000,000 rounds of ammunition were to be smuggled into Johannesburg. . . . Nor was this all, for on the original plan it was intended to seize the fort and magazines at Pretoria."

The raid failed because Dr. Jameson started too soon. The Johannesburg committee were not ready. The necessary amount of arms had not yet been smuggled into the city. Every effort was made to stop Dr. Jameson by messengers and telegrams, but he disregarded every warning and precipitated the crisis.

On Sunday, December 29, Dr. Jameson paraded his troopers near Mafeking and read them a letter, previously drawn up by the committee, asking him to come to the aid of Johannesburg. In reply to questions as to whether they were fighting under the Queen's orders, they were informed that they were going to fight for the supremacy of the British flag in South Africa. At that a considerable proportion of the men withdrew, leaving 480 to make the raid.

The force started Sunday afternoon at about five o'clock. No casualties occurred until the afternoon of Wednesday, when Krugersdorp was reached. Here the fighting lasted well on into the night, and resulted in the retreat of Dr. Jameson's force to higher ground. Next morning an attempt was made to pass around the Boer position in order to reach Johannesburg; but the Boers, following his movements with reinforcements, barred his way at Doornkop. Dr. Jameson made a desperate effort to get through and then surrendered. The Boer losses were reported to have been 4 killed and 5 wounded. The losses of Dr. Jameson's force were 18 killed and about 40 wounded. "The prisoners were treated with every consideration by their captors, with the exception, perhaps, of Dr. Jameson himself, who was threatened by some of the unruly ones and freely hissed and hooted, but was protected by the officers in charge. It must be said of the Boers that they acted with admirable self-restraint and dignity in a position such as very few are called upon to face."

Dr. Jameson and his officers were shortly after sent back to England to be tried. The members of the Johannesburg committee were arrested, and on the eleventh day the majority were let out on bail. Only the signers of the letter to Dr. Jameson, calling for his aid, were kept in prison. The final result of the Reform agitation was that Mr. Lionel Phillips, Col. Francis Rhodes, brother of Cecil Rhodes, John Hays Hammond, an American mining engineer, and Mr. George Farrar were convicted of high treason and sentenced to death. The death sentence was commuted to a fine of £25,000 a piece. They were obliged to sign an agreement to abstain from politics for fifteen years, or, failing that, to submit to banishment for the same period. Fifty-six prisoners were condemned to two months' imprisonment and to pay £2,000 or, as an alternative, to suffer another year's imprisonment. A three years' abstention from politics was demanded of them. Among these was also Mr. J. P. Fitzpatrick. One prisoner became insane and committed suicide, and two others remained in jail because they refused to appeal. The prisoners suffered greatly in the primitive Pretoria jail. They were mostly men of means and refinement, and the accommodations and sanitary arrangements were entirely inadequate.

"The year 1896 was a very bad one for the whole of South Africa. Besides the raid and the suspense and disorganization entailed by the prolonged trial, the terrible dynamite explosion in Johannesburg, the still more terrible rebellion and massacre in Rhodesia, and the crushing visitation of the great cattle scourge, the rinderpest, helped to produce a deplorable state of affairs in the Transvaal." The grievances of the Uitlanders against the Government accumulated. The killing of a British subject by a Boer policeman almost led to rebellion. Finally, a petition to the Queen praying for protection was signed by upward of 21,000 signatures. There followed the now famous meet-

ing at Bloemfontein in the Orange Free State between President Kruger and Sir Alfred Milner, the British high commissioner. No agreement could be reached, and the war now raging in South Africa soon after blazed forth.

Mr. Fitzpatrick affirms that:

"No civilized body of men ever had more just cause for complaint than the Uitlanders of the Transvaal have, but they carry on their reform movement under very difficult and discouraging conditions. Those who have petitioned their sovereign to secure for them some amelioration of their lot are branded by the head of the state as rebels for so doing, and his example is followed by all his party."

The book closes with an appeal to the mother country:

"Only the blindest can fail to realize how much is at stake, materially and morally, or can fail to see what is the real issue, and how the mother country stands on trial before all her children, who are the empire. . . . Unpleasant it may be, but not without good that England's record in South Africa—of subjects abandoned and of rights ignored, of duty neglected and of pledge unkept, of lost prestige and slipping empire—should speak to quicken a memory and rouse the native sense of right, so that a nation's conscience will say, 'Be just before you are generous'—Be just to all—even to your own.'"

INTERNATIONAL SYMPOSIUM ON ANTI-SEMITISM.

AT no time has antisemitism been stronger or more widespread as a politico-social movement than it is to-day. It is the boast of the French Nationalists that "all Frenchmen are antisemites"; and even the Orléanist pretender to the throne has openly made common cause with the extreme Jew-baiters. In Austria, the same sentiment is pronounced; Germany is not free from it, while of Russia it is hardly necessary to speak. Much has been and is being written on the subject. It has occurred to a Parisian journalist to gather the opinions of eminent men in France, Italy, Belgium, England, and Germany and publish them, together with an analysis of the results, in a permanent form. His volume is called "Enquête sur l'antisémitisme," and it gives the views of more than a score of leading thinkers and writers. The author of the volume is Henri Dagan, who personally is utterly opposed to the movement he describes and investigates. We give herewith a summary of the more significant explanations:

E. Picquart, Belgian jurist and professor, undertakes an ethnical and sociological defense of antisemitism. He considers the movement to be due to deep historic causes, and he speaks of the inevitable struggle between the Aryan and the Semitic races. The Semites, according to him, have always sought to subjugate and dominate the Aryan races, and the modern Jew acts very much like the Saracen, his kinsman, in the days of Mediterranean piracy. The struggle is obscured by economic factors of great complexity, but in point of fact only the *motive* of piracy and robbery has changed, not the principle. The form has become intellectual, bourse operations, banks, and syndicates accomplishing the old purpose of taking away Aryan property and reducing the Aryans to dependence. The races are psychologically dissimilar, and peace between them is impossible; hence all efforts at assimilation are futile. The remedy, according to the Brussels jurist, is special legislation against Jews, debarring them from public office and positions of influence. All political institutions, he says, ought to be managed by Aryans, and Jewish influence on them can not fail to be pernicious.

The French economist, Levassier, thinks that the hatred of the Jews is due entirely to the position they have conquered, in spite of all obstacles, in finance and commerce. The religious and racial prejudices have been stirred and inflamed by commercial envy and rivalry. The Christians and Mohammedans have themselves forced the Jews into trade and commerce, having for ages shut every other door to them; and if the Jews are business men *par excellence*, it is neither strange nor alarming. Men

are not born for special occupations, and conditions determine the direction of national or racial energies.

Achille Loria, professor at the Padua University, takes a similar view. Antisemitism, he says, is a form of competition. The Christian capitalists do not want the Jews to get control of property and opportunities which they themselves covet. The Jews are dangerous rivals in the financial market, and they are hated because they are feared. The object is to expel them and acquire their property for next to nothing, as was the case during the early wholesale expulsions.

Elisée Reclus, the distinguished geographer and reformer, agrees that contemporary antisemitism is sordid, selfish, and criminal, but he thinks the feeling itself deep-seated and permanent. Antisemitism is different each year and in each country, but it is not evanescent. He does not sympathize with it, however, and sees no just reason for it.

E. Durkheim, the editor of a sociological magazine, expresses a somewhat similar opinion. French antisemitism is radically different from Russian or German, he says. In these two countries it is chronic, racial, and traditional, manifesting itself in contempt and superciliousness, whereas in France it is ephemeral and acute, dying out as suddenly as it is excited. In 1848, and again in 1870, antisemitism was running high, as a result of economic disaster and humiliation in war. The French needed a scapegoat, a victim, and they found him in the Jews. When a nation is in distress, it must find some one upon whom to wreak its wrath, and the unpopular classes are made to play the part of the personified cause of all the troubles.

The Abbé Lemire disclaims sympathy with the practical antisemites, but he is "benevolently neutral" toward that larger movement, of which antisemitism is but a manifestation, which fights all bourse manipulators, all cosmopolitan financiers, and materialistic men of affairs, whether they profess the Jewish, Catholic, or Protestant religion.

One or two of the contributors denounce the movement as barbarous and inhuman, but give no scientific explanation of it. Some say that the Jews embody capitalism in its worst form, and that antisemitism is part of the social-democratic movement. This Dagan, in summing up the argument, denies with emphasis. The Jews, he says, have known how to take advantage of capitalism, but they did not create it. Expel them, and capitalism would remain in full force. Everything would be exactly as now, only others would take the place of the Jewish capitalists and proprietors.

Dagan points out that in England no antisemitism exists. Sir John Lubbock is his only British contributor, and Sir John says that the English admire the high qualities of the Jews and find them useful and excellent citizens.—*Translations made for THE LITERARY DIGEST.*

OUR RECIPROCITY TREATY WITH FRANCE.

THE reciprocity treaty which our Government has agreed upon with the Government of the French Republic is regarded as very satisfactory in France. Paul Leroy-Beaulieu, in the *Paris Economiste Français*, summarizes the advantages to be gained by France as follows:

In the first place, our exports to the United States will show a very desirable increase, especially in staple articles. But this is hardly the main advantage. As matters stand, our ultra-protectionism is becoming very inconvenient. It creates false impressions, and leads to excess of production in manufacturing as well as in agricultural circles. In the next place, a reduction of the tariff will cheapen the necessities of life with us. We are over-taxed in this respect. Our system is absurd. It is a fundamental law, among nations as well as individuals, that all benefit by the division of labor. By our attempt to produce everything ourselves we create mediocre workmen, and are in danger of losing that superiority which we still retain with regard to certain articles. If we depend upon our own limited markets, we shall be economically the losers, for our population is stationary.

The other European nations show great interest in the matter, especially the Germans, who are very anxious for an opportunity to remove the present obstacles to the importation of American foodstuffs. "It is impossible to deny that Germany can not fully

provide for herself," remarks the Berlin *Tageblatt*, which hopes that, above all, the importation of American meat will be made easier. The Hamburg *Correspondent* expresses itself in the main as follows:

We are all anxious to come to terms with the United States, if it can be done upon a fair basis, especially as France has made an arrangement satisfactory to herself. It is not the first time. In the spring of 1898, France concluded a preliminary agreement which materially benefited the export of French specialties. We were not greatly affected by this agreement, but the new treaty grants special reductions, from five to twenty per cent., on articles which we ourselves export in large quantities. Now, it is not at all certain that the American legislature will ratify the treaty, for this treaty must necessarily cause much dissatisfaction in England and Germany. Even with the new treaty in force, American goods will have to pay much higher duty in France than in either England or Germany, and the trade of each of the last-named countries is much more valuable. Of our trade with the United States, involving nearly \$250,000,000, the larger portion, \$150,000,000, is in imports. If France is alone favored, the beginning of a tariff war is intended by the United States, and retaliatory measures would not long be wanting. We hope that our own Government may speedily come to a satisfactory, lasting agreement with the United States.

The Montreal *Witness* says:

"There is no uniter like a tariff and no disjoiner like a tariff. All whom a tariff includes are drawn together by it. The United States tariff has done more to nationalize a polyglot and mixed people than anything else could have done, and in that it has been a blessing to that people. It has, on the other hand, separated them from humankind to a belittling extent. For a little people like ours, a high tariff is very narrowing. As raised against our fellow citizens it is the greatest enemy we can set up to unity. A common tariff within the empire would, on the contrary, be broadening, and, were it possible to have it, would do more to weld us to the empire than any other human device. . . .

"We can not, however, enclose ourselves with Great Britain within a common tariff wall, because Great Britain refuses to be walled in at all. But we can take a long step toward practical intimacy by taking another substantial slice off our tariff so far as Great Britain is concerned. The reduction already made has had but a moderate effect, so well were the channels of trade worn in another direction and so great is the advantage of the United States in the matter of proximity."—*Translations made for THE LITERARY DIGEST.*

TRIAL OF THE CONSPIRATORS IN FRANCE.

THE early days of 1900 were marked by an incident of no little importance to the friends of peace in Europe. The Dreyfus trial at Rennes had aroused the hope of a speedy overthrow of republicanism in the breasts of three distinct sets of the discontented: (1) The extreme Radicals, who would rule the country by plebiscite, changing the form of government to suit the popular mood, and who look to M. Déroulède as a leader; (2) the Royalists, led by M. Buffet; (3) the antisemites, who staked their hopes upon M. Guérin, of "Fort Chabrol" fame. Seventy-five persons belonging to these different sections were arrested, to be tried by the senate, by which course an appeal was made impossible. Seventeen only were closely examined. Three only, the "ringleaders" named above, were punished, Déroulède and Buffet with ten years' banishment, Guérin with ten years' confinement in a fortress in France. The excitement which their friends hoped for, and which the supporters of the Government feared, did not reveal itself among the population. France is tired of disturbances, and the sentences have aroused no general dissatisfaction. The Brussels *Indépendance Belge* says:

"The efforts of the conspirators have fallen flat. They have passed a considerable time in confinement without advancing in the least the cause of which they instituted themselves paladins. Despite their vociferations, their appeals to the populace, they have rapidly alienated whatever sympathies may have been

grouped around them. They have been unable to disturb the country, and it is better thus for France."

The organs of the many factions opposed to the revision of the Dreyfus case express their dissatisfaction, but without apparent success. The *Echo de Paris* calls the

trial of the conspirators a "monstrous iniquity." The *Journal* predicts that Déroulède will carry on his agitation with increased vigor. The *Autorité* and the *Soir* complain that "Dreyfus is at liberty while noble citizens are punished." The three "conspirators" (who, however, never acted in concert) did their best to goad the senate into awarding them punishment rigorous enough to excite pity, by reiterating their intention to overthrow the Government; but they were not successful. The *Matin* expresses itself in the main as follows:

M. Déroulède, who has perhaps the largest following, wishes us to adopt a form of plebiscite. As a matter of fact, however, we have as liberal a suffrage as we can afford to have. When we look at the legislators elected, we can not help wondering what sort of a President the masses would elect. Certainly not the wisest and ablest man, but the most notorious. We have had the plebiscite before, and the result was not encouraging. In 1870 we had to pay a bill which debars us from similar adventures. The election of a President by the people would be a perpetual lottery.

The Paris *Temps* is very much pleased with the moderation of the senate. "Men like Déroulède, Buffet, and Guérin," it says, "can not upset the Republic unless the Republicans themselves assist. The senate knows that well enough." Foreign opinion is aptly summarized in an article in the Amsterdam *Handelsblad*, from which we take the following:

"If the senate has shown any weakness, it was on the side of mercy. The

accusation of the opposition, that the senate was anxious to be revenged politically, is therefore without foundation. The agitation which has disturbed France since it became necessary to satisfy outraged justice to some extent in the Dreyfus case is allowed to fall into oblivion. Evidently the opposition are much disconcerted by the moderation of the senate. Rigorous punishment was hoped for, in order to make martyrs of the conspirators. That part of the program can not now be carried out. The public at large certainly are satisfied, and pleased that some of the people who make it their business to disturb the country have been put outside. France has quite enough such men as it is. France wants the respite necessary to prepare for the World's Fair; she has had quite enough of old quarrels."—*Translations made for THE LITERARY DIGEST.*

JULES GUÉRIN.

PAUL DÉROULÈDE.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Stowe of Cape Town writes November 4, 1899:

The exodus of Uitlanders from the South African Republic and Orange Free State has, I believe, been unprecedented in history. Many of these people—the mining population, the bone and sinew of the country—have scattered over the world. Numbers of them, too poor to get out of the country, are subjects of charity in the cities of Cape Colony and Natal and have to be fed. Some have funds for a few days or weeks, but will in time have to be supported by the public, and this in a country that can not or does not produce the foodstuffs for its own people. The English army is fed with supplies from other countries, and, while much of these may have originally come from the United States, they reach here via England. The customs duties and railroad and telegraph revenues have fallen off. As the railroads and telegraphs are owned by the Government, a very large source of Government support is lost, to say nothing of the employees thrown out of work.

Johannesburg, in the Transvaal, and Bloemfont-

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5

OUR Spring Catalogue of Tailor-Made Suits and Skirts is now ready. We picture in it all of the newest styles, and will mail it free, together with samples of the materials, to the lady who wishes to dress well at moderate cost. No ready-made garments, but everything made to order; we show you exclusive things that cannot be found elsewhere.

Our new Spring Catalogue illustrates:

Tailor-Made Suits, \$5 up.
New Skirts in the latest Paris cut, \$4 up.

Wash Suits, \$4 up.
Wash Skirts, \$3 up.
Rainy-Day Suits and Skirts made of double-face materials.

Bicycle Suits, and Skirts, Capes, Jackets, Riding Habits, Golf Suits and Skirts.

We also make finer garments and send samples of all grades. We pay express charges everywhere. If, when writing, you will mention any particular kind or color of samples that you prefer, we shall be glad to send you an assortment of the kind you wish.

Write to-day for Catalogue and samples—we will send them to you free by return mail.

tein, in the Free State, are, to all intents and purposes, deserted cities. Johannesburg, the largest commercial center in South Africa, has, so far as trade is concerned, ceased to exist. This once busy, bustling city, producing monthly over 10 tons of gold and yearly \$5,000,000 worth, is silent. Up to this time, goods have reached the Transvaal via Delagoa Bay, but it is not supposed that they will long be permitted to enter. The two Republics must then live on their own resources. Their crops are ready for the sickle, but can not be cut, as the men are off to the war. Prices are so high that the trade papers refrain from publishing the usual column of "market prices." Large quantities of gold en route to seaports in this colony for shipment to England have been taken by the Boers. Representatives here to export commission houses of the United States are constantly booking and cabling large orders, particularly of foodstuffs, but word comes from the canners of meat and fish, makers of flour, corn meal, etc., that they have about all they can do to supply the home demand and are many weeks or months behind orders.

Under date of November 24, 1899, Mr. Stowe adds:

From United States papers that reach me, I gather that our manufacturers intend to withhold shipments to this country. The fear is expressed that the war would disrupt business for a time. War does disrupt business, but does not always curtail export trade or interrupt its progress. I agree that "goods which are sent to South Africa from the United States are handled in many cases by English jobbers, who would, of necessity, be compelled to break off business relations with the natives (the italics are mine) in case of hostilities"; and that presents the question, Why should English jobbers take the agency for the whole of South Africa in any article? I regret to learn, and correctly too, that several hills of goods sold by resident agents to merchants here have been held back, both on account of the war and the uncertainty of payment. I think this is poor policy. The credit of the leading merchants in the seaports of this colony can not be materially affected by the war, and in several cases of which I am cognizant the goods which were sold and held back in the United States were sure of payment. The situation is so well set forth in an article from the *British and South African Export Gazette* that I here insert it:

"SOUTH AFRICA'S COMMERCIAL CREDIT.—It is gratifying to note—the war notwithstanding—that there is no present need to urge a policy of forbearance toward South African firms on the part of creditors. It is generally and rightfully recognized that the present situation is altogether abnormal and produced by causes essen-

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

GERANIUMS FROM SEED

No flowering plants are more grown and none more suitable for large beds where a mass of blossoms is desirable, or for single specimens in pots in the house. We offer new crop seed, saved from over 50 of the finest double, semi-double and single named Japanese and Italian varieties of the most gorgeous and brilliant colors, with full instructions how the most inexperienced amateur flower lover can grow them successfully from seed and flower the first season if sown early.

For 14 Cts. In stamps, and the addresses of two friends who grow flowers, we will send one full size packet—**FORTY SEEDS**, and **FREE** copy of our catalogue for 1900, the most beautiful book published, devoted exclusively to flower seeds that grow.

S. Y. HAINES & CO.,
105 Boston Block, Minneapolis, Minn.

There are two Seed Catalogues

Published by

W. ATLEE BURPEE & CO., Philadelphia.

One is the "BLUE LIST," giving wholesale prices in bulk, which is mailed only to Market Gardeners and Florists. The other is

Burpee's Farm Annual for 1900

which is mailed to the address of any private planter, who desires to get for his own garden the Best Seeds that Grow, at moderate prices.

It describes Unique Novelties, and gives much useful information, which cannot be obtained in any other free publication. If interested, send your address, on a postal card, **TO-DAY**.

BURPEE, Philadelphia.

Time Tells The Story.

There is a big difference between the cost of making a first-class sewing machine, embodying the best of materials and workmanship, and one which is made in the cheapest manner. The buyer of the cheap machine soon pays the difference of price in the constant cost for repairs, to say nothing of its annoying inefficiency.

Singer Sewing-Machines do good work during a lifetime.

Sold on instalments.

Old machines taken in exchange.

The Singer Manufacturing Co.,

"Sewing-Machine Makers for the World."

Extraordinary Reduction! SENT ON APPROVAL IF DESIRED.

IN ORDER TO SEND OUT BALANCE OF

Augusta-Victoria Empress Shoulder-Shawls, handwoven, in December, the price for a limited time is \$5.50 instead of \$7.50. Colors to choose from: light green, white, and cherry red.

SUSACUAC WEAVING CO., BETHLEHEM, PA

MACBETH'S "pearl top" and "pearl glass" lamp-chimneys are carefully made of clear tough glass; they fit, and get the utmost light from the lamp, and they last until some accident breaks them.

"Pearl top" and "pearl glass" are trade-marks. Look out for them and you needn't be an expert.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address **MACBETH, Pittsburgh, Pa.**

Vapo-Cresolene

Agents Wanted. Easy terms. Exclusive territory. **TOLEDO BATH CABINET CO., 614 Cherry St., TOLEDO, OHIO.**

tially transitory. It is not a case where consideration may only delay, but not prevent, a final collapse, but the contrary. As a fact, conditions for prosperous trade are excellent; but political circumstances in South Africa stand in the way of their immediate utilization. The essence of the present situation is patience. When the paralysis of trade is at an end, the vast sums of money locked up in bank coffers in South Africa, as well as those in this country which are ready to be launched so soon as reasonable securities are visible, will lubricate the wheels of a rebound of trade which will quickly change the present complexion of things. South Africa has before now successfully ridden over worse times than these, and there is no reason to suppose that she will not be able to do so again.

I make the statement in all candor that the war, even with all its horrors, will not cause imports from the United States to fall off. The thousands of miles, the millions of pounds of flour, wheat, corn, corn meal, sump, and canned meats and fish brought into this country from England for war purposes, which previously had been shipped from the United States to England, added to the direct shipments from the United States to this country, present a total that is extraordinary.

What the shipments of United States products from England amount to we shall never know, as they enter duty free and no record is kept of them at the custom-houses.

It must, however, be kept in mind that in some lines of goods from the United States, which have in previous years found a valuable and ready market, the decrease in imports will be decided. The total trade from the United States is maintained by the increase in foodstuffs.

PERSONALS.

DURING his recent trip to the Philippines, say *Savvy*, Albert J. Beveridge, United States Senator from Indiana, stopped at the Japanese port of Nagasaki. Mr. Beveridge is only thirty-five years old, and so youthful-looking that he might easily pass for a collegian of twenty-five. He went ashore at Nagasaki for a few hours. Nobody in the place knew him, not even the few Americans there, as his coming had not been heralded. He walked about the town at his leisure and then dropped in to pay a visit to the United States consul. That official had been victimized a few weeks before by a young American visitor who claimed to be a son of Senator Boies Penrose of Pennsylvania, and borrowed twenty dollars. The consul had just learned that Senator Penrose has no son.

"Good-morning, consul," exclaimed Mr. Beveridge, handing out his card. "I am Senator Beveridge of Indiana, and I have just dropped in to—"

"Look here, young man!" interrupted the consul, "I am up to your little game, and you can't get a cent here; do you understand?"

The Senator, first astonished and then indignant, began to protest; but the ludicrous side of the matter appealed to him so strongly that he picked up his hat and went away laughing.

"Ha!" exclaimed the consul, "they can't fool me more than once. I suppose the next thing will be some round-faced beggar trying to palm himself off on me as President McKinley."

At the foot of the stairs, as luck would have it, an American officer recognized Mr. Beveridge. When the situation was explained, the officer took the Senator back to the consulate, and everything was made right a few hours later over an elaborate dinner.

CONGRESSMAN ROBERT W. TAYLOR, who led the fight against Roberts, the Mormon, is an Ohio man, and comes from the sturdiest stock of the Western reserve. He was born in New Lisbon in 1837, was educated at the Hudson Academy and Western Reserve College, and began life as a school teacher in his native town. Later he was state superintendent of schools, and then after

A Wholesome Tonic Horsford's Acid Phosphate.

Dr. S. L. WILLIAMS, Clarence, Iowa, says: "I have used it to grand effect in cases where a general tonic was needed. For a nerve tonic I think it the best I have ever used."

PRICES \$1 TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to you at from \$1 to \$12, express or freight prepaid. Alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

Current Events.

Monday, January 22.

—Fierce fighting continues along the Tugela River, and the bombardment of Kimberley is renewed by the Boers.

—American troops in Luzon capture the town of Taal, in the province of Batangas, defeating 800 Filipinos.

—In the Senate, Mr. Pritchard, of North Carolina, speaks on the race question in the South, and Mr. Turner, of Washington, in opposition to the President's Philippine policy.

—W. J. Bryan goes to New York, and is the guest of O. H. P. Belmont; Mr. Keller's invitation to Bryan to dine at the Democratic Club is protested against by some members of the club.

—Professor Herron, Edwin Markham, and George Fred Williams speak at a meeting of the "Get Together" Club in Brooklyn.

Tuesday, January 23.

—General Warren gains ground west of Spion Kop, and shells the enemy's trenches above him.

—In the Senate, Messrs. Ross and Turner speak on the Philippine question, and Mr. McEnery on race troubles in the South.

—In the House, the debate on the Roberts case begins. Mr. Roberts defends himself.

—The National Board of Trade holds its thirtieth annual meeting at Washington.

FINANCIAL.

A SAFE INVESTMENT

NOT A SPECULATION

WE OWN AND OFFER:

\$50,000 FIRST MORTGAGE 30-YEAR 5% GOLD BONDS OF THE

Alliance Gas & Electric Company

OF ALLIANCE, OHIO

These bonds are secured by an absolute first mortgage upon all the property now owned, or that may be hereafter acquired by the company, in favor of the Savings and Trust Company, of Cleveland, Ohio, trustee for bondholders.

The net earnings of the Company for the past three years have been over twice the interest on the bonds.

Alliance, Ohio, is a city of 12,000. It has but this one Gas and Electric Company, whose franchises are very liberal and perpetual.

The bonds are redeemable after December 1, 1909, at 105 and interest, and the Company is compelled to pay off at least \$6,000 per year after 1909 at 105 and interest until all are redeemed.

The report of our experts, engineers, and others who have made examinations of the plant are at your service.

We have sold a large amount of the issue and offer the remainder at 101 and interest netting over 5%.

We are offering you a first-class investment at a liberal rate of interest. Money placed in these bonds is more secure than in most savings banks and pays better interest.

We invite correspondence.

DEPOSIT CERTIFICATES

New York City Real Estate Security for Double the Amount.

BEAR 6 PER CENT. INTEREST, PAYABLE QUARTERLY.

Money Can Be Withdrawn Within 30 Days of Notice

It has been decided by the Managers of the Prohibition Park Company to accept additional loans for a limited amount of money in any sums for which 6 per cent. interest bearing Deposit Certificates will be issued in denominations of \$10 each.

INTEREST will be forwarded to the holders of Certificates quarterly. The principal will be payable at any time on thirty days' notice. The Deposit Certificates are secured by deeds of unencumbered real estate and mortgages to double the amount of the Certificates deposited with I. K. Funk, President of Funk & Wagnalls Co., as collateral. In addition to this security, the Deposit Certificates are a first lien upon all the assets of the Prohibition Park Co.

The security makes the loans absolutely safe. The money will be used in completing the improvements and in beautifying Prohibition Park, (Westleigh), Borough of Richmond, New York City. Address

THE NATIONAL PROHIBITION PARK CO.,
West New Brighton, New York City.

—It is said that John B. McDonald, the New York **Rapid Transit** contractor, is having difficulty in getting his bonds, and that he will form a construction company.

Saturday, January 27.

—The capture and abandonment by the British of Spion Kop is attended by fearful loss; it is stated by the Boers that 1,500 English were killed.

—General Wood's arrival at Santiago, in his tour of the island, is greeted by enthusiasm both of the Cubans and Americans.

—The Administration abandons its plan for absolute free trade with **Puerto Rico**, and a reduced tariff for the island is now proposed.

—The Senate Committee hears argument in the contest over the seat of Senator Scott, of West Virginia.

Sunday, January 28.

—A despatch from General Buller states that the British forces are in retreat across the Tugela River; Ladysmith is now regarded as doomed.

—Arms and ammunition intended for a **Carlist** uprising are discovered at Palencia, Spain; six Carlists flee across the frontier.

—The report of the exploring expedition to investigate a route for an **Alaskan** railroad is made public.

—Prof. A. J. Henry is chosen to fill the vacancy in the Weather Bureau at Washington caused by the death of Professor Hagen.

MAKERS of HISTORY

These *thirty-two important interesting historical volumes* provide the way for all to become acquainted with the *makers of the world's history*. They are not *dull, hard-to-read* books, but, on the contrary, *most instructive*, and written in an *exceptionally entertaining style*.

Alfred the Great
Margaret of Anjou
Cleopatra
Richard I.
Richard II.
Cyrus the Great
Darius the Great
Genghis Khan
Peter the Great
Xerxes
Hannibal
Julius Caesar
Nero
Pyrrhus
Romulus
Richard III.

The careers of these historical characters, without an exception, are as entertaining as the most exciting novel. These are the men who have changed the boundary lines of countries to change time and time again.

That these are books whose ownership is appreciated is best evidenced by their unequalled sale of over

650,000 VOLUMES

This publication, *Abbott's Biographical Histories*, has been adopted by Boards of Education in many states, and no library can be termed complete without this work.

Masterpieces of American Art

THE AMERICAN ART PUBLISHING CO. recently succeeded in making arrangements with AMERICA'S GREATEST ARTISTS for the reproduction of their MASTERPIECES in the finest photogravure process.

These photogravures represent paintings that have been sold for thousands of dollars and others that are fresh from the artist's brush.

These reproductions would sell rapidly at any art store at \$5.00 each, but they cannot be purchased except directly from us, as we absolutely control the copyrights.

Beautify Your Home

You have read about many of these paintings and the enormous prices paid for them, but, doubtless, never even dreamed that you could obtain a perfect fac-simile in elegant form and at a nominal price to adorn your parlor or drawing-room.

These photogravures are printed from the finest plates that modern workmanship can produce, on extra heavy paper made expressly for this work. Size, 18 x 24 inches. Twenty-five of them are placed in a beautiful Portfolio, and so arranged that they can be conveniently removed for framing without injury to either the picture or Portfolio.

The masterpieces of twenty-five of America's Greatest Artists are now for the first time available in a single collection.

An Art Educator

This Portfolio, besides being a beautiful ornament to any home, is also an Art Educator, and will at once stimulate a desire for the artistic.

Accompanying each picture is given a description of the painting, also a portrait and biographical sketch of the artist, an interesting account of his early studies, how he was led to take up art as a profession, in what schools and under what master he received his instruction. It describes his trips and sojourns abroad, where and when his paintings were first exhibited and the honors they received both in Europe and America. The titles of the artists' most notable paintings are also given and where they now are. All of this information is not only interesting but exceedingly instructive.

OUR SPECIAL PROPOSITION

To all who make application this month, the price will be less than one-third the regular price and on very easy monthly payments. The Portfolio will be sent on examination with the privilege of returning if not entirely satisfactory. Write at once for full particulars to

EXTRAORDINARY OFFER TO LITERARY DIGEST READERS

The Few Remaining Copies at **ONE-THIRD** the Regular Price

EDITION DE LUXE

SUBSCRIPTION PRICE \$150

Offered to "Digest" readers AT LESS than one-third the original price, and payable \$3.00 per month :: :: ::

BY AN ESPECIAL ARRANGEMENT WITH THE PUBLISHERS OF THIS MAGAZINE WE OFFER TO ITS READERS THE **FEW REMAINING COPIES** OF WHAT IS UNIVERSALLY CONCEDED TO BE THE MOST MAGNIFICENT WORK OF ITS KIND EVER ATTEMPTED IN AMERICA AND NOT EXCELLED ELSEWHERE

MIZRAIM OR ANCIENT EGYPT

By DR. SAMUEL AUGUSTUS BINION

Most superbly illustrated history ever published of the Art and Architecture of any country in the world. A fortune was spent on this work, which is the result of more than ten years of labor of Author, Artist, and Engraver. It is superbly illustrated with 72 full-page plates, 20 x 26 inches, magnificently colored, and representing the temples, etc., exactly as they appeared four thousand years ago.

EGYPT! Whose civilization is the oldest known, and yet whose architecture is the wonder and admiration of modern times, and which "For nobility of conception, vastness of detail and majesty of the highest order exceeds anything ever reared by human hands," has now, for the first time, been adequately shown forth in these superb volumes.

Whether specially interested in Egypt or not, no one who is a lover of good things in art or literature can fail to be fascinated by the beauty, grace, and grandeur of Egyptian art as exhibited in these plates.

THE WORK HAS BEEN ENDORSED by purchase after thorough examination, and at the regular price, by the British Museum, Metropolitan Museum of Art, Boston Library, Astor Library, the leading libraries of this country, and several hundred discriminating individual buyers.

THE ENTIRE EDITION IS LIMITED TO 800 COPIES AND THE PLATES HAVE BEEN DESTROYED

HALL OF COLUMNS, GREAT TEMPLE OF KARNAK (Recently Fallen.)

This plate is 22 inches wide by 14 inches high, and is one of 72 full-page plates.

"This work MUST AMERICA BE. For a time, the Queen of Egyptology, wrote, 'I wish to tell you how much I am pleased with the magnificent plates of your great work.'"

"I regard 'Mizraim' as a masterpiece. Its exquisite and excellent plates will refresh those who have seen the monuments or studied their history. Its letterpress ably explains what its great plates so fascinatingly present. The book is a joy and a satisfying investment."—Wm. Cochrane Wineslow, Hon. Sec'y Egypt Exploration Society.

"We have found the last very interesting and up-to-date."—*Biblia, official organ of the Egypt Exploration Society.*

"A series of illustrations that for beauty of execution are absolutely unparalleled."—*Illustrated London News.*

Prof. Geo. T. Martin, of the Smithsonian Institute, said: "I am proud to see such original work done in our country."

The educational force of such a work is incalculable."—*Education, Boston.*

"A most most beautiful and pictorial history of the wonders of ancient Egypt."—*The Argosy, New York.*

"The magnificence of these plates, as in number, can not be adequately understood from mere description. The featured interiors of the temples of Dendera and Karnak are marvels of lithographic art. The coloring of these plates is extremely elaborate; one in particular, the interior of the temple of Medinet, showing 15 different hues. It is impossible to detail at length the varying subjects of the illustrations. Without exception they are interesting and well executed. It would be difficult to overestimate its value as a pictorial history."—*Public Opinion, New York.*

OUR OFFER THE GREATEST FAVOR EVER EXTENDED TO "LITERARY DIGEST" READERS

The work is published in twelve parts, each containing six plates with their accompanying letterpress, and these are enclosed in four handsome half morocco portfolios, regular price \$150. To the first subscribers who shall send \$3.00 we will send the entire work, and the balance can be paid in fourteen monthly payments of \$3.00 each. We can also supply it in 2 volumes bound elegantly in half morocco by adding 50 cents in each of these payments. If you care to add to your library the most superb work concerning the most fascinating country in all the world, fill out or copy the enclosed acceptance blank.

HENRY G. ALLEN & CO., 150 Fifth Ave., New York.

Condition: I accept your offer to "Digest" readers of the edition of 800 of MIZRAIM, or ANCIENT EGYPT, and enclose \$3.00 as first payment. Balance to be sent \$2.00 monthly, beginning 30 days after I have received the vol. I reserve the privilege of RETURNING THE WORK WITHIN THREE DAYS AFTER RECEIVING IT IF NOT FULLY SATISFACTORY, in which case you are to return the \$3.00 paid.

Problem 450.

BY R. H. SEYMOUR.
Black—Seven Pieces.

White—Eight Pieces.

White mates in two moves.

(This beautiful composition is an old problem, which took the First Prize in the Fifth American Chess-Congress.)

Problem 451.

BY COL. W. VON WALTROFFEN.
From *Wiener Schachzeitung*.
Black—Seven Pieces.

White—Six Pieces.

White mates in three moves.

Solution of Problems.

No. 444.

1. R-Q3 Castles (Q side), mate
2. K x R

Other mates easily found.

We apologize to our solvers for calling this a problem; we should have named it a puzzle or a curiosity. We do not believe that Castling in problems is legitimate, for the reason that it can not be demonstrated that White has the right to Castle. It is not possible to prove that the White K has not been moved.

Very few solvers saw the trick: M. W. H., University of Virginia; H. H. Ballard, Pittsfield, Mass.; W. R. Coumbe, Lakeland, Fla.; C. R. Oldham, Moundville, W. Va.; A. Knight, Bastrop, Tex.; Prof. C. D. Schmitt, University of Tennessee.

No. 445 is the same as 391; the key-move, Q-R8.

The Rev. F. H. Johnston, Elizabeth City, N. C. got 442 and 443; Prof. C. D. S., 440 and 441; J. H. Minims, St. Albans, Vt., 442; and W. J. Lachner, Baker City, Ore., 437, 438, and 440.

"The Blackburne Brilliant" (January 20), mate in four moves, begins with K x P.

Our Correspondence Tourney.

20 P x P	P x P		

Notes by One of the Judges.

(a) The strongest move is Kt-QB3. The exchange of Pawns leads to an even game.

(b) Kt-KB3 followed by B-Q3 is better.

(c) Kt-KB3 is still in order. The text-move is a loss of time.

(d) It is quite evident that Black is not conversant with the French. The pinning of the Kt at this juncture accomplishes little. He should bring out his K Kt and then Castle.

(e) Black's slow development has enabled White to make an attack. B-K Kt3 is much stronger here, as he not only gets his B into play, but brings a powerful pressure on Black's center.

(f) Q-R4 opens up possibilities. The text-move frees Black's game somewhat.

(g) The pushing of the B P brings about a weakness on Black's Q side. White keeps his Q side intact, and easily breaks through Black's lines.

(h) Another weakening move. He is afraid of Kt-B3, which, however, would not amount to much. The trouble with Black's game is that his pieces are confused. Probably P-K Kt3 is the best this time.

(i) The hole is about to be made.

(j) White had a pretty play here: R x P if P x R: Kt x P winning the Q.

(k) Better here, probably, to play B-Q4, forcing the White B from the very dangerous diagonal.

Correspondence Chess.

MAXIMS BY THE REV. L. TURNER.

1. Be thoughtful, but not slow.
2. Be exacting, but not fastidious.
3. Be bold, but not reckless.
4. Be cautious, but not timid.
5. Do not form opinions hastily, but rely on your own mature judgment, even in the face of authority.

6. Do not grow discouraged over a position where you can not demonstrate a win for your opponent. Patience and self-reliance will overcome great difficulties. As long as there is hope, play with determination.

7. When sure your game is lost, resign it at once.

8. The simplest and surest way to win or draw is the best; play to win, not to be brilliant.

9. Do not be over-confident against weaker players or timid when opposing stronger—for any one is strong by correspondence.

10. Do not ask for favors outside the rules of correspondence play, and do not grant them. Abide by the consequences of your errors without grumbling, and expect your opponent to do the same.

A Russian Brilliant.

Another Pillsbury Brilliant.

In St. Louis, recently, Pillsbury played twelve games *simultaneously*. On one of the boards the following position occurred:

WHITE: P on K on KB sq; Q on Q sq; B on Q; R on K R sq; P on KB2, K Kt4, Q4, Q Kt5, Q R2.

BLACK: K on K Kt5; Q on Q sq; B on K7 and Q R2; R on K B4, and Q R sq; P on K, Q, Q B2, Q Kt3, Q R2.

Pillsbury played P x R ch, and after three more moves Black resigned. The Champion then gave an analysis of the position, without sight of the board, showing that in any variation White wins.

Chess-Nuts.

Mr. Blackburne played 24 games simultaneously at the City of London Chess-Club, the team including several first-class men. The result was 12 wins, 8 draws, and 4 losses for the single player.

Pillsbury and Showalter contested three games at Louisville recently, and the result was a draw in each case. The result shows that Showalter is picking up.

Thomas Frere, who died on January 10, 1880, was a prominent Chess-player, and had taken a leading part in the organization of Chess-clubs and Chess congresses in this country for fifty years. He was one of the most active promoters of the first American Chess Congress at New York, in 1857, by which Paul Morphy was introduced to the world. He was one of the organizers of the first Brooklyn Chess-Club in the early Fifties, and also an organizer of the Manhattan Chess-Club.

The Literary Digest

VOL. XX., No. 6

NEW YORK, FEBRUARY 10, 1900.

WHOLE NUMBER, 512

Published Weekly by
FUNK & WAGNALLS COMPANY.

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

KENTUCKY'S RIVAL GOVERNORS.

THE dramatic situation in Kentucky is still holding first place in public attention as we go to press. Within less than sixty days, Kentucky has had four men claiming the right to exercise gubernatorial powers. The term of Governor Bradley (Rep.) expired December 12. William S. Taylor (Rep.) took the office as Bradley's successor, in accordance with the declaration of the canvassing boards. William Goebel (Dem.) then claimed the office, and was sworn in last week, as a result of an appeal to the legislature. And J. C. W. Beckham, who claimed election to the office of lieutenant-governor, is endeavoring to act as governor in place of Mr. Goebel, who was shot January 30, and died February 3. The following review of the undisputed facts of the case may be of service:

Taylor and Goebel each claimed a majority at the elections last November, and on the face of the returns Taylor seemed to be elected. Goebel contested the election, and by the provisions of the Goebel election law the case went to the State Board of Election Commissioners for decision. Altho a majority of the board were Democrats, they decided in favor of Taylor, and he was inaugurated December 12. Mr. Goebel, under another provision of the election law (of which law he was the author), then appealed to the legislature, which is strongly Democratic. The tension at Frankfort, the Kentucky capital, became intense, and about one thousand armed men were brought to the city by the Republican leaders, who, it is said, feared that violence would be used to oust them from the state offices. Most of the "regulators" soon left the city, however.

On Tuesday of last week, the House and Senate committees, both overwhelmingly Democratic, decided to report in favor of Goebel; but just before they were ready to make their report Mr. Goebel, while entering the State House grounds, was fatally wounded by a shot from a concealed assailant. Governor Taylor at once called out several companies of the State militia and issued a proclamation declaring that a state of insurrection existed, and adjourning the legislature (an act which the Democrats consider unconstitutional), and summoning it to meet later in London, Ky., a town in the mountains. The Democratic ma-

jority of the legislature, barred from the State House and other public buildings by the bayonets of the militia, signed a paper declaring Goebel and Beckham governor and lieutenant-governor, who were accordingly sworn in, tho the former was at the time almost at the point of death. Governor Taylor appealed to the President on Friday for recognition, but the President refused to interfere. The Democratic legislators, to strengthen the legality of Goebel's claim to election, held a meeting in a Frankfort hotel, Friday, and again declaring the Democratic candidates elected, the latter were again sworn in. Judge Cantrill, upon petition of Goebel's counsel, issued a temporary injunction restraining Governor Taylor from interfering with the legislature and from removing the seat of that body to London, Ky. Acting-Governor Beckham appointed a Democratic adjutant-general of the militia. The Republican members of the legislature went to London Saturday, announcing their intention to elect a Republican United States Senator. Governor Taylor remained at Frankfort in the executive building, defended by the militia. On Saturday, February 3, Mr. Goebel died, and Mr. Beckham was sworn in in his place. On Sunday the Democratic leaders decided to transfer the seat of government to Louisville, leaving the Republican governor in Frankfort and the Republican legislature in London, Ky.

The *New York Times* (Ind.) summarizes the situation by saying:

"Kentucky has one man claiming to act as governor who would not have been governor had the legislature not been prevented from acting on the contest, and another claiming to act as governor who would be governor had the legislature really acted. Neither one is clearly justified in his claim, and neither is wholly in the wrong. It is a case for conference, deliberation, and peaceful settlement, and any man of influence that does not use his influence to secure such a settlement is guilty of a very serious offense against the Commonwealth. The Republicans are peculiarly bound to see that everything possible is done to accomplish this—first, because the action of their governor has prevented a direct settlement, and second, because if the matter reaches a stage where the Federal Government must act, the Republican Administration will be placed in a most embarrassing position."

The Democrats and Republicans of Kentucky are each accusing the other of lawlessness and anarchy. The *Louisville Courier-Journal* (Dem.) points out that "Mr. Goebel, who both before and since his election" had been "assailed by the opposition with a fury and malignancy never before equaled in a political contest in Kentucky," had throughout "followed rigorously the plain provisions of the law. It is beside the question," it continues, "to say that the law is an objectionable and an unpopular law. It is the law, and bad as it may be it is all that stands between the people and anarchy."

After the shooting of Mr. Goebel the same paper said of Governor Taylor:

"Two days have passed and not a word is said by this mock governor, so ready with his treasonable proclamations and so prompt with his lawless use of troops to disperse legislative bodies, and to terrorize courts of law, to pursue the perpetrators of the horrible deed done under his own official roof, almost in his presence, and by men brought to Frankfort by his orders. If this be not a public acknowledgment of complicity, then there is no significance in human conduct."

The *Louisville Commercial* (Rep.) says that all Mr. Goebel's apparently legal acts by which the election of last fall is reversed

WILLIAM S. TAYLOR (REP.).

WILLIAM GOEBEL (DEM.).

J. C. W. BECKHAM (DEM.).

THE THREE PRINCIPAL FIGURES IN THE KENTUCKY CONTEST.

and that "if they shall become effective they will destroy government by the people in Kentucky."

As the claim to the governorship is a strictly legal question, to be decided by the courts, most of the press devote their attention to the condition of lawlessness which culminated in the attempt to kill Mr. Goebel, made in broad daylight, in the grounds of the State House, by an assassin concealed in the building containing the State executive offices. This crime is considered to be the natural result of the state of the public mind, but the press divide in placing the responsibility for the state of mind. The *Brooklyn Eagle* (Ind. Dem.) thinks that Goebel's election "robbery" invited the treatment he received. "It is impossible to be surprised by the attack on him," says *The Eagle*; "it is affectation to wonder at it; it is hypocritical not to see dramatic retribution in it." "If ever a man marched straight up to the muzzle of a loaded gun with his eyes wide open and a challenge to the man behind the gun to shoot," says the *Hartford Times* (Ind. Dem.), "that man was William Goebel." The *Philadelphia Press* (Rep.) thinks it "plain as noonday" that his "persistence in his purpose to usurp the governorship after his defeat by the people meant violent resistance." The *Washington Star* (Rep.) agrees that the crime is "the logical consequence of the high-handedness with which the State Democratic leader has sought to attain

his own ends regardless of the wishes of the people"; and the *Buffalo Express* (Rep.) considers him "a victim to the spirit which he had himself aroused." The *New York Evening Post* (Ind.) and the *Boston Transcript* (Rep.) recall that Mr. Goebel himself, in 1895, shot and killed the president of a bank in Covington, Ky., in consequence of a political quarrel. Mr. Goebel, however, was acquitted by the jury, and some accounts say that Mr. Goebel would himself have been the victim if he had not been quick enough to fire first.

Not a few papers think that the Kentucky Republicans are themselves to blame for the State's disordered condition. "The processions of armed mountaineers," says the *Philadelphia Record* (Ind. Dem.), "that have been marshaled in the little town where the legislature is sitting, have not been chary in their threats of violent interposition in certain contingencies of legislative action. Could there have been a greater provocative to the bringing on of bloodshed?" The *New York World* (Ind. Dem.), after referring to Governor Taylor's interference with the legislature, asks: "When the chief magistrate thus overrides law, who can wonder that assassination has been followed by anarchy in Kentucky?" The *Detroit News* (Ind.) also agrees that "Mr. Taylor has shown that he has no more respect for the law than Mr. Goebel has, which is not a happy position for one to be in who has arrogated to himself all the virtue of Kentucky politics." The *Indianapolis Sentinel* (Dem.) believes that "this spirit of lawlessness, this defiance of legally constituted authorities, this determination to rule with or without law, is a natural Republican product," and adds that it now appears likely that Taylor's majority last fall was fraudulent, for "nobody can very consistently claim that a class of men who would openly attempt to intimidate a legislature would hesitate about intimidating voters." Even the Republican *Boston Advertiser* says of the assassination of Goebel that "it is hard to see how the Republican Party of Kentucky can escape hereafter the lasting suspicion of being in some measure responsible for the outrage"; and the result, it predicts, "will be to throw Kentucky permanently into the Democratic column and to bring some other of the formerly doubtful States back to Democratic control."

A NEW SPEAKER IN THE CHAIR OF THE KENTUCKY LEGISLATURE.

—The Detroit Journal.

Papers of all political persuasions recommend cool-

ness and self-restraint at this time of high tension. The Louisville *Commercial* (Rep.) counsels "firmness and the exercise of all necessary authority for the preservation of the peace and good order of the Commonwealth"; *The Courier-Journal* (Dem.) warns the Democrats not to lose "the self-control which has thus far restrained them from overstepping the law," and *The Times* (Dem.) bids the Democrats "stand still and see the salvation of the Lord." The St. Louis *Globe-Democrat* (Rep.) says: "Surely, Kentuckians should find some peaceful, upright way to calm the agitation that prevails, to reassure the people who think their liberties are threatened, and to prevent the spilling of another drop of blood in this strange and tragic form of politics." The Detroit *News* says that "the Democrats of Kentucky might better lose a dozen state elections than triumph by fraud, and on the other hand, the Republicans might better sink Mr. Taylor and all his crew than to hand Kentucky over to anarchy and mob rule in order to maintain him in office." The Baltimore *Sun* (Ind.) thinks that the cause of the whole trouble is boss rule, and that "honest election laws, enlightened public sentiment, and independence in voting" are the remedies. The New York *Sun* (Rep.) notes that the Constitution declares that "the United States shall guarantee to every State in this Union a republican form of government," and says:

"It is too early for Kentuckians to talk of force as the last resort of American citizenship against fraudulent legislatures, usurping governors, or venal or intimidated state judiciary. The Supreme Court of the United States exists, and the egis of the federal Constitution is over republican government in every State."

JAMES BRYCE AND OTHERS ON BRITON AND BOER.

THE right and the wrong of the strife in South Africa is still a stirring theme in this country. In public meetings, in the press, and even in Congress the Uitlanders' "taxation without representation" and the Boers' right to independence are texts for impassioned argument. Opportunely for those who are bewildered by these discussions, and for others who are still seeking light on the causes of the war and the blame for it, appears a book named "Briton and Boer, Both Sides of the South African Question," a sheaf of notable articles that have appeared during the last half-year in *The North American Review*. These articles follow out two interesting lines of thought—one on the causes of the war, and one on the attitude of the European powers toward England.

The three main powers of continental Europe are assumed in these articles to be Russia, Germany, and France, and all the writers freely express the opinion that these powers are distinctly hostile to England. The two Russian writers, Vladimir Holmstrom and Prince Oukhtomsky, agree that "a curse to mankind was and is the policy pursued by Great Britain for the last two centuries," and that "through blood and tears is she making her progress through the world"; but the time is not yet ripe, they think, for Russia to interfere. The German representative, Prof. Hans Delbrück, lecturer on history in Berlin University, finds the anti-English sentiment so strong in his country that "to-day all German parties are united in rejoicing over English defeats" and "public meetings censure the Government for not intervening in favor of the Boers." He declares that "if it were announced to-morrow that Russia, France, and Germany had concluded a continental alliance against England, this news would be welcomed everywhere with joy by the people of these three nations." There is "only one person in the whole country," he says, "who thinks otherwise": but that person happens to be the Kaiser, and as the Kaiser shapes Germany's foreign policy England need not expect intervention from that quarter. As for

France, M. Francis Charmes, foreign editor of the *Revue des Deux Mondes*, says that when the news of the war came, "the sympathies of the people went out to the brave little republic," because in France "there is a love of countries that struggle for their independence, that are ready to stake all in order to acquire or maintain it." Selfish interests, rather than humanitarian, rule in European politics, however, and nothing tangible will happen. "Public opinion will condemn the war," he says, "but the governments will not move."

Mr. Sydney Brooks outlines clearly the British side of the contention. The British treaty or convention with the Transvaal Republic (guaranteeing its independence, and acknowledging British suzerainty) ought not to be considered seriously, he thinks. "It was so little thought of," he says, "that the Boers might claim it has lapsed through frequent unrebuked violations; above all, it dealt with a state of affairs that has altered in every particular since its promulgation." It was signed before gold was discovered in the Transvaal, and hence before the arrival of the Uitlanders. As to the Boer treatment of the Uitlanders when they did come, he says that they were "treated like Kafirs." He describes the situation in the Transvaal as "almost too fantastic for serious presentation." He continues:

"The Uitlanders, seven eighths of whom belong to the English-speaking race, outnumber the Boers by more than two to one. They own half the land and contribute nineteen twentieths of the public revenue. It is through their brains and energy that the Transvaal has been raised from bankruptcy to its present prosperity."

And how were they treated in return for all this? "They have not only taxation without representation, but taxation without police, without sanitation, without schools, without justice, without freedom of the press, without liberty of association."

It will be seen from the above quotations that Mr. Brooks does not pretend to give the Boer side of the case. Several writers in the book do present the Boer argument, but none so convincingly as Mr. James Bryce, the well-known author of "The American Commonwealth," who was a member of one of Gladstone's cabinets and author of "Impressions of South Africa," a study made from personal observation a few years ago. His article in "Briton and Boer" has attracted widespread comment in the American press. The argument obtains much weight from his obvious purpose to treat both sides with fairness; Mr. Brooks himself refers to Mr. Bryce as "a witness of inspired impartiality." This impartial spirit enables Mr. Bryce to see reason in both sides of the case, and he blames neither party for resenting what it very plausibly considers injustice. The point he urges is that British blunders caused and kept up an unfortunate and bitter estrangement between Dutch and English in South Africa, and that this estrangement is the real cause of all the troubles—an estrangement that the present war will certainly not heal, whoever wins. We condense his statement of the case as follows:

The Dutch and English lived many years side by side in Cape Colony, and "these two stocks have so much in common that it might have been expected that they would readily amalgamate, and at any rate would, as the Dutch and English did long ago in New York, be on good terms with one another." England, however, "managed things ill." Dutch rights in courts, local governments, and in the use of their own language were reduced, and when slavery was abolished, the owners were "allotted a very inadequate sum," and much of it "never reached their hands, because it was made payable in London." The Government, too, refused to protect the Dutch against native raids. These grievances "determined a large body of Dutch farmers and ranchmen to quit the Colony altogether, and go out into the wilderness which stretches far away into the Northeast," the country they are now defending. "This Great Trek of 1836 has been the source of all subsequent troubles between the Dutch and English races in South Africa." It developed three passions which "are the key to the subsequent history of the country."

They are: (1) "A deep dislike to the British government"; (2) "a love of independence for its own sake," and (3) "an ardent attachment to their Calvinistic faith and to their old habits and usages." The British, in the mean while, altho they did not deem the emigrants to be acquiring the interior for Great Britain, "did deem the emigrants to be still British subjects, for, as they had not become subjects of any other state, it was held they must still owe allegiance to the British crown. This notion has in a vague sense never quite vanished from the British mind ever since." The idea of the emigrants themselves was quite the reverse.

In 1838 some of the Boers from the North moved into Natal and set up a republican form of government, but the British, considering Natal British territory, sent troops in 1842 to occupy Durban. A conflict ensued, the Boers were beaten, and they returned northward "full of resentment at the Government." In 1846 the British tried to extend their frontier northward and built a fort at Bloemfontein. After several battles the British, feeling that the results would not be worth the conquest, withdrew.

"In 1852, a treaty—known as the Sand River convention—was made with representatives of the Boers who dwelt beyond the Vaal River, which guaranteed to them 'the right to manage their own affairs and to govern themselves according to their own laws, without any interference on the part of the British Government.' It was also thereby declared that no slavery should be permitted or practised by the Boers beyond the Vaal. Two years later, after a troublesome war with the Basutos, in which the British general narrowly escaped a serious reverse, had confirmed the disposition of the Government to withdraw, another convention was made at Bloemfontein, by which the Boers living in the sovereignty between the Vaal and Orange rivers were 'declared to be a free and independent people,' and the future independence of the country and its government was guaranteed."

The Transvaal Republic fared badly, and it had, in 1877, "become not only bankrupt, but virtually unable to enforce obedience." The British Government, thinking this weakness and disorder a public danger, sent a commissioner who, in April, 1877, proclaimed the annexation of the country to the British crown. "It was a high-handed act, for the Republic had enjoyed complete independence, and Britain had no more legal right to annex it than she had to seize the neighboring territories of Portugal." The Boers did not like this attempt to give them the protection of a strong government instead of their weak one, and in 1880 they overpowered the British troops in the country, and repulsed a relief force at Majuba Hill. The British Government decided to undo the annexation of 1877 and a convention was concluded in August, 1881. "By this instrument Britain recognized the Transvaal State as autonomous, reserving to herself, however, the control of all foreign relations, and declaring the suzerainty of the Queen." The Boers, far from showing gratitude for the concession of autonomy, deemed, and "were indeed justified in deeming, the annexation of 1877 to have been an act of pure force," and they "did not resign the hope of ultimately regaining complete independence." In the realization of this hope, they "had a nearly complete success," for "in 1884 they persuaded the late Lord Derby, then colonial secretary in the British cabinet, to agree to a new convention, whose articles supersede those of the convention of 1881." "This later instrument sensibly enlarges the rights and raises the international status of the 'South African Republic' (a title now conceded to what had been called in 1881 the 'Transvaal State')." Under the convention of 1884, the British crown retains the power of vetoing any treaties which the Republic may make, except with the Orange Free State. But the Republic is entitled to accredit diplomatic representatives to foreign courts; the protection of the natives is no longer placed under the care of a British resident; the internal administration of the state is left entirely free from any sort of British control. The Republic is, in fact, with the important exception of the treaty-making power, to all intents and purposes independent."

This convention was signed in 1884. In 1885 gold was discovered and "within a few years the white population more than trebled." The Uitlanders, if given the ballot, would soon outnumber the Boers and make the Transvaal an English instead of a Dutch country. "From this prospect," Mr. Bryce says, "they recoiled with horror." Their device of withholding the

ballot was, says Mr. Bryce, "an obvious form of self-preservation." But the Transvaal administration, with growing prosperity, "became not only inefficient, but to some extent corrupt," and "it was not strange," Mr. Bryce admits, "that the new settlers should have soon become discontented." Paying nearly all the taxes, but having no voice in the Government, "they felt aggrieved, and found no means of removing their grievances." The result was a contemplated rebellion, made abortive by Dr. Jameson's ill-fated attempt to cooperate by invasion. The effect of the "Jameson raid" upon the Boer mind was most serious. To it, says Mr. Bryce, are due "all the subsequent troubles in South Africa." The Boer hatred of the British was intensified, and the reforming party among the Boers was discouraged. Nor was this all. "The effect of the Jameson expedition," Mr. Bryce says, "was no less mischievous in other parts of South Africa than in the Transvaal." The Orange Free State, believing that the British had designs on its independence, now rallied to its sister republic. In Cape Colony "the Dutch accused the English of desiring to acquire the gold-fields and blot out the two republics," while "the English accused the Dutch of desiring to make all South Africa Dutch and shake off the British connection," and passion ran high between them. To Mr. Bryce "both accusations appear equally groundless," but they had their effect on the public mind.

Coming now to England's right to compel the Transvaal Republic to give the ballot to the Uitlanders, Mr. Bryce says that the Transvaal, under the convention of 1884, "had the most complete control of its internal affairs, and Britain possessed no more general right of interfering with those affairs than with the affairs of Belgium or Portugal." England's "title to address the Boer Government and demand redress," says Mr. Bryce, "depended primarily upon the terms of the convention of 1884, any violation of which she was entitled to complain of; and, secondly, upon the general right which every state possesses to interpose on behalf of its subjects when they are being ill-treated in any foreign country." Two questions, then, might arise:

"Were the grievances of her subjects so serious, was the behavior of the Transvaal Government when asked for redress so defiant or so evasive, as to contribute a proper *casus belli*?"

"Assuming that the grievances (which were real, but in my opinion not so serious as has been frequently alleged) and the behavior of the Transvaal did amount to a *casus belli*, was it wise for Britain, considering the state of feeling in South Africa, and the mischief to be expected from causing permanent disaffection among the Dutch population; and considering also the high probability that the existing system of government in the Transvaal would soon, through the action of natural causes, break down and disappear—was it wise for her to declare and prosecute war at this particular moment?"

"Strange to say," remarks Mr. Bryce, "neither of these two questions ever in fact arose." The question at stake was the length of time which should elapse before an Uitlander could have the ballot, "which was not a grievance," says Mr. Bryce, "for the redress of which Britain had any right to interfere, and which, therefore, could not possibly amount to a *casus belli*," and it was a matter "entirely within the discretion of the Transvaal legislature." In the course of the discussion the Transvaal people noticed with alarm the despatch of British troops to South Africa and the calling out of the reserves in England, and became "convinced, rightly or wrongly, that the British Government had resolved to coerce them." Mr. Bryce continues:

"They were in a sore strait, and they took the course which must have been expected from them, and indeed the only course which brave men, who were not going to make any further concessions, could have taken. And thus the question whether the grievances amounted to a *casus belli* never came up at all. The only *casus belli* has been the conduct of the two contending parties during a negotiation, the professed subject of which was in no sense a *casus belli*."

Mr. Bryce says of the war's after-effects:

"No one, however, denies that the war in which England will, of course, prevail, is a terrible calamity for South Africa, and will permanently embitter the relations of Dutch and English there. To some of us it appears a calamity for England also, since it is likely to alienate, perhaps for generations to come, the bulk of the white population in one of her most important self-governing colonies. It may, indeed, possibly mean for her the ultimate loss of South Africa."

THE SOCIALISTIC TREND IN AMERICAN CITIES.

MR. J. W. MARTIN, a lecturer of the Socialistic Fabian Society of England, has taken up his residence in this country, and is making a study of the tendencies in American cities. He finds that there are two obvious tendencies that seem to a Britisher "mutually exclusive." One is the trend toward municipal ownership, and the other the persistency of municipal corruption. The latter, however, tho still overwhelming, he finds "less flagrant than formerly." After citing in illustration of this corrupt or "semi-barbarous" condition the rule of Croker in New York and of "Dave" Martin in Philadelphia, and the "equally corrupt" conditions in Chicago and St. Louis, Mr. Martin proceeds (in *The Contemporary Review*) to consider the relation of all this to the development of the Socialistic idea as applied to cities. He writes:

"The view of this side of American city government alone—bosses with semi-barbarous codes of morality, officials dishonest and inefficient, representatives mean in ability and corrupt in character—gives the impression to an English citizen that they can not possibly follow the example of British cities in that enlargement of municipal functions which is roughly described as municipal Socialism. Yet the trend in this direction is, as Dr. Albert Shaw, the foremost authority on American municipalities, says, 'the most popular and significant movement of the day in the United States.'"

This movement Mr. Martin illustrates by a great many recent examples. In Toledo, Mayor S. M. Jones, an avowed Socialist, was elected in 1899 by a vote which doubled that of his combined opponents. In Haverhill, Mass., Mayor Chase was last year reelected to office, as the candidate of the Social Democratic Party headed by Eugene Debs, and another Socialist mayor, C. H. Coulter, of Brockton, was also elected.

In Chicago, Mr. Martin mentions the popular indignation aroused in connection with the proposed grant of street franchises, and also the 46,000 votes cast for Altgeld in the mayoralty contest last year, as instances of the growth of the Socialistic sentiment. In Denver, Milwaukee, Des Moines, and San Francisco, the majority of voters have shown a strong leaning toward municipal ownership. In New York, the agitation for public ownership of the rapid transit tunnel, tho unsuccessful, yet emphasized a great body of Socialistic opinion.

Boston is cited as the most striking example of all, and Mayor Quincy, in Mr. Martin's estimation, is one of the ablest

of American administrators. The municipal printing-plant, the municipal department of electrical construction, the open-air baths, the public parks, the free concerts and picnic excursions, and the municipal boys' camp, are all successful examples of his progressive policy.

Mr. Martin thus attempts to harmonize the persistence of municipal corruption and the movement toward municipal ownership:

"The two facts, grave official corruption and a marked trend toward municipal Socialism, which I have shown to distinguish American cities, will appear to the British citizen to be mutually exclusive. Representatives and officials who are financially clean he considers essential to extended city operations. First honesty, then larger business, appears to be the proper order. But that order is impossible in the States, because the private corporations which control the city services are a prime cause of the corruption."

"Public ownership offers less temptation to jobbery and scoundrelism than the surrender of public services to private corporations. The alternative is not between honesty with private enterprise and dishonesty with public ownership, but between periodical and gigantic frauds along with the surrender of city property and the retention of valuable rights at the risk of constant petty peculation. Neither policy offers ideal conditions, but the preference is now in favor of the smaller thefts. It is cheaper for the city to lose small sums annually through the selection of workmen for political reasons than to remain in the grasp of private corporations who can levy exorbitant charges."

The *Chicago Evening Post*, however, considers Mr. Martin's logic very "bizarre":

"His argument is not convincing; it is not even plausible. The corporations are not the prime cause of corruption, for the sufficient reason that they can not corrupt men of real character and integrity. They bribe those who are bribable, who go into public life to fill their pockets with illicit gains, not to serve their fellows. To say or imply that private corporations can corrupt any man, no matter how upright he may be when entering public life, is to libel American citizenship and contradict our experience. With honest and intelligent men in office the franchise-grabbers are powerless for evil; they have to do equity and to be satisfied with equity from the city. It is preposterous to assert that we can not elect trustworthy and faithful men, and upon this the whole case for municipal Socialism as the only alternative to corrupt alliances with franchise-grabbers is founded."

The *London Spectator*, voicing English sentiment, takes a similar view when it says:

"The root of municipal corruption is really the indifference on

JOHN BULL: "Great shade of Wellington! Hi've butted into hit again!"
—*The St. Louis Republic*.

BULLER AND WARREN (in cloths): "There doesn't seem to be any flank to this thing." —*The Denver News*.

CARTOON ECHOES OF SPION KOP.

the part of the citizens which makes corruption cease to be secret and become shameless. . . . Is it possible to convince the people of the United States that the true remedy is a higher appreciation of honesty by the individual citizen?"

RECOMMENDATIONS OF THE PHILIPPINE COMMISSION.

THE first half of the Philippine Commission's report, signed by Jacob G. Schurman, president, George Dewey, Charles Denby, and Dean C. Worcester, which has just been made public, contains, among other things, the plan of government which the Commission thinks best suited to the need and ability of the Filipinos. The islands need the protection of the United States, thinks the Commission; but not in "the chimerical scheme of protection cherished by Aguinaldo," under which the insurgent leaders should enjoy all the powers of an independent, sovereign government, and the Americans should assume all obligations to foreign nations for their good use of those powers—a situation which the Commission speaks of as "impossible." The Commission would have the islands absolutely under American control, but would give them a very liberal form of government. From the *New York Sun* (which devotes a page to a condensed summary of the report in its issue of February 2), we quote the following sketch of the Commission's plan:

"The Commission discusses at great length different propositions for a government of the islands, and calls particular attention to the question whether or not the Philippine possessions shall be one commonwealth or a confederation. They announce their unqualified opposition to the formation of a confederation and recommend a complete territorial government with a governor appointed by the President of the United States. The report names as two fundamental principles of a successful financial administration that the islands' finances must be managed not for the advantage of the sovereign power, but for the benefit of the people of the islands, and that the islands themselves must be made self-supporting. The report in its plan of government says:

"That it will be safe and expedient and desirable to grant to the inhabitants of the archipelago a large measure of home rule in local affairs. Their towns should enjoy substantially the rights, privileges, and immunities of towns in one of the Territories of the United States. As to the provinces, the Commission is of the opinion that they should be turned into counties and vested with substantially the same functions as those enjoyed in a county in one of the Territories of the United States. This system might be applied to Luzon and the Visayan Islands at once; with some exceptions, tho inconsiderable, in the mountain regions, and a beginning might also be made on the coast of Mindanao; while the Sulu archipelago, calling for special arrangement with the Sultan, need not be considered in this connection. It is, of course, intended that the Filipinos themselves shall, subject to the general laws, which may be enacted in this regard, manage their own town and county affairs by the agency of their own officers, whom they themselves elect, with no contribution to this work from American officials, except what is implied in the Philippine conception of intervention and control on the part of the central government at Manila.

"The suffrage should be restricted by educational or property qualifications, or perhaps even both. The system will necessitate a small body of American officials of great ability and integrity, and of much patience and tact in dealing with other races. They may be called advisers, residents, or commissioners. One such commissioner for every 250,000 natives should suffice. It would be the duty of the commissioners to make regular reports of their work to some department of the Government at Manila, presumably the Secretary of the Interior. Their main function would be to advise the county and town officials in the proper discharge of their duties. In watching the collection of local revenue and controlling its expenditure, the commissioners would find the most important portion of their duties."

Other recommendations of the Commission may be condensed from *The Sun's* report as follows:

It will be safe and desirable to extend to the Filipinos larger

liberties of self-government than Jefferson approved of for the inhabitants of Louisiana. The Filipinos should be permitted to elect at least the members of the lower branch of the territorial legislature; half of the members of the upper branch might be chosen by the natives, and the other half appointed by the President of the United States. The governor-general should have a qualified veto power, and the right to suspend a law for a year if passed by a two-thirds vote over his veto. This plan of government would be a territorial government of the first class, and this is what the Commission earnestly recommends.

The Commission maintains, in a legal argument, that the power of Congress over the islands is unlimited.

No American should be appointed to any office in the Philippines for which a reasonably qualified Filipino can possibly be secured. The merit system must be adopted and lived up to: the spoils system would prove absolutely fatal. Of the American officials, however, the higher ones should be appointed by the President and the lower transferred from the home service, without examination in either class.

The chasm between the economic and social conditions in the Philippines and those in the United States is so great that it will be impracticable to apply the same tariffs, either for customs or internal revenue.

In all parts of Luzon and the Visayan Islands where American occupation is effective, this scheme of government should be applied as soon as possible, and its operation should be extended with the spread of American control. We should not wait for the entire suppression of the insurrection.

While the people of the islands hunger and thirst for their rights and liberties, they do not generally believe the islands ready for independence now, altho they desire it ultimately. The general substitution throughout the archipelago of civil for military government, tho, of course, with the retention of a strong military arm, would do more than any other single occurrence to reconcile the Filipinos to American sovereignty.

We should maintain a permanent fighting force of ships on the Asiatic station, including battle-ships and armored cruisers; and it is of prime importance to have a naval station of the first class, with the best docking and coaling facilities, in or near Manila Bay.

Great antagonism exists between the Filipinos and the friars. The question of title to the property claimed by the religious orders must be left to the courts. Possibly this property might be divided into small parcels and sold—a thing which is very greatly desired.

No legislation on the currency question is needed at present, except to establish a bank or banks.

A statement by Admiral Dewey denying that he ever promised Aguinaldo that the Philippines would be given their independence by the United States is embodied in the report. Senator Lodge read in the Senate on Wednesday of last week a letter from the admiral in which he said:

"The statement of Emilio Aguinaldo, as recently published in the *Springfield Republican*, so far as it relates to me, is a tissue of falsehoods. I never promised, directly or indirectly, independence for the Filipinos. I never treated him as an ally, except to make use of him and the soldiers to assist me in my operations against the Spaniards. He never alluded to the word independence in any conversation with me or my officers. The statement that I received him with military honors or saluted the so-called Filipino flag is absolutely false."

The *New York Times* says of this: "Admiral Dewey has ruthlessly destroyed one of the foundation stones of the anti-imperialist temple of falsehood and delusion." The *Springfield Republican* quotes the admiral's letter and says:

"The country is glad to hear from him, and there will be a desire to have him take up Aguinaldo point by point, and set forth his side with an equal fulness and particularity. Assertion and reply will become a part of history, valuable now and for the use of the historian of the future. Calm statement and the full record have got to take the place of violent denunciation and concealment. The people want the facts and all of them."

The Washington correspondent of the *New York Tribune* reports that the President has decided to replace the military government under General Otis by a purely civil administration,

modeled on the Commission's plan, as soon as the right men can be found, without waiting for the action of Congress. The correspondent adds that Governor Roosevelt and President Schurman have declined the management of this task, and that General Grant is being favorably considered.

COROLLARIES OF EXPANSION—I. THE NICARAGUA CANAL.

A CANAL across the American isthmus, a cable across the Pacific, government aid for a great American merchant marine, and a great navy to protect them all, are being discussed by the American press as probable facts of the near future. The Administration, so Mr. Charles A. Conant, Washington correspondent of the *New York Journal of Commerce*, says, has decided on an "aggressive policy" which will include the above-named "measures for stimulating American commerce." Hawaii, the Philippines, and our growing Chinese trade are themselves looked upon by the expansionist press as unanswerable arguments for these expansive and expensive ventures.

As for the building of a canal across "the neck of America" somewhere, few, if any, newspapers oppose it; most of them favor it heartily. Most enthusiastic of all are the Pacific-coast press. The *San Francisco Chronicle*, for example, says that the canal will "make possible a great revolution in our industries, and transform an energetic agricultural and mining community into a still more energetic and far more thriving manufacturing and commercial community. . . . The canal will benefit the world, but it will revolutionize California." Serious questionings are heard, however, as to which route is better, the Nicaragua or the Panama; as to whether Congress should decide now or wait for the report of the Walker commission, and as to whether the United States should hold the canal under its own military and commercial control, or give equal rights in the canal to all nations. Great Britain, the despatches say, has agreed to a modification of the Clayton-Bulwer treaty, by which she practically gives up the claim to a dual control of the Nicaragua canal. Bills have been favorably reported in both Houses of Congress looking toward the early construction of a canal across Nicaragua; and a canvass of the Congressmen by the *New York Herald's* Washington staff indicates that a measure will be adopted authorizing the President to expend \$140,000,000 or more to construct, as the Hepburn bill says, "from the Atlantic Ocean or Caribbean Sea to the Pacific Ocean a canal of sufficient capacity and depth for vessels of the largest tonnage and greatest depth now in use," to make adequate harbors at the terminals, and to build "such fortifications for defense as will be required for the safety and protection of the said canal and harbors." Mr. Hepburn, who is chairman of the House Committee on interstate and foreign commerce, says in an article in *The Independent* that he favors the Nicaragua route and believes that the canal "should be constructed and owned by the United States with the right and power to defend it." American ships, he says, should be favored in the matter of tolls, so that "the canal would thus serve as a sort of subsidy to promote ship-building in the United States." Mr. Morgan, chairman of the Senate committee on interoceanic canals, agrees with Mr. Hepburn on the superiority of the Nicaragua route, not only on account of the greater ease of construction (a point disputed by the Panama advocates), but because it is a route nearer the United States. If we should adopt the Panama route, Senator Morgan argues, and some other nation should build a canal across Nicaragua, the other nation "would cut our line of communication on both sides of the isthmus with a shorter line to our coasts, and, in the military sense, would interpose between us and our base of operations."

Some papers point out that the Walker commission has only just started for Central America for the very purpose of examining the two routes and reporting which is the more practicable. Our present knowledge of the two routes is inadequate, says the *New York Journal of Commerce*, and "it is the duty of Congress to defer action until the present commission makes its report, covering the whole question." "The delay is a matter of small consequence," says the same paper, "and the information that the forthcoming report will afford may easily be worth many million dollars to the country." Representative Moody, of Massachusetts, said to the Washington correspondent of the *New York Evening Post* a few days ago that it might be well to consider Nicaragua's treaties with other nations before pushing ahead so fast. "It reminds me much," he said, "of proposing to build a house on another man's land before finding out whether you can buy it or not, and at a time when four or five other fellows think they own mortgages on the property." Several papers believe the Panama route to be the better one. Says the *Springfield Republican*:

"All information at hand tends to raise presumptions in favor of the Panama canal. It is two fifths finished, according to report. It is open to navigation twelve miles inland on the Atlantic side and four miles inland on the Pacific side. Thousands of men are now at work on the channel where it is to pass through the continental divide and where the waters of the Chagres River are to be turned into an interior lake, and the plans of the new French company for the completion of the work have been pronounced sound and practicable by prominent American engineers.

"But whether this be so or not, it would be a strange proceeding for Congress to go ahead with the Nicaragua project before its own instructed commission has had time to report on the situation at Panama and the comparative merits of that route."

The *Chicago Times-Herald* and the *Boston Transcript* express similar views, the latter paper adding:

"For Congress to continue to act along its present proposed lines will be the height of national stultification, for it will do so not only without the information which it has authorized an expensive commission to seek and lay before it, but also in the face of opposing testimony furnished by some of the most famous and expert engineers in the world. As the situation now stands it is one of the craziest schemes that has come before the country for many a day."

Albert Shaw, however, says in *The Review of Reviews*:

"The reopening of the Panama question and the endeavor to stimulate American interest in Panama are simply part of the program of opposition to any canal whatsoever. If the United States should be led by these influences to the point of a decision in favor of Panama, forthwith we should see very much the same combination of interests suddenly swing around to an agitation in favor of Nicaragua—all for the purpose of gaining two or three more years. These interests would for the most part keep themselves concealed, as in years past and gone. If there has never been so favorable a time in the past for decisive action toward the accomplishment of the Nicaragua canal, it is equally true that there is likely never to come again in the future an opportunity equally advantageous."

If Congress adopts and the President approves the Nicaragua route, with American military and commercial control, as now seems likely, some complications may arise. Both Great Britain and Germany, according to the Washington correspondent of the *Chicago Times-Herald*, "have formally served notice that they will protest against fortification of the Nicaragua canal if that waterway be constructed by the American Government." Many papers, however, think that Germany and England have no rights in the case. Even before England relinquished her claim to dual control of the Nicaragua canal, which was provided for in the old Clayton-Bulwer treaty, a considerable part of the press declared their belief that the treaty was void.

The Clayton-Bulwer treaty between the United States and

England, framed in 1850, provided that neither government "will ever maintain or obtain for itself any exclusive control" over a ship canal across Nicaragua, or erect any fortifications, "or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America." England, however, after the beginning of our Civil War, transformed a wood-cutting settlement in Honduras into a crown colony. Secretary of State Prelinghuysen, of President Arthur's Cabinet, maintained that this violated the treaty and made it voidable at the pleasure of the United States, and he so informed the British Government. Some of the British press have lately shown a disposition to regard our preparations for building the Nicaragua canal independently as an unfriendly act; but the British Government's abandonment of the old treaty makes these objections groundless. Great Britain, it appears, receives no *quid pro quo* for her surrender of the Clayton-Bulwer claim, except what this country may voluntarily give hereafter. The new treaty, by which the old one is so radically amended (but which has not yet been confirmed by the Senate), provides that the canal shall be neutral in peace and war. The *New York Evening Post* says: "This represents such a distinct and enlightened advance over what American diplomacy has hitherto contended for that Mr. Hay is to be warmly congratulated upon his success."

We could not admit England into partnership in the control of the canal, thinks the *Chicago Times-Herald*, "without discriminating in favor of Great Britain against all Europe"; and by doing away with this provision we "put all on an equal footing and present an impregnable front to all." As for the objections that may be raised by the other powers, the *Detroit Tribune* says:

"The United States at this late day are surely big enough and strong enough to do things without the suggestion, much less the dictation, of outsiders. We have started on a career of expansion from which it seems there will be no withdrawal, as there seems no valid reason why there should be. But if we are to heed the cries of other countries when some action that we contemplate—even before we put it into effect—causes them displeasure, we had better withdraw into our shell at once and become a picayune people, to be the perennial laughing-stock of the transoceanic world."

Not a few papers heartily indorse the "open-door" policy for the canal. The *Chicago Record* thinks it should be open to friend and foe alike, even

in war time. Says *The Record*: "It is a matter of comparatively little consequence to us that an enemy could use the neutral canal also, on like terms with ourselves. Whereas, if an enemy were privileged to destroy the canal if he could, or to prevent its use in any of the ways known to modern warfare, we might be very seriously inconvenienced." The *Philadelphia Times* says: "A ship canal would have to be neutral or nothing. While it would be always possible to stop it against an enemy, an enemy, with any naval force at all, could also stop it against us." Commerce, too, thinks the *Minneapolis Tribune*, should find no discrimination there. The "open-door" policy, it says, "is the broad-gage, liberal policy, and we should hate to see our Government attempt to enforce anything else." "We should let the world know," says *The Independent*, "that our canal will be open to the ships of all nations on equal terms." The *Philadelphia Manufacturer* takes a similar view. It says:

"The utter folly of mixing politics and business ought to be fully understood. To run an interoceanic canal of this sort as a kind of closed den is an altogether impracticable plan and should receive nobody's commendation. The Central American canal should be conducted on business principles, like the Suez canal. It should be neutral territory free to all comers who will pay for passing through it. American ships, English ships, and German ships should enjoy identically the same privileges. The aid which the United States Government gives to the enterprise should be the kind of aid England gives to the Suez canal. Such a business-like investment would make money for the Government, at the same time that it conferred great benefits upon American trade."

TOPICS IN BRIEF.

PUBLIC affairs in Venezuela continue normal. The usual revolution is in progress.—*The Philadelphia Ledger*.

THE gun behind the man is also an important factor in the Kentucky engagements.—*The Memphis Commercial-Appel*.

Would it not be appropriate to rechristen the Tugela River and call it Hutter Run?—*Correspondent of The New York Sun*.

All Kentucky needs is a few kopjes and some artillery to be proper object for resolutions of sympathy.—*The Washington Star*.

THE much-advertised "anti-puncture" compounds should find a ready sale among Kentucky politicians.—*The Baltimore American*.

WHAT must be the reflections of Dr. Jameson when he thinks that he once tried to conquer the Boers with 300 men?—*The Chicago Record*.

MARK HANNA declares that McKinley's reelection is so certain that he needs money to start the campaign immediately.—*The Chicago Record*.

It is appalling to speculate on what would happen if forty million Boers were matched against a quarter of a million Englishmen.—*The New York World*.

THE Montana senatorship appears to present another instance of over-capitalization.—*The Detroit News*.

POSSIBLY Mr. Bryan will "give up silver" as the Gold Democrats command, but evidently not more than a dollar or two at a time.—*The New York Mail and Express*.

CONSCIENCE appears to have been a valuable asset in the late legislature of Montana. The more a member had the more he could get for it.—*The Philadelphia Ledger*.

SUSPICIOUS.—"More Irish prisoners," said the general to Krüger. "This may be an English ruse to gain control of the government," sighed the wily Oom Paul.—*Puck*.

MRS. SMYTH (looking up from her paper): "What does it mean in the Washington news when it speaks of 'the lower House!'" Mr. Smyth: "That means the House of Representatives. The Senate is higher." Mrs. Smyth: "How is it higher? Do you mean that it costs more to get there?"—*The Philadelphia Record*.

LETTERS AND ART.

A FAMOUS JAPANESE ANTHOLOGY.

VIEWED in its relation to the world's literature, Japanese poetry is individual and unique. It arose in a prehistoric age, and at a period still long anterior to the beginnings of authentic history its peculiar form and spirit had already become crystallized, altho the climax of its excellence was not reached until about a thousand years ago. One is carried back by it, therefore, into a singular and isolated literary realm, as rare and piquant in the world of letters as is the Island Empire in the world of nations. The most characteristic representative of Japanese poetry is a collection known as the "Hyakunin-isshū," a sort of Japanese "Golden Treasury of the Best Songs and Lyrics," corresponding in some respects to the famous English collection of Palgrave, tho antedating it by eight hundred years. In a paper read by Prof. Clay MacAuley at a recent meeting of the Asiatic Society at Tokyo and reproduced in *The Japan Weekly Mail* (December 16), the following account of this anthology of Japanese poetry is given:

"Just by whom, and how, the 'Hyakunin-isshū' came to be gathered is no longer known. Certainly, in its present form its editorship is doubtful. The author of the 'Dai-Nihonshi' ('History of Great Japan') was satisfied, upon the authority of the 'Meigetsuki' ('Records of Brilliant Months') that the collection was made by Teikakyo, whose family name was Fujiwara no Sadaie. Sadaie held high office. He was an imperial vice-counselor prior to, and under, the reign of the Emperor Shijō (1233-1242 A.D.).

"Now, taking these 'Single Songs of a Hundred Poets' as a whole, the reader will find that, broadly judged, they can be gathered, in accordance with their subject-matter, into three groups. Let us name these groups: 1, *Nature*, or contemplation and description of scenes in the outer world; 2, *Sentiment*, or moods associated with the milder human emotions, such as melancholy, pensiveness, regret, sympathy, contentment, gratitude, friendship, filial love, loyalty, and the like; 3, A third group belonging to the deeper ranges of emotion, but distinctive enough to be regarded separate, is composed of those poems which are outbursts of the passion *love*. Love poems are in a higher degree characteristic of Japanese as of all other poetry. In this collection, forty-six of the *tanka*, nearly half of the songs, have for their motive some phase of this great human passion. Twenty-nine of the *tanka* are given to the more ordinary sentiments, and twenty-six to the scenes of nature. It will be well, however, in reading all these songs to remember that they need not be taken as transcripts of personal experiences. Most of them were creations for use in poetical contests and as exhibits of artistic skill."

Professor MacAuley gives specimen verses from the several divisions of the book. Speaking of the poems on love he says:

"*Tanka* thirteen tells of love perfected. The poet uses the figure of a mountain rill becoming a full, serene river:

From Tsukuba's peak
Falling waters have become
Mina's still, full flow.
So, my love has grown to be—
Like the river's quiet deeps.

In *tanka* sixteen, by means of two word plays—one upon the word Inaba, meaning a mountain or district to which the poet was going, and also the phrase 'if I go'; the other upon the word *matsu*, meaning 'a pine-tree,' and 'to wait,' as one *pinning* for another may wait—an assurance of faithful love is well given:

Tho we parted he,
If on Mount Inaba's peak
I should hear the sound
Of the pine-trees growing there,
Back at once I'll make my way.

In the eighteenth song, one of the distinctive devices of Japanese poetry, the 'preface' and euphonic 'introductory word' appear. In the English rendering the word 'gathered' reproduces ap-

proximately this device. The first two lines of the stanza are to be regarded as introductory. The theme is 'Secret Love':

Lo! the gathered waves
On the shore of Sumi's bay!
E'en in gathered night,
When in dreams I go to thee,
I must shun the eyes of men.

Unconfessed love, that betrays itself, is the theme of the fortieth song:

Tho I would conceal,
In my face it yet appears,—
My fond, secret love:
So much that he asks of me
'Does not something trouble you?'

Love perplexed is pictured in the forty-sixth song under the simile of a mariner at sea, with rudder lost:

Like a mariner
Sailing over Yura's strait,
With his rudder gone;
Whither o'er the deep of love
Lies the goal, I do not know.

Struggle to conceal a love that may not be shown to the one beloved is admirably exhibited in the eighty-ninth *tanka*, in an apostrophe to self. The poet wrote:

Life! Thou string of gems!
If thou art to end, break now.
For, if yet I live,
All I do to hide my love,
May at last grow weak and fail.

These are but a few of the many songs of which love, in some of its phases, is the theme.

"I will quote but one more of them. It is the one written by the compiler of the 'Hyakunin-isshū,' the poet Sadaie. It is a vivid picture of a common scene on Awaji Island, used in simile here for the poet-lover's impatience in waiting:

Like the salt sea-weed
Burning in the evening calm,
On Matsuo's shore,
All my being is aglow,
Waiting one who does not come.

THE STEADY GROWTH OF AMERICAN FICTION.

A GLANCE over the literary history of the past five years reveals unmistakably a steady and gratifying growth of interest in books of American life by American authors. *The Bookman* (February) exhibits this in a graphic way by the statistical method. Taking as a basis the month of December (which for several reasons is especially well adapted for purposes of comparison), it gives lists of the six most popular books from 1895 to the present year. The list for 1895 is as follows:

"Days of Auld Lang Syne," by Ian Maclaren. "The Red Cockade," by Stanley Weyman. "Chronicles of Count Antonio," by Anthony Hope. "Sorrows of Satan," by Marie Corelli. "The Bonnie Brier Bush," by Ian Maclaren. "The Second Jungle Book," by Rudyard Kipling.

Here there is neither American book nor American author. The year 1896, however, shows a little improvement:

"Kate Carnegie," by Ian Maclaren (British). "King Noanett," by P. J. Stimson (American). "Sentimental Tommy," by J. M. Barrie (British). "Quo Vadis," by H. Sienkiewicz (Polish). "Seven Seas," by Rudyard Kipling (British). "The Damnation of Theron Ware," by Harold Frederic (American).

A further increase of interest in American books and life is observed in 1897:

"Quo Vadis," by H. Sienkiewicz (Polish). "The Choir Invisible," by J. L. Allen (American). "The Christian," by Hall Caine (British). "Hugh Wynne," by S. Weir Mitchell (American). "In Kedar's Tents," by H. S. Merriman (British). "Captains Courageous," by Rudyard Kipling (British, but in the main on American life).

On the record for December, 1898, half the books are by writers born in the Western hemisphere:

"The Day's Work," by Rudyard Kipling (British). "The

Battle of the Strong," by Gilbert Parker (Canadian). "Red Rock," by T. N. Page (American). "Adventures of François," by S. Weir Mitchell (American). "The Castle Inn," by Stanley Weyman (British). "Roden's Corner," by H. S. Merriman (British).

But the record for December, 1899, is, as *The Bookman* remarks, "the crown and completion of that Americanism in literature which marked the year 1899":

"Janice Meredith," by Paul L. Ford (American). "Richard Carvel," by Winston Churchill (American). "When Knighthood Was in Flower," by Caskoden (American). "David Harum," by Westcott (American). "Via Crucis," by Crawford (American). "Mr. Dooley in the Hearts of His Countrymen," by F. P. Dunne (American).

Not only is every book in this list by an American author, but in all but two instances ("When Knighthood Was in Flower" and "Via Crucis") the theme also is American. Among the other striking American successes of the past few months are Mrs. Burnett's "In Connection with the De Willoughby Claim," Mr. Booth Tarkington's "The Gentleman from Indiana," and Harold Frederic's "The Market-Place," which, tho written in London by one who had long resided abroad, may be classed as an American book.

RUSKIN AS A REVOLUTIONIST.

IN summing up Ruskin the man, it is impossible to gain a full comprehension of his message without an understanding of his social ideals. The fashion is to brush these lightly aside as "extravagant" or "visionary"; but whatever may be our own

summed by a passion for art. This is the keynote to his life. But to him the word *art* always meant infinitely more than the pictures we hang on our walls and occasionally go to see in galleries. In his mind it was simply a synonym for beauty in everything that the hand of man touches—in our cities, streets, and homes. From earliest boyhood his whole soul was in revolt against the sordidness and ugliness of the life that he saw around him. Looking at the matter first of all purely from the esthetic standpoint, he came to realize that popular art is inevitably rooted in social conditions—that it is, in fact, simply the outward expression of social ideals. He loved to look back to the Middle Ages, with their glorious architecture and their multitudinous art-products from the hands of unknown workmen. This, he said, showed the result of simple and wholesome lives of fellowship inspired by devotion to the common weal and to noble religious ideals. In the sordid city streets of to-day, on the other hand he saw simply the expression of a selfish commercialism.

"We can trace the current of Ruskin's revolutionary social thought in all his writings. We see it plainly in such books as 'Sesame and Lilies,' 'The Crown of Wild Olive,' and 'Time and Tide.' We see it even more unmistakably in those four essays on political economy which he called 'Unto this Last.' Finally, it bursts the floodgates in that fervid series of 'letters to workmen' entitled 'Fors Clavigera'—almost the last of Ruskin's writings.

"'Unto this Last' was contributed nearly thirty years ago to *The Cornhill Magazine*, of which Thackeray was then editor. After two of the essays had appeared, there was such a storm of indignation that Thackeray refused to print more. This little book was a bombshell thrown into the camp of the orthodox and conservative political economists. It attacked the very basis on which political economy was supposed to rest. In 'Unto this Last' Ruskin boldly declared that political economy was a science not of things, but of *men*, and that the test of modern society was not its material wealth but the character of all its men and women. The message of the book can be summed up in one sentence from it: 'There is no wealth but life.'

"'Fors Clavigera' is perhaps the most stinging indictment of modern society and religion in English literature. In one of these letters Ruskin exultantly declares himself a 'Communist, reddest of the red.' The following quotation is from 'Fors':

"'The guilty thieves of Europe, the real sources of all deadly war in it, are the capitalists—that is to say, people who live by percentages on the labor of others; instead of by fair wages for their own. . . . All social evils and religious errors arise out of the pillage of the laborer by the idler; the idler leaving him only enough to live on (and even that miserably), and taking all the rest of the produce of his work to spend in his own luxury or in the toys with which he beguiles his idleness.'

In the most deliberate way imaginable Ruskin declares that the wealthy class of to-day is essentially a parasitic class:

"'We, of the so-called "educated" classes, who take it upon us to be the better and upper part of the world, can not possibly understand our relations to the rest better than we may where actual life may be seen in front of its Shakespearian image, from the stalls of a theater. I never stand up to rest myself, and look round the house, without renewal of wonder how the crowd in the pit, the shilling

gallery, allow us of the boxes and stalls to keep our places! Think of it! those fellows behind there have housed us and fed us; their wives have washed our clothes and kept us tidy; they have bought us the best places, brought us through the cold to them; and there they sit behind us, patiently, seeing and hearing what they may. There they pack themselves, squeezed and distant, behind our chairs; we, their elect toys and pet puppets, oiled and varnished and incensed, lounge in front

THE LAST PORTRAIT OF JOHN RUSKIN.

individual view of society, we have to recognize the important influence which Ruskin's conceptions of social reform exerted in his writings and life. In *The Independent* (February 1), Mr. Leonard D. Abbott writes of Ruskin from the viewpoint of a revolutionary. He says:

"Ruskin, like his Socialist disciple, William Morris, was con-

placidity, or, for the greater part, wearily and sickly contemplative."

In order that he may not be misunderstood, he dwells on the point again and again:

"Nearly every problem of state policy and economy, as at present understood and practised, consists in some device for persuading you laborers to go and dig up dinner for us reflective and esthetical persons, who like to sit still, and think, or admire. So that when we get to the bottom of the matter we find the inhabitants of this earth broadly divided into two great masses, the peasant paymasters, spade in hand, original and imperial producers of turnips; and, waiting on them all round, a crowd of polite persons, modestly expectant of turnips, for some—too often theoretical—service."

"If we read these statements detached from their context, would we not be justified in supposing that they came from Socialist or anarchist pamphlets? Ruskin was unquestionably a revolutionist. He longed to see our social system changed from top to bottom. His ideal was almost identical with that of a Communist like William Morris, or an anarchist such as Kropotkin."

LETTERS OF CHARLES GOUNOD.

THE letters of this celebrated composer to his young friend and disciple, George Bizet (*Revue de Paris*, January 1), adds another name to the long list of distinguished artists and authors who of late have been revealed as never before to their admirers through the publication of their intimate and confidential letters. These of Gounod are at once simple and playful, wise and affectionate; they scintillate with wit and gaiety, and teem with luminous and profound reflections. Like the similar spontaneous effusions of Balzac, George Sand, Victor Hugo, Alphonse Daudet, Mme. Michelet, they show, however it may be as to the decadence of France as a nation, that her great artists, poets, and men of letters are remarkable for the clear comprehension and lofty devotion with which they confront and pursue their high vocations. They testify also to the purity and elevation of the domestic life of that country.

At the time the correspondence begins, Gounod was thirty-nine and his young friend seventeen. The latter, an Academy student, was competing for the great prize (the *prix de Rome*) for the best musical composition of that year—1856. "David," with lyrical scenes and three personages, was the poem proposed to the competitors. This is the theme of Gounod's first letter, which we cite in full:

"Thanks, dear child, for letting me know so promptly on what subject your imagination will be exercised during the next twenty or twenty-five days—yes, indeed, you will have it done in time, perhaps before the time allotted—I am sure of it! On the first day, a mere cantata seems like an opera in five acts, and one feels as if, working night and day, he will never get it completed. I know all about that, for I have been through it, and yet I have finished my work, and my comrades have finished theirs, and the time given was all sufficient for our need. *Do not hurry.* Everything will come at the right moment. Do not be in haste to adopt an idea, under the pretext that you will not perhaps find another; they will press upon you ten for one. *Be severe.*

"I am enchanted with your subject, for the simple reason that the figures are all characteristic. Have courage, be calm above all, for precipitation stifles everything; and if you will take my advice, do not work at night. The mind is then overwrought, agitated, and this fever has usually only one result—a discontent on the following day that will compel you to do over the work of the night before. Adieu."

The death of his mother calls out from Gounod a touching letter. Mme. Gounod, tenderly beloved by her son, as we already know from that exquisite book "*Mémoires d'un Artiste*," died in 1858, immediately after the appearance of one of his operas, "*Le Médecin Malgré Lui*," that crowned him at once with the brightest laurels which he had yet won. Gounod writes:

"Under what sad circumstances, dear friend, do I send you the

news which you demand. My poor mother is no more! She was taken from me on Saturday, the sixteenth of the month, at eight o'clock in the evening, the very day after the first performance of my new work.

"You know how I adored my mother; it is needless for me to tell you that I shall weep for her all my life, for she was the providence of my entire life. It would have been very sweet for me to have cheered her with this triumph, the most brilliant result yet achieved of a career begun long ago and pursued under her eyes with the most ardent desire of finally recompensing that existence so full and so laborious to which I owe the little that I am.

"Ah, dear friend! render your dear mother as happy as you can. When she is no longer by your side, you will deplore the least neglect that wronged her goodness, and will reproach yourself latterly.

"I will not sadden any longer your stay in the beautiful country that you will now see and love. You are in the golden age of life, dear friend, and you know not how vividly I feel with you in all your new experiences! Enjoy fully all that Rome will give you with an incomparable and exhaustless abundance."

Gounod's love for Italy, and especially for Rome, appears to have been a veritable passion. It is the keynote of a number of his letters to Bizet, during his two years' residence in the Eternal City, and gives tone and color to them all. On one occasion he cries:

"Admire! admire all that you can: admiration is a noble faculty, and it is at the same time one of the most vivid enjoyments of man, if not the newest among them. To admire is to expand, and if Italy is capable of developing us as she does, it is because she constantly invites and quickens the enthusiasm that belongs to admiration. How much more one lives there than elsewhere! What pulsations of the heart, of the soul, of the intelligence, in the existence that you are now about to lead! I can talk to you to-day in a language that you will comprehend, and in which, please God, we will commune more fully and clearly on your return."

And again:

"Rome is a being. It is more than a friend, it is a verity, profound and multiple; it is the key of a crowd of questions, since almost all questions are summed up in some few, the good, the true, and the beautiful; and Rome, withdrawing you from all the meanness and pettiness of the real life, permits you, isolated through reflection, to hover in the grand domain of the things that are eternal. It is this sentiment, absolutely free from all narrow preoccupations, that will constitute the most exquisite and divine recollections that you will preserve, and which we will reawaken the one in the other when we resume our pleasant talks of former days.

"Work, think, open your soul to all the grandeurs that surround you, breathe them in with full lungs, and believe always in the affection of your friend."

When at last George Bizet bids good-by to Italy, he announces that he will make only a rapid tour of Germany *en route* to his native land; but his wise preceptor enjoins him to reconsider his determination:

"Let me tell you this: after Italy, Germany is due; that is to say, after the contemplation, the sort of beatitude of the intelligence, the life of reverie that Italy induces, you must withdraw into yourself and cultivate, however painful the effort, the soil which Italy has sown. You will not understand fully at present the relation that unites these two realms of your being, for we do not attain a clear consciousness of what goes on within until later; but that relation exists, and the labor of which I speak can alone fecundate the germs that you will bring away with you from Rome, and which otherwise would remain absolutely sterile.

"I have heard M. Ingres declare: 'There is no art without science.' This is profoundly true. Question Germany then before quitting it. If she has a message for you, listen; and, believe me, before returning to this horrible Paris, teeming with all sorts of distractions and dissipations, it is of the first importance that you should have acquired habits of *work* that will become

a need and a force sufficient to sustain the assaults of all kinds to which we are exposed."

Later, when Bizet in his turn is mourning the death of his mother, in his brief strong letter of condolence, Gonnod utters the following line apostrophe in praise of the sovereign remedy for all human ills:

"The most consoling of friends in such periods of affliction is *work*. That voice alone is serious enough to address, and that hand alone gentle enough to touch, alike the most terrible griefs and the highest joys of life, because that alone is exempt from the stains and imperfections of our poor humanity. Avail yourself, as soon as you can, of this marvelous and inexhaustible support; it will not rob you of your recollections, but will surely eliminate their too poignant and cruel bitterness."—*Translation made for THE LITERARY DIGEST.*

A NEW THEORY OF GENDER IN LANGUAGE.

GRAMMATICAL gender has always been more or less of a stumbling-block to the beginner in a foreign tongue. Why, for instance, are the Teutonic races so perverse as to call *table* feminine, *tree* masculine, and, worse still, *woman* neuter? Or what is the occult mental process by which the Latin races decide for themselves that *knife* shall be masculine, while *spoon*, violating all natural proprieties, is made a feminine article? Formerly answer was made that the human mind naturally personifies inanimate things, and that with the large in bulk or the active in temperament were naturally associated masculine qualities, and *vice versa*. Thus the sun, which is large in the Southern heavens, is masculine in Latin and all the Romance languages of Southern Europe, and the moon is feminine; whereas in the north of Europe, where the sun is less powerful, it is feminine, while the moon is masculine in gender.

This answer, however, appears less satisfactory than it once did; and now Mr. J. G. Fraser (in *The Fortnightly Review*, January) comes forward with a wholly new and certainly a striking theory, based on the study of the speech of certain South American tribes. Among the Arawaks each sex often has a different speech—different not so much in the use of distinct words as in the use of different prefixes and terminations. He says:

"For 'yes' the Arawak men say *tase* or *hese*, the women *tara* or *kisseira*; for 'certainly' the men say *dukessa* or *hedukessi*, the women *dukara* or *hedukara*. The word *ehe*, meaning 'yes,' may be used both by men and women. For 'no' men and women alike say *kawake* or *koake*. The men greet each other with *buill* or *bülluai*, 'Are you there?' to which the answer is *daili* or *dallisi*, 'I am there.' A woman, on the other hand, is greeted with *bairu*, 'Are you there?' to which she answers, *dairuru*."

Among the Caribs, also, the same peculiarity has long been noted. As examples of this difference of speech, Mr. Fraser quotes the following table from a paper by a recent traveler in the West Indies, Mr. Joseph Numa Rat, published in *The Journal of the Anthropological Institute* (1898):

	Used by Men.	Used by Women.
Moon	Nönn	Käti
Rain	Känöbul	Häya
Fish-hook	Küwi	Büre
Cassava root	Klere	Käi
Son	Wäkäri	Éyeri
Daughter	Wuri	Yäru
Pepper	Bärmäl	Ati
Fowl	Alira	Käyo
Sea	Bäraua	Bärawa

From an elaborate analysis of the words and the inflectional endings in the masculine and feminine speech of the Caribs and other American tribes, and from researches into the history of these races, Mr. Rat concludes that the feminine forms were originally a separate language spoken by the women of another tribe, and preserved by them after their capture and adoption into the tribe of their husbands. How the change came from

subjective gender to what may be called objective gender can only be conjectured; but it is not improbable, Mr. Fraser suggests, that when the two speeches finally coalesced, certain of the feminine forms for inanimate objects were retained together with masculine forms for others.

THE NEW ART OF DESCRIPTION IN FICTION.

THE great difference between the descriptive style of fifty years ago and that of to-day is one of the most marked phenomena of modern fiction. Prolixity and colorless detail have been succeeded by brevity and crisp, vivid outline. In *The National Review* (London, January), Miss Jane H. Findlater contrasts the style of such writers as Scott and Galt with that of the new school of novelists. As a typical example of the slovenly and tedious description which prevailed earlier in the century she quotes the following passage from Galt:

"The year was waning into autumn, and the sun setting in all that effulgence of glory with which, in a serene evening, he commonly at that season terminates his daily course behind the distant mountains of Dumbartonshire and Argyle. A thin mist, partaking more of the lacy character of a haze than the texture of a vapor, spreading from the river, softened the nearer features of the view; while the distant were glowing in the golden blaze of the western skies, and the outlines of the city on the left appeared gilded with a brighter light."

With this she contrasts the following from Kipling:

"The animal delight of that roaring day of sun and wind will live long in our memory—the rifted purple flank of Lackawee, the long vista of the lough darkening as the shadows fell; the smell of a new country, and the tearing wind that brought down mysterious voices of men from somewhere high above us."

But some writers of the new school, in their effort to be vivid and striking, have allowed themselves to be carried away into extremes. For instance, in Mr. Stephen Crane's "Red Badge of Courage" the following typical sentences occur:

"His canteen *banged* rhythmically and his haversack *bobbed* softly . . . he *wriggled* in his jacket . . . the *purple* darkness was filled with men who *jabbered* . . . he felt the *swash* of the water—his knees *wobbled* . . . the ground was *cluttered* with men . . . a *spatter* of musketry . . . the fire dwindled to a vindictive *popping* . . . the man was *blubbing* . . . another man *grunted* . . . the guns *squatted* in a row like savage chiefs . . . they argued with abrupt violence, it was a grim *pow-wow*."

The straining after effect, and the extravagant use of onomatopoeicism here become so evident as to be uncouth. Still another vice of the less skilful writers of the new school is the glaring want of construction in their sentences. Says Miss Findlater:

"Because prolixity and over-elaborated phrasing were the snares of bygone writers, that is no reason why we should cut up our sentences into four or five words: Nothing is easier. The method is simple. It presents no difficulties. It is distinct. It appeals to many. It is new. Therefore it pleases. For a time. But not permanently. Men of intelligence yawn. The trick is too readily seen through. It is like an infant's reader: 'My cat is called Tom. Do you like cats? No, I like dogs. I like both cats and dogs,' etc."

NOTES.

THE publication of a new monthly periodical, to be called *The Magazine of Poetry*, will be begun in February by Mr. Daniel Mallett, of Flatbush, New York.

THE conferences this winter before the Comparative Literature Society at Carnegie Hall, New York, include lectures on "The Greek Epic" by Prof. Thomas Davidson (January 26); "The Finnish Epic," by Prof. G. L. Kittredge, of Harvard (February 3); "The Sanskrit Epic," with lantern slides, by Prof. Charles R. Lanman, of Harvard (February 17 and March 3); "The Medieval French Epic," by Prof. Arthur R. Marsh (March 17); "The Medieval Germanic Epic," by Prof. Charles Sprague Smith (March 31); "The Irish Epic," by Dr. F. N. Robinson, of Harvard (April 14).

SCIENCE AND INVENTION.

AMERICAN AND ENGLISH INVENTORS.

IN the noteworthy series of articles now appearing in *Engineering* (London) on the subject of "American Competition," one signed "A Practical Exporter" is especially interesting for its comparison of the sources of invention in England and the United States respectively. According to the writer, the American inventor is generally a workman; in England he is an employer, and the former is the better of the two. Hence the workman must be encouraged and raised if invention is to flourish. Says this writer:

"Let us take a look at England's early material for raising a corps of inventors. . . . The farm-laborer and the artisan, from which classes the rising industries drew their labor, were mechanics in the lowest sense of the term, doing their round of duties day by day in a dull, dogged style; thinking little of alteration or improvement in anything; kept down by class prejudice, woefully ignorant, few of them being able either to write or read. Borrow, who could not be accused of unfavorably misrepresenting his countrymen, describes the English working classes of his early days as dull, stupid, and heavy. Instead of such workmen being equal in intelligence to the old Yankees, it is very probable that even their masters, the English so-called middle classes, were hardly on their level, and they were certainly not above it. Yet traditions and ideas handed down from a past of old ignorance and prejudice mold to some extent the ideas of the English workman of to-day. One feels surprise at first that America has not long ago completely beaten England in the race; but we must remember that only within the last few years have the two countries come into sharp conflict."

The real inventive strength of a nation, the writer goes on to say, lies with the common workmen. "America treads on solid ground here, England on sand." The traditions of the English mechanic seem to be against invention. The Englishman has had to have machinery forced upon him all through this century, and is trying to keep up the conflict still. To quote again:

"Who can calculate the millions that Britain has lost by this suicidal purlblindness? America began its industries with invention, and among American mechanics invention has always been the order of the day. Instead of employers having to force new machines on their workmen, the men themselves are constantly on the *qui vive* to invent new machines or improve old ones. Thus, a current that in England has always been against the inventor, in America carries his bark on its bosom and bears him triumphantly forward. And, needless to say, this same hope and probability of inventing something is an active stimulus to the American mechanic, making him a clever workman and increasing his intelligence. He is always encouraged, too, by his employers, who give bonuses and rewards; some masters undertake to pay all the patent expenses and experimental expenses of an invention, the patent becoming the workman's property on some arrangement allowing a fair benefit to the employer. The American workman takes altogether a higher place in the industrial world than the English one; there is not between him and his master that great gulf, bridged only perhaps by a foreman of narrow intelligence, which we too often see among ourselves."

The English employer is to blame equally with the workman, the writer thinks. The employer has done his best to keep his workmen down. Each has regarded the other as "a kind of necessary nuisance." This must cease, and master and man must get down to a plane of mutual helpfulness if England is to keep her place as an inventive nation.

Commenting on this suggestive letter, *The American Machinist* (January 25) remarks that it contains food for thought for Americans as well as Englishmen. It says:

"Too many of our American shop proprietors and others seem to forget what this Englishman clearly recognizes and boldly states, *i.e.*, that very much of our acknowledged superiority in certain lines of manufacturing and our success abroad come from

the fact that American workmen and American employers were formerly in exactly the same social stratum, neither one claiming superiority nor acknowledging inferiority to the other. The workman of to-day has been the employer of to-morrow, has felt himself to be worthy of respect, and has commanded it.

"There are those who believe that this condition of things is passing away. If it is, then we believe our American industrial development will by that receive a far more serious blow than it can possibly receive in any other way."

NEW YORK'S GREAT UNDERGROUND RAILROAD.

IF the contract that has been awarded by the rapid transit commission of New York City be carried out to a successful conclusion, the result will be the greatest underground railroad in the world, to extend from the New York city hall northward to the upper part of the borough of the Bronx. By means of this road New Yorkers hope to secure what they have been aiming at for a quarter of a century, namely, the power to travel through the thickly settled parts of the city at the speed of a fast express on a trunk railway line. The engineering difficulties to be overcome in the construction of this road are, of course, considerable, as may be seen from the following description in *The Journal* (New York, January 21) of the route chosen:

"After describing a double-track loop around the post-office, the big four-track tunnel (the two express tracks in the middle) will begin opposite Frankfort Street, under Park Row, and go northward.

"It will pass under Centre Street, New Elm Street, or Dewey Avenue, as this is to be called. It will continue under Lafayette Place, across Astor Place and private property, between Astor Place or Eighth Street and Ninth Street to Fourth Avenue.

"Up to this point the tunnel will have passed mostly through sand and soft earth. As there are few tall buildings on this part of the earth no great difficulty is expected in constructing it. Only a little masonry bracing will be necessary to keep the sidewalks and foundations of buildings in proper position.

"From Fourth Avenue northward throughout nearly the whole extent of the twenty-mile tunnel system, the boring will be through almost solid rock.

"While this will make the work slower and more costly, it will also simplify it. There need be no fear of buildings caving in. The solid rock on which they stand makes a natural foundation that no tunneling will disturb.

"From Ninth Street and Fourth Avenue, the tunnel will continue under Fourth Avenue and Park Avenue to Forty-second Street, thence under Forty-second Street to Broadway, and thence under Broadway and the Boulevard to a point at or near Ninety-seventh Street, all of which railway will be known as the main line."

At Ninety-sixth Street, the road separates into two double-track branches, one of which, the West Side branch, continues along the Boulevard, crosses the Manhattan valley on a viaduct, and ends finally at 230th Street, while the other, the East Side branch, runs under Central Park along Lenox Avenue, under the Harlem River, and so to Bronx Park by way of Westchester Avenue. We quote again:

"In addition to the construction of the railway itself, it will be necessary to construct or reconstruct certain sewers, together with house and other sewer connections, placing them at either side of the tunnels, and to adjust and maintain railways, pipes, subways, and other surface and sub-surface structures, and to relay the street pavement both on streets occupied by and on streets other than those occupied by the route of the railway.

"The tunnels for the most part will not be arched, as is usually done in building subways. They will be flat on the top, braced by three rows of steel pillars between the tracks and covered with steel plates. The tunnel measures fifty feet across in the main four-track section and is thirteen feet high.

"Under the present Park Avenue street-car tunnel, from Thirty-second Street to Forty-second Street, a variation from this

UNDERGROUND RAILWAY.

who is to build the road (for \$35,000,000), is a contractor of wide experience. He was engaged in the work of improving the harbor of San Francisco, constructed a large portion of the Canadian Pacific Railroad, built the Baltimore tunnel, and is now engaged on the Jerome Park reservoir in New York City.

Controller Coler believes that the new road will be but the first link in a future chain of underground communications between the various boroughs of Greater New York. In an interview in *The World* (New York) he says:

"Rapid transit for all of the boroughs must follow. Of all the systems proposed, the best, to my mind, is a system of tunnel. The next step taken should be to continue the assured underground railway from City Hall Park to the Battery.

"The first tunnel, I think, should connect the lower end of Manhattan with South Brooklyn. It would be well if this tunnel could be completed simultaneously with the underground railway on Manhattan Island. Without it traffic will be heavy one way in the morning and equally heavy in the opposite direction at night. I estimate that for \$5,000,000 at the outside the rapid-transit system may thus be extended to South Brooklyn.

"Another tunnel under the East River should connect Manhattan with the borough of Queens, and eventually one under the Narrows should connect the borough of Richmond with South Brooklyn.

"The city could and should have built the tunnel through Manhattan and the Bronx. The contract should not have been allowed to go to a private individual or corporation. I have always favored municipal ownership. But now that the contract is let

SECTION OF UNDERGROUND RAILWAY.

to an individual, we must be content with seeing to it that the city itself constructs the tunnels which should, and I am certain will, connect Manhattan with the other boroughs."

Use of Alcoholic Drinks in War.—The use of liquor among soldiers has greatly decreased since the old days when veterans mixed gunpowder in whisky and gave a drink to the recruits to instil in them Dutch courage. In an editorial in *The Medical Age* (December 25) comment is made on a report from Ladysmith announcing that whisky was selling at \$25 a bottle. That it had reached this price, remarks the editor, when neces-

sary provisions were fairly plentiful, indicated that it had not been provided in large quantities. He proceeds:

"The waning estimation of the value of alcohol for general purposes is perhaps nowhere more admirably exemplified than in the records of the British army. In old days, when it was the fashion of our forefathers to drink to excess, the same practise prevailed in the services, and in the army and navy grog was an indispensable and permanent ration. A very different place is now assigned to alcohol in the conduct of modern warfare. No longer is 'Dutch courage' the kind of courage thought desirable to attain. The modern general knows that hardships can be best borne and dangerous climates best encountered without the constant use of stimulants. This conviction has long been gaining ground. Even in the Indian mutiny Havelock's men performed the greatest feats of endurance on coffee alone as a beverage. To General Wolseley, the present commander-in-chief, may perhaps be particularly attributed the growing condemnation of the spirit ration. In the Red River expedition of 1870 Wolseley first discontinued the spirit ration, and it is recorded that no troops enjoyed better health than those engaged. The rum ration was discontinued in the Ashantee war of 1873, and was again prohibited in the Kafir war of 1877-78. In the Sudan expedition all alcoholic liquors were prohibited, and the men engaged achieved fine physical condition as regards health and endurance."

REJECTION OF THE HOLLAND SUBMARINE BOAT.

AFTER the favorable report of a government commission regarding the recent trials of the Holland submarine boat, the news of its final rejection by our naval experts comes as something of a surprise. Says the *Baltimore Herald* (January 23):

"It will be observed that naval experts differ concerning the practicability of submarine boats, the French, altho far more conservative than the Americans, favoring the construction of such craft as a necessary and powerful adjunct to the naval forces. The budget submitted to the Chamber of Deputies not long ago provided for a number of submarine torpedo-boats, and this recommendation is expected to go through.

"The rejection of the Holland experiment by the Naval Board of Construction has been interpreted as suggesting unpleasantly the prevalence of prejudice and other unworthy motives in the Navy Department. But this view as to the cause of the adverse verdict can not be entertained without convincing evidence. In the course of the past week Admiral Sampson's idea of superimposed turrets for the new battle-ships, authorized by Congress has encountered opposition sufficiently strong to insure its defeat.

"The failure of the ram *Katahdin* and of the dynamite-thrower *Texas* make the disinclination of the naval authorities to try any other innovations of doubtful merit excusable, and affords a rational explanation for the action of the Construction Board. So many considerations are involved in the problem of submarine navigation that only the most exhaustive

tests, if successful, would justify appropriations for a number of boats."

It is suggested by *The Standard-Union* (Brooklyn, January 25) that our action marks the beginning of a general abandonment of the submarine idea. It says:

"There is certainly something curious about the *Holland*, which is named after its inventor. It was first heard of about twenty years ago, more or less, and a great mystery was made of it. For a time it lay moored to a little pier on the shore at Bay Ridge. A reporter, who is now connected with this paper, who visited the place, had the satisfaction of seeing a few inches of the top of its whale-like back, and of seeing Mr. Holland descend to the interior—to show that it was hollow, the reporter thought, since the same privilege was denied the visitor, altho he explained that he was not a mechanic.

"When the Spanish-American war came upon us, it was thought a submarine boat would be just the thing to protect the harbor of New York from the dreaded Spanish fleet that never came—but the *Holland* was not ready. A number of tests of its navigating powers were made in the inner bay, and reports were made of its achievements, but somehow they all seemed to fall short of what was expected or desired, for the navy was not enriched by the addition of any boats of its type, and it is still waiting to get in."

On the other hand, the *Providence Journal* (January 26), in a carefully written article on the French submarine boats, states its belief that these craft have come to stay, but that France is far ahead of the United States in their construction. It says:

"The success of the *Goubet No. 2* has demonstrated that naval operations under water within certain not narrow limits are sure to be a feature of any protracted war of the future, and not on a small scale either. Whether France now constructs thirty-four or twenty-four or only fourteen submarine boats, or whatever number it chooses to build, it has a clearly defined plan of submarine construction, navigation, and warfare, which does not permit it to neglect the new type of naval architecture in its program.

"Comparisons with the trials of the *Holland* boat in November will show on what the French Government bases its faith in the *Goubet No. 2*. The *Holland* craft has never been tried in rough water. The French boat has been navigated in a heavy sea, has made six knots an hour outside at a distance of nine feet below the surface, and has been maneuvered in such waters and so far from sight by means of its 'optic tube.' The American boat has made a rate of six or eight miles an hour at the surface, has been incapable of maneuvers under water, and has shown no submergible capabilities except under favorable circumstances. *The Journal* has already praised the *Holland* design of submarine boats, and it retains faith in it. But there is no question that as compared with the best of the French craft it is merely of great promise. The *Goubet No. 2*, on the other hand, is a realization of great hopes."

Comment on the rejection of the *Holland* seems confined chiefly to the daily papers, the technical press having apparently no opinions to express, one way or the other. It must be remembered that the Government is now constructing for itself a larger submarine boat than the *Holland*, of the same type, and this will of course be available for further experiment. This fact probably had its influence on the decision not to purchase the smaller boat.

Pearls as Products of Disease.—Chemical analysis reveals the pearl as a compound of phosphate and carbonate of calcium, mingled with an organic substance called conchyoline. "These materials," says *The National Druggist*, "are deposited in concentric layers, the nucleus or center of which is almost invariably a foreign substance—a little acarian, an animal parasite, a grain of sand, a bit of shell all have been found, and many other substances as well, occupying the point of concentration of pearls, and whence, according to the generality of naturalists, the pearl is regarded as a pathological product, a concretion of the kidneys, expelled by the animal, and which almost invariably falls into the closely neighboring genital gland. The gem, the

pearl 'of purest ray serene,' is therefore nothing more nor less than a nephritic or urinary calculus, and we must regard the famous and aristocratic pearl oyster as merely a poor, unhappy, gravelly mollusk. However, we must admit that he does not belong to the ordinary run of the tribe. He belongs to the genus *Aviculidae*, or wing-bearing conchs, and sports the distinguished title *Melcagrina margaritifera*, tho he is nicknamed 'Pintadine' by the fishermen. There are two distinct varieties of the pearl oyster, distinguishable from each other by their relative size, and by the quantity of the product. The 'great pearl oyster,' or *pintadina grande*, is sometimes found a foot long, and weighs not infrequently ten pounds or even more. It inhabits a belt which girdles the earth, but only in the seas distinguished for the warmth of their waters does it bear pearls. Attempts have been made by scientists and others interested, to cultivate the pearl oysters, and exploit them methodically, with a view of obtaining superior pearls. The attempts have thus far not been very successful, but M. Dastre, in a recent article in the *Revue des Deux Mondes*, now holds out quite rosy views of the prospects in this direction."

Some New Uses for Milk.—From the casein derived from milk by coagulation, we are told by *L'Industrie Laitière* (Paris), is now made an artificial ivory known as lactite, from which are manufactured billiard balls, tooth-brush handles, combs, etc. The same journal informs us that by treatment of the same casein "certain manufacturers prepare a paste or powder that can be used instead of eggs in some kinds of cookery, while costing only half as much. The casein combined with alkaline bases makes a hydraulic cement. The curd is cut into bits which are dried rapidly and then finely powdered. The powder is mixed with 20 per cent. of pulverized quicklime. This cement keeps some time if placed in well-stoppered bottles after the addition of 1 per cent. of camphor. Finally, curdled milk has been for some time used in whitewashing buildings and to prevent scaling. For this purpose it is mixed with lime so as to make a thick liquid. Lactarine is a preparation of almost pure casein, which, dissolved in ammonia, is used to thicken colors used in cotton-printing."—*Translation made for THE LITERARY DIGEST.*

Cause of the Earth's Magnetism.—Experiments seeking to connect the magnetism of the earth with its rotation have been successfully performed by Prof. Henry A. Rowland, at Johns Hopkins University, according to daily press despatches. According to these, Professor Rowland uses a wheel wound with miles of fine wire and revolving on a shaft run by a motor. About the wheel is a casting or sheath of brass, with an air or ether space between it and the circumference. The whole represents the earth with its atmosphere. By revolving the wheel an electric current is produced in the wire. Dr. Rowland is now working to show that the faster the revolution the greater the current and the stronger the resulting magnetism in the core.

SCIENCE BREVITIES.

CHERRAPUJH in Assam, northeast of Calcutta, has the reputation, says *The Scientific American Supplement*, of being the wettest place on the earth, the average annual rainfall being 108.15 inches, while it has the record of one month in which 117.17 inches fell. The first half of the past year beat all previous records, 56.34 inches of rain having fallen between January and the middle of June, five months and a half, while 73.79 inches, over six feet of water, fell in a single week.

"The influence of the imagination," says *The Medical Press*, "is a factor with which physicians have to reckon very largely, and in the minor ailments of life, at any rate, the most successful practitioner is he who possesses the faculty of inspiring confidence in himself to begin with, and then in the treatment he advises. A recent number of *The Psychological Review* relates an interesting experiment made by Mr. Slosson with the view of demonstrating how easily this faculty can be called into play. In the course of a popular lecture he presented to his audience a bottle containing distilled water, which he uncorked with elaborate precautions, and then, watch in hand, he asked those present to indicate the exact moment at which the peculiar odor was perceived by them. Within fifteen seconds those immediately in front of him held up their hands, and within forty seconds those at the other end of the room declared that they distinctly perceived the odor. There was an obstinate minority, largely composed of men, who stoutly declared their inability to detect any odor, but Mr. Slosson believes that many more would have taken in had he not been compelled to bring the experiment to a close within a minute after opening the bottle, several persons in the front rank finding the odor so powerful that they hastily quitted the lecture-room."

THE RELIGIOUS WORLD.

WHAT IS TO BE THE RELIGION OF THE FUTURE?

A WORK which has attracted much attention has lately appeared from the pen of a French *savant*, M. Henri Constant, in which he expresses the view of many thinkers in France as to the future of religion. He regards dogmatic Christianity as hopelessly discredited and undermined, from the historical, scientific, and ethical standpoints. Yet, he believes, the sterile negations or still more brutal affirmations of materialism will never satisfy the human intellect or the soul, and the time will come when the noble philosophy of the Neo-Platonists and the doctrines of the extreme Orient will be sifted and accepted in part, supplemented by numerous contributions from the virile intellect and spirit of the West, including much from physical science, from spiritualism, and from such schools of thought as that of Prentice Mulford and the new metaphysical or mental science movement. In the light of this rational and humane religion, the dark superstitions and grotesque survivals of former barbarian ages will be dissipated as the sun scatters the shades of night. M. Constant formulates his prophetic statement of this new religion under eight heads, as follows (we quote from the *New York Herald*, January 7):

"First—A supreme intelligence rules the worlds. That intelligence, which we call God, is the conscious Ego of the universe. It is in the universe, for the universe, and through the universe that the divine thought is objectified.

"Second—All creations develop themselves in an ascending series, without a break in the continuity. The mineral realm passes insensibly into the vegetable, the vegetable into the animal, and this, in turn, into the human with no sharply marked lines of distinction. There is a double evolution, material and spiritual. These two forms of evolution run parallel and jointly, life itself being but a manifestation of the spirit appearing as movement.

"Third—The soul is elaborated in the midst of the rudimentary organisms. That it might become what it now is in man it had to pass through all the natural kingdoms. A blind and indistinct force in the mineral realm, individualized in the plant, polarized in the sensibility and instinct of the animal, the soul tends unceasingly toward that conscious monad in its slow elaboration, until at last it reaches man. In the animal it was as yet in a rude state only, in man it acquires consciousness and can never again go backward. But at every step the soul fashions and prepares its material garb.

"Fourth—The evolution of the soul is infinite, and each existence is no more than a page in the book of eternity. In every stage of evolution attained by the soul it has in itself the crowning synthesis of all the lower powers of nature, and at the same time it possesses the germ of all the superior faculties, power, intelligence, love, which it is destined to develop in succeeding lives.

"Fifth—The soul progresses in its corporal and spiritual states. The corporal state is necessary to the soul until it attains a certain degree of perfection; it is developed by the tasks to which it is adjusted for its actual needs, and here it acquires special practical knowledge. A single corporal existence would be insufficient for these ends. Hence it takes up new bodies as long as it finds that necessary, and each time it advances with the progress acquired in earlier existences and in its spiritual life.

"Sixth—In the intervals between these corporal existences the soul lives on in its spiritual life. That life has no fixed limit. The happy or unhappy state of the soul is inherent in its own degree of perfection. The soul suffers from the very evil it has committed. Because its attention is incessantly directed to the consequences of this evil it understands the pain and is stimulated to correct itself. It forms strong resolutions, and, the time having arrived, descends again into a new body, to improve itself by labor and study. It always preserves the intuition, the vague sentiment of the resolutions formed before its rebirth.

"Seventh—When the soul has acquired in one world the sum

of progress which the state of that world admits, it departs to be incarnated in another world, more advanced, where it acquires new knowledge, and, inasmuch as now the incarnation in a material body is no longer useful to it, it lives an entirely spiritual life. There it progresses in another sense and by other means. Arrived at the culminating point of progress, it enjoys supreme felicity, having been admitted into the counsels of the Almighty.

"Eighth—The soul has a fluid body, the substance or essence of which is drawn into the universal or cosmic fluid, forming and nourishing it as the air forms and nourishes the material body. This state of the soul is more or less ethereal, according to the worlds in which it finds itself and the degree of its purification. There is thus an intermediary between the soul and the body; an organ for the transmission of all the sensations. Those which come from without make an impression on the body, the intermediary transmits it, and the soul, the conscious and intelligent being, receives it. When the action comes from the initiative of the soul it may be said that the soul will, the intermediary transmits, and the body performs the act."

THE CHRISTIAN BROTHERS AND THE CLASSICS.

THE news comes from Rome that the Vatican has decided adversely as to the rights of the Christian Brothers to teach the classics and higher collegiate studies in their American schools. The dispute has been causing difficulty for some time. The order, originally founded to teach the common branches only, has for many years maintained higher schools and colleges in this country and has much property invested in them. A few years ago, however, the superior general of the order, who resides in Paris, sent a summary command to the American Christian Brothers that all teaching of the classics must be abandoned, as a violation of the constitution of the order. This meant the closing of the various colleges maintained by the Christian Brothers and the relinquishment of the work built up by years of effort. The case was appealed to Rome, backed, it is said, by the unanimous support of the American archbishops; but apparently by the terms of the present decision the authority of the head of the order is to be maintained. Cardinal Satolli, late Apostolic Delegate to the United States, and the drafter of the report of the Propaganda, says in explanation: "Just as the Americans adhere to their national Constitution, so the Christian Brothers must maintain theirs. That constitution forbids the teaching of the classics."

The Independent (undenom., January 15) calls attention, however, to the fact that the Constitution of the United States has received fifteen amendments, and suggests that also that of the Christian Brothers might receive one. It says further that the decision is, as the archbishops declare, against the interests and the true management of Catholic affairs in America:

"It is a victory less for the French superior than for the Jesuits, who claim an especial, if not exclusive, right to control higher Catholic education. The decision is one greatly to be regretted, but it is likely that some way will be found to avoid its worst results. Very likely the members of the Christian Brotherhood in this country will seek the consent of Rome to establish a new order which will be free to give as high an education as may be desired. If Catholics had been content to leave education in the hands of the Jesuits they would not have founded the Catholic University at Washington as a direct rival to the near-by Jesuit university. We are glad to see that the Catholics are about to establish a girls' college in Washington, which it is intended shall have as high a rank as any girls' college in the country. It will be the first institution of its kind in the world, and it shows what is the initiative enterprise of American Catholics."

On the other hand, *The Catholic Universe* (Cleveland, January 19) is disposed to welcome the Propaganda's settlement of the matter. More than half the Roman Catholic schools are without male teachers, it says, and until this field is adequately

covered it is difficult to see why the Christian Brothers "are willing to abandon any part of their legitimate work to enter new spheres already well cared for by others." Yet they can undoubtedly secure a separation from their present head, the paper remarks, and alter their constitution.

"In this way they would be free to take up the work they propose to themselves here. If they do this, it would be well for the Parisian head to organize new houses along the old lines to prevent the ambition of higher attainments interfering with the aims and purposes of their saintly founder. Perhaps this would be a happy solution of the difficulty. It would open the door to higher education for those who think that the Christian Brothers are needed in that work, and at the same time provide a place for those who believe like La Salle that the Christian Brothers have a work worthy of their best efforts in caring for the primary education of Catholic children, and leave the rest to others."

THE RELIGIOUS PROBLEM IN THE PHILIPPINES.

PRESIDENT SCHURMAN'S recent article on "Our Duty to the Philippines" has provoked an exceptional amount of comment from journals of all varieties. The only point in which they are all agreed is that the religious problem in the archipelago is fully as puzzling as is the military and the civil one, and that it will require still greater care in the handling. In the course of his article (in *The Independent*, December 28) Dr. Schurman said:

"The priests have ruled in Luzon so long that their influence is widespread, and the natives know of no other form of Christianity. The Roman Catholic Church has been established there for three hundred years, and the archipelago was really governed by the priests, and not by the Spanish civil or military commanders. Of the \$15,000,000 raised on the island about \$1,500,000 was used for the church's support. Each small church would receive about \$500 for its support, and the priest an allowance of \$300. We must credit the church with having done a great deal of good work among the natives. We must reckon with these facts when we send missionaries to the Philippines."

"Missionaries are needed in the islands, and I hope they will be sent there in large numbers. There is plenty of work for them to do, and I hope they will go with a complete understanding of the situation and an earnest desire to accomplish good. They must realize that they are contending with a Catholic-educated population that knows nothing about the fine differences between Protestant sects and denominations. Therefore it would be highly impolitic to send missionaries of different denominations to confuse the minds of the people. I do hope that when we send the missionaries we will decide beforehand on one form of Protestant Christianity. Send only one type of missionaries. The Filipinos will then have Catholic Christianity and Protestant Christianity presented to them so they can take their choice. We have no adequate idea how confusing to the simple minds of an uncivilized people the different forms of our Protestant faith appear. The Chinese, who are perhaps more intelligent than the Filipinos, regard our different denominations as so many different religions. This idea prevails in many other lands that we are trying to convert to Protestant Christianity, and it works confusion in the minds of the people that often sadly handicaps the labors of the missionaries. I hope that before sending missionaries to the Philippines the different denominations will unite on some common platform."

Roman Catholic comment on this suggestion is mostly inclined to be skeptical, if not decidedly ironic. *The Church News* (Washington, January 13) says:

"There are numberless varieties of Protestantism, and of course the professor will admit that all can not be true. And yet he urges that the poor Filipinos be taught either a creed composed of these various beliefs, or else some one of the many be selected to the exclusion of all others. Who is to make the selection?"

"There is something absolutely cruel in this suggestion of

Schurman's. We can readily understand how he could urge the various sects to send missionaries to the Philippines, but we can not understand why he is willing to risk selecting a creed that he does not believe himself, to have taught the natives. . . .

"The Philippines are not likely to become Protestant, it matters not what kind of creed is sent there. While there is but little prospect of the sects uniting on a common creed for the Filipinos, there is still less chance of their succeeding in destroying the faith which has been flourishing there for centuries."

The Catholic News (New York, January 20) says:

"The ignorance about the work of the Catholic Church in the Philippines displayed by certain lecturers and writers who pretend to know so much is amazing. These people have been in the Philippines; they say they have closely investigated the condition of affairs there; and they declare solemnly that they have no prejudice against the Catholic Church. But we can not help noting that never do they utter a good word for the work of that church, whose missionaries have succeeded in converting a nation of savages into a people whose religious devotion and purity have astonished Americans who have been among them. Under such circumstances, it is not strange that we are often forced to the conclusion that those who have been in the Philippines and who criticize the Catholic Church there are guilty of deliberate misrepresentation. The fact seems to be that they do not want to know the truth."

The Catholic Universe (Cleveland, December 29), under the caption "Protestant Impudence and Gull," says:

"Who is going to give us the best Protestantism? Is McKinley's Philippine commission empowered to recognize and name this new state church of imperialism from the hungry horde waiting open-mouthed for the crumbs of royal favor, or is it to be a religion by selection? If it is, what are the leading features to be? What is to predominate? The immersion tub of the Baptists, the amen corner of the Methodists, the rationalistic tendency of the Presbyterians, or that composite entity called Episcopalianism? Is Schurman in earnest or mad, or only joking? If he is in earnest, why does he not convene this church congress and insist that we have this best Protestantism for home consumption. We could then see what effect it would have in filling empty Protestant churches and correcting some of the vices that make Protestantism look like a soiled rag dipped in whisky compared with the spotless simplicity and purity of Catholic Filipinos."

Protestant comment is fairly represented by the following excerpts. *The Independent* (December 28) says:

"Every word of this is true; but the warning will be thrown away. No matter how impolitic, missionaries will be sent of different denominations to confuse the minds of the people. We are the Lord's foolish ones, and we waste much of our energy by our lack of intelligent cooperation. . . .

"The same thing will be done over again in the Philippines. We have no doubt that the chief denominations, and a score of small ones, will all establish missions there. Most of them will have their headquarters in Manila. Each sect, Presbyterian, Methodist, Baptist, Episcopalian, Congregational, Disciples, Seventh-Day Adventist, will have its own organization. 'Join us,' 'Join us,' 'We are the true church,' will be the cry. At present there is no chance for anything else. What more can we expect? Baptists and Episcopalians, Presbyterians and Methodists, can not unite even in federation here in America. We fail even to see the scandal of the division; and the scandal is more offensive there."

"What can be done to remove the scandal? Nothing, we fear, until the denominations here are federated. Why can it not be done? Shall the century end and nothing be accomplished? In England already there is federation of all the free churches, and the conscience of our churches ought to demand as much."

The Northwestern Christian Advocate (Meth. Episc., January 3) says:

"The plan outlined by our Commissioner Schurman is impracticable. It will not be followed, and we incline to think that it should not be followed, even tho there are such things as missionary economy and common sense. In one sense the world has scores of 'religions.' In another sense, and in the proper sense,

there are but two forms of 'Christian religions' in the United States from which missionaries will be sent to the Philippines. Roman Catholicism already is in the islands, and has been there three hundred or four hundred years. While the Presbyterian, the Baptist, the Congregational, the Methodist, and other churches are here, these in fact are but one, in a sense which all these churches understand and accept. These are separate and distinct and different in the sense that the various brotherhoods and sisterhoods of Romanism are separate and distinct. Romanism does not admit that point, but its non-admission does not count. The competitions between the various American Christian churches known as Protestant are synonyms for veritable peace as compared with the competitions and sharp rivalries that exist between Romanist brotherhoods. The natives of Luzon are not ignorant that certain classes of friars and 'brothers' are features in the Roman Church as it exists on the islands. We are sure that the natives already are 'confused.' It may clear up things wonderfully if several Protestant churches are planted even on Luzon, so that genuine fraternity and Christian unity may be exhibited there."

In the mean time, Archbishop Chapelle, the apostolic delegate to the Philippine Islands, appears to be finding his task of adjusting the altered relations of church and state a delicate and difficult one, altho it is believed that his diplomatic skill and good sense will eventually prevail. His mission is a twofold one: to bring about an equitable arrangement as to the property rights of the church in the islands, and to arrange a *modus vivendi* between the Filipinos and the friars. These two aims are thus stated by the New York *Tribune* (January 20):

"It has been foreseen from the first by the thoughtful that the government of the Philippine Islands would involve some difficulty on account of the peculiar attitude of a great many Catholic inhabitants toward the friars of certain monastic orders there. Despatches now state that excitement has been caused by a report that the apostolic delegate, Monsignor Chapelle, had undertaken with authority from the Pope and from President McKinley to restore the friars to their parishes and to the power from which they had been driven by the Catholics themselves. Charges of extortion and immorality against the friars were said to have been one chief cause of the insurrection of 1896, which the Spanish Government broke down by bribing Aguinaldo and other leaders to betray their followers. More recent accounts have indicated that the inhabitants who did not give support to Aguinaldo, or who had ceased resistance and welcomed American authority, were generally opposed to the friars and intensely hostile to their reinstatement in their former power. . . .

"Apparently the root of the difficulty in the Philippines is a claim of the monastic orders to certain properties and revenues. The eighth article of the Treaty of Paris provided that the relinquishment of power by Spain 'can not in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds of . . . ecclesiastical or civil bodies.' The tenth article declared that 'the inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.' If these two provisions are by anybody construed to mean opposite things, if the claim of an ecclesiastical body comes to a denial of the free exercise of their religion by any inhabitants or involves any hold upon properties which the laws would not sustain, the courts established by the United States have jurisdiction and will control. How far they may prove adverse to the titles by which the monastic orders claim property it is not yet possible to judge, but there is every reason to expect that the Government will guaranty and preserve to Catholic as to other inhabitants entire freedom in the exercise of their individual choice in all matters pertaining to or growing out of their religion."

The statement from Manila alluded to above in the New York *Tribune*, that the mission of the apostolic delegate is to reinstate the friars in their former power, acting as joint agent of the Pope and President McKinley, has of course been denied by Monsignor Chapelle as a canard. The despatch gives the following additional details of the situation:

"Catholics of all sections are petitioning Monsignor Chapelle

and Major-General Otis against the friars returning to their parishes, repeating the charges of oppressions, extortions, and immoralities which, they assert, caused the revolution of 1896. The Catholics request that they be given priests not connected with the brotherhoods. Delegations from many of the towns are visiting the provincial governors for the purpose of making the same request, and prominent Manila Catholics are cabling the Pope on the subject.

"The people say the friars will be driven out if they return to their parishes, and that there will be continual trouble if the Administration attempts to protect them. To quell the excitement, Major-General Otis consented to the publication in the local newspapers of a statement which he had made to a delegation of Filipinos, as follows:

"If the church authorities assign friars to curacies who are obnoxious to the people they will not be compelled to accept them. The individual liberty guaranteed by the American Constitution will not be denied the Filipinos, and the Government will not force upon them any ecclesiastical denomination contrary to their wishes."

PRESIDENT SNOW'S DECLARATION CONCERNING POLYGAMY.

THE proclamation issued on January 8 by Lorenzo Snow, president of the Church of Jesus Christ of the Latter-Day Saints, is regarded as one of the most important manifestoes of that church put forth during the past few years. It reads as follows:

"From the reading of the various editorials and articles of the public press it is evident that there is much misconception and

LORENZO SNOW.

misunderstanding as to the present attitude of our church respecting the subjects of polygamy and unlawful cohabitation; and, believing that many good and conscientious people have been misled and much adverse criticism occasioned thereby, I feel it but just to both 'Mormons' and non-'Mormons' to state that, in accordance with the manifesto of the late President Wilford Woodruff, dated September 25, 1890, which was presented to and unanimously ac-

cepted by our General Conference on the 6th of October, 1890, the church has positively abandoned the practise of polygamy, or the solemnization of plural marriages, in this and every other State, and that no member or officer thereof has any authority whatever to perform a plural marriage or enter into such a relation. Nor does the church advise or encourage unlawful cohabitation on the part of any of its members. If, therefore, any member disobeys the law, either as to polygamy or unlawful cohabitation, he must bear his own burden; or, in other words, be answerable to the tribunals of the land for his own action pertaining thereto.

"With a sincere desire that the position of our church as to polygamy and unlawful cohabitation may be better understood, and with best wishes for the welfare and happiness of all, this statement is made, and is respectfully commended to the careful consideration of the public generally."

The Deseret Evening News (January 8), the official organ of

the Church of Latter-Day Saints, comments as follows upon this letter:

"The president's statement is gratifying to us because it authoritatively asserts what *The Deseret Evening News* has advanced editorially. The church teaches obedience to secular law. It does not advise nor encourage any species of lawlessness. It supports the Constitution of the United States and the constitution of Utah and all laws passed in pursuance thereof. It has its own sphere, which is ecclesiastical. While it gives counsel and promulgates rules for the guidance of its members as to individual conduct in all the affairs of life, it does not interfere in any way with the free agency of men and women, dictate to them how they shall vote or to which political party they shall belong, or hinder them in any lawful course as to business or other personal affairs.

"There are persons in all religious bodies who act contrary to the faith they profess. The church or society with which they are connected is not accused of such derelictions by just and sensible people; they are charged only to the erring individuals.

"The Latter-Day Saints should ponder well this declaration from the president. It is of great importance. If there is any deviation from the path which he defines, it will be on the personal responsibility of the individual that pursues that way, and he must take the consequences whatever they may be. The church must not be burdened by the weight of anything that is contrary to its teachings.

"We believe the permanent, reasonable residents of this State, 'Mormon' and non-'Mormon,' will be pleased with President Snow's announcement, and will accept it in the spirit that prompted its publication. And we hope that it will aid in the establishment of that abiding peace that is necessary to the harmonious action of all classes, creeds, and parties, without which Utah can not achieve the success as a commonwealth that its best people desire to secure."

The *Denver News* (January 10) says that altho "all legal and constitutional precedents" have been overridden by those who opposed the seating of Mr. Roberts in the House of Representatives, yet the case "has not been without its good effects," one of which is this manifesto. It continues:

"The Mormon Church has been prompt to recognize the condition of public sentiment in the nation on this question, and President Snow's formal manifesto should be received by the country in the same spirit in which it is apparently issued. He announces that plural marriages were abandoned in 1890, and that no church official is authorized to solemnize them. While the maintenance of relations with plural wives entered into prior to 1890 has been tolerated by the church, the time has now come when such toleration must cease, and members of the Mormon Church must obey the laws of the land, or in suffering the consequences must bear their own burdens. In brief, President Snow's manifesto is as emphatic a repudiation of polygamy as can be desired by the most bitter opponent of Mormonism. It covers a repudiation of plural marriages, past and future."

THE BROOKLYN REVIVAL AND RELIGIOUS ANIMOSITIES.

PEACE and good-will to men have apparently not been the first fruits of the evangelistic efforts of the Rev. Len G. Broughton, a Georgia revivalist who has lately come to preach the Gospel to sinners in Brooklyn. In a recent address he made the following allusion to Unitarian belief (*New York Tribune*, January 28):

"It [the revival] is a war on all forms of infidelity and sin. Before God, infidelity is the most damning sin of all. Jesus said: 'He that believeth not the Son, the wrath of God abideth within him.' The rejection of Jesus Christ as 'the Lamb of God that taketh away the sin of the world' is the one sin for which men go to hell, because it includes and fosters all other sins. When a man truly accepts Jesus Christ as his Savior, he gives up sin. Now, Unitarianism is only one form of infidelity, but it is the form that just now poses under the guise of culture and religion, and through pulpit and press during recent months has been in-

sulting believers in the deity of Christ by asserting that there is little need of multiplying Unitarian churches, because orthodox churches are full of such unbelievers."

In a statement to the press, Mr. Broughton reiterated and emphasized this opinion. He said (we quote from the *New York World*, January 29):

"I still stand by my guns and repeat that the man who believes in Unitarianism, and sticks to it, will go to hell.

"All sinners are Unitarians. All Unitarians are sinners because they deny the deity and divinity of Christ and His atonement by blood. Unitarians would go up Calvary's hill and tear down the cross of Christ itself. I don't run much on scholarship, but place my theology on the Bible. I claim I am as broad as my opponents. But I am narrow when it comes to the upholding of the Word of God. This fight is on, and, thank God, I am in it. To the minister who says that I am one of those sleepers, Southerners preaching a medieval theology, I will say that I preach to more people in one night than he does in a month. He says I am asleep, does he? Well, let him follow me and I'll keep him awake.

"I'm in this fight up to the chin, and I repeat that the man who denies the divinity of Christ can not be saved. Paul says 'By the deeds of the law shall no man be justified.' The Unitarian creed is that by the deeds of the law man shall be justified. Which theology will you have? I confess that I believe in sticking to Paul."

Taking this utterance as a basis, another of the evangelists, the Rev. Dr. A. C. Dixon, announced that the revival was to be a campaign against Unitarianism. Both these pronouncements were widely published, and an outburst of criticism and counter-criticism has been the result. The Rev. Dr. Charles H. Eaton of the Church of the Divine Paternity (Unitarian), attacked the methods and the "medieval" theology of the revivalist, saying that "ministers of the Southern type have been asleep while the world has moved forward," and that "the weapons used by them would be about as effective, in the light of modern warfare, as the gun of Rip Van Winkle, and its watch-dogmas about equal to Rip's dog Snider." The Rev. Horace Porter, associate pastor of Plymouth Church, after a consultation with its leading officers, refused to read the printed announcement of the revival meetings from the pulpit. He said, as reported in the *New York Sun* (January 29):

"If the revival is, indeed, as has seemed to be indicated by the leaders of this revival, a movement not against vice and crime which are rampant, but is against one particular class, I am going to take the full responsibility in the absence of Dr. Hillis of refusing to read it [the announcement]. I have always found this class, against which, it is alleged, this movement is directed to be eminent for its nobility of character and the largeness of its charity.

"If these people shall turn from their deliberate efforts against one class to a general revival movement for the regeneration of the wicked, they will have no heartier support than from Plymouth Church."

Newspaper comment, so far as we have seen it, is distinctly condemnatory of the evangelists. The *Brooklyn Eagle* (January 25) says:

"In a borough of a million people, in a city of three millions, a town overflowing with misery, vice, and crime, these men, in the name of the Lord, are conducting a campaign, not against sin, but against another sect whose theology they do not approve of. Surely, the reduction of what was said to be a movement for the conversion of men to righteousness, to a squabble between sects, or, more accurately, of one sect against another, releases comment from the obligation which it is ordinarily under to treat with respectful sympathy any movement for the betterment of men."

The *Boston Transcript* (January 24) says:

"The interjection of doctrinal acerbity into these Brooklyn meetings has been both painful and hurtful. Salvation is a long way off when men sink their little six-inch plummets into their

own dogmatic beliefs or imaginings, and then assume that they have fathomed infinity and are commissioned to take the spiritual measure of all other men. The saint's calendar for Massachusetts would be singularly incomplete without the names of those noble men of the Unitarian faith whose fame is world-wide and whose memory draws to it even the honor and reverence of posterity. None were more quick to discern this odor of sanctity than the great Trinitarian leaders. There were no truer brothers in Christ to be found the world over than President Mark Hopkins, of Williams College, and the late Dr. A. P. Peabody, of Harvard, or than Phillips Brooks and Rev. James Freeman Clarke, and the list of such friendships, both personal and spiritual, might be indefinitely extended. Dr. Peabody and James Freeman Clarke not only believed the truth, but they did more, they lived it, and no men of their generation have carried the Christly standard higher."

DR. SHELDON'S EXPERIMENT IN RELIGIOUS DAILY JOURNALISM.

AN announcement unique in the history of journalism has just been made by the *Topeka Daily Capital*. The owners of that paper have—to use their own words—"decided to place its plant and the entire editorial and business control of the paper in the hands of the Rev. Charles M. Sheldon, author of 'In His Steps,' that he may exemplify his idea as to what a Christian daily newspaper ought to be." For six days, commencing with March 13, Dr. Sheldon will be absolute director of *The Capital*; unhampered, he will "dictate its policy, edit its news columns, control its advertising." It is expected that the experiment may have far-reaching influences upon the press, and without doubt it will be watched with keen interest by a vast number of people of all beliefs and occupations. Comment on the plan is of course voluminous and varied in tenor, for there is probably not a newspaper in the United States which has not devoted at least one editorial, sober or satiric, to this topic.

The *Chicago Chronicle* (January 24) points the following moral:

"Mr. Sheldon's publication will not be a true experiment, because for a single week it will be easy enough to draw such artificial support as its novelty may create. It is the pace that tells in the life of a newspaper, not for one week, but for a series of weeks and years. The trouble of innovators of the Sheldon type is that they imagine their particular interpretation of Christianity, with its elimination of the bad and preponderance of the good, to be adaptable to the needs of the every-day public. The average secular newspaper is merely a reflection of current life, and as the latter grows purer the newspaper columns will grow purer too. The religious propaganda has its place and force in human economy, but it is open to serious question whether the editorial sanctum of a secular newspaper is a better point of vantage than the time-honored pulpit."

The *Philadelphia Times* (January 22) gives Dr. Sheldon some sage advice:

"The Rev. Mr. Sheldon will get 'a good ready' before he starts, and then he will 'edit.' Like a great many other people, he believes that it is just as easy for a man to 'edit' as for a compass to point to the north. He will learn something he doesn't already know. He asks advice and suggestions from the editors throughout the country. Ours is the hint given to Caesar, which he disregarded: 'Beware the ides of March!'"

Most of the religious journals speak with approval of the enterprise. *The Independent* (undennom., February 1) says:

"We trust there are already other journals whose aim is as high as Mr. Sheldon's, to put nothing in that Jesus would not approve, advertisements as well as news reports; but newspaper ethics generally needs all the elevation that Mr. Sheldon's example might suggest."

The Baptist Standard (Chicago, January 27) does not think the experiment for so short a period will be conclusive, but upon

the whole it will be instructive. On the other hand, *Church Progress* (Rom. Cath., St. Louis, January 27) says:

"This man is going to show the world how Our Blessed Lord would run a daily paper if He were in Topeka, Kans. This same gentleman would damn Ingersoll for daring to utter the inane blasphemy that Almighty God should have consulted him before He promulgated the laws of nature. And yet, the irreligion and irreverence of Sheldon's hypocritical cant and blasphemous presumption amounts to almost the demoniacal conceit that conceived the temptations of Our Savior after His fast of forty days in the desert."

The situation has its ironies for Dr. Sheldon. For instance, Mr. E. W. Howe, editor of the *Atchison Globe* (author of "The Story of a Country Town") has announced that during the experimental week he will write and publish daily sermons in his paper on "How Ministers Should Preach the Gospel"; and he even offers to come to Topeka to relieve Dr. Sheldon of his pastoral duties. The latter, however, is apparently not appalled. He has declared himself glad to receive any suggestions regarding ministerial work Mr. Howe has to offer, and has added that he believes he will accept the "exchange of pulpit" if the members of his church take kindly to the idea. Dr. Sheldon has not yet announced what his plans will be, and prefers to let the paper speak for itself. He says:

"In fact, I have not fully matured them, except as to the main idea of a Christian daily. I want to make a success of the undertaking, and I am firmly convinced that I will. I am anxious to prove to the world that a daily newspaper can be run on Christian lines and succeed without catering to the morbid curiosity of baser instincts."

"I propose to inspect all matter that goes into the paper during the week and subject it to the general test, 'What would Jesus do?'"

Boer and Briton in the Psalms.—Ever since the Psalms were written by the ecclesiastical lyrists of the Jewish temple, their alternate benedictions and maledictions have been the delight of religious men of war. Cromwell and his troopers found solace in them, and now President Kruger, who has a keen eye for a text, calls down blessing on the Boers and confusion and death upon the British by an appeal to the Lord of Hosts in the Psalms. "Read Psalm xxxiii," he says in a message to his generals, and adds, "The enemy have fixed their faith on Psalm lxxxiii." The passages he refers to, says the *London Academy*, are evidently these:

PSALM XXXIII: BOER.

Blessed is the nation whose God is the Lord: and the people whom he has chosen for his inheritance.

There is no king saved by the multitude of an host; a mighty man is not delivered by much strength.

An horse is a vain thing for safety; neither shall he deliver any by his great strength.

Our soul waiteth for the Lord: He is our help and our shield.

PSALM lxxxiii: BRITISH.

They have taken crafty counsel against thy people, and consulted against thy hidden ones.

They have said, Come and let us cut them off from being a nation; that the name of Israel may be no more in remembrance.

Fill their faces with shame; that they may seek thy name, O Lord.

Let them be confounded and troubled forever; yea, let them be put to shame and perish.

Upon this *The Academy* remarks: "One can not but admire the President's selection of a Psalm containing the verse, 'An horse is a vain thing for safety,' since, humanly speaking, the Boers owe very much to their ponies. President Kruger's statement that 'the enemy have fixed their faith on Psalm lxxxiii,' tends to turn the words quoted against the Boers themselves; for the Uitlanders might well have adopted Psalm lxxxiii, as an expression of their grievances."

THE confirmations into membership of the Protestant Episcopal Church last year numbered 41,700. Of these, 5,750 came from families already connected with the church. The total increase in membership of the church was 10,000, showing, according to *The Christianian* (January), that the changes from this church to others are taking place with quite the facility of changes to it.

FOREIGN TOPICS.

ARE THE LATINS DECADENT?

FOR some time France has been the scene of a considerable amount of self-abasement and of corresponding admiration for foreign races, especially for the English-speaking peoples. Our readers will remember the book written by M. Demolin, editor of *La Science Sociale*, on "The Superiority of the Anglo-Saxons" (THE LITERARY DIGEST, October 9, 1897; July 2, 1898). At present, however—owing, perhaps, to the resentment awakened by criticism in other lands called forth by the Dreyfus case,—a different strain pervades French literature. The new strain is illustrated by an article in the *Revue des Deux Mondes* written by Alfred Fouillée, a member of the French Academy, who undertakes to show that the Latin is not inferior to the Anglo-Saxon and Teuton. The following is his line of thought:

The birth-rate of France is not so very much below that of other countries. It is declining, naturally, everywhere; circumstances alter cases everywhere. In Canada, the French increase faster than the English. Nothing is more amusing than the accusation of sloth. Why, the Latin is too lively. Spain may be a little conservative, but France would be better off if she showed less longing for excitement. The Catholic religion, too, is mentioned as the cause of Latin decay. But neither in Belgium nor in Rhenish Prussia, neither in Austria nor the United States, does Catholicism appear to hinder progress. Individualism, another supposed advantage of the Anglo-Saxon, will presently become stronger in the Latin. The French are accustomed to grant too much power to the authorities from sheer habit alone.

One of the gravest complaints laid against the Latins is their criminality, especially in Italy. But Italy is not quite free from the influences of the past. The crimes of the Middle Ages mingle with those of modern society. Yet even Italy may not be called immoral. Personal purity, for instance, is respected more in Italy than in France. Suicide is rarer than in Germany, theft less common than in Great Britain. Illegitimate births and divorces are less common in Italy than in Anglo-Saxon countries. The more numerous murders are due to violent temper and blood feuds. On the whole, it may be said that all nations are passing through a moral crisis. The Teutons and Anglo-Saxons are wealthier, because they are more grasping; but this does not improve them morally. Wealth is honored everywhere; but in England even the desire for wealth is regarded as commendable, and honored more highly than the desire for rank, virtue, and learning. But that evidently will not save England from decay. Greed has led to excessive expansion of empire, an expansion so dangerous that England is now forced to respect even smaller fleets than her own. The future of the Anglo-Saxon is as uncertain as that of the Latin. No race can claim in perpetuity the exclusive possession of virtue and power. The future now as ever belongs not to any particular race, but to the most industrious, the most intelligent, the most moral nations.

M. Ch. Monue, in the *Revue Bleue*, Paris, admits that there is a serious falling-off in the energy of the French people; but he regards this as a national rather than a racial defect. He argues in the main as follows:

Births are more rare with us than with the Germans or English, chiefly because we have a decadent love of ease. We do not wish to share our heritage with a numerous progeny. This is shown in a most striking manner by the fact that our wealthiest families have so few children. In Berlin and London the wealthy have nearly twice as many children as in Paris. From a purely economical point of view this is to be deplored. The individual French capitalist, who limits his family rather than work to increase his income, may be a gainer; the nation loses by it. The more anxious Frenchmen are to live on the interest of their income, the less that interest in the end will be. But there is also a serious moral drawback to this love of ease. Idleness begets love of pleasure, and love of pleasure is the source of the illegitimacy of which we make so light. One is struck by the purity of morals in German plays, by the home life of England, compared with French comedy and with French homes. This, again, re-

acts upon our energies. The restrictions in the number of their offspring to which Frenchmen have accustomed themselves must ultimately place them at a serious disadvantage with their neighbors.—*Translations made for THE LITERARY DIGEST.*

THE CHARACTER OF RUSSIAN INDUSTRIAL DEVELOPMENT.

THE expansion of industry and trade in Russia is a subject everywhere discussed with interest. The Siberian, Central-Asian, and other great railroads, the hospitality extended to foreign manufacturers and capitalists, the adoption of the gold standard and other signs of material progress, have attracted general attention. The Russian Ambassador at Washington, Count Cassini, has officially spoken of Russia's preference for American manufactures, and the great opportunities presented by the new territories which are being opened to commerce, and a permanent exhibition of American machinery and other commodities is being planned at Moscow, the real center of capitalism in Russia. In view of these facts it is interesting to read a frank view of Russian industrial progress in the editorial pages of so influential a paper as the St. Petersburg *Novoye Vremya*. It is not a flattering view, and it has surprised and displeased other Russian editors. The article is so significant that the essential portions of it are translated and given below:

"Russia is often compared to the United States of America, and, in some respects, not without justice. As there, so here, we see the rapid growth of centripetal forces, immensity of operations, gigantic colonial possibilities, exceptional natural opportunities for acquiring wealth, and, finally, the tremendous part played in all branches of activity by self-made men.

"But the comparison is far from favorable to us when we carry it into the field of general culture. We find that the American dollar and the Russian ruble do not give the same results. American pioneering quickly connects newly developed points with the civilization of the country at large, while our capitalism works in its own narrow sphere and takes no part in the larger life of the territory it fructifies. Decades go by without any effect on the intellectual and moral life of the place annexed by industry. Crowds of vagrant laborers are attracted and sources of wealth are opened up, but the old state of sloth, misery, ignorance, and stagnation is preserved, and no marks of progress appear except cards and champagne among the inferior employees. The ruble and culture seem to be divorced.

"In recent years many new points in the empire have received vast importance owing to their industrial position and rapid growth of their population. But only in a few of them have there arisen hospitals or schools, and even in these the capitalists have had nothing to do with these provisions for the welfare of their workmen. Labor is hired and exploited, but no attention what ever is bestowed upon its comfort or welfare.

"Now take old and long-settled industrial cities in our central provinces. The inhabitants are rich, but there is nowhere a trace of civilized existence. There is not a single improved or attractive street, not a public square, no pavements, no lighting, no library or theater, no educational institutions, and no social life of any kind. The millionaires live in the same darkness and fog as the paupers around them. Even Moscow, with its traditions, its university, and grand past, has retrogressed since it became a mercantile community preeminently. Her wealth has increased, but to talk about her progress is impossible, unless we mean by that term the saloons and hotels which the new era has called into existence.

"The million has arrogated to itself all power and might, and regards itself as the be-all and end-all of modern life. But in Europe, at least, the power of plutocracy is due to its close and historic association with culture. There the third estate is the richest, but also the most enlightened, and it has done the most for general progress. But what right have the millions which do not carry culture with them?"

Yet the *Novoye Vremya* is opposed to the encouragement of foreign capital and to the extension of franchises and privileges

to foreign manufacturers. Its motto is Russia for the Russians, even in an economic and industrial sense.—*Translation made for THE LITERARY DIGEST.*

SECRET CORRESPONDENCE ON SOUTH AFRICAN MATTERS.

AMERICAN readers have seen in recent cable despatches references to a secret correspondence, published in part in the *Indépendance Belge* (Brussels), that seems to deepen the suspicion that the Colonial Secretary of Great Britain was involved, long before the war, in the machinations of the Chartered Company managed by Cecil Rhodes, and in the Jameson raid. According to the despatches, Mr. Chamberlain, in response to questions put in the House of Commons, has admitted that this secret correspondence is substantially as printed; but he has denied having had any personal knowledge of it until a few days before its publication.

The correspondence so far published consists of seventeen letters and telegrams chiefly between Fairfield, chief of the South African Department of the Colonial Office (of which Chamberlain is the head), and Hawkesley, the legal adviser of the Chartered Company and of Mr. Rhodes. Hawkesley tells Fairfield to get from Eyre & Spottiswood, the sworn Government printers, a copy of the government report of February 11, 1896, on the Jameson raid. On May 6, Fairfield assures Hawkesley that no harm will come to the Chartered Company, as Lord Selborne and Lord Mead protect it. Moreover, Chamberlain would speak in favor of the company. The next day Fairfield tells Hawkesley that the Chartered Company can not be saved unless Rhodes resigns from his position as director. On July 22, Hawkesley recommends Cripps, Q. C., Carson, Q. C., and Wyndham as members of the House of Commons who should be put on the committee of investigation. Carson wanted to know too much, and was not selected. Wyndham made a mild protest afterward against the proceedings. A letter from Hawkesley to Maguire (elected among the Irish members at the alleged cost of \$50,000 to Rhodes) shows that the "Harris" telegrams (which will be remembered by those who kept close track of the Jameson raid investigation) really came from the company. On February 20, Hawkesley in-

the first day, tho his evidence was good even then. Yesterday he was simply splendid.

"I do not think we are by any means out of the wood; but there does seem an off-chance of the plea of public interest being recognized and the cables of the last half of 1895, or rather the negotiations of that period, not being disclosed, tho I am bound to say that personally I think the balance of probability is that they will have to come out.

"If they do, Mr. Chamberlain will have no one but himself to thank."

Not without interest is a letter by Chamberlain's sister-in-law to Hawkesley, in the course of which she says:

"As long as you make it impossible for C. J. R. to give Jameson away, he will be loyal to him; but I am sure, from what I

"CONFOUND THOSE MAPS! NOT A SINGLE BOER AMBUSH MARKED! HOW CAN A GENERAL AVOID THEM?"

—*Finchietta.*

have said, that at one time Rhodes contemplated sacrificing the doctor. The doctor must never know this, and if any one can keep Rhodes up to the mark you can."

The *Indépendance Belge* has not yet kept its promise to publish further revelations, and suspicion is expressed that the paper has been bought up by the financial interests involved. Those wishing fuller account of the correspondence can get it either in the *London Speaker* (January 13) or in the *Indépendance Belge* itself (January 12).

Few British papers have thought it worth while (or had thought so prior to the interrogation in the House of Commons) to mention the revelations; fewer still have quoted them. Among these few is the *Manchester Guardian*, which thinks the matter should be investigated, and which remarks:

"The English press as a whole has thought it best to conceal these letters from its readers, but that proceeding will no more profit England than it profited France to have her chief newspapers suppressing all the principal evidence in favor of M. Dreyfus. The possessors of an empire like ours rely ultimately upon the regard of the civilized world, and we can not afford to ignore its loss."

The *London Clarion*, the only "imperialist" Socialist paper in England, says:

"It looks unkind of the *Indépendance Belge* to publish these letters just when our country is in such a hole; but if the unfriendliness of the Belgian press only opens the eyes of our countrymen to the real worth of their idols, it will have conferred unintentionally a favor on us, and have done a service to humanity."

The paper most determined to sift the matter is *The Speaker*, which says:

"For the present the appearance of these compromising letters

RAT BITES.

"A bit rough on one's tail; but I'll get there all the same!"

—*The South African Review (Cape Town).*

forms Lord Grey that Rhodes will manage to get out of the affair. He says:

"MY DEAR GREY: Thanks for your letter of the 9th ult., which I read with great interest. You will, of course, have heard that the committee was reappointed, and has got to work. I send you official prints of the evidence already taken. Rhodes has done very well, and I think will come out on top. He was nervous

has been ignored by almost the entire Unionist press. *The Times* carries its policy of suppression so far as completely to discredit its pretensions to collect and reflect foreign opinion. For everybody who reads foreign papers knows that most of them have reproduced, and a great many have discussed, the revelations of the *Indépendance Belge*. These revelations are generally regarded as of the greatest moment, and their effect has scarcely been to make foreigners look more indulgently upon the war. But the foreign intelligence columns of *The Times* know nothing of all this. The subject is as rigidly ignored by the foreign correspondents as by the editor himself. These revelations find no place in the rambling soliloquies of M. de Blowitz or the personal attacks of Mr. Smalley. And yet what a lot we heard a few months ago of impositions practised upon unfortunate Frenchmen by editors who did not want their readers to know what the world thought of 'L'Affaire Dreyfus.' "

The *Post* (Berlin) says:

"Even in the House of Commons voices have been heard to exclaim that Chamberlain may have some personal interest in the war, and that there are other reasons for killing the Boers beside the distressful cries of the poor Uitlanders. It seems that Chamberlain knew all about the raid, and it is certain that he shielded the chief actors in it. What is more likely than that the present war is being waged in the same interests?"

In the *Berlin Nation*, S. van Houten, ex-premier of Holland, writes that, in his opinion, Chamberlain is not unlike the buyer of green goods, "a cheated cheater." He put his faith in the Rhodes clique, and was forced to do their bidding.

The Boers also publish some secret documents captured during General Yule's flight from Dundee. The entire plan of invasion, including the attack upon the Free State, the detailed maps of the northern part of Natal, the manner in which Van Reenen's Pass was to be occupied, etc., fell into their hands. The documents are by Captain Melville, Captain Gale, Captain Wolley, Major Grant, and General Sir Redvers Buller.—*Translations made for THE LITERARY DIGEST.*

THE BAGDAD RAILROAD.

IT has long been the wish of the Turkish Government to connect the Mediterranean Sea with the Gulf of Persia by a railroad. Negotiations which promise to become successful are in progress, and the Deutsche Bank in Constantinople will probably finance the undertaking as the largest shareholder. British capital, however, will not be excluded from the enterprise. The *London Outlook* says:

"German capitalists are, it would seem, to get most of the plums—that is one penalty we have to pay for past British inertia. Yet the proposed fusion would probably do more for British interests than could be accomplished by isolated efforts; for, humiliating confession tho it be, there is only too much truth in the assertion of *The Times*, that 'the Turkish Government may flout or fleece an English company, but it will think twice and thrice before attacking the interests of capitalists, German, English, and French, who are safeguarded by the personal concern of the German Emperor for the success of their undertakings.' Under joint British and German effort, what limits shall be set to possible development in Asiatic Turkey?"

The *Berlin Tägliche Rundschau* describes the matter as follows:

"There is no definite agreement as yet. The Porte as well as the Deutsche Bank may withdraw at any time if either party fail to be satisfied with the terms of the commission appointed to inspect the route. But Germany has the refusal. The railway will benefit, in the first place, the Turkish Government. The majority of the Sultan's troops are now drawn from Asia, and it is to his interest to have roads by which he can quickly collect them. It is, therefore, only natural and just that the Turkish Govern-

ment should assume the financial risk, and as Turkish finances are not in very good condition, it is difficult to obtain adequate guaranties, for the sum involved is large, certainly not less than \$100,000,000. We are, therefore, quite willing to see other countries share with us in the undertaking, especially France. According to the latest accounts, French capital will be interest to the extent of 40 per cent. of the whole sum. We do not even object if British capital has a share. In the first place, this would lessen competition, and, further, it should be remembered that, in case of difficulties, it is best to have the assistance of as many interested nations as possible, even if German influence is not exclusive. In view of the railroads which must soon be built in Asia and Africa, we do not intend to tie down so large a capital and so much material in the Orient; for that the Bagdad line will pay at an early date, is much to be doubted."

The news that German and French capital will be employed in a common work, involving also the working side by side of French and German engineers, is received with pleasure in France, altho it is well known that Russia opposes everything that is likely to strengthen the military, political, and financial position of Turkey. The *Paris Journal des Débats* expresses itself in the main as follows:

We are aware that the prospect of the railroad puts the Russian press in a bad humor, but the press is not the Government in Russia. Nor can the Russians justly object to a strategical line which is so far removed from their frontiers, especially as they seem inclined to regard Persia as their exclusive domain. We are willing to admit that a railroad from the Mediterranean to the Persian Gulf, if in the hands of Great Britain, would be likely to hinder Russian plans. But the work itself will be undertaken, progress is inevitable, and it is much better for Russia that the road should be in the hands of two powers of which one is an ally of Russia while the other traditionally follows a policy friendly to the Czar. To place serious difficulties in the way of France and Germany would lead to the strengthening of the very power which opposes Russia everywhere in Asia.—*Translations made for THE LITERARY DIGEST.*

South African Distances.—"Lord Roberts should have a force of not less than 70,000 strong when he crosses the Orange River, if he wishes to be certain of being able to crush opposition

and press forward to Pretoria, a month's steady marching away." This in *The Westminster Gazette* (London) from its military expert. It is a decided understatement. A month's marching, even without opposition, would not be sufficient to cover the distance. The *Handelsblad* gives a rough map of Europe, locating on it the South African towns that are most frequently mentioned in connection with the war, to enable European readers to realize the distances that have to be overcome by the British army of invasion. We give a map of the United States arranged in a similar manner. Lord Roberts with an army of 70,000 men, traveling with ox-wagons, could not make more than ten miles a day if no opposition whatever were offered to his progress. The route from Delagoa Bay (New York) to Pretoria (Buffalo) is still closed to the British. Colesberg (Lexington, Ky.) is a long distance from Pretoria (Buffalo), and is yet in the hands of the Boers. The chief base of supplies for the British is Cape Town (somewhere between Little Rock and Memphis) or near the Franco-Spanish frontier.

Current Events.

Monday, January 29.

—Conditions remain unchanged in South Africa; General Buller reports a long list of casualties.

—In the Senate, there is a lively debate on the war in South Africa, caused by alleged utterances of the British consul at New Orleans.

—Secretary Gage replies to a Senate resolution of inquiry as to his relations with the National City Bank of New York.

—In the House, the resolution proposing an investigation of Secretary Gage's methods is debated and sent to the ways and means committee.

—A great pro-Boer mass-meeting is held in New York, at which the speakers are Congressmen De Armond and Cochran, Mayor Perry of Grand Rapids, and others.

Tuesday, January 30.

—A Boer shell-factory at Johannesburg is destroyed by explosion; Dr. Leyds, the diplomatic representative of the Transvaal, visits Berlin and St. Petersburg.

—Both houses of the English Parliament convene, and the Queen's speech is read.

—Senator William Goebel, the Democratic candidate for governor of Kentucky, is shot near the Capitol at Frankfort by an unknown assassin; the contest committee of the legislature decides that he is legal governor.

—The bodies of General Lawton and Major Logan arrive at San Francisco.

Wednesday, January 31.

—Additional casualty lists from General Buller make the total British loss since the beginning of the war 6,681 men, the losses north of the Tugela exceeding 2,400 men.

—The Democratic leaders in Kentucky have the oath of office administered to Senator Goebel, who is in a dying condition; he also signs an order dispersing the militia. Governor Taylor adjourns the General Assembly, and summons it to meet in London on February 6.

—A stormy debate in the Senate is caused by Mr. Pettigrew's resolution to recognize Aguinaldo's recent statement; he is called a "traitor" by Senators Hawley and Sewell.

—President McKinley's suggestion of a pan-American congress is favorably received by Central and South American countries.

Thursday, February 1.

—A London newspaper reports that Buller has again crossed the Tugela; there are rumors that Kitchener is advancing.

—William Goebel, contrary to the expectation of his physicians, still holds out; there are serious factions in the Kentucky militia, and civil war is feared owing to the intense excitement prevailing. Governor Taylor appeals to McKinley for Federal protection.

—The Isthmian Canal Commission arrives at Nicaragua.

—In the Senate, Mr. Allen criticizes Secretary Gage's financial methods.

—In the House, Mr. Stibley, of Pennsylvania, upholds the policy of expansion.

Friday, February 2.

—No official despatches from South Africa are made public, but there are persistent rumors to the effect that General Buller has engaged the enemy again.

—The Democratic members of the Kentucky Senate and House meet in secret and declare William Goebel governor, and J. C. W. Beckham lieutenant-governor. President McKinley refuses to comply with Governor Taylor's request to send Federal troops into Kentucky.

—Mr. Pettigrew again attempts to introduce anti-imperialist documents in the Senate, but is cut off by a point of order.

—The House committee adopts a tariff bill for Puerto Rico and decides that the Constitution and laws of the United States do not extend over new possessions.

—The report of the Philippine Commission to the President is made public.

Saturday, February 3.

—The Boers destroy the line of railway between Modder River and Kimberley; the Boer garrison of Stormberg is in danger of being surrounded by the British.

—Brigadier-General Kobbe occupies the islands of Samar and Leyte, of the Philippine group; several new hemp ports are opened in the islands.

—William Goebel dies at Frankfort, Ky., as the result of the shot from his assassin. J. C. W. Beckham immediately takes the oath of office, and issues a proclamation calling upon the militia to disband.

Sunday, February 4.

—A despatch from Durban, Natal, reports that General Buller has again crossed the Tugela.

A Mattress Crusade

Compressing

TRADE
MARK.

We are determined that every person in the country shall know that hair mattresses can be surpassed in wear and comfort at less cost. We will send you (express prepaid to any point)

The Ostermoor Patent Elastic Felt Mattress \$15.

and positively guarantee that the best \$50.00 Hair Mattress made is not its equal in cleanliness, durability, or comfort. We sell on the distinct agreement that you may return it and get your money back (without dispute) if not satisfactory in every possible way at the end of THIRTY NIGHTS' FREE TRIAL. This is what we mean by our now-famous phrase

"Sent on Suspicion"

We have advertised in "The Literary Digest" and all the leading publications for years, selling thousands of mattresses, and not ten returned unsatisfactory as yet. If you are sceptical about its merits or don't need one now, send for our handsome illustrated pamphlet, "The Test of Time," mailed free for the asking. It gives full particulars.

ST. PAUL SOCIETY FOR PREVENTION OF CRUELTY,
W. L. WILSON, PRES.
608 CHAMBERS OF COMMERCE BUILDING,
ST. PAUL, MINN., JANUARY 4, 1900.

Messrs. OSTERMOOR & CO.

GENTLEMEN:—For thirteen years we have had in constant use one of your Patent Elastic Felt Mattresses, which has been entirely satisfactory, and exhibits little signs of wear except the loss of a few tufts.

When this was purchased we had others supposed to be made of excellent hair, and which have only been continued in use by frequent renovations, but at their best we consider them far inferior to yours.

Yours truly, W. L. WILSON.

Showing Patent Elastic
Felt Layer in Mattress;
tick ready to be closed.

Church Cushions

We make and renovate them quickly, thoroughly, and cheaper than you imagine. They are in use IN OVER 25,000 CHURCHES.

Read Rev. Dr. E. S. MacArthur's Opinion:

CALVARY BAPTIST CHURCH,
NEW YORK, Feb. 6, 1897.

DEAR SIR:—It gives me much pleasure to say that the Patent Elastic Felt Cushions put by your company into the Calvary Baptist Church more than forty years ago are still in excellent condition, and I can most heartily recommend them. They still retain their elasticity, and are free from moth and vermin of every sort. They have preserved their shape better, and are, in my judgment, in every way more desirable than cushions made of any other material offered to the public. The cushions were put in the church long before I became a preacher. Of their present condition I can judge. In regard to the length of time they have been in use, and the satisfaction they have universally given, the officers of the church are my authority.

We found the cushions, after so many years' constant use, in such good condition that, upon going into our new church, we had you recover them, and they are to-day certainly as good as new.

Very respectfully, E. S. MACARTHUR, D.D.
Send for our book, "Church Cushions"—sent free.

PATENT ELASTIC FELT consists of airy, interlacing, fibrous sheets of snowy whiteness and great elasticity; closed in the tick by hand, and never mats, loses shape, or gets lumpy. It is perfectly dry, sun-durable, and is guaranteed absolutely vermin proof. Tick may be removed for washing without trouble. Softer and purer than hair can be; no repicking or re-stuffing necessary.

Send for our book, "The Test of Time."

It will interest you to know about the best and cheapest mattress in the world. We sell direct to the user only.

3 ft. 6 in. wide, 25 lbs.	— — —	\$8.35	All 6 feet 3 in. Long.
3 ft. wide, 30 lbs.	— — —	10.00	
3 ft. 6 in. wide, 35 lbs.	— — —	11.70	
4 ft. wide, 40 lbs.	— — —	13.35	
4 ft. 6 in. wide, 45 lbs.	— — —	15.00	

Made in two parts, 50c. extra.

Express charges prepaid everywhere.

Take Care! Don't be Deceived!

There is not a single store in the country that carries our mattress; almost every store now has an imitation so-called "felt," which is kept in stock to sell on our advertising. Our name and guarantee is on every mattress. Can be bought only direct from us.

Burpee Seeds

are the most popular

They are sent out only in sealed packages from the New Burpee Building, Philadelphia. A postal card application will bring

Burpee's Farm Annual for 1900 which tells all about the **Best Seeds that Grow**, as tested at Fordhook Farms, the largest trial grounds in America.

No matter how many other seed catalogues you may have, you cannot be thoroughly posted without Burpee's. Write TO-DAY. Address simply
BURPEE, Philadelphia.

and is marching on Ladysmith; General French has a slight engagement with the enemy.

—The situation in **Kentucky** remains quiet, and preparations are made for the meeting of the legislature in London.

—The **Clayton-Bulwer Treaty** regarding the Nicaragua canal is the subject of negotiations in England and the United States in which American and British ambassadors take part.

—Advices from Albany state that **Governor Roosevelt** refuses to be considered a candidate for the Vice-Presidential nomination.

PERSONALS.

SENATOR W. A. CLARK, of Montana, whose seat is threatened by serious charges of political corruption, has been a remarkably successful man from several points of view. He is worth, say \$500,000, his property consisting of sixteen mines, banks, and a Democratic newspaper. He is just sixty years of age, strong, erect, vigorous, and with a shock of hair whose aggressive redness refuses to be tempered by the gray of advancing years. It is not generally known, but he is a graduate of Columbia College, where he took a course in mineralogy and chemistry before he entered seriously into mining. In this respect he is like J. H. De La Mar, who studied metallurgy before the mast and made millions in Arizona and Mexico. Should the charges instituted against him fall, he will have reached the heights of ordinary ambition—an ambition which he doubtless did not dare to entertain in the old days, when he was peddling clocks and gewgaws to the Indians and miners of the far Northwest.

REPRESENTATIVE RICHARDSON, of Tennessee, enjoys the unique distinction of having received more votes for Speaker of the House than were ever before received by any unsuccessful candidate for that office. He received 126 votes, while the next highest number ever received by a defeated candidate was that given for Mr. Carlisle in the fifty-first Congress, when he received 113 votes.

GOVERNOR BEADY, of Alaska, whose recent visit to Washington in the interests of his Territory has attracted considerable comment, was a homeless little waif, standing on a North River wharf in New York City, twenty years ago. He was found there by the Children's Aid Society, and with many others was sent to the country. The story of his life reads like a romance, and yet it differs very little from that of the lives of a great many other representative Americans, who have arisen from obscurity to eminence in the various walks of life. After securing an education, he entered into missionary work among the natives of Alaska, where he has toiled for many years. Few men, therefore, are more competent to speak with authority upon the topics connected with that country.

The titled families of Great Britain are largely represented among those who have recently joined the army in South Africa or volunteered for service there, says the *New York Independent*. In addition to the Earl of Warwick, the Earl of Dudley, the Earl of Lonsdale, and others heretofore mentioned, the list includes the Duke of Norfolk (whose brother, Lord Edmund Talbot, is in the army); Lord Harris, ex-governor of Bombay; Lord Arthur Grosvenor, the Earl of Pingal, the Earl of Longford; Victor Cavendish, M. P., heir to the dukedom of Devonshire; Captain Holford, an intimate friend of the Prince of Wales, and owner of Dorchester House with its picture galleries; Lionel, son and heir of Lord Rothschild, and Lord Stanley, son and heir of the millionaire

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5.

If you wish something decidedly new in a dress or skirt, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits and skirts, but we are the only house making fashionable garments to order at moderate prices.

Our Catalogue illustrates an exquisite line of exclusive designs, which are shown by no other firm.

Tailor-Made Suits, \$5 up.
New Skirts in the latest Paris cut, \$4 up.
Wash Suits, \$4 up.
Wash Skirts, \$3 up.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Earl of Derby, who has joined General Roberts's staff. Lord Edward Cecil, son of Lord Salisbury, has been wounded at Mafeking.

SIR JAMES SIVEWRIGHT, of Cape Town, has turned over to the British Government his great estates, lying thirty miles from Cape Town, to be used as a hospital and convalescents' home for the army. Three different mansions, giving accommodations for nearly three hundred officers and men, have been provided. In addition, Sir James has equipped and brought to South Africa at his own expense two complete corps of doctors and nurses, one of them remaining on duty in and about Cape Town, while the other goes to the aid of the wounded Boers.

THE *Wichita Eagle* says that Gen. Fred Funston looked out of the car window at a small town in Western Kansas, and saw a seething mass of humanity at the depot to do him honor. Turning to his wife, he said: "Two years ago I lectured to an audience of seven in this town."

OOM PAUL, while still a lad, first gained prominence as a fearless tracker and hunter. He could tramp along the veldt all day, driving his string of oxen, and then spend all night in stalking wild animals. While still in his teens he killed a full-grown lion with nothing but a hunting-knife. Now that he is in his old age, he can still bend a rifle-barrel over his knee, or fell a bullock with his fist.

JOSEPH CHAMBERLAIN'S distaste for physical exercise is as marked as his passion for orchids. At no period in his life has he indulged in any form of sport, and walking is his special aversion. Practically the longest walk he takes when in London is from Prince's Gardens to his clubs in Pall Mall or St. James's Street. To his sedentary habits he adds a love of smoking black cigars and drinking strong tea.

MORE OR LESS PUNGENT.

A Difference.—The returning American, as he stands on the dock, is reminded of the fact that we have customs, but no manners.—*Life*.

She Received Many Calls.—"Is she really a society girl?" "Well, she makes and receives a great many calls." "Really?" "Yes, she's a telephone operative."—*Philadelphia Record*.

His Wondrous Faith.—DIX: "Weeks seems to have a lot of faith in homeopathy, doesn't he?"

DIX: "Never saw anything to equal it. Why, last summer when he had an attack of hay fever he married a grass widow."—*Chicago News*.

No Wonder He Felt Important.—HORSE: "What is that pompous, shabby-looking male braying about?"

AUTOMOBILE: "Oh, he's just home from a battle in South Africa."—*Indianapolis Journal*.

The Light of Love.—"Omed," whispered the dark, romantic maiden, "what is the light of love?" "The light of love," murmured Omed, with a far-away look, "is generally the gas turned down to a mere blue spark."—*Chicago News*.

Cream of Wheat

For a good, hearty, nourishing, winter breakfast, to fit for school or office, try this:

Breakfast Porridge

To one quart of boiling water add one-half teaspoon full of salt and three-fourths of a cup of Cream of Wheat. Stir it in slowly and cook fifteen minutes or longer, in a covered dish set in boiling water. Cooking one-half or three-quarters of an hour increases its delicacy of flavor. Serve hot with cream and sugar. Many prefer it to stand until it jellies, as this adds somewhat to its delicacy.

Ask your grocer to show you the beautiful Cream of Wheat pictures.

Cream of Wheat Co., Minneapolis, Minn.

LITTLE DOROTHY: "Well, mamma, can't I start something?"—*Twinkl.*

Was Looking For William J.—As the west-bound train dashed in the young hopeful to the Pullman gazed out upon the animated platform. "What do you see, Frankie?" inquired the stately woman by his side. "Oh, mummy!" he shouted. "I see the Chicago platform, but I don't see Bryan."—*Chicago Tribune.*

An Irish Definition.—LITTLE MIKE (who has struck a hard spot in his reading): "Feyther, phwat is an autopsy?"

MICHAEL (promptly): "An autopsy, is at? Sure, that's phwat a dead man requests the doctors to cut him up, so that he can find out phwat is the matter wid him."—*Humor.*

Two Kinds of Devils.—It was a proud day for the printer's trade when two men who had been apprentice boys in a composing-room presented themselves before the bar of the United States Senate to be sworn in as members. They were Peter C. Pritchard and Marion Butler, both of North Carolina.

"I didn't know you could make a Senator out of a 'devil,'" jocularly remarked David D. Hill, then a Senator from New York.

"Oh, yes," retorted Senator Lodge, "the transition is a natural and easy one—on your side of the House."—*Newark Evening News.*

A "Bird's-Eye" View.—The solemn air of judicial gravity and dignity of the Supreme Court is sometimes disturbed by a flash of humor. On one occasion there was an argument going on, and the attorneys were using a map to illustrate the case. One attorney pointed to the map and was proceeding to dilate upon it, when Justice Gray asked him what the map was. "Why, your honor, it is just a bird's-eye view of the land in controversy," answered the counselor. "Well," said Justice Gray, "I wish you would bring the map a little nearer, I haven't got a bird's eye."—*Indianapolis Press.*

BROWN'S Bronchial Troches

(Made only by John L. Brown & Son, Boston.)

give instant relief in

Hoarseness

TWO FINE SPECIMENS Of Physical Manhood.

No form of athletic exercise demands such perfect physical condition as prize-fighting. Every muscle in the body must be fully developed and supple, and the heart, lungs, and stomach must act to perfection.

Whether we endorse prize-fighting or not, it is nevertheless interesting to know the manner by which men arrive at such physical perfection.

James Jeffries, the present champion heavy weight of the world, and his gallant opponent, Tom Sharkey, in the greatest pugilistic encounter that has ever taken place, both pursued much the same course of training, and the first and most important part of this training was to get the stomach in condition, and keep the digestion absolutely perfect, so that every muscle and nerve would be at its highest capabilities.

This was not done by a secret patent medicine, but both of these great pugilists used a well-known natural digestive tablet sold by druggists under name of Stuart's Dyspepsia Tablets and composed of the digestive ferments which every stomach requires for healthy digestion.

Champion Jeffries says: "Stuart's Dyspepsia Tablets prevent acidity, strengthen the stomach, and insure perfect digestion. They keep a man in fine physical condition." Signed, James J. Jeffries, champion of the world.

The gallant fighter, Sharkey, says: "Stuart's Dyspepsia Tablets remove all discomfort after eating. They rest the stomach and restore it to a healthy condition. I heartily recommend them." Signed, Tom J. Sharkey.

The advantage of the daily use of Stuart's Dyspepsia Tablets is that they keep the people well and ward off sickness, and are equally valuable to well persons as to the dyspeptic. Another advantage is that these tablets contain no cathartics, or poisons of any character, but simply digestive ferments which are found in every healthy stomach, and when digestion is imperfect it is because the stomach lacks some of these elements and Stuart's Dyspepsia Tablets supply it.

They are no cheap cathartic, but a perfectly safe and efficient digestive, and the demand for them is greater than the sale of all other so-called dyspepsia cures combined. No remedy could possibly reach such a place in public esteem except as the result of positive merit.

Full sized packages are sold by all druggists at 50 cents, and the best habit you can possibly form is to take a Stuart's Tablet after each meal. They make weak stomachs strong and keep strong stomachs vigorous.

Peter Moller's Cod Liver Oil

now prepared by an improved process which is the result of years of scientific investigation, may be confidently relied upon as being of

Absolute Purity and Free From Disagreeable Taste and Odor.

MOLLER'S OIL always gives satisfactory results because of its perfect digestibility and the fact that it may be taken continuously without causing gastric disturbance.

In flat, oval bottles only, dated. See that our name appears on bottle as agents. Explanatory pamphlets mailed free.

Schleffelin & Co., New York.

Free on Trial.

A new invention sent free on trial that enables you to enjoy a luxurious Turkish or Russian bath in your own private apartments at home or hotel. Send your name and address to Kelling Sanitas Co., 288 E. Main St., Battle Creek, Mich., and they will send you their fine booklet on health and hygiene. Select the style you prefer and the Sanitas Bath Cabinet will be expressed direct to your home, where you can try it fully and freely.

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent postpaid including everything ever published on the great value of lung gymnastics, by Dr. Patchen. Send 2-cent stamp for testimonials to

WANTED.

Active and energetic men to represent us in Eastern, Western, and Southern States. Weekly salary or commissions paid. Make application by letter, giving references, age, and previous occupation.

DODD, MEAD & CO., - New York-Chicago.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The cut on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets and by touching the spring, a new hand is before each player. The advantages over trays are, no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price for one table, \$7.00, for three tables to one address, \$18.00, delivered free. Send for circular.

GEO. H. RICE, - Green Bay, Wis.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.

CAPACITY 35,000 ACATE LINES.

Size of Book, 4 1/2 x 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

Problem 452.

Composed for THE LITERARY DIGEST
BY WALTER PULTZER.

Black—Nine Pieces.

White—Ten Pieces.

White mates in two moves.

Mr. Pulitzer has composed two problems for us. The first is given above, and he offers a prize for the best solution in time.

Solution of Problems.

No. 445.

Key-move, R-K B sq.

No. 447.

Key-move, Q-R 4.

Both problems solved by M. W. H., University of Virginia; the Rev. I. W. Dieter, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; F. S. Ferguson, Birmingham, Ala.; M. Marble, Worcester, Mass.; W. R. Conner, Lakeland, Fla.; A. Knight, Bastrop, Tex.; B. Moser, Malvern, Ia.; J. Chapin, Philadelphia; the Rev. S. M. Morton, D.D., Birmingham, Ill.; G. Patterson, Winnipeg, Man.; H. Meyer, Milwaukee, Wis.; H. H. Ballard, Pittsfield, Mass.; J. D. Campbell, Brenham, Tex.; the Rev. T. H. Johnston, Elizabeth City, N. C.

445 (only): Dr. H. W. Fannin, Hackett, Ark.; C. B. Hoffman, Enterprise, Kan.; Prof. C. D. Schmitt, University of Tennessee; F. R. Osceola, North Conway, N. H.; M. F. Muller, Ponteroy, Ia.; R. B. Brigham, Schuylerville, N. Y.; W. J. Lachner, Baker City, Ore.

447 (only): T. R. Denton, Asheville, N. C.

Comments (445): "Very good, not brilliant"—M. W. H.; "Of choice timber and temper"—L. W. B.; "A fine composition"—C. R. O.; "Worthy of a prize anywhere"—P. S. F.; "A polished masterpiece beyond criticism"—W. R. C.; "A gem"—A. K.; "An elegant problem, and deserves first prize"—H. M.; "A model of its kind"—J. C.; "Most beautiful"—H. H. B.; "Interesting"—C. B. H.; "One of the best"—R. E. B.; "Both beautiful and difficult"—P. H. J.

(447): "A knightly brush done in a rush"—L. W. B.; "Excellent"—C. R. O.; "Only four variations, but full of trouble"—P. S. F.; "After the Canadian war any ordinary war would appear easy"—W. R. C.; "Admirable, simple, symmetrical"—A. K.; "Puzzling at first, but really very simple"—R. M.; "Somewhat elementary"—J. C.; "Very fine"—J. D. C.; "First class, but not as meritorious as the war"—E. H. J.

A CURE FOR RHEUMATISM...

DR. J. G. CONNOR, Ionia, Mich., writes:

DEAR SIR:—An old friend of mine handed me a couple of small vials of your TARTARLITHINE some time ago and I tried it on myself, having suffered from rheumatism for several years. I assure you I was so pleased with its effects that I procured a full sized bottle, and since taking it I have been entirely free from rheumatism during the past year. I also observed that it is not surpassed by any other preparation as a prompt and effective diuretic; besides it is pleasant to administer. Please send me a few bottles for use among my patients afflicted with Rheumatism.

Regular package \$1.00.

Of all druggists or post-free by mail.
Pamphlets with Testimonials FREE.

VOL. XX., No. 7

NEW YORK, FEBRUARY 17, 1900.

WHOLE NUMBER, 513

Published Weekly by
FUNK & WAGNALLS COMPANY,

32 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

MORE BRITISH REVERSES.

THE failure of General Buller's third attempt to relieve Ladysmith; the retirement of Sir Hector Macdonald to the Modder River after an unsuccessful attack on the Boer force that bars Methuen's road to Kimberley; and the repulse of Colonel Plumer's relief expedition eighty miles from Mafeking make so little change in the situation and repeat previous experiences so closely that little comment that is striking or new appears. More interest seems to center around the new plans of both parties. The report from Durban that a Boer force 6,000 strong has crossed the Tugela and is threatening General Buller's right flank suggests interesting possibilities, altho the *New York Sun* thinks the report a rumor "that need not be taken seriously unless confirmed from some other source." The *New York Tribune* says that "it would be an interesting complication if, by using General Buller as a feint to distract attention from the Western campaign, Lord Roberts had left him to be surrounded and demoralized by the foe. That would be a fine case of the hunter hunted." The appearance of Lord Roberts in General Methuen's camp on the Modder River and his speech to the troops there, telling them that a hard but undoubtedly successful campaign was before them, is taken by the *New York Times* to indicate "that the theater of war is suddenly to be shifted from the extreme east to the extreme west," a fact which "confesses and emphasizes the failure of the campaign in Natal," and "seems to denote the abandonment of Ladysmith." The "plain statement of the case," says the same paper, is that "the British have definitely lost one campaign; they are about to begin another." Much interest is also aroused by the announcement in the British House of Lords that the size of the army will be increased to nearly 600,000 men, rearmed with the most modern rifles and artillery. A report from Berlin that Emperor William during a visit to the British Ambassador "touched upon the feasibility of friendly intervention" is again furnishing food for speculation.

The *London Times*, according to cabled reports, says of General Buller's retreat:

"If General Buller has failed, it seems unlikely that another attempt will be made. The terrible initial strategic mistake of abandoning the principal objective for a subsidiary operation [the relief of Ladysmith] still overweighs the campaign; but the time approaches when its baneful influence will cease to fetter our action. The great issues of the war will not be decided in Natal."

The *New York Herald* believes that "General Buller's campaign has signally demonstrated the futility of both direct assaults upon strong outposts and attempts to force them by tardy flank movements." The *London Standard* declares that the situation is no better than it was a month ago. The river still flows, it says, and the fortified hills still frown between the Natal army and the beleaguered town it is vainly trying to relieve. There seems to be no disposition, however, to blame General Buller for falling back. The *London Telegraph's* correspondent with General Buller says in his account of the ill-fated movement: "Only at the greatest and with needless risk could General Buller have forced his way through. He decided to face the wisest alternative and not to insist upon an advance that way. I ask you to suspend judgment and to rely on General Buller."

A more optimistic tone pervades other offices. The *London Morning Post*, for example, believes that General Buller "can hardly have been intending to relieve Ladysmith or contemplating a determined attack on the Boer army." It continues:

"The whole action must rather be taken as a demonstration intended to keep the Boer force on the Tugela until it is too late for the Boer commander-in-chief to send reinforcements to Magersfontein in time to influence the events impending there. This hypothesis would account for the present state of things at both theaters of war. General Buller would not be allowed to attack the Boers with a force that had already been shown to be inadequate if there was not a different plan afoot from that of a direct advance for the relief of General White."

The theory that finds most acceptance with the London military experts, says the London correspondent of the *Associated Press*, is that General Buller's retirement "was ordered by Lord Roberts, and that both General Buller's and General Macdonald's operations were made by the direction of the commander-in-chief, in order to occupy the Boers at widely separated points, so they would be unable to transfer any portion of their forces to oppose the projected central advance." The *New York Times*, too, suspects that Buller's advance was only a feint, and that some greater movement is on foot. It says:

"It is possible that this last advance was made as a forlorn hope, with the strong probability of a repulse perfectly well known, in order to keep the Boers employed and divert them from coming to the defense of the position against which the really serious and promising attack was to be directed."

The Paris correspondent of the *Philadelphia Press* reports Emile Zola as drawing a new lesson from the Boer successes. M. Zola is reported as saying:

"The Boers are teaching us a good many things besides the power of a united people striving to defend a grand idea. They are proving that it is by no means the nation that spends millions a year in armaments that proves the strongest in war."

"They are making the strongest possible argument against the

exaggerated idea of the value of tremendous military establishments. Altho I am not at all opposed to the army, which I judge to be a necessary evil in society as at present it is constituted, I am powerfully struck with the new conception of national power for defense suggested by the success of these doughty Boers."

AN UNFORTIFIED NICARAGUA CANAL.

THE new treaty with England, now before the Senate, altho intended to bring about a peaceful settlement on questions involved in the construction of the Nicaragua canal, seems to have had its first effect in putting many American newspapers into a very bellicose mood. The provisions of the proposed treaty are briefly put by the Washington correspondent of the New York *Sun* as follows:

"A guaranty to the United States by Great Britain of the right to construct, operate, maintain, and control an interoceanic canal, control to be subject to certain conditions.

"A guaranty by the United States of the absolute neutrality of the canal.

"A guaranty by the United States that it will not fortify the approaches of the canal.

"A guaranty to the United States of the right to police the canal.

"A guaranty that war-ships of belligerents, while permitted to use the canal in time of war, should not remain in it for more than twenty-four hours."

What arouses the opposition of the papers referred to is the guaranty of the canal's absolute neutrality in peace and war. Such strongly Republican papers as the New York *Sun* and the Chicago *Times-Herald* and *Inter-Ocean* believe that the Administration has made a mistake this time, and are urging the Senate not to confirm the treaty. Says *The Sun*:

"The more closely we examine the new convention offered as a substitute for the Clayton-Bulwer treaty, the more unacceptable it appears. Among the objections to the ratification of the instrument, which, as *The Sun* has pointed out, while ostensibly a substitute, is essentially a revival of the most obnoxious features of the former treaty, these are insurmountable.

"First, the asserted parallelism between the projected Nicaragua canal and the Suez canal [whose neutrality is also guaranteed by the powers] does not exist in fact; secondly, an agree-

ment on the part of the United States not to fortify the Nicaragua waterway would place our relatively unprotected cities on the Pacific coast at the mercy of any stronger naval power with which we might happen to be at war; thirdly, such an agreement would especially disable us in the event of a war with Great Britain, which is not only the greatest naval power on earth, but possesses in close proximity to the Atlantic entrance of the proposed canal a coign of vantage in British Honduras which she would be at liberty to fortify and garrison; finally, the agreement that Great Britain shall jointly guarantee the neutralization of the Nicaragua canal, and the invitation to other European powers to join in such guaranty are flagrant violations of the Monroe doctrine."

The Sun proposes that we annex Nicaragua and admit it as a State, so that the canal will become an internal affair, like the Erie canal across New York State, with which no other nation will have the slightest right to interfere. "Better to dig no canal," says the same paper, "unless it is to be a canal absolutely under the control of the United States in peace and in war, including war in which the United States may be engaged." The Chicago *Times-Herald* says:

"The United States is sovereign on this continent and its fiat is law. It will permit no other power to build the canal. It will do the work itself with a due regard for the protection of its own interests at all times. In time of peace the commerce of the world may ride the waterway, because this is compatible with these interests of ours. In time of war both the commerce and the war-ships of a public enemy of this country must be barred by our navy and by our forts in order to secure the advantage for which we pay. These are the considerations by which we are moved and they are the ones that will prevail. Fortifications are as certain as the canal itself in spite of the convention."

The Chicago *Evening Post* (Rep.) says that "England has given up nothing substantial, while we have signed away a prerogative of infinite importance and value." "If the free use of the canal is granted to the war-ships of an enemy," says the Chicago *Tribune* (Rep.), "this country will be furnishing to its foes facilities at great cost for carrying on war against it." The San Francisco *Chronicle* (Rep.) says that our right to an exclusive control of the canal "is the right of self-preservation. We are entitled, in time of war," it continues, "to control the nearest waterway between our east and west coasts. If there is any part of the Monroe doctrine which will commend itself to the

THE CANAL AND THE CARTOONISTS.

common sense of mankind it is this." The *Detroit Tribune* (Rep.) declares that "no foreign government must be allowed to have a voice in its control." "We agree to pay all the cost of constructing the canal, instead of part of the cost," says the *Detroit News* (Ind.), "and receive nothing in exchange." "If we should pierce the isthmus on such terms," says the *New York Journal* (Ind. Dem.), "we should be simply opening a way for our enemies to attack us."

While so many Republican papers are viewing the proposed treaty unfavorably, we find it heartily indorsed by the *New York Evening Post* (Ind.) and the *Springfield Republican* (Ind.), two papers that are usually very free with the scalpel when the present Administration's acts are under treatment. *The Republican* considers the new treaty "very creditable to the Administration," and says of the neutrality proviso that "no other policy is morally justifiable in the present advanced state of civilization and international commerce"; and *The Evening Post* says that "the Secretary of State has risen to his great opportunity of preparing the way for an interoceanic canal that shall be a means of international unity and amity, as well as a highway of international commerce." The *New York Times* (Ind.) believes that the international guaranty of neutrality is the only thing that will keep the canal open at all, to friend or foe, in war time. It says:

"The contention that we must have the authority to pass our own ships while forbidding the passage of our enemy's is simply foolish. As a political demand it would never be granted by the nations of the world. As a point of strategy it would be futile, since no conceivable fortifications or means of defense which we might set up could be relied upon to protect the canal against effective obstruction by the enemy. We can well afford to take our chances in the time of war with the canal, since it will manifestly give us greater advantages than it will give our foe."

The *New York Journal of Commerce* points out that the reason the Suez canal is neutral is because England could not stand out against the maritime nations of the world; "and," continues the same paper, "neither can we, with England herself, far the largest maritime power, peaceful or belligerent, in the world, at their head." The *New York Herald* (Ind.) calls the contention for a fortified canal "a snarling, dog-in-the-manger policy, petty and ridiculous in a nation which has attained the rank and dignity of this country." The *New York Tribune* (Rep.) says:

"The question seems to be whether the United States is big enough and brave enough and strong enough to open this canal to the world and trust its own ability to cope with whatever improbable emergencies may arise, or is so given to seeing ghosts that it must line the canal with fortresses and sit up o' nights to watch lest some bad pirate enter it. To that question it should not take long to give an answer."

The *Philadelphia Press* (Rep.) points out that the policy of the new treaty is the historic American policy. It says:

"The open navigable character of all interoceanic waterways we have insisted upon from the first. We fought the North African pirates for the freedom of the Straits of Gibraltar. We forced Denmark to surrender her claim for sound dues at the entrance to the Baltic. We have applied the principle or joined in applying it to rivers like the Amazon and the Kongo. We have accepted the principle in our own case in the Yukon, whose navigation is free. . . . Any sign that the United States proposes to play the part of the bully, to refuse the plain rights of international law, and to depart from our own settled policy with reference to free waterways, converts our protection into tyranny and will link the Monroe doctrine with the unscrupulous disregard of international rights."

After touching upon some of the points already noted, the *Chicago Record* (Ind.) says: "Moreover, our neighbors in this hemisphere are likely to regard us with less suspicion if we do not insist on making a military fortress out of the waterway which is of so much importance to the development of both the Western

continents"; and the *Minneapolis Tribune* (Rep.) notes that by accepting the international guaranty of the canal's neutrality "the United States would thereby avoid the expense of defending it, involving the construction of enormous defensive works, and the maintenance of a strong fleet at either end and of strong garrisons along its entire length."

The Washington correspondents report that considerable opposition to the treaty is developing in the Senate, but that there is little doubt that it will receive the two-thirds vote necessary for ratification.

CIVIC RULE FOR THE PHILIPPINES.

THE President's appointment of Judge William H. Taft as chairman of a new Philippine commission to establish civil government along the lines laid down by the old commission (outlined in these columns last week) has met with almost unqualified approval. Even the anti-expansion press, which refer

to the commission as one that has for its object the "shaping of a civil administration for a people who are laying down their lives rather than accept it," pay a tribute to Judge Taft's character and ability. The judge is forty-two years old, the son of Judge Alphonse Taft, who was Attorney-General and Secretary of War under the Hayes Administration. His record as Assistant Attorney-General and circuit court judge has been highly honorable, and he was men-

JUDGE WILLIAM H. TAFT.
Appointed by the President Civil Governor of
the Philippines.

tioned last year for the presidency of Yale College.

The new Philippine commission, which is appointed by the President without specific authority from Congress, will probably enter upon its duties after the passage of Senator Spooner's recent bill, of which the principal clause is as follows:

"That when all insurrection against the sovereignty and authority of the United States in the Philippine Islands shall have been completely suppressed by the military and naval forces of the United States, all military, civil, and judicial powers necessary to govern the said islands shall, until otherwise provided by Congress, be vested in such persons, and shall be exercised in such manner as the President of the United States shall direct for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion."

Colonel Denby and Professor Worcester will serve on the new commission, with two others, as yet unnamed. There is a rumor to the effect that General Otis will soon return from Manila, and that the military government will be superseded wherever possible by a purely civil administration.

The *St. Louis Globe-Democrat* (Rep.) says:

"It is safe to say that a majority of the people of the islands who have the sense to make an intelligent expression of their opinion on the subject of the government of their country desire the Americans to control it. There are good reasons for assuming that the only persons who are anxious to have independence are the little oligarchy under the leadership of the Aguinaldo cabal who wish to replace the Spanish despotism by an even

more drastic tyranny of their own. Events in the Philippines are shaping themselves in the direction of the interests of the United States and in justification of the policy which the Administration has been pursuing from the outset."

The *Washington Star* (Rep.) says that Judge Taft's sacrifice in leaving his judicial position for the more arduous service in Manila testifies, like the case of Gen. Leonard Wood, "to the high public spirit to be found in men of high moral and intellectual grade at a time when such men are so much in demand." The *New York Evening Post* (Ind.) speaks of Judge Taft as "a man of high character, excellent ability, and judicial mind"; but adds that this indorsement of the man chosen "is a very different thing from indorsing the policy under which the President, not acting as commander-in-chief to name a military governor, assumes the dictatorial power of sending men to establish such civil government as may seem good to them and him, without the slightest authorization from Congress." The *Philadelphia Evening Bulletin* (Rep.) says in a similar strain:

"If the insurrection is virtually at an end, as everybody hopes, and as the mouthpieces of the Administration assert, the question of Philippine government would seem to come within the legitimate scope of congressional duties. The President's desire to do all that is possible in extending the blessings of peace, order, and enlightened civil control throughout the archipelago is undoubted. But the wisdom of his going ahead in the matter without asking for further legislation and authority from Congress is open to question."

THE CLEARING SKIES IN KENTUCKY.

THE opinion generally obtains that the Kentucky crisis has passed, and that whatever the outcome of the contest for the governorship, no more blood will be shed. This first became apparent when the Democratic leaders moved their headquarters to Louisville, leaving the Republican governor in Frankfort and the Republican legislators in London, Ky., far enough away from each other to diminish greatly the chances of sanguinary strife. The conference of leading Democrats and Republicans in Louisville on Monday of last week was taken as another omen of peace, especially in view of the mutual spirit of conciliation that was manifested. If, in accordance with the resolutions adopted at the conference, Governor Taylor had submitted to the legislature and surrendered his seat to Beckham, and the Democrats, in return, had repealed the vexatious Goebel election law, the Republican papers outside Kentucky believe that a revulsion of feeling against the Democrats would have thrown the State into the Republican column next fall. The Republican press in Kentucky, however, preferred the bird in the hand, and urged Governor Taylor to hold the gubernatorial chair at any cost. The Louisville

Commercial (Rep.) said: "If Governor Taylor must surrender the great office to which the people elected him, let the revolutionists, not the Republicans, force him out. Let it be understood that he goes down before the Goebel kuklux, not by private agreement to the burial of the Republican Party in Kentucky beyond hope of resurrection." The *Louisville Times* (Dem.) said that "unless he is demented this agreed basis of a settlement will be accepted and ratified by Mr. Taylor; if he is demented he will be dealt with and disposed of accordingly." Governor Taylor announced, on Saturday of last week, in a signed statement, that he will not sign the agreement, but will let the contest be settled by the courts.

From later accounts it appears that Mr. Goebel's appeal to the legislature, after the State Board of Election Commissioners had decided against him, was taken in accordance with a provision of the state constitution, instead of by the Goebel election law as previously reported.

Victory for Self-Government.—"No more signal proof of the capacity of the American people to conduct their own affairs

under conditions of the greatest confusion and perplexity, and to secure the realities of order and justice despite the apparently hopeless conflict of forms and methods, has been given since the famous disputed Presidential election of 1876. Had the same situation existed in a Latin country, the inextricable tangle which no logic availed to loosen would in all probability have been cut by the sword. But to the average American, taught by his own

experience that facts are too mixed and uncertain to permit the rigid application of logic to them, the situation called for compromise. The fundamental and lasting interest of all the community in order and peace was seen to be of infinitely more consequence than the vindication of the claim to regularity of either party. It is this keen and sound sense of the relative value of things in public life that constitutes the most precious qualification of our people for self-government. So long as we retain it in such a degree as has just now been manifested in Kentucky, we are safe from the dangers which democracy is supposed to involve."—*The New York Times* (Ind.).

Repeal the Goebel Law.—"Nothing short of an unqualified and unconditional repeal of the iniquitous Goebel election law by the joint assembly should induce General Taylor to surrender his claims to the governorship and recognize Beckham as the head of the State government. This infamous law, framed by the late Senator Goebel, was designed to throw the complete control of the State election machinery into his hands for the furtherance of his inordinate political ambitions. Under its operation it was possible to defraud the people and falsify the returns in every precinct and county in the State. It placed the verdict of the people at the mercy of partizan election boards, all of whom were friendly to Goebel in the last contest. It was the blackest stain on the career of Goebel.

"If the legislature will repeal this law or modify it so as to provide for non-partizan election boards General Taylor can go before the people again in November with the assurance that every vote cast for him will be honestly counted. Kentucky will then have an opportunity to right the wrong that has been done him by a partizan legislature in connivance with partizan courts, which defied the plain mandate of the people."—*The Chicago Times-Herald* (Rep.).

Taylor an Outlaw.—"The vital question involved in the Kentucky contest is whether the law shall prevail or whether force shall be recognized as the decisive factor in establishing and

SEAL OF KENTUCKY—REVISED.
—*The Minneapolis Journal*.

"KEEP RIGHT ON STUDYING, BOYS; DON'T MIND THE NOISE OUTSIDE."
—*The Detroit News*.

maintaining state government. Governor Taylor can not expect the support of law-abiding citizens throughout the Union if he stands as the champion of militarism in state affairs as opposed to the Constitution and the statutes. He has either blundered or else he has deliberately entered into a scheme which is revolutionary in the extreme. He has appealed to the bayonet instead of to the courts; he has coerced the legislature when he should have employed the whole power of the State to protect it and to make its deliberations as free as if no crisis had arisen. He proclaimed a state of insurrection when a condition of insurrection did not exist. He set his own power against that of the judiciary, and has done everything, in fact, which 'law-abiding citizens' will not tolerate. If he wishes their support he must first become a law-abiding governor. The issue in Kentucky, reduced to the last analysis, is not whether Taylor or Beckham shall be governor, but whether the law and the Constitution shall prevail. On that issue there can be no division of opinion among thoughtful men. If Governor Taylor outlaws himself he need expect no sympathy from those not blinded by partisan or personal considerations."—*The Baltimore Sun (Ind.)*.

LOCOMOTIVES IN THE STREETS.

THE increasing use of automobiles at high speeds in the streets of our cities is looked at askance by railroad men, who seem to think that the law is unfairly discriminating against railways. We have been crying out for years against grade crossings and have spent millions in abolishing them; and yet, without a moment's warning, say the railroad people, we admit to our streets a crowd of free-running motor-cars that may at any time run amuck, as one did not long ago on Fifth Avenue, New York, to the great danger of hundreds of persons. This seems to the railroad men somewhat inconsistent. Says one of their representatives (*The Railway Age*) in a leading editorial:

"If railway trains, running on a fixed and narrow path, with warning bell and steam puff, across streets guarded by gates and watchmen, and along their own right of way, fenced against trespassers, are considered dangerous, what shall be done with the fierce motors possessing the freedom of the streets, from curb to curb, that are soon vastly to outnumber the locomotives?"

"All the steam railways entering Chicago are now under orders from the city for track elevation. Probably forty miles or more of high earthwork and steel bridges have been constructed in the four years since elevation of the railways, instead of viaducts to carry the streets over the level or depressed tracks, was decided upon. Four companies alone, in their last fiscal year, expended nearly \$2,000,000 in that work, and others spent millions more. A few weeks ago the city council passed a single ordinance requiring four other companies to elevate a part of their tracks, at a cost estimated at \$2,500,000. The railways have accepted these heavy burdens, and will abolish level crossings, altho their tracks do not enter the heart of the city, where the trolley and the automobiles have full play.

"Assuming that track elevation has settled the problem of danger to street travel from the railways, how is the later and greater problem to be solved of protecting the hundreds of thousands of people who daily crowd our thoroughfares from the locomotives of all kinds whose right of way is the streets and crosswalks? That the danger is great and rapidly increasing none who are compelled to cross the streets of Chicago will question. Men who have faced bullets dodge through the crush of vehicles in greater peril than that of war, and women, children, and aged people essay the passage with trembling, and are fortunate to escape unmaimed."

The writer insists most earnestly that the danger he points out is not imaginary. Statistics prove, he says, that more people are killed and injured on the streets of the great cities annually than all the victims of railway accidents. If this has been true in the past, he asks, what will be the record in the 'horseless age,' if locomotives and pedestrians crowd the streets, on a common level? Elevated sidewalks are now proposed as a partial safeguard. Depressed or elevated tracks for vehicles the author

believes to be probably a more feasible remedy, but all, he says, are unsatisfactory. "Surface crossings by steam railways," he concludes, "were harmless compared with the dangers which will confront foot travel in cities in the automobile days of the near future."

COROLLARIES OF EXPANSION—II. SHIPPING SUBSIDIES.

NONE of the proposed maritime ventures mentioned last week seems to have stirred up so much opposition as the bill before Congress "to promote the commerce and increase the foreign trade of the United States, and to provide auxiliary cruisers, transports, and seamen for government use when necessary." This bill, known as the Hanna-Payne subsidy bill, provides for the payment from the national Treasury of not more than \$5,000,000 a year for twenty years to owners of American ships, the swift vessels receiving considerably more than the slow ones. This measure, it is urged, will greatly encourage American shipbuilding and restore the American merchant marine of former years. In 1826, it is recalled, 92 per cent. of our foreign trade was carried in American ships, while now 92 per cent. is carried in foreign ships. The cause of this radical change, say the friends of the subsidy measure, is the cheapness of construction in the British shipyards and the cheapness of running the foreign ships with foreign crews. By paying the owners of American-built and American-manned ships a subsidy, they urge, the margin of loss on American ships will be replaced by a margin of profit, thriving shipyards will spring up along our coasts, employment will be given to many thousands of American workmen and sailors, the Stars and Stripes will again float on every sea and in every port, and in war time the American merchant marine will furnish a great naval reserve of swift cruisers, manned by trained American sailors.

The foes of the measure, however, reckon that the lion's share of the \$5,000,000 would fall to the transatlantic liners, which are held to be already doing business at a profit. The *New York Evening Post (Ind.)*, indeed, points out that if this law had been operating in 1897, steamship lines now running successfully without subsidy would have absorbed \$5,000,000 of the total. "We are informed," it continues, "that the subsidy which would be earned by the International Navigation Company under the proposed bill would in itself amount yearly to more than the gross earnings that can be made by either of the largest steamship companies now employed in the trade between England and America from the earnings of their regular business." In nine years, calculates *The Post*, the Treasury would, under this proposed law, pay "the whole cost of such a steamer as the *Verde York* or the *Paris*, at the end of which time she will be owned, not by the Government of the United States, which has paid for her, but by the company which has received her cost price—the United States being obliged to go on paying the yearly bonus eleven years longer." If this bill is pushed through by the Republican Party, continues the same paper, "it will be simply impossible to answer the taunting charge of Bryan that the Republican Party exists mainly to make the powers of Government subserve the greed and the gain of a few rich men and corporations."

The *New York Times (Ind.)* says that "surely we have had enough of the legislation that taxes and does not benefit those classes that are the great majority of the people"; and adds that it would be as reasonable for the farmers to ask the Government for new plows as for *The Times* to ask for new presses. The *New York Journal of Commerce* says that it—

"would be glad to see American steamships traveling every sea and carrying the greater part of our own commerce and a good part of the commerce of other nations; it would be glad to see

this upon one proviso, and that is that it should be profitable; that the business should earn more than its cost. If it should earn less than its cost, the country would lose the difference whether the loss fell upon the shipowners or whether the rest of the population were taxed to reimburse them; the loss would be there no matter who paid for it.

This paper does not believe that it is sound public policy to take out of the Treasury funds raised by taxation and hand them over to persons engaged in a private business to cover their losses. . . .

"Subsidies are wholly ineffective. We have tried them and abandoned them. Not over 4 per cent. of the British or German steam tonnage receives money from the Government, and in both cases the ships probably earn all they get by speed and frequency of sailings. France, which has adopted the universal bounty system now pressed upon our Government, is complaining of its absolute futility and is proposing the second increase of the rates of bounty in twenty years because the French mercantile marine is not even holding its own. No person who can read our economic history, or who can reason, supposes that our merchant vessels can be supported by the Government for thirty years and then be in a condition to meet foreign competition. They will have to have a constantly increasing amount of assistance until the system gets too heavy to be borne and breaks down."

The *New York Press* (Rep.) thinks that the bill should be changed so that the slow steamers, which carry the bulk of our foreign trade, will get a larger share of the subsidy.

The *Boston Journal* (Rep.) thinks that the United States or any other nation which does not use some means of protecting itself from England's competition in shipbuilding will inevitably lose its merchant marine. But, says the *Boston Transcript* (Ind. Rep.), "whatever the effect of subsidies may have been, the great mass of England's carrying trade has been in independent vessels that neither received nor asked any government aid whatever." This bill, it adds, "belongs in the rubbish heap of discredited legislation, and the sooner it is remanded there to stay the better." The *Boston Herald* (Ind.) calls the scheme "an effort on the part of a relatively few individuals and companies to secure a large annual subvention from the United States Treasury," and the *Worcester (Mass.) Star* (Rep.) declares that "it would be nothing short of an outrage to tax the general public to pay increased profit to a small class of shipowners."

The *Philadelphia Ledger* (Ind. Rep.) calls the bill "wholly pernicious," and the *Philadelphia Record* (Ind. Dem.) says that "should the nine millions a year prove insufficient to go around, it would prove a potential lobby fund for making a demand upon Congress for more. Once begun, there is no predicting where this scheme of spoliation and corruption would end." The *Philadelphia Manufacturer*, however, believes that the nation's shipping interests bear so important a relation to the nation's well-being that their prosperity will repay the country for all that it is likely to expend upon them; and the *Philadelphia Bulletin of the Iron and Steel Association* takes a similar view. The *Iron Age*, of New York, on the other hand, says:

"It ought to be evident by this time that the country which eventually is to be supreme in the shipping trade of the world will not become so on account of the payment of subsidies. The American people have been able to develop an unparalleled transportation system on land by means of private enterprise and the employment of private capital. Why should it be more necessary to depend upon government aid in the building of ships? This question is pertinent in view of the success of the American shipping trade before the period when railway building began to absorb to so large an extent the capital of the country."

So much for the Eastern press. The *New Orleans Picayune* (Dem.) says of the bill that "there never was a more barefaced and wholesale raid on the Treasury than this ship-subsidy grab, except, perhaps, the pensions expenditures." The *Indianapolis Sentinel* (Dem.) says that "the apparent fact is that the subsidy

bill is the worst gouge ever attempted in this country, and it is meeting condemnation everywhere"; and the *Indianapolis News* (Ind.) argues that "there is no more reason why the farmers should be taxed for the benefit of the shipping interests than that the shipping interests should be taxed for the benefit of the farmers."

The *Chicago Inter Ocean* (Rep.) supports the measure heartily. It says:

"The United States, and particularly the South, abounds in all the materials for shipbuilding. We have capital eager for investment and men skilled to do the work. Our experience in war-ship building proves that where the demand exists steel ships can be built more cheaply in this country than elsewhere. It costs more to operate an American than a foreign ship because wages are higher. To meet this difference, a difference which makes for the general well-being of our own people, Congress is asked merely to take some of the money which we now pay to foreign labor and give it to American labor. . . .

"Inasmuch as we now pay at least \$300,000,000 a year of tribute to foreign vessel-owners, who have the greater part of our carrying trade, the moderate appropriations contemplated by the Hanna-Payne-Pryce bill will be a measure toward a great ultimate economy."

The *Chicago Times-Herald* (Rep.) takes a similar view, saying:

"The annual subsidies to be granted are limited to \$9,000,000, which is not half so much as is granted every year to the improvement of rivers and creeks that can not be located on the map. Deducting from this the sum of \$1,500,000, the present cost of carrying our ocean mails on American vessels, leaves the actual maximum annual expenditures proposed by the bill at \$7,500,000, an amount so small compared to the vast benefits that will accrue to the shipbuilding industry that it is not likely the opposition to government subsidies can muster enough strength to defeat the measure or some modification of it."

The *Chicago Tribune* (Rep.), however, says that "the trail of the serpent" is over the Hanna-Payne shipping subsidy bill. It is devised principally by one of the most odious trusts in this country. Its object is not to 'build up the merchant marine,' but to enrich the promoters of the enterprise." The *Chicago Chronicle* (Dem.) says that it is "a bill to take money out of the pockets of American taxpayers and put it into the strong boxes of the American capitalists who own ships and run them between American and foreign ports"; and the *Chicago Journal* (Ind.) says: "What American grain-growers are interested in is low freights. Low freights do not result from putting the carrying trade into the hands of a trust, as the Hanna-Payne bill would do."

The *St. Paul Pioneer Press* (Rep.) says:

"We are now producing steel fabrics of all kinds at less cost than any other country in the world, and there is apparently no reason why we can not compete successfully with any other nation in the building of steel ships. In all probability the steel trusts, and perhaps a shipbuilding trust, would manage to appropriate, if not the whole, at least a part of the subsidy in increased prices for material and construction. . . . Unless amended in such a way as to be plainly promotive of the up-building not only of an American merchant marine but of American trade with foreign countries, it will be difficult to justify the taxing of the American people to pay subsidies to shipowners."

The *St. Paul Dispatch* (Rep.), referring to the belief that most of the subsidy would go to the Atlantic liners, says: "If American products are to be shipped abroad they must go in freighters—not in the great ocean greyhounds. As well talk of stimulating the shipment of hogs from Chicago to New York by reducing the charge for berths in Pullman sleepers"; and the *Minneapolis Times* (Ind.) believes that a shipping trust would be formed, freight rates increased, and commerce, instead of being helped, would receive a staggering blow. The *Milwaukee Journal* (Dem.) says that the proposed law will make "fat picking for

the bounty beggars." The *Denver News* (Ind. Rep.) favors discriminating import duties as a substitute for the subsidy plan.

Most of the Pacific-coast press look upon the subsidy measure with favor. The *San Francisco Chronicle* (Rep.) calls it "the only course which will ever permit the United States to take its proper place as a maritime nation," and the *Tacoma Ledger* (Rep.) indorses it with the proviso that it be amended so as to favor the slower Pacific steamers more. With such an amendment, it says, the measure "would solve the problem of the Oriental trade and aid in building up the most magnificent fleet of merchant vessels in existence." The *Seattle Post-Intelligencer* (Rep.) thinks that some aid for American shipping is certainly needed, but admits that the question as to how the aid shall be given is a vexing one. The *Portland Oregonian* (Rep.) notices that Arthur Sewall, William H. Starbuck, and several other Americans have been able "to pile up colossal fortunes without the aid of subsidies, and to sail their ships in any part of the world, in direct competition with the British ships," and says that these examples "give the lie to all who assert that the American merchant marine can not float on its own bottom unaided by subsidies." Several other papers have pointed out that President James J. Hill, of the Great Northern Railroad Company, is preparing to build a fleet of twenty-five large steamers on the Pacific coast, without subsidy aid, for trade with the Orient, and expects to make them pay. The *Oregonian* concludes that the shipowner does not need the subsidy, and as for the freight-paying farmer, "if he is the man to reap the benefit, give it to him in the shape of a direct bounty, instead of a subsidy which is certain to fall into the hands of a few shipowners and shipbuilding syndicates."

The Washington despatches say that on account of the strong and growing opposition to the bill, both inside and outside of Congress, its promoters may postpone its consideration until the short session of Congress, after election.

A PROPOSAL TO TAX PATENTS.

A BILL has been introduced into Congress by Mr. Reeves, chairman of the House committee on patents, under the terms of which any persons or corporation that shall manufacture any article, machine, device, or thing hereafter patented shall pay into the hands of the Commissioner of Patents, for each of the things so manufactured, as a royalty for the privilege of manufacturing and selling such patented article, a sum of money not less than 1 per cent. nor more than 10 per cent. of the estimated cost of manufacturing such patented article, which royalty will be determined by the Commissioner of Patents. Upon receipt of this sum the commissioner will issue a stamp or certificate showing that the royalty has been paid, and this stamp or certificate shall be attached to such manufactured articles where practicable, and in all cases shall be delivered by the manufacturer to the purchaser, whether attached thereto or not. No manufactured article will be allowed to leave the hands of the manufacturer without the stamp

or certificate. The *American Machinist*, to which we are indebted for this summary of the proposed measure, calls on the manufacturers of the country to rally for its defeat. It says:

"This we consider to be one of the most foolish and ill-considered measures that have been proposed in Congress for some time. There are too many people who know nothing of the science of taxation, who seem not to know who finally pay all taxes, and imagine that whenever any man or class of men are wealthy it is the duty of somebody to devise a new tax to be applied to them or their business. The proposed tax would be an annoyance to manufacturers, would operate to prevent new inventions from being introduced, and would of necessity be paid in the end, not by manufacturers, but by the users of the particular patented articles, just as users pay all other necessary elements of the cost of producing such articles.

"Then, too, let us imagine, if we can, the difficulties and entanglements that would arise from the fact that the Commissioner of Patents is to decide whether a man pays 1-per-cent. or 10-per-cent. tax."

TOPICS IN BRIEF.

There are no differences of opinion concerning Kentucky. She should not be annexed.—*The Indianapolis News*.

"After all," sighed Victory, leaning sadly upon her shield, "what would I be in these days if it were not for the press censor?"—*Puck*.

It is true that "the Boer is standing in the way of progress." That is to say, progress of the British troops.—*The Memphis Commercial Appeal*.

In one respect Aguirre has beaten Governor Taylor of Kentucky. The latter tried to move his capital, but couldn't.—*The Chicago Times-Herald*.

The woman suffrage associations may now discuss the question, "Are the men of Kentucky too emotional to be allowed to take part in politics?"—*The Woman's Journal*.

If General Roberts has profited by the experience of General Oia he will just remain at Cape Town and issue bulletins to the effect that the war is over.—*The Chicago Record*.

The *Durban Weekly Review* has been suppressed for criticizing Buller. This is the first complete victory that the general has gained so far.—*The New York World*.

It is said the Federal Government will not interfere in Kentucky. The Federal Government interfered in Cuba and Luzon some time ago and has not got out of it yet.—*The Chicago Record*.

They arrested a man in New York the other day for tickling his wife until she had hysterics. After this what excuse will any New York man have for trying to be pleasant around the house?—*The Chicago Times-Herald*.

If the English don't watch out the fight is likely to be given to the Boers on a foint. General Joubert complains that they "don't fight fair," as the boys say. Only a little while ago they planned a night attack on his camp, and then the order was countermanded without notification being sent to him. As a result he and his men lost an entire night's sleep. This, as every one knows, is against the rules of civilized warfare. Soldiers need sleep as well as other people, and to deprive them of it unnecessarily is to perpetrate a cruel injustice.—*The Chicago Evening Post*.

OPERA IN AMERICA AND EUROPE.

MR. HENRY T. FINCK, the musical critic of the *New York Evening Post*, makes an interesting comparison of the conditions of the opera in the chief cities of the United States and of Europe, in *The International Review* (February). The contrast between the reception accorded to grand opera in New York and in Chicago is very marked, he writes, and he is rather severe in his judgment of musical taste in the latter city:

"Chicago claims a population of two millions, and it is estimated that among these there are perhaps four hundred thousand who were born in Germany, or born in America of German parents. The Germans are certainly more devoted to good music than any other nation in the world; yet when Mr. Maurice Grau invaded Illinois with an opera company which New York had patronized to the extent of nearly a million dollars, leaving him a clear profit of one hundred thousand dollars, Chicago, with its hundreds of thousands of Germans, treated it with such neglect that Mr. Grau solemnly resolved that he would never go there again. Last November, nevertheless, he made another attempt, changing his tactics by taking his company to Chicago before the New York season; thus silencing the objection that he did not give Western audiences a chance to hear his singers until their voices had been worn out by four months' work in New York. Again, however, his expenses exceeded his receipts, and this time he was charged with the crime of taking his company to Chicago first, in order that the performances there might serve as rehearsals for New York!

"The indifference shown toward Mr. Grau's company in Chicago seems almost incredible when we look at its make-up. No opera-house in Europe has half as many singers of the first rank as he took West in November. The names of the prima-donnas alone would take away the breath of opera-goers in any European city. There were not only the two most eminent American singers, Mmes. Eames and Nordica, but five of the foremost German and Austrian artists of the century. . . . The plain truth is, that the populace of Chicago, like that of most of our cities, does not care to support good music, for the simple reason that such music gives it no pleasure, being, in fact, more apt to bore it."

Philadelphia has of late made an effort to become operatic, and for many years New Orleans has had a praiseworthy French opera; but in the European sense, says Mr. Finck, New York still remains the only American city worthy of serious attention from the viewpoint of opera. Even in New York, opera has not always been prosperous. During the last season, to be sure, Mr. Grau cleared a hundred thousand dollars; but in 1884-85, the old firm of Abbey & Grau lost a quarter of a million and vowed that they would thereafter have nothing more to do with New York. Mr. Finck does not regard the prices paid to operatic stars as excessively high: "One might as well inveigh against great lawyers and doctors for the exceptional fees they receive; or against Kipling for getting more for a line of verse than Milton got for the whole of 'Paradise Lost.'" Mr. Grau does not grudge Jean de Reszke the fifteen hundred dollars or more per night when his receipts average three thousand more when that singer appears. Mr. Finck continues:

"In the days of Anton Seidl, the orchestra at the Metropolitan was as admirable as the great singers, but the chorus has seldom reached a high level. It is made up chiefly of Italians, who are not always on good terms with the pitch. I have heard them sing in such a way that one got the impression that they were split up into two dozen factions, each one asserting the claims of one of the twenty-four major and minor keys, with the adjacent territory. Of acting, they have no more notion than their predecessors in the Italian opera of the seventeenth century. As a stage manager once remarked, 'They seem to think they have done all they have been paid for, if they just stand around and sing.' Nor can I say much in praise of the Metropolitan scenery,

tho a few of the operas are well mounted. For so large a stage the facilities for making changes are lamentably deficient.

"The ballet has degenerated into a thing to be laughed at. We are far, indeed, in taste, from the times when operatic critics were expected to go into raptures over a Carlotta Grisi, 'bounding like a gazelle at sunrise, when first she starts from her couch of fern, shaking the dew from her haughty crest, lithe of limb, incarnate of grace.'"

As for operatic conditions in London, the situation at Covent Garden is so similar to that in New York as to require no separate description. The grand opera is transferred bodily from New York to London, where the season begins just a month later. Wagnerian opera, about which the Princess of Wales is an enthusiast, predominates, and only five Italian operas were given in London last season.

Across the Channel, in Paris, operatic music is dominant. The receipts at the grand opera average about six hundred thousand dollars for the season, but the singers receive much less than in England and America. Lately, the chauvinistic quarantine against Wagner has been removed, and now the great German holds the leading place.

In Italy we find nothing but decadence, says the writer: "Italy has long since ceased to supply the world's demand for opera singers, and the very few there are do not remain at home, because they can get so much higher terms in England and America." Verdi is the last of the great composers; for Mascagni, who, when he first appeared on the horizon with his "Cavalleria Rusticana," was thought to be a star, is now admitted, says Mr. Finck, to be only a comet.

Germany is far in the lead of Italy in operatic music, and the keynote of German musical life is cosmopolitanism:

"It is an actual fact that Italian and French operas are oftener sung in Germany than in Italy and France, and to these the Germans add their vast domestic repertory, including about fifty new operas a year. Most of these, it is true, are ephemeral. Indeed, the only brilliant successes within the last decade or so have been won by Humperdinck, Goldmark, Kienzl, and Siegfried Wagner. Richard Wagner still overshadows everything, his operas receiving between eleven and twelve hundred performances a year. In the larger cities—as has been the case also in Paris, London, and New York—Wagner gets one third of all the representations. In Hamburg alone Wagner had a thousand nights in twenty-three years, beginning in 1874, on the accession of Pollini as manager. At Baireuth the house is always sold out. The future is uncertain—not for Wagner, but for his successors, D'Albert, Weingartner, Richard Strauss, and others are industriously adding new operas to the repertory, but there is as yet no sign of a new genius; and, at the present date, it does not seem likely that Siegfried Wagner will astonish the world by making as long a stride from his first opera to his later ones as his father made half a century ago."

A Pioneer of Juvenile Journalism.—The recent death of Mr. Daniel S. Ford calls attention to a career of more than ordinary interest. Altho commencing life with a very meager equipment of education and means, Mr. Ford attained one of the great journalistic successes of the time, and through his widely circulated paper, *The Youth's Companion*, exerted a powerful influence, tho his personality was for the most part unknown to the public. The methods by which he attained his personal and business success are instructive. From a biographical sketch in *The Youth's Companion* (February 1) we quote the following:

"Only a few months before his death he related an instance of the manner in which his self-training was first practised. It reveals a characteristic quality of well-guided perseverance. He was working, in his early life, at his trade of printing. The editor whose paper he served was less industrious than he might have been, and was not sorry to receive 'copy' from his young printer. This printer saw therein his opportunity, and gave

most of his spare time to writing. All the while he did not fail to read the best exchanges, English and American, which came to the office, and had the good sense to recognize in them an editorial style much better than anything at his command. How could he, how did he, acquire it? Night after night he held himself to the task of learning how to write—and after this wise: He placed before his mind a single straightforward idea—capable of expression in about one page of manuscript—and proceeded to get at the best way of expressing it. In every form of words which his ingenuity could contrive, he wrote out this idea, sparing no drudgery or weariness until he felt that he at least could express it no better. It was an unconscious preparation for an English style of unusual effectiveness for its purpose—a style which had perhaps its best expression directly in editorial correspondence and indirectly in all the columns of *The Companion*.

In 1857, Mr. Ford bought *The Youth's Companion* from its founder, Nathaniel Willis, and thereafter devoted his whole energies to bringing about the great success which it later attained.

HAMLIN GARLAND AS INTERPRETED IN PARIS.

IN Th. Benzon (Mme. Blanc), Mr. Hamlin Garland finds a delightful sponsor for his introduction to the Parisian world. She calls him "A Radical of the Prairie" (*Revue des Deux Mondes*, January 1); and under this title writes such a thoroughly readable and appreciative review of his works that a new interest could scarcely fail to be awakened in his behalf. He has paid Mme. Benzon a visit, at her "little house" in the suburbs of Paris, and she has found in him that element of the primitive—"sauvage de l'Ouest"—that Europeans seem always to look for in Americans. She writes:

"An artist rarely resembles his work, because in this world absolute sincerity is rare. But one finds this sincerity intact in Hamlin Garland. In reading him, it is impossible to imagine him other than he is. All that he has written of the hard life of the pioneers of the Central West he has experienced. 'With my own hands have I cultivated hundreds upon hundreds of acres. I speak of nothing I have not accomplished myself; I have, by the sweat of my brow, transformed a desert into a field of wheat; when I plead the cause of the people, I feel myself one of these people, even to the very marrow.'"

There follows a short biography, telling of Garland's life on the prairies and his subsequent visit to New York and New England "in search of another kind of culture than that of wheat." For he believes, with Eugene Field, that genius is "the knowing how to remain face to face with an idea." Mme. Benzon continues:

"Hamlin Garland has remained and still remains face to face with an idea ever increasing within him, viz.: the resources and glory of the West, the inanity of the dead past, the duty of pressing on to the future. In his 'Prairie Songs' a perfectly new and original note is sounded. He sings of the vast plains of the great West, with the unique aim of catching in his poems what he has lived there, putting it all with precision and all possible sincerity, so as vividly to present this rival of the steppe and of the sea, the prairie. His thoughts are put to measure as they come to him under form of rapid impressions, but so just that one feels them, beholds the prospect, and breathes the aroma of the atmosphere. His verses strike you by the happy selection of words as much as by a sentiment of ineffable melancholy; they reflect the springtime, the nocturnal snows, the passage of the last buffaloes dispossessed of their empire, the flight of the threatening wolf; and the song of the shifting winds sounds in our ears."

Of the pitiless toil of Garland's characters, Mme. Benzon says:

"Of this labor, worse than that of slaves, Hamlin Garland speaks in such a way that one would call him a pessimist, did he not take the trouble to explain his particular kind of optimism. It is that of a man who, fully understanding the lamentable state

of things, believes, nevertheless, that it is capable of being ameliorated. He dares to speak the truth, even very black truth, but he believes there is a panacea for the future. What is it? Equal rights for all. That is to say, suppression of monopoly and of too great privilege."

Mme. Benzon believes, however, that in his case the radical will be eventually swallowed up by the nature-lover.—*Translation made for THE LITERARY DIGEST.*

SOME ENGLISH VIEWS OF RUSKIN.

RUSKIN'S burial at Coniston, his old home, instead of in Westminster Abbey, has called forth some expressions of regret in England, altho the justness of the considerations which led his relatives to decline Dean Bradley's offer of a burial-place in England's great Pantheon is acknowledged. From the *Manchester Guardian* (January 16) we take the following description of the last rites:

"It is much . . . that he sleeps in the village churchyard, in the shadow of his loved hills and in the home of all the most beautiful associations which have grown up around his name. His place of burial is in the northeast corner of the churchyard, and is shaded by a row of cedars. Wordsworth made sonnets here, as everywhere in the Lake district; and it may have been of this churchyard that he thought when he wrote of the dead being 'soothed by the unseen river's gentle roar,' for the line has here a faithful significance. The church—which is severely simple within and without—is overlooked by the sheer Long Crag, now a dark brown in its winter foliage, relieved here and there with white strips of waterfall which are too far off to be heard but are infinitely refreshing to the eye.

"This morning the tops of Langdale Pikes caught and held the flying mist, and Coniston Old Man was simply blotted out of the prospect. Rain had poured in torrents all yesterday, and in the night there was a storm of wind and rain not often equalled even in the Lake district. It was in a drenching downpour that Mr. Ruskin's body was brought yesterday from Brantwood. The members of the Severn family accompanied the hearse in four carriages, one of which bore upon the panel Mr. Ruskin's characteristic motto—'To-day, to-day, to-day.' The members of the Parish Council and the committee of the Institute met the procession a quarter of a mile from the church and, notwithstanding the heavy rain, walked at its head. In the church the coffin was placed upon the bier which has frequently done similar duty for the humbler dead of the parish. The village choir sang 'Peace, perfect peace,' and Miss Bowness, the organist, played the 'Dead March.' The inner shell of the coffin was open over the face and fitted with glass to give Mr. Ruskin's friends a last opportunity of looking upon his features. The face bore a beautifully calm and peaceful expression, and it was remarked that Mr. Ruskin's hair retained its singular yellow-gray color so familiar to his friends for many years. The church having been visited by some hundreds of people, many of whom had traveled considerable distances, the coffin was closed in early yesterday (Wednesday) evening. Visitors, however, continued to pass the bier until ten o'clock at night, and after that hour and until the re-opening of the church this morning a band of villagers kept watch in relays of two. . . . The wreaths came from all parts of Great Britain, and there was one from Ireland—sent by Victoria School, Londonderry. Mr. G. F. Watts sent a crown of laurel from a shrub at Limmerslease, and with it the following note: 'A wreath of the true laurel, the victor's crown, to lay at his feet. It comes from our garden, and has been cut before three times only—for Tennyson, Leighton, and Burne-Jones. This time for the last of my friends.' The inscription accompanying the wreath was 'With profound admiration and deep affection.' . . . During the closing words of the service there was a slight renewal of the rainfall, but by one of the sudden transformations characteristic of the Lake district the sun partially dispersed the clouds before the end was quite reached, and there came a stretch of blue overhead which developed into a beautifully fine evening."

The Guardian, commenting on the chief lesson of Ruskin's life and teaching, says that it was his endeavor to reconcile the

two great classes that still dominate England and the world, the Roundheads and the Cavaliers—the people who see only duty and not beauty, and the people who see beauty but not duty. The soul of humanity should be large enough to include both these great principles:

"It is a fixed idea of one type of English mind that art is a rather wicked thing, just as it remains a very prevalent idea in other quarters that duty must be a very unpleasant and ugly business if it is to have any merit. Carlyle did a great deal to encourage this. He imported into English thought all the terrors of his Calvinistic tradition, and he made it rather a virtue to be surly and melancholy. But Ruskin taught us that joy was a duty; that you can not be good unless you like being so; and, most holdly of all, that art is a necessary part of good living. 'Industry without art,' he said to our great England, proud of its vast toils and its very ugliness, 'is brutality.' 'Art without industry,' he said to our *dilettante* artists, 'is guilt.' 'Art,' he said, in a fine paradox, 'alone is moral.' He endured the prophet's reward—of being scorned by both sides. But all he wanted was the 'crown of wild olive,' the 'wages of going on,' and those he has earned. He has taught us the beauty of holiness. There are plenty of teachers who will show us the dusty road of duty, but there are not many who can lead us on, like the Pied Piper, charming us by the strains of their lutes. That was Ruskin's work. There are some who see in it a strain of weakness, and we do not pretend that it provides a cure for the gravest moral tempests. But it has laid hold of young England, and has probably had more influence for good than many denunciations of doom."

The Standard (London, January 22) says:

"Few lives and reputations, it is not too much to say, would bear without impeachment and disadvantage the keen scrutiny which can be turned fearlessly enough on the life of Ruskin. According to his own lights—and they were, indeed, no mean ones—he was an absolutely faithful and helpful man. His impatience permitted him to say unwelcome things. A belief in his own inspiration—which had at least far more to justify it than the vanity of the convenient talent that has known how to make itself notorious—urged him sometimes into treating opponents with a harshness which, if he had realized it, he would have been the first to deplore. Those who knew him best knew that he was often of wonderful kindness in thought and act. Witness his public benefactions—Sheffield, Oxford, Cambridge—as well as his private services. He not seldom quarreled with others, but others rarely quarreled with him. And that was not their merit. It was his, almost entirely. For, with faults womanly or childish, he had goodness, virtue. Lovable in youth, energetic in manhood, and in later years at once to be venerated and pardoned, he was of a nature to make but temporary enemies—to make faithful disciples and devoted friends. Years—wearied years even after the end of his true career—the grave is closing over this poetic enthusiast, this generous soul, and this consummate writer."

The Academy (January 27) thus speaks of Ruskin's prose style:

"He acquired something of the Greek's noble limpidity without foregoing his own Gothic spirit of poetry, his own Teutonic love of color and sensitiveness to external nature. This is for us the authoritative Ruskin; upon this balanced and matured style our estimate of him is based. Let it be said that it is impossible to separate, in this perfected style of his, mechanism from substance. This is as it should be. In the greatest works both are indissoluble; the outward form being the limbs and lineaments of the inward meaning, and without significance apart from it. Despite those leonine roars of invective in which he remembers Carlyle, the true Ruskin is essentially feminine and persuasive. That later style of his is a wonderfully adaptable thing, gracious and pliant, lending itself alike to exposition, description, playfulness, eloquence—all the needs of the lecturer. The old Hellenic verbal teacher was reincarnate in our midst. The sentences were mostly short, unintricate, but ruled by a supreme sense of form. Most subtle and suave, they moved in an atmosphere of exquisite luminosity and clarity. The earlier insistence of adjectives disappears, while the sense of apt and chosen epithet remains. He can be austere in gnomic wisdom, or full of fluent charm in de-

scription. And there is no trace of effort. He attains the note of the complete master, the presiding greatness of a sweet and lovely peace. Out of this un-self-conscious style, at grips solely with the explicit delivery of its message, the loftier passages blossom naturally. Such is that on the Cumæan Sibyl of Botticelli in 'Ariadne Florentina.'

"There is no straining after eloquence; but impressiveness is beautifully, because righteously, attained. And the greatness of Ruskin's style at its best is that of most sweet adequacy and entire fulfilment; the adornment not a thing put on, but the expression of an innate grace."

The Tablet (Rom. Cath., January 27) says:

"He will be remembered not for his teaching on the principles of art or on politico-economical subjects, but for the nobility of his aims and the matchless dignity of his style, which, in spite of all its faults of prolixity and paradox, gives him an assured place in the majestic dynasty of the greatest writers of English prose."

The St. James's Gazette (January 22) says:

"Mr. Ruskin was indeed not without limitations of his own. He has said things about the artists of the Dutch school, and notably on Rembrandt, which leave one with the wish that his sympathies had been even wider. He was obtuse to the beauty of Raphael, and he indorsed a judgment on the great Italian master attributed, on good evidence and with every appearance of truth, to Velasquez, which is chiefly a proof that a man may be a consummate artist and yet want due appreciation of an art which is not congenial to himself. That Velasquez did not much admire Raphael is as credible as that Carlyle had no love for Plato. When both condemned what was not their own, they only proved that men may be great creative artists and yet be wanting in that impartial love of all things good and beautiful which is the virtue of the true critic. Perhaps Mr. Ruskin, whose claim was that he was a critic, erred in not being wider in his sympathies than the intensely individual Spaniard and the passionately individual Scotchman. But then he was himself far more artist than critic, and it is a mistake to look upon him as a judge. He had the indispensable qualities of the artist—the love and inner vision of beauty, and the power of giving form to what he felt."

LACK OF NATIONAL CHARACTER IN AMERICAN ART.

AMERICAN art as viewed to-day by one who is frankly—we might almost say defiantly—American is not altogether roseate in its coloring. Mr. Hamlin Garland looks upon the plastic and linear arts much as Whitman looked upon the art of literature—as presenting an inspiring opportunity for the display of all that is virile, and heroic, and distinctively democratic in American life; and, like Whitman, he sees very little of these qualities as yet in American art. In speaking of the splendid new Congressional Library at Washington, which he takes as a characteristic type of the American art of to-day, he says (in the *St. Louis Post-Dispatch*, January 21):

"Here the mastery of means is complete; the sculptor's hand has gained extraordinary cunning; the painter's colors vibrate in harmony with the most advanced theories of art. Effects are studied, graded, juxtaposed, and blended. Enormous knowledge of modern methods, a cleverness which seems miraculous, is in every flying figure, in the set forms of the mosaic and in the sculptured cornices and balustrades; but it is all without national character; it is the art of culture, it is not creative. In excluding the coon and the buffalo, the jaybird and the prairie chicken, the painters have shut out everything which a hundred years from now will seem typical of our life at this day. One distinctive scene, an Indian picture-writing on a buffalo skin, stands out conspicuously alone in a chain of panels illustrating the development of the art of bookmaking; all else smacks of Paris and of Parisian cafés."

"Now, all this is deeply significant. The decoration of these buildings registers a curious stage in American art life. For some reason many of our painters to-day are frankly scornful of us. They consider their native land barren and hopeless, a place

unfit for them to inhabit. They sneer at the notion of a national art. To be 'little Frenchmen,' to paint canvas that shall look like the successes of the year in Paris, is to these men better worth while than the delineation of any phase of American life whatsoever. 'I'd rather be a beggar in Paris than a millionaire in America,' said one artist to me.

"They have no part in American life; those of them who remain at home herd together in the great cities; they may be found constantly at the clubs, where they talk each other into deafness if not into silence. They copy each other even to the brush stroke. They go to Paris if they can; if they can't, they complain of their hard lot. The Alleghenies, the great plains, the Rocky Mountains, the Sierras, and the Western sea are to them names. The life of the farm, the workshop, and the mines has for them no interest. At the very best they endure New York City. If a man is born west of the Alleghenies he hastens to forget it; he flutters around the flame of Paris and in the end is swallowed up.

"Great cities are in fact naturally inimical to the creative and individual in art and literature. They are market-places, points of comparison and criticism, but they are dangerous residences for the creative man. They warp all things to their own judgments, and a genuine national art is difficult in London, which considers 'the provinces' dark places, or in Paris, which considers itself Europe. In their clamor the painter loses individual quality and paints for the market, which is bad, or for his critics, which is worse."

THE NEW NATIONAL INSTITUTE OF ARTS AND LETTERS.

IT is believed that a new influence for the advancement of American literature and art has arisen in the recent organization of the National Institute of Art and Letters, the first public meeting of which was held in Mendelssohn Hall, New York, on January 30. The original members of this body were selected by the American Social Science Association, acting under the power of its charter from Congress. The Institute, which now has an independent organization, comes nearer, therefore, than any other body to being the official representative of arts and letters in America. At the recent meeting addresses were given by the president, Mr. Charles Dudley Warner, and by Dr. Henry Van Dyke. Mr. Warner's address (which, owing to his illness, was read by Mr. Hamilton Wright Mabie) was in part as follows (New York Times, February 3):

"No one doubts that literature and art are or should be leading interests in our civilization, and their dignity will be enhanced in the public estimation by a visible organization of their representatives, who are seriously determined upon raising the standards by which the work of writers and artists is judged. The association of persons having this common aim can not but stimulate effort, soften unworthy rivalry into generous competition, and promote enthusiasm and good-fellowship in their work.

"In no other way so well as by association of this sort can be created the feeling of solidarity in our literature and the recognition of its power. It is not expected to raise any standard of perfection, or in any way to hamper individual development, but a body of concentrated opinion may raise the standard by promoting healthful and helpful criticism, by discouraging mediocrity and meretricious smartness, by keeping alive the traditions of good literature, while it is hospitable to all discoverers of new worlds. A safe motto for any such society would be Tradition and Freedom—*Traditio et Libertas*.

"It is generally conceded that what literature in America needs at this moment is honest, competent, sound criticism. This is not likely to be attained by sporadic efforts, especially in a democracy of letters where the critics are not always superior to the criticized, where the man in front of the book is not always a better marksman than the man behind the book. It may not be attained even by an organization of men united upon certain standards of excellence. I do not like to use the word authority, but it is not unreasonable to suppose that the public will be influenced by a body devoted to the advancement of art and literature, whose sincerity and discernment it has learned to respect, and admission into whose ranks will, I hope, be considered a

distinction to be sought by good work. The fashion of the day is rarely the judgment of posterity."

Continuing, Mr. Warner, differing from a large number of American and English authors (see THE LITERARY DIGEST, September 3, December 2, 1899), advocated perpetual copyright of books, stigmatizing the present copyright law as a "gross absurdity."

AMERICAN BOOK PRODUCTION IN 1899.

THE year 1899 was a good year from the publisher's standpoint, altho not a phenomenal one in the total number of books published and sold. Altogether 5,321 new publications were recorded for last year on the weekly lists of *The Publishers' Weekly*—more than in either 1897 or 1898, but less than in 1895 or 1896. In two respects, however, the year was phenomenal—in the great sales recorded for the three or four leading novels of the season, and in the fact that these were all books of American life by American authors. *The Publishers' Weekly* (January 20) gives the following summary of the production of books during the past two years:

"The table which follows gives in classes the figures approximately of the book production of this country in 1899, with those of 1898 for comparison. All the departments show an increase, excepting theology and religion, political and social science and medical science, in each of which there is a slight decrease. Fiction, it will be seen, still keeps the lead, as it has for many years. Law follows, as in the previous year. But theology and religion, which occupied the third place, fell to the fifth, taking the position of juvenile in the list, which rose to the third place. The changes in the other classes were not so notable. Education and language, biography and memoirs, and description and travel went up a little, but the other classes kept their old positions.

Classes.	1899.		1898.	
	New Books.	New Editions.	New Books.	New Editions.
Fiction	794	483	749	481
Law	407	39	454	33
Juvenile	305	37	434	34
Education and language	164	13	397	32
Theology and religion	406	49	393	37
Literary history and miscellany	313	39	304	42
Poetry	258	15	308	31
Biography, memoirs	173	23	288	22
History	344	35	345	22

Total	4,332	554	4,749	572
		4,178		4,749
		4,386		5,321

NOTES.

NOT many American authors have enjoyed the privilege of translation into Russian. Such, however, is the honor which has befallen Mr. Ernest Howard Crosby's "Plain Talk in Psalm and Parable." Count Tolstoy, who has lately read Mr. Crosby's volume, thus writes to the author:

"I like the book very, very much. Some of the pieces—the choice is difficult because all are very good—I will have translated into Russian and published. There is nothing more new and interesting than the most common subjects looked at from a Christian point of view; and that is what you are doing in your book, and doing with talent and sincerity."

PHENOMENAL sales continue to be reported of the leading novels. "David Harum," in about a year, has reached a sale of somewhat over 400,000 copies, while "Richard Carvel" in seven months has reached 350,000 copies. Three new books are now pressing toward the front. "Janice Meredith," by Paul Leicester Ford (Dodd, Mead & Co.), has taken so remarkable a hold upon popular fancy that its sales in three months reached 200,000, and the interest and merit of the story have also won critical commendation. Crawford's "Via Crucis" is now in its seventieth thousand. It is a tale of the Second Crusade, and many admirers of Mr. Crawford think it equal to the best work he has done. Another book that is rapidly coming to the front is Booth Tarkington's "The Gentleman from Indiana," of which 4,375 copies were sold in December alone. Altho by a very young man, the book has, in its descriptive and humorous power, a decided touch of the spirit of Dickens, and the account of the Hon. Kedge Halloway's speech in the third chapter is Pickwickian in its slyly humorous portrayal of a rural scene. In Mr. Tarkington the great West has apparently found another Garland, altho one dealing with its life from an almost diametrically opposite standpoint of optimism.

SCIENCE AND INVENTION.

HOW SCIENCE IS TRANSFORMING THE WORLD SOCIALLY.

THE result of the advancement of science seems to be a steady upward drift in the industrial scale. The introduction of improved machinery and better methods in all occupations throws men out of work, it is true, at the lower end of the scale, but it provides more intelligent work at the upper end, so that, altho individuals may suffer, humanity as a whole is a gainer. This is brought out in a recent article on the subject in *The Nineteenth Century*. Says the writer

"Science is steadily sweeping away all those humblest classes of employment. Hardly any man has now to toil up ladders with the hod of bricks upon his shoulder. The donkey-engine does the purely animal part of the work. The reaper is replaced by the machine, and the plowman is fast receding as the steam-plow makes its appearance. We rarely see long lines of men, laden with coal-bags, running up planks as in the olden days. The need of men to do the work of horses is steadily diminishing. . . .

"Where are now the armies of water-carriers, and chair-porters, and night men and sawyers whom our grandfathers used to require? Imagine, if ships had still to be moved by galley-rowers, what millions would be doomed to a beast-like toil. Some parts of the big domain of unreflective labor will long be left untouched, but the process is going forward; and it is clear that while education is rendering the lower classes unfit for the humblest sorts of occupations, science is steadily sweeping away these occupations. It would be too much to hope that these processes should be at all times strictly proportioned to one another, but in the general drift of things they are compensatory, and if we only give to science a reasonable time it will leave us none of that labor to be done which requires an uneducated laborer."

What is to become of the classes thus deprived of occupation? This, the writer confesses, is an "uneasy question." The working classes, especially in the older European countries, often curse the progress of invention, and look upon it as no friend to their welfare. In former times, this feeling showed itself in machine-breaking; but now the difficulty often arises in "acute, tho silent, suffering." To quote again:

"Unfortunately, society has always to travel to permanent good through transitory ills. When an army of compositors is dismissed because some one has invented a linotype machine, there is excuse for some bitterness of feeling. And yet there was a time when a whole army of manuscript book-copyers had to give way before the advent of the compositor.

"But the difficulty is always evanescent, for here, too, there are compensating influences at work. For if science is abolishing occupations at the lower end of the scale, she is creating new ones at the top. Think of the hundreds of thousands of men who in England are now employed in callings that had no existence sixty years ago: the telegraphers, and photographers, and mechanists of a hundred kinds. In the last decade or two what an army of skilled men have been demanded by the inventions of the bicycle, the telephone, and the electric light! As compared with the beginning of the century, think of the long array of marine and locomotive engineers, the chemists, the journalists and draftsmen, the teachers, the postmen, railway porters, and tram conductors. What a multitude of callings are there which are either new, or else newly stocked; so that while the population has quadrupled, their ranks have been multiplied a hundred-fold. But it is the entirely new employments that strike the mind most forcibly, and any one who runs his eye down a census of the occupations of the people will satisfy himself that in England of the present day one-fifth part of the adult male population find their livelihood in callings that had no existence when the century began."

That our workingmen here in the United States have learned this lesson better than their English brethren is one reason, we

are told by the experts, why America is wresting from Great Britain her industrial supremacy along certain lines. Even now British workman often fight against improved American machines because they require fewer men to tend them. This is, of course, only one instance of the truth that science takes away the low-class occupations. It is equally true that it adds to the high-class ones, tho this is not always so immediately apparent. The writer goes on to say

"Of course it never happens that the coal-heaver, when thrown out of work by the introduction of a steam-crane, can go away and get a place in one of the newly created superior callings. He is not such a fool as to waste his time in applying for an opening as an electrical engineer. But there is a gradual creeping up that is always taking place. And yet the transfer is much less effected by the promotion of individuals than by promotion of generations. No doubt, it sometimes happens that the intelligent plumber steps into the new opening for an electrical engineer, and leaves a gap which some one of an inferior calling steps into; the gaps being filled in succession, until, perhaps, the riveter, thrown out of work by the introduction of hydraulic machinery, finds a vacancy at last and steps into it. But it more frequently happens that the plumber educates his son to be an electrical engineer, and the carter apprentices his boy to the plumber, and the dock laborer sees his young folk aspiring to be carters.

"Thus the general drift of the whole social scale is steadily upward in proportion as science provides intelligent occupations at the upper end and abolishes those that are more or less brute-like at the lower, and so humanity as a whole is the gainer. There is therefore no reason to feel uneasy at a prospect of over-education."

NERVE TELEGRAPHY.

WE have in our bodies a complex telegraphic system—that of the nerves. It can not be called "wireless," for the signals from sense-organ to brain appear to travel only along the definite paths afforded by the nerves themselves. How do these signals travel, and what is their nature? M. Charles Richet, in a recent address that has been much commented upon, and that is published in the *Revue Scientifique* (December 23), tells us of the latest work of physiology on this interesting subject. He says:

"The exterior world, with all its aspects, infinitely diversified, its colors and its forms, is but the sum of different vibrations. These vibrations, of very diverse qualities and energies, act on the living being and produce sensations in him.

"Now it is very likely, and I shall try to prove this, that the vibrations in the external world act on our sense-organs by producing in us another form of vibration necessary for the existence of perception and sensation. Nerve-vibration thus seems to be the consequence and the final result of external vibrations. If there were no nerve-vibration there would still assuredly be in the world all the other forms of vibration that now exist; but they could produce no physiological effects. The human consciousness would not be reached. The living creature, by the fact of his own vibrations, is the receptacle, the microcosm, on which at each moment the different vibrations of the universe are concentrated, and the universe is accessible to our knowledge only through this vibration."

M. Richet then proceeds to describe the nervous system as an aggregate of cells, or neurons, each in close relation to all the others, so that the individual may be regarded as "a colossal nerve-cell" sensitive to all external excitation and responding to it by movement. This sensibility and responsiveness operate by means of what we call "nerve-vibration." Has such a name any justification? In the first place the transmission of nerve-action has a definite velocity which has been measured and found to vary with temperature and with the nature of the excited nerves, but to be always about 100 feet a second. It is accompanied by special electrical phenomena, and probably also by chemical and

thermic modifications. Finally, if a nerve be cut, transmission ceases, even if the cut ends be brought together again. Evidently there is a passage of something along the nerve. What is it? M. Richet enumerates hypotheses as follows.

1. *Mechanical hypothesis.* What passes is a mechanical vibration or jar, like a ripple in a liquid. The trouble with this is that the filaments seem too small to allow the passage of any such vibration in their semi-liquid protoplasm.

2. *Chemical hypothesis.* What passes is a wave of explosive chemical action, as when a train of powder is lighted. This would explain why feeble excitation of a nerve may produce such a powerful response, but it is hard to see how a second wave of chemical action could pass a fraction of a second after the first. The same train of powder can not be fired twice in succession.

3. *Electrolytic hypothesis.* What passes is a progressive action like the decomposition of a liquid by an electric current, where,

to arrive at such a result, it may be said that nerve-vibration has been shown to be of type *B*, and that a single vibration takes about one tenth of a second. The vibration is thus enormously slower than those that produce the sensation of light. Of the time occupied, the preliminary swing takes about one tenth or one hundredth of a second, while the slow return to equilibrium occupies the rest. Occasionally the second phase is absent, and occasionally, too, the type has been found to be more nearly that shown in type *C*. The fact that a nerve-vibration lasts one tenth of a second accounts, M. Richet tells us, for the fact that we can have only about ten distinct sensations a second. When they come at shorter intervals they are confused—a fact that has long been recognized. Likewise the muscles can make only about ten voluntary movements a second, altho when directly excited, as by electricity, they can contract thirty or forty times a second. He goes on to say:

"There exists, then, in the very nature of our cerebral organization, a narrow limit to our appreciation of time. We propose to call this 'the psychologic unit of time,' the minimum time appreciable by our intelligence, an irreducible unit, which we can theoretically split up into smaller fractions, but whose divisions correspond to no real mental image.

"In other words, the minimum of time that our consciousness can directly seize is one tenth of a second.

"We say commonly 'as quick as thought'; but we see now that thought is not very rapid, compared to the prodigiously swift vibrations of light and electricity."

Another interesting point noted by M. Richet is that, altho the vibration is practically over in one tenth of a second, it is really never quite completed. This, he thinks, may explain the phenomenon of memory, for, as the neuron never quite returns to equilibrium after once being disturbed, it always retains the stamp of that disturbance. A man pronounces a syllable. One tenth of a second later he can pronounce another; but the memory of the first persists. This, says the author, is only an analogy; it does not even rise to the rank of a hypothesis, yet it is interesting as showing agreement between the mathematico-physiologic theory of nervous vibration and the hitherto inexplicable facts of memory. M. Richet concludes thus:

"So nervous vibration, by its form, its period, and the manner in which it dies away, can be compared to the other vibrations of the boundless universe in the midst of which we exist. But this resemblance should not make us lose sight of the abyss that separates it from all other phenomena accessible to us. The vibrations of natural forces are probably blind . . . the nervous vibration can know and judge; it has conscience-knowledge of itself. It can distinguish itself from the world that surrounds and excites it."—*Translation made for THE LITERARY DIGEST.*

Search for Water with the Divining-Rod.—The use of the so-called divining-rod for the discovery of hidden springs or underground watercourses is about to be scientifically investigated. A commission has been appointed in France to study all apparatus and methods employed by sorcerers, "water-seers," wizards, and all specialists in occultism, in the discovery of water in other ways than by those recognized in geology and hydroscopy, such as the divining-rod, exploring pendulums, hydroscopic compasses, magnetic and electric apparatus, etc. The president of the commission is M. Brothier de Rollière, a French engineer. Says *Cosmos*: "To get at the truth, M. de Rollière will procure, seek, and collect all devices, works, reviews, journals, experiments, reports, and observations for and against the divining-rod and other like apparatus, with names and addresses of the authors or inventors; he will put himself in communication with all persons who have experimented or written on the subject, with a view to holding a meeting of them, and clearing up, if possible, these cloudy questions that ought to be treated in public.

"He wishes, therefore, to collect the largest possible number of addresses of sorcerers and wizards. . . . It is said that these exist everywhere, in all parts of France and of Europe; but when

as soon as the current ceases, the elements recombine. M. Richet believes that this hypothesis approaches the truth.

4. *Electric hypothesis.* What passes is a real electric current. The chief objection to this is that the nervous current is vastly slower than the electric, but M. Richet thinks it probable that retardation due to poor conduction may explain this. He goes on to say:

"The hypothesis that nerve-vibration is an electric phenomenon is quite satisfactory, especially if we suppose that it resembles electrolytic phenomena.

"Of course we must recognize that, very soon perhaps, some one will give a formal demonstration of a profound difference between electric and nerve currents, showing that nerve-vibration has certain special properties that differentiate it from all other known forms of vibration."

What is the form of a nerve-vibration? Vibrations in general are of three types, M. Richet reminds us, as shown in the three annexed curves. In type *A*, the return to equilibrium, as with a pendulum, is through a long series of oscillations; in type *B* it takes place slowly, after one quick swing; in *C* it occurs at once without any swing at all, but with increasing slowness. Without going over the experiments by which it has been possible

they are sought, they can not be found. It would, nevertheless, be very interesting to know them; for if their science is exact, they will, of course, find lucrative employment and will render valuable service. If their knowledge is worthless, it will be so proved, and people need no longer employ them. M. de Rollière therefore makes an appeal to all persons, in France and elsewhere, to furnish him with the necessary documents in great number. We take great pleasure in making known a request which will interest all students of science, both theoretical and applied." All facts or documents for M. de Rollière may be sent to the office of *Cosmos*, 8 Rue François Premier, Paris. It may be doubted whether scientific hydroscopey will gain much from this inquiry, but it ought to bring out a rich collection of facts for students of folk-lore, the psychology of superstition, etc."—*Translation made for THE LITERARY DIGEST.*

AN IMITATION MOUNTAIN RANGE.

THE Paris Exposition is to contain a Swiss village that will rejoice in an imitation mountain chain of great size and remarkably faithful in detail. Its construction is not only an engineering feat, but also an achievement from the point of view of the geologist or geographer, since it will be practically a huge model of a Swiss mountain range, with rocks, trees, and water-

SKELTON OF THE SWISS MOUNTAINS AT THE PARIS EXPOSITION.

falls complete. The construction of this wonder is thus described by M. S. Regelsperger in *La Science Illustrée*:

"The passer-by who stands to-day at the top of the stairway that leads from the Trocadero Palace toward the gardens sees a curious spectacle. . . . As far as the Seine and beyond, on both sides of the Eiffel Tower and in its rear, are scaffoldings, galleries in construction, iron framework, palaces, domes, minarets. If we look toward the right, we shall be somewhat surprised to see in profile, as on a distant horizon, a whole mountain chain, with the snowy hues of winter. . . .

"This phenomenon, however, has nothing to do with geology. These mountains, which make us think of the magnificent panorama visible from the terrace at Pau or from the cathedral at Berne, are nothing at all but lath and plaster. They form the background of the curious and picturesque 'Swiss Village' which Messrs. Hennsberg and Allemand are building between the avenues of Suffren and La Motte-Picquet. This work, which is carried out with an exactness and sincerity worthy of the greatest praise, will give an image, reduced but faithful, of Switzerland, with its mountains, its cascades, its pastures, its ancient buildings, its old houses, its chalets.

"Beyond streets of elegant buildings that will recall the different regions of the mountain republic will extend the country, a whole Switzerland in miniature, with its beautiful and picturesque landscapes and its most varied features. Here grass-clad and there rocky, the chain of mountains that shuts off the horizon can not fail to produce a striking effect on the visitor. It will be 600 meters [2,000 feet] long, and its height will vary between 20 and 40 meters [65 and 130 feet]. The proportions have been so well chosen in the smallest details that a real illusion is

produced; the summits will thus easily be made to appear as if they reached the lower limit of the glaciers.

"How has this mountain chain been built and of what is it made? These gently undulating fields, these pastures bordered by precipices, these high rocky walls, have been obtained by means of wooden framework, bearing only the necessary earth for plantations of trees that have already begun to be placed on them.

"The frame that forms the skeleton of the Swiss Village is both odd-looking and complicated. It is composed of wooden pieces that are almost never arranged in the same plane; they are usually disposed to form spirals or in fan-shape, and are at all possible angles—here salient and there reentrant. It is this irregular frame that has enabled the builders to imitate the most varied forms of natural scenery.

"The frame has been put together so as to be able to support a considerable mass of earth, varying according to place. The weight of this is quite great, for if we assume that the soil is 30 centimeters [a foot] thick, which is the case in most parts of the mountain, the weight supported by the framework is not less than 400 kilograms to the square meter [about half a ton to the square yard]. . . .

"The whole surface of the frame is covered first with a sort of wooden floor, then with a layer of asphalted paper to make it waterproof, and finally, to prevent the earth from slipping, cleats are nailed across, the size of these varying with the slope and the mass of earth.

"Most of the rocks are made of staff, molded from actual casts taken in Switzerland with modeling-clay. . . . These are nailed on the plank floor, according to certain geological forms. . . . The joints between blocks are carefully filled with plaster. The whole thus forms a mass of perfect cohesion and great solidity.

"The rocks placed in the lower parts of the mountain, where visitors can see them close at hand, are real, and special care is taken in their selection. Two Geneva architects, Messrs. Hennsberg and Allemand, have carried the passion for realism so far that they have sent these all the way from Switzerland, principally from the Jura.

"These mountains are not uniformly bare and rocky. Vegetation, varied and scientifically arranged according to the nature of the site and its supposed altitude, will diversify the landscape. It will include handsome trees of average height; pines, firs, cedars will be scattered here and there, or grouped together. The rhododendron, the edelweiss, and other Alpine plants are not forgotten and will have their place.

"That vegetation placed in such abnormal conditions may keep fresh and green during the Exposition, a system of watering has been devised which has necessitated the construction of a road around the mountain. On this road have been placed hydrants at regular intervals.

"Finally, to complete the charm of this curious reproduction of mountain scenery, a real cascade, 100 feet high, will fall from the sides of a peak, giving rise to a brook that flows through the village. This cascade, which will use 4,000,000 liters [about a million gallons] of water a day, will probably be one of the wonders of the 'Swiss Village.'—*Translation made for THE LITERARY DIGEST.*

Celery as a Vehicle of Infection.—The possible danger from fertilizers, and especially from the use of sewage, has recently been brought to public notice. The use of animal fertilizers has been suspected of doing harm to those who have eaten of the vegetables grown under their stimulus, and of being the possible cause of disease in some obscure cases. Says *The Journal of the American Medical Association* on this subject: "A rather striking object-lesson is reported from one of the Eastern States where an epidemic of fever occurred in one of the State institutions. It was found that the disease could apparently be traced to the use of celery grown on some sewage-fertilized grounds, the practise of banking up the stalks making these plants specially adapted to receiving and holding the germs. As soon as the use of the plant was stopped, the epidemic diminished, and finally ceased altogether. These facts indicate the need of a caution in using this popular vegetable, which, with its corrugated stems, etiolated by banking up with earth often saturated with fertilizers of one kind or another, and generally eaten raw, might very possibly carry the germs of disease. The danger is

not great or we would hear more of it, but that it may exist occasionally the above case seems to prove."

RESEMBLANCES BETWEEN ANIMATE AND INANIMATE MATTER.

IT is becoming increasingly difficult to draw a line between the phenomena of life and those of dead matter. Extremists, of course, go so far as to say that there is no difference; but even those who contend for a rigid distinction admit the discovery of interesting facts that furnish analogies between the organic and non-organic worlds in totally unexpected places. Some of these are brought out by M. C. E. Guillaume in a recent paper read before the Swiss Society of Natural Sciences, of which the following abstract appears in the *Journal de Genève*:

"At bottom, the abyss that seems to separate brute matter from living matter does not exist, and the more deeply we investigate intermolecular phenomena, the more analogies we find with those of biology. Whether it forms part of a living or non-living body, the molecule undergoes multiple metamorphoses, more or less rapid disaggregations, movements, etc. The metamorphoses of non-living matter, ordinarily very slow, are always adaptations to varying conditions, just like the transformations of the living organisms, properly so called.

"The microscope, which has opened up such vast regions in the mechanism of fermentations, for example, by enabling us to connect this with the action of determinate microorganisms, is in the way of rendering an equally great service in its application to inanimate matter.

"The form of this latter, taken in a solid state, is not variable. Every one knows that glass contracts with temperature, that all bodies acted on by external force are deformed, and that brass, for instance, under the influence of heat, passes from the ordinary to the annealed state.

"Modern physics shows us that ordinary brass is composed of little broken crystals, mingled with a mass which they penetrate completely. In annealed brass, on the other hand, the crystals are reconstituted and separated from the amorphous mass. Now these crystals could not have been formed without a movement of the molecules in the interior of the metal—a movement that is much greater than ordinary molecular motion, reaching hundredths, and even tenths, of a millimeter."

Where, asks M. Guillaume, does the mobility of the molecules in a solid body have its limit? It is doubtless greater, he believes, than has usually been supposed. At the temperature of 700°, a small cylinder of lead, in contact with a disk of gold for forty days, has, at the end of that time, gold throughout its whole mass. The astonishment that such an experiment excites grows less, the writer reminds us, when we compare the result with the long-known fact of the penetration of carbon into heated steel. When we add external to molecular forces, we get effects of still greater intensity. To quote again:

"In facts of this kind, which modern discovery is multiplying daily, M. Guillaume finds the proof of molecular displacements measured by millimeters and centimeters; it is then wrong to draw a line between so-called inert matter and animate matter.

"On the other hand, brute matter is modified by adaptation. When we subject a steel bar to a pull sufficient to break it, a narrow neck is first formed at the point where the bar will break. But if we cease pulling as soon as the narrowing becomes noticeable, and then turn the bar down to a uniform diameter in a lathe, when we subject it a second time to this treatment we shall find that the neck always forms in a new place. It appears that wherever, under traction, the metal begins to be thinner, the substance 'instinctively' hardens, to resist the effect.

"In the alloys of nickel and steel studied by M. Guillaume, similar facts have been brought out. . . . We can mention here only one—the fact that under the influence of great cold, bars of nickel-steel lengthen in such a way that when the phenomenon is seen for the first time it seems as if the inert matter had been suddenly endowed with life.

"Phosphorescent bodies, from the point of view of adaptation

to external circumstances, furnish an analogy with social organization. M. Guillaume cites a beautiful example taken from Becquerel's process of color-photography. Chlorid of silver, which becomes red under the influence of red light and green when subjected to green light, is only, by this process, protecting itself against the light, which tends to break up its molecule.

"In closing, M. Guillaume, after indicating the likenesses that appear to exist between inert and animate matter, takes care to remind us of some of the fundamental facts that forbid us to believe that these forms of substance are one and the same. It would, of course, be imprudent to generalize prematurely, but M. Guillaume has certainly shown us analogies where they would have been least suspected."—*Translation made for THE LITERARY DIGEST.*

IS ELECTRICITY A SUBSTANCE?

THE controversy over the dutiability of electricity has already been alluded to in these columns. Apparently the question may turn upon another. Is electricity a substance or not? This is a good old question, and is still unsolved. It is largely a matter of definition, for the two words "electricity" and "substance" are still used in various ways. The engineer often means "electrical energy" when he says "electricity," while the physicist usually postulates the existence of something that is the vehicle of this energy. Now if something analogous to a substance is introduced into this country from Canada, it may be dutiable, while if only energy or "power" is brought in, it may not. The whole subject is elusive, and it will be interesting to see how the Patent Office will deal with it. *The Electrical Review*, in a leading editorial, seems to take the view that the electricity can not be made to pay duty because it passes continuously around a circuit and hence is exported as fast as it is imported. It says:

"The electricity—whatever that may be—could be justly considered to travel along the line into the United States, and at once to travel back to Canada.

"Suppose two pulleys, one on each side of the Niagara River, with a rope or belt connecting them. This arrangement would transmit power if one of the pulleys was turned. Similarly, while it was running there would be a more or less rapid importation of the belt, and an exactly similar exportation. And it could not be said with truth that such an arrangement constitutes an importation of power, for the power, in its applicable form, does not exist in transit, but only at the driven pulley. Now this arrangement is an exact analog of an electrical-power transmission.

"If those who are anxious to prevent Canadian importations would only turn their attention to certain unenumerated, unmanufactured products of that country now entering duty free, such as blizzards, north winds, hunting and fishing stories, etc., they would do a good work."

Immediately following this editorial is another in which the ground is taken that electricity is not a substance at all. It appears that *The Commercial Tribune* (Cincinnati, Ohio) has suggested the possibility that electricity may be not only a substance but an exhaustible substance, and "views with alarm" the possibility that the world's supply of it may give out. To this the writer in *The Review* rejoins that our supply can not be exhausted, for electricity is not a substance at all, but a mere condition. He says:

"To define this condition of matter and ether that is commonly called 'electricity' is not yet perfectly possible, tho the true nature of electricity is far better understood than that of so simple and everyday a phenomenon as gravity. We know enough about it to say that electricity is certainly not a substance, and, for the present, perhaps it is safer to let our definite assertions stop with the statement that it is a state into which a body and its surroundings may be brought by suitable work done upon it. That is all. Hence we are in no particular danger of seeing our stations crumbling into picturesque decay, and our telephones on the scrap heap. Indeed, if all the electricity were gone, we wouldn't see anything, because there would be no more light."

This whole discussion is very interesting, as showing how a subject may leap fully armed from the regions of metaphysics into the "strenuous" arena of commerce.

THE RELIGIOUS WORLD.

SOURCES OF STRENGTH OF ROMAN CATHOLICISM IN AMERICA.

MR. H. D. SEDGWICK, JR.'S recent article in *The Atlantic Monthly* on the future of the Roman Catholic Church in America (see *THE LITERARY DIGEST*, November 15, 1899), has received much attention from the Protestant and Roman Catholic press. Naturally, some of his reasons for believing that the Roman Catholic Church will be the dominant one in this country at a not far distant date are contested by Protestants. One Protestant writer, however, Miss Pauline G. Wiggin, believes that Mr. Sedgwick has overlooked one of the strongest elements of power possessed by that church. While she points out that certain portions of the Roman Catholic flock—notably the farming Portuguese—are falling away from the church's ranks, and that her gain in country regions can not be compared with that of the Methodists, Miss Wiggin still believes that the Roman Catholic Church, by virtue of her unrivaled organization and her sacraments, possesses a power of reaching young children far beyond that of any other church, and she thinks that Protestants themselves would profit by a study of this system. She writes (in *The Outlook*, January 6):

"This is a matter of greater importance than seems to be commonly recognized. One calls to mind the old Jesuit maxim: 'If you give us a child the first seven years of his life, you may do as you like with him afterward; his religion will be fixed'; and altho this is, of course, an exaggeration, it is certain that most persons depend very largely upon their childhood teaching for their religion. This truth the Catholic Church has always recognized more fully than the Protestant, and her advantage in this respect has grown to enormous proportions of late years since the secularization of the schools. The daily recognition of Christianity in the reading of the Bible and in the prayer, slight and perfunctory as it often was, at least kept the facts of religion before the child's mind and gave them a recognized place in his life. Family prayers also used to be a common institution in Protestant homes, whereas now it is a rare one; and the family, unorganized and preoccupied as it so often is with material or purely intellectual interests, can not now be relied upon to give systematic training. Thus deprived of regular religious teaching both in the school and the home, the Protestant child has now become peculiarly dependent upon the church. And how do the churches meet its need? By an hour's instruction once a week, under teachers who, it must be admitted, are, as a body, incompetent and irresponsible. There are educated and earnest men and women who give their Sunday-school classes the time and thought and faithful work they give to their daily business, but they are very few in comparison with the number of children to be taught. No one could maintain that the average instruction of children in the Protestant religion is as efficient as is their instruction in arithmetic."

The parochial schools also are a strong bulwark, but Miss Wiggin believes that these are destined to disappear "by an irrevocable sentence of economic law," since they can not hope to compete, she says, either in financial backing or in pedagogic quality, with the common schools. Nevertheless, without them "the church will still stand strong":

"In the first place, her services appeal far more than Protestant services to those human faculties, the heart, the imagination, and the senses, which are strongest in children. While the reason sleeps these are alive, making for virtue or vice, for lofty or low ideals and purposes, and determining the springs of action; and the church which is to be strong must draw from these sources of strength as well as satisfy the reason. If its head should be in the clouds, its feet must rest upon the ground, and this the Catholic Church has always realized to her advantage."

"Moreover, the Catholic organization has better means at its disposal than the Protestant denominations for the definite instruction of children in the faith. Its Sunday-schools are more

efficient. They are taught, as a rule, by persons especially vowed to the service of religion, who would naturally make better teachers of its tenets than the average willing but otherwise preoccupied persons who take classes in Protestant vestries and chapels; and their very uniforms inspire respect. They spend a larger part of their lives in the service of the ideas they are teaching, and are therefore likely to teach them with more force and conviction, and they do not so often neglect their duties by absenting themselves from school. The religious orders make very good material from which to draw Sunday-school teachers. The instruction, too, is, as a rule, better organized and proceeds in a more regular and orderly manner from year to year; and, if the results do not always seem to us very good when we question our Catholic servant-maids, we should not forget that Protestantism could not any better afford to be judged by the irrational, conflicting notions of its ignorant supporters. We can not expect a consistent system of philosophy from persons whose opportunities have not fitted them to receive it; no method of instruction could accomplish this; for, as the old Sanscrit epigram has it,

"The pitcher at the well is filled, not more
Drawn at the ocean shore."

But it is a serious matter for consideration whether in Protestant churches the wells of instruction do not oftener than need be run dry before the pitchers are filled."

Still another source of strength to the Roman Catholic Church is the First Communion and Confirmation:

"The Episcopal Church retains the latter, but the great opportunity of the First Communion has been relinquished by all Protestant churches; and anyone who knows how much the ceremony stands for in the life of French girls, for instance, how it becomes a season of uplift not only for themselves but for their families, must feel that it is a serious loss. We need such seasons of special exaltation. Monotony is nowhere the rule of human life; we can not if we would keep Sunday every day of the week, or Lent all through the year; but, altho our souls can not live in the upper air, now and then they can take a flight into the blue, and it is well for us to have them guided thither, as the Roman Church guides her children through the First Communion and Confirmation, when we are docile, enthusiastic, impressionable. There is, I believe, nothing in the Protestant church organization which fully fills the place of these sacraments."

"Such advantages as I have mentioned would undoubtedly make a strong case for the future of any church, and the lesson should not be ignored. If Mr. Sedgwick's prophecy should eventually be fulfilled, it will be, I believe, largely because the Protestant denominations fail to recognize and meet the increased responsibility for the distinctively spiritual training of young people which has lately fallen upon the churches. It will be because they neglected the children."

Prayer as Wireless Telegraphy.—The Rev. Canon Wilberforce takes a novel but suggestive view of what is to some people a vexed subject. In the January number of an English publication called *St. John's Parish Magazine* the following report from a recent sermon by him appears:

"Intercessory prayer is that divine essence of soul union, that heavenly ministry, which laughs distance to scorn and creates a meeting-place in God for sundered hearts and lives. I can not analyze it and reduce it to a proposition; but neither can I analyze the invisible fragrant vibrations which proceed from a bunch of violets, and which will perfume a whole room. I can not analyze the passage through the air of the dots and dashes of the Marconi system of wireless telegraphy. But I know that intercession is a current of the breath of God, starting from your own soul, and acting as a dynamic force upon the object for which you pray. It sets free secret spirit influences (perhaps the Father's mighty angels, that excel in strength, who can say?) but which influences would not be set free without the intercession. I can well understand Mary Queen of Scots saying that she feared the prayers of John Knox more than an army of 10,000 men. Why should not intercession be part of God's regularized workings, as much as wireless telegraphy? Why should it not be a natural law, and none the less spiritual, because natural? Such forces do exist—call them thought-transference, psychic

sympathy, spiritual affinity, what you will. These forces of influence between man and man, acting independently of distance, are rapidly claiming recognition from the physical investigator. Why should not intercession be one of these secret affinities, appertaining to the highest part of man, and acting, by divine natural law, directly upon the object prayed for, originating from the divine nature in you, and passing, full of the infinite resources of God, directly to the one for whom you pray?"

"THE CARDINAL AND THE HERETIC."

DR. ST. GEORGE MIVART'S alleged heresy, as displayed in his recent articles in two British reviews (see THE LITERARY DIGEST, February 3) continues to occupy the attention of religious circles in England and, to a considerable extent, upon this side of the Atlantic. Professor Mivart has resented what he terms the "personal attack" made upon him in the *London Tablet* (Rom. Cath.), the official organ and property of Dr. Vaughan, cardinal archbishop of Westminster, and an exchange of letters between the scientist and the cardinal followed, culminating in the inhibition of Dr. Mivart, thus depriving him of the sacraments of the church until he shall have specifically denied the opinions which his recent articles appear to advocate. The correspondence is published in the *London Times* (January 27). The cardinal, almost at the outset of the correspondence, asked Dr. Mivart to sign a formula or profession of faith, in part as follows:

"I hereby declare that, recognizing the Catholic Church to be the supreme and infallible guardian of the Christian faith, I submit therein my judgment to hers, believing all that she teaches and condemning all that she condemns. . . .

"I therefore firmly believe and profess that the Blessed Virgin Mary conceived and brought forth the Son of God in an effable manner by the operation of the Holy Ghost, and absolutely without loss or detriment to her virginity, and that she is really and in truth as the Catholic Church most rightly calls her, the 'Ever Virgin'; that is to say, virgin before the birth of Christ, virgin in that birth, and virgin after it, her sacred and spotless virginity being perpetually preserved from the beginning, then and forever afterward. . . .

"I firmly believe and profess in accordance with the Holy Council of Trent that the first man Adam, when he transgressed the command of God in paradise, immediately lost the holiness and justice in which he had been constituted, and that he incurred through that prevarication the wrath and indignation of God, and that this prevarication of Adam injured not himself alone, but his posterity, and that by it the holiness and justice received from God were lost by him, nor for himself alone, but for us all (cf. Council of Trent, Session V.). . . .

"I reject and condemn all doctrines which deny the reality and transmission of original sin, and the perfect sufficiency of the atonement by which man is reconciled to God in the blood of Jesus Christ, as false and heretical, and contrary to the holy Catholic faith now and at all future time.

"I firmly believe and profess that the souls of men after death will be judged by God, and that those who are saved will 'go into everlasting life' (Matt. xxv. 46), and those who are condemned 'into everlasting punishment.' I reject as false and heretical all doctrines which teach that the souls in hell may eventually be saved, or that their state in hell may be one which is not of punishment (cf. Constitution of Council of Lateran IV.).

"I firmly believe and profess that the doctrine of faith which God has revealed has not been proposed like a philosophical invention to be perfected by human ingenuity, but has been delivered as a divine deposit to the Spouse of Christ, to be faithfully kept and infallibly declared, and that, therefore, that meaning of the sacred dogmas is to be perpetually retained which our Holy Mother, the church, has once declared, and that that meaning can never be departed from, under the pretense or pretext of a deeper comprehension of them. I reject as false and heretical the assertion that it is possible at some time, according to the progress of science, to give to doctrines propounded by the church a sense different from that which the church has understood and understands, and consequently that the sense and meaning of her doctrines can ever be in the course of time practically explained away or reversed (cf. Dogmatic Constitution of the Vatican on Catholic Faith, chap. iv., can. iv.).

"Moreover, I condemn and revoke all other words and statements which in articles contributed by me to *The Fortnightly Review* and *The Nineteenth Century*, or in any other of my writings are found to be, in matter of faith or morals, contrary to the teaching of the holy Catholic faith according to the deter-

mination of the Apostolic See; and in all such matters I submit myself to the judgment of the said See; receiving all that it receives and condemning all that it condemns."

Dr. Mivart, however, did not hasten to affix his signature, as desired, to this document, and after some waiting Dr. Vaughan wrote "for the third and last time" for his submission; otherwise "the law of the church will take its course."

Professor Mivart's reply, setting forth the difficulties which he says the modern man of science finds in trying to reconcile science and Christian dogma, is in part as follows:

"When I was admitted as a Catholic I made, of course, a profession of the creed of Pope Pius IV. But I have no recollection of ever having made, or been asked to make, the following profession, which forms part of the document I am now asked to sign:

"In accordance with the Holy Councils of Trent and of the Vatican, I receive all the books of the Old and New Testament, with all their parts as set forth in the fourth section of the Council of Trent and contained in the ancient Latin edition of the Vulgate, as sacred and canonical, and I firmly believe and confess that the said Scriptures are sacred and canonical—not because, having been carefully composed by mere human industry, they are afterward approved by the church's authority; not merely because they contain revelation with no mixture of error, but because, having been written by the inspiration of the Holy Ghost, they have God for their author, and have been delivered as such to the church herself."

"Now, I beg of Your Eminence, as my ecclesiastical superior, to tell me whether I am, or not, right as to what would be the consequences of my signing the above?"

"It would be easy, of course, by a little dexterity, to distort and evade what appears to be its real and obvious meaning. As God is the First Cause and Creator of all things, He is, in that sense, their author—author of the 'Decameron' of Boccaccio, as well as of the Bible. But to make a profession with such a meaning would be, in my eyes, grossly profane and altogether unjustifiable.

"Your Eminence, of course, means and wishes me to sign *ex animo* the document sent to me, and I, for my part, desire to be perfectly—transparently—honest, candid, and straightforward.

"Now in my judgment an acceptance and profession of the above-cited portion of the document sent me would be equivalent to an assertion that there are no errors, or altogether false statements, or fabulous narratives, in the Old and New Testament, and that I should not be free to hold and teach, without blame, that the world was not created in any six periods of time; that the story of the serpent and the tree is altogether false; that the history of the tower of Babel is a mere fiction devoid of any particle of truth, that the story of Noah's Ark is also quite erroneous, as again that of the plagues of Egypt; that neither Joshua nor Hezekiah interfered with the regularity of solar time; that Jonah did not live within the belly of any kind of marine animal; that Lot's wife was never turned into a pillar of salt; and that Balaam's ass never spoke. I only put these forward as a few examples of statements (denials) which it seems to me any one who holds that 'the books of the Old and New Testaments, with all their parts, were written by the inspiration of the Holy Ghost and have God for their author' ought not and could not logically or rationally make.

"If, however, Your Eminence can authoritatively tell me that divine inspiration or authorship does not (clerical errors, faults of translations, etc., apart) guarantee the truth and inerrancy of the statements so inspired, it will in one sense be a great relief to my mind and greatly facilitate the signing of the document, Your Eminence's decision on the subject being once publicly known, and also the conditions under which I sign it."

The cardinal's answer to this letter is the answer of St. Augustine: "Ego vero Evangelio non crederem, nisi me Catholicæ Ecclesiæ commoveret auctoritas" ("I should not believe in the truth of Scripture unless the authority of the Catholic Church so bade me"). The cardinal adds:

"But if you are going to give the assent of faith only to such doctrines as present no difficulties beyond the power of your finite intelligence to see through and solve by direct answer, you must put aside at once all the mysteries of faith, and you must

frankly own yourself to be a rationalist pure and simple. You then constitute your own ability to solve difficulties, intellectual or scientific, into your test of the doctrines proffered for your acceptance. This is to return to the old Protestant system of private judgment, or to open rationalism and unbelief.

"But you will let me, I hope, be frank and urge that it is your moral rather than your intellectual nature that needs attention. God gives this grace to the humble; it is 'the clean of heart' who 'shall see God.' Let me press upon you the primary necessity of humility and persevering prayer for light and grace."

Without waiting for a reply, the cardinal then issued his inhibition. Dr. Mivart's final response is of considerable length. He laments that the cardinal says neither yes nor no to his question, and, referring to the famous encyclical of Leo XIII., known as "Proventissimus Deus," which maintains in the strongest terms that the Bible is without any kind of error, he writes thus of his changed attitude upon the publication of that document in 1893:

"It then seemed plain to me that my position was no longer tenable, but I had recourse to the most learned theologian I knew and my intimate friend. His representations, distinctions, and exhortations had great influence with me and more or less satisfied me for a time; but ultimately I came to the conclusion that Catholic doctrine and science were fatally at variance. This is now more clear to me than ever since my 'Ordinary' does not say whether my judgment about what the attribution of any document to God's authorship involves is or is not right. To me it is plain that God's veracity and His incapability of deceit are primary truths without which revelation is impossible. The teaching then of Leo XIII., addressed dogmatically to the whole church, comes to this: Every statement made by a canonical writer must be true in the sense in which he put it forward whether as an historical fact or a moral instruction.

"Thus it is now evident that a vast and impassable abyss yawns between Catholic dogma and science, and no man with ordinary knowledge can henceforth join the communion of the Roman Catholic Church if he correctly understands what its principles and its teaching really are, unless they are radically changed.

"For who could profess to believe the narrative about the tower of Babel, or that all species of animals came up to Adam to be named by him? Moreover, among the writings esteemed 'canonical' by the Catholic Church are the book of Tobit and the second book of Maccabees, and also the story which relates how, when Daniel was thrown a second time into the lions' den, an angel seized Habakkuk, in Judea, by the hair of his head and carried him, with his bowl of pottage, to give it to Daniel for his dinner.

"To ask a reasonable man to believe such puerile tales would be to insult him. Plainly the Councils of Florence, Trent, and the Vatican have fallen successively into greater and greater errors, and thus all rational trust in either popes or councils is at an end. . . . Now I have myself maintained, and maintain, that a secret wish, an unconscious bias, may lead to the acceptance or rejection of beliefs of various kinds, and certainly of religious beliefs. But when the question is a purely intellectual one of the utmost simplicity, or like a proposition in Euclid, then I do not believe in the possibility of emotional deception. The falsehood of the historical narration about Babel is a certainty practically as great as that of the equality of the angles at the base of an isosceles triangle.

"Happily I can not speak with entire frankness as to all my convictions. *Liberavi animam meam.* I can sing my *Nunc Dimittis* and calmly await the future."

Dr. Mivart categorically refuses to sign the profession of faith. He is, however, attached to Catholicity "as he understands it"; and, loving its rites, he will not cease to assist at them, for he regards divine worship "as the highest privilege of a rational nature."

The New York *Sun*, which finds in the episode a confirmation of its own position (that there is no other choice than that of absolute dogmatic belief or rationalism), comments as follows on the correspondence:

"Cardinal Vaughan, it will be seen, would have no parley with

Professor Mivart, but required of him, first of all, that he should recant recent teachings of his as to the conflict of the Scriptures and certain fundamental dogmas of Christian theology with facts of science he held to be demonstrated unchangeably, under pain of excision from membership in the Roman Catholic Church, of which he had been so long a defender. Undoubtedly no other course was possible if that church is to retain its position, and the refusal of Professor Mivart to submit was not less requisite if he was unprepared to make a complete surrender of his intellectual convictions. The truth is thus again made evident that modern science and the church can make no terms with each other. If, on its side, Christian theology would preserve itself from destruction it must, perforce, refuse countenance to all scientific rejection of its dogmas on the ground that the supernatural authority on which they depend contradicts natural demonstration.

"That great battle has been joined in Christendom during the last quarter of a century, and it will be waged all the more fiercely because of the treatment of the case of Professor Mivart by Cardinal Vaughan."

A writer in the London *Times*, quoted in *The Westminster Gazette* (January 27), says, on the other hand:

"The threat of excommunication, terrific in the tenth century, has a touch of the ridiculous in the twentieth; and ridicule kills. . . . A condemnation of Mr. Mivart would be taken by many persons within and without the Roman Church as an admission of the incompatibility of Catholicism and science, in the largest sense of the term. The inference, indeed, would be illegitimate, all that the facts would warrant being the conclusion that freedom of speech among Catholics is limited; and this at once reduces the question from one of principle to one of expediency and degree. It would be drawn, however, by many; and it is one which the church can ill afford to have, rightly or wrongly, drawn."

RELIGIOUS TENDENCIES IN JAPAN.

DR. MICHEL REVON, late professor in the Imperial University of Japan, who for seven years has carefully observed the religious movements in the island empire, says that no one can be in doubt as to the changes which the modern scientific spirit is making in the old religious beliefs of that people; the tendency of the modern Japanese mind is toward agnosticism. In *The Independent* (December 28) he says:

"An interesting effort is now being made by some of the more thoughtful to adapt Herbert Spencer's philosophy to the religion of Buddha—and the two coalesce surprisingly well, for Buddhism is at bottom only the doctrine of evolution in mystic form, plus a certain amount of superstition, and this extra element of superstition is rapidly disappearing, so far as the educated classes are concerned.

"This interpretation of Buddhism by modern science seems likely to increase somewhat the hold on Japan that the Buddhist priests first gained by explaining that the Shinto gods were re-incarnations of Buddha.

"The new scientific spirit is entering even into Shintoism, the original religion of Japan, and the faith to-day of the Emperor and of perhaps a majority of the most enlightened Japanese who are not already pronounced atheists. The strength of Shintoism to-day is indicated by the fact that only a few years ago it made a determined contest with Buddhism for designation as the state religion of Japan. Neither succeeded, however, and it has been decreed recently that no religion whatever shall be taught in the public schools.

"It is a fact that the word 'Buddhism' no longer has a definite significance in Japan. Many who through life are Shintoists ask when dying for Buddhist burial—sometimes for no other reason than because it is more gorgeous than the Shinto ceremonial. Many others are Buddhists only in name, and atheists in fact. From that stage there is every gradation back to the complete and literal acceptance of the doctrines laid down by Saka-Munji.

"This new and increasing tendency toward agnosticism has retarded the progress of Christianity in Japan, and actual converts have not increased in proportion to the increase in population. Many who embrace it in the belief that it is responsible

for the advance of Western civilization drop it when they encounter the miracles of which it tells. Some have been known to adopt it temporarily for the sake of learning the language. The attitude of another class is indicated by a pamphlet written some years ago, in which it was seriously explained that Christianity was very good for the Western people, as it helped to restrain them from murder and robbery and the other great black sins to which they were naturally addicted; but that the Japanese needed no such religion, for they were naturally good."

BIBLES BY THE MILLIONS.

THE figures showing the number of copies of the Bible put into circulation during the past century are little less than marvelous. According to trustworthy estimates, some 280,000,000 copies have been published and disposed of during that period by the Bible societies alone; and, if all printed copies were to be

included, it is probable that the number would not be less than half a billion. The Bible societies are the chief agencies of distribution, however, and there are seventy-three of these, chiefly in Europe and America. *Leslie's Weekly* gives the following account of their work:

"Two Bible societies stand far above all others in the gross amount of their circulation—the British and Foreign Bible Society, whose output during the century has reached a total of 160,000,000, and our own American Bible Society, which issued last year 1,380,802 volumes, and in all, since its foundation, 66,000,000 volumes. Where has this vast army of books gone, and how did they reach their destination? It has taken a regiment of skilled laborers to accomplish it—porters and carriers, or colporteurs as they are technically called, carefully marshaled and organized under a staff of experienced officers in many countries all over the world, and employing every mode of transportation known to

JAEMON NAGASAWA, EIGHTY-ONE YEARS OF AGE—FOR TWENTY-TWO YEARS A CHINESE COLPORTEUR.

Courtesy of *Leslie's Weekly*.

mankind to carry the book across seas and continents, so that it may reach not only great nations in China and India, but even those unknown and barbarous tribes who have no literature until this, the finest literature of the world, is thus brought to them. Already the agents of the American and of the British foreign societies are beginning work in the Philippine Islands. Rev. Jay C. Goodrich and his wife are probably by this time in Manila with an abundant stock of Bibles and Testaments, not only in Spanish and English, but in some of the unnumbered languages and dialects that our scholars must grapple with, translations into Tagalog, Visayan, and Pangasinan having been begun.

"The Zulu Bible, published by the American Bible Society, is a factor in South African affairs larger and more influential than many more conspicuous in international politics. Whatever happens in the Transvaal, it will not cease to do its silent work. On the west coast of Africa, Bible translation has been proceeding for half a century, and the sheets of the Benga Bible, intelligible not only to that tribe, but to a cluster of rude tribes dwelling on that far-off coast, have been passing through the press of the society in New York, and when finished sent on their voyage to the Gaboon and Corisco Mission. Tho numerically less, not less interesting is the circulation of the Bible among our own aborigines. Only lately a grateful letter came in acknowledgment of a consignment of Bibles for use among the full-blooded Choctaws, who number 12,000. Choctaw and Cherokee, Mohawk and Dakota, Arrawack and Ojibwa, Seneca and Muskokee—what a polyglot undertaking it is to reach all these! Yet they are reached in one way and another. Some-

times there come back marvelous tales of their interest in the book that is brought to them. A Cree Indian and his son, fishing in the Northwest in the winter-time some years ago, traveling on snow-shoes across the snow-covered plains, carried what they called 'the Book of Heaven' in their pack, and found, when they reached a hunting-ground 140 miles distant from the fishery, that the book had been left behind. One of them went back on his track, and walked in four days 280 miles through the wild forest to regain his treasure.

"Sometimes a consignment of Bibles is lost. So it recently happened when the good bark *Johanna*, bearing a consignment of gospels in the Kusaian language to those who spoke that strange and unknown tongue in Micronesia, foundered at sea with all her precious freightage. Steamships, and the various modes of conveyance used in Western countries, are sometimes lacking; express companies and parcel posts are not found everywhere. In China, for instance, the American Bible Society issued last year 438,000 copies, printing them in China, through its Shanghai agent, and using for their distribution native coolies and burden-bearers, as well as foreign missionaries."

IS SOCIAL DEMOCRACY GENUINE CHRISTIANITY?

IN Germany, where Social Democracy commands more than a million votes throughout the empire and is the most aggressive party in the country, the relation of its teachings to Christianity has been a matter of considerable discussion, altho for the most part it has been regarded as naturally anti-Christian and anti-churchly. Recently, however, a prominent pastor of the Protestant Church, the Rev. Dr. Blumhardt, of the famous Bad Boll, in Württemberg, the headquarters of the pietistic school, has astounded church and state by his open declaration that in reality the principles of Social Democracy are the modern reproduction of primitive Christianity, and that Christians and Social Democrats should stand and fall together. His address, originally delivered in a public assembly, has been published through the length and breadth of the land. We reproduce its outlines from the *Leipziger Chronik* (No. 36):

When I look at the present condition of the workingman, I much despair that civilization and Christianity have not yet produced better results. Through legislative enactments practically no substantial improvement of the condition of the poor has been or can be accomplished. I can see no way for permanent betterment except by an absolute reorganization of the social status of modern society. For many years it has been my conviction that no religion is worth anything that can not transform society and raise it to a higher and better level and make men happy here on earth. In this sense I understand the Scriptures, and in that sense I understand my Christ. And therefore I feel myself inwardly related to those people who are charged with aiming at a Utopia; I am their associate and one with them in spirit. May the time come when money shall not be the measure of all things and of all values, but the life and happiness of man shall become the chief thing. What we need is a Christian state, with the spirit of Christ controlling all things.

Let it not be regarded as astonishing that a man who confesses the Lord Jesus Christ acknowledges his agreement with the ideas of Social Democracy, with the poor working people of the land. For Christ Himself was of the lowly. He was crucified because He was a Socialist; twelve members of the proletariat were His apostles. People are mistaken when they think a man ceases to be a Christian when he joins the proletariat. Paul did the same thing. . . . It is impossible that the present condition of affairs should continue among the working people, and this change must be effected along the lines pointed out by Social Democracy. The current claim that the Christian religion has no part or claim on Christianity is a great mistake. The aims of that party can be best realized in accordance with the teachings of Jesus Christ. It was a part of the accepted social order of the day that the poor should be oppressed, and it is against this order that He fights.

These sentiments have awakened the greatest of interest in Germany, on account of the prominent position of the new con-

vert. But they are also recognized to be symptomatic. Both Catholics and Protestants have long since recognized that there is, in the aims of the Social Democrats, an element of truth in full accord with the ideals of Christianity. For this reason, the late Catholic bishop of Mayence, the famous Dr. Ketteler, was untiring in his efforts to combat the new gospel by appropriating some of its leading ideas in the interests of this church, and Dr. Stöcker, the famous court preacher of Berlin, organized a Christian Social party. In general, however, the religious journals see in Blumhardt's position an extreme radicalism not justified by Biblical teachings.—*Translation made for THE LITERARY DIGEST.*

FEDERATION OF AMERICAN CHURCHES.

WHAT it is hoped may prove one of the important religious movements of the coming century was inaugurated in New York early this month by representatives from over sixty church organizations, acting as delegates to the "Conference in the Interests of Federative Action among Churches and Christian Workers Throughout the United States." From *The Outlook* (February 10) we quote the following account of the meetings:

"The first session was mainly devoted to a general discussion of the need and opportunity of federation among churches and Christian workers throughout the country. Representatives of federative work from various parts of the country participated in this discussion. With large agreements there was still some difference of opinion as to the extent to which interdenominational cooperation could go. After the Conference had dined together at the Aldine Club, the evening session was devoted to addresses. No more convincing argument could be presented for federation than President Hyde's account of 'Ten Years of Federation in Maine.' On the morning of the second day the contemplated movement was decisively initiated by the unanimous adoption of the report presented by a committee. This declares that 'the time has come for the institution of a national conference for Federation among Churches and Christian Workers in the United States,' and recommends the creation of an executive committee of nine ministers and nine laymen. Some of the functions of this committee are: (1) To facilitate and foster intercommunication between local federations, and diffuse information regarding the work. (2) To give counsel and assistance in the interests of comity and cooperation, and to promote the formation of local and state federations. (3) To arrange for a similar conference next year, and to report to it a plan for a basis of membership in the conference. Finally, a committee was appointed to select the executive committee and call it together. The contemplated federation, like that already formed in Great Britain, does not undertake to be a federation of all Christian churches, but only of those Protestant churches which are denominated 'evangelical.' Such a limitation, however regrettable, is in existing conditions the *sine qua non* of any federation at all."

The Independent (February 5) says of the conference:

"President Hyde in his address urged that the same common sense and tact, energy and enterprise that are used in the maintenance of a business trust be applied to reconstruct missionary competition and promote church cooperation, and held that this would strengthen hundreds of feeble churches, encourage thousands of disheartened ministers, and secure a greatly increased efficiency with a decreased expenditure. . . . It is sincerely to be hoped that the plan will be carried through. At no time in the past has there been such a conviction of the necessity of such federative action and on the whole so general a willingness to enter into it."

The *New York Evening Post* (February 2), under the caption "A Religious Trust," after referring to Dr. Schurman's recent words about the need of a single form of Protestant Christian missions in the Philippines, says:

"President Schurman has already uttered a warning on this point, and has called attention very plainly to the evil consequences of a policy which, by permitting unlimited competition and duplication, should not only mislead but alienate the minds of people who know nothing of our theological or ecclesiastical

distinctions. In other words, what is needed here is combination, not competition. What is demanded is, in the best sense, a religious trust—not a multitude of rival concerns.

"We are glad to see signs that the truth of this has begun to appeal to the authorities of the churches, and that the possibility of cooperation in missionary work, particularly in our newest possessions, is being seriously considered. . . .

"The Young Men's Christian Association—the greatest of our religious organizations outside of formal church lines—might, if it could but break away from the narrow theological lines which so generally confine it, contribute powerfully in this direction. Moody's Northfield conferences have unquestionably worked to the same end. It is humiliating to think that the opposition to such business-like union comes mainly not from the smaller denominations, but from one or two of the largest and most powerful ones; yet even here there are not wanting some encouraging signs of a better day. Doubtless we must still expect much stubborn adherence to the old ways, and much stirring up of the faithful in the interest of sectarian prestige; yet we can but think that the larger interests of religion are, on the whole, steadily making their way."

Are We in the Twentieth Century or the Sixtieth? A Religious View.

—The discussion concerning the century's end will not down in the religious press any more than in profane journals. The Rev. W. P. McNary, D.D., writing in *The Midland* (United Presb., Chicago, January 15), proposes to show not only that "the Pope is fallible as well as some other people," in supposedly announcing the present year as the first of the new century [as a matter of fact, the Pope distinctly recognized that the nineteenth century has *not* yet ended.—EDITOR OF *THE LITERARY DIGEST*], but also that on January 1, 1901, we shall be at the commencement of the sixtieth century. He dates his article "Dawn, Monday, January 10, 5901; 59 [century] A.M.; 19 [century] A.D." and says:

"Waiving the question of the supposed error of four years in the date of the Christian era, and all similar questions, let us suppose that Adam was created at or just after midnight of January 1 and that Christ was born just four thousand years later. Let us suppose that Adam wrote up his diary some time during the first day and that he and some of his descendants have kept it up until the present time. The following table will show how that diary would have been dated:

	Month.	Day	Year A.M.	Cent. A.M.	Year A.D.	Cent. A.D.
Day Adam was created	January	1	1	1		
Last day First Century	December	31	100	1		
First day Second Century	January	1	101	2		
Last day First Millennium	December	31	1000	10		
First day Second Millennium	January	1	1001	11		
Last day Fourth Millennium	December	31	4000	40		
First day Fifth Millennium	January	1	4001	41	1	1
Day Christ was Born						
Last day First Century A.D.	December	31	4100	41	100	1
First day Second Century A.D.	January	1	4101	42	101	2
Last day Nineteenth Century A.D.	December	31	5900	59	1900	19
First day Twentieth Century A.D.	January	1	5901	60	1901	20
Last day Twentieth Century A.D.	December	31	6000	60	2000	20
First day Seventh Millennium	January	1	6001	61	2001	21

RELIGIOUS NOTES.

A COMPLETE copy of the famous Bible Commentary of Nicholas de Lyra, in five volumes, printed originally in Rome by Don Pietro Massimo in 1475-76, was recently discovered by the antiquarian Leo Olschci of Florence, in a private collection of books in Venice. Copies of this work, which are exceedingly rare, have been sold for as high as 30,000 lire [\$5,250]. It also marks an era in Bible illustrations, its abundance of pictures being evidently the work of a master, probably Mantegna, at the close of the fifteenth century.

THE two largest Presbyterian churches in New York—the Fifth Avenue and the Brick Church—greeted new pastors in January. They are, respectively, the Rev. Dr. Purves and the Rev. Dr. Babcock, and tho said to resemble their predecessors neither in manner nor method, they are apparently to revive the memories of old Presbyterianism in a close adherence to conservative evangelical doctrine. The religious writer of the *New York Sun* (whom Dr. Fulton, editor of *The Church Standard*, has lately termed a "Jesuit in disguise") says that the two new pastors are "prudent in not attempting to reconcile the old faith with the new skepticism," for the two are natural and irreconcilable enemies according to his view.

FOREIGN TOPICS.

AMERICAN SENTIMENT ON THE SOUTH AFRICAN WAR.

A FEW weeks ago the opinion prevailed in nearly every prominent British paper that the sympathies of the American people were, on the whole, with Great Britain in her struggle with the Boers. That opinion has been losing ground, and the admission is now found in Conservative as well as Liberal

THE RETURN OF THE LEOPARD
— *Paul Rieu, Paris*

papers that American public opinion is on the whole in favor of the Boer cause. The London *Saturday Review* says:

"We fear that no accurate presentment of the real sentiment in the United States regarding the war in South Africa reaches this country. It is true that many of the leading newspapers take the pro-English view, but, taking journals all over the country and not only in New York, there is no doubt at all that the balance is heavily against us. So it is with public opinion.

the proportion of anti-British sentiment is by far the greater. The quotations which reach our newspaper readers by no means afford a correct idea of American opinion. Briefly the condition of public feeling as expressed in newspapers may be summed up thus. The Administration organs and the financial organs are still strongly with us, but the latter are beginning to waver because the war is beginning to injure trade. It must not be forgotten how completely the Administration is in the hands of the great financiers and trust companies."

The same paper warns English statesmen that if they "handle the 'alliance' carelessly" they "may render assistance where they least wish to," that is, to Bryan and the Democrats.

The Spectator is in hopes that the Boers themselves may destroy the favorable impression held of them in this country. Referring to the distrust with which the Boer authorities regard our Administration, as reported by an American correspondent of the *London Times*, *The Spectator* says:

"The American correspondent's general impression is that 'the Boer dislikes an American.' That is, we believe, true, and to this fact is due the studied rudeness with which America has been treated by the Boers. People here and in the United States wonder at this, and ask how it is that clever politicians like the Boers can be so infatuated as to risk annoying so mighty a state. They forget the very practical nature of the Boer. The Boers argue, and argue very rightly: 'The Americans can not possibly injure us, for they can not get at us with their ships, and they certainly will not send troops, whatever we do; therefore, it is perfectly safe for us to show our feelings. We lose nothing by being absolutely frank. Besides, we do not want to encourage Americans to come and settle here, for they do not understand our ways, and are as troublesome as the English.' The Boers, in fact, know their own minds exactly, and are not awed by such conventional notions as 'small states must not be rude to great states.' They only ask whether the great state could hurt them."

A similarity between the present war and our war of the Revolution is referred to by a writer in *The St. James's Gazette* as follows:

"The American war was produced by an attempt to interfere with the internal affairs of certain British colonies in regard to their right of taxation. No one who reads the history of the time can doubt that there was a strong case for the Home Government, and public opinion in England supported the interference as strongly as it has supported Mr. Chamberlain in the present instance. . . . The argument for the fatal tax on tea was precisely that used in the present war—the desire to assert British supremacy. From a financial point of view it was worthless; but 'suzerainty' was thought to be at stake. The spirit in which the nation entered into the war was very much the same as that shown at present. The 'Yankees' then were spoken of very much as the 'Boers' are spoken of now, and there was the same persistent effort to represent them as savages outside the pale of civilization.

"The analogy is made even closer by the new argument that this is not a war against a foreign state, but against a dependency in rebellion. If the Transvaal war is to be called the 'Boer revolt,' then it becomes much more like the 'American revolt' of the eighteenth century. The Cape Colony is still fortunately loyal, we must not forget that many of the American colonies were loyal during the earlier years of the war, and were only driven into disloyalty by the recklessness of 'patriots' at home and the unwisdom of English generals.

"The granting of the franchise to newcomers is, in all states, a matter of internal administration, and our claim to dictate to the Transvaal on this point is not by any means so very dissimilar from our claim to tax the Americans in order to support the imperial troops. Then, as now, there were faults on both sides; but now, as then, the dangerous feature of the situation was the arrogant and intolerant spirit of public opinion at home."

There is hope, however, in the breast of some English editors that we may draw nearer to Great Britain on further consideration. The *Newcastle Chronicle* says:

"By and by, when both nations come to see, as they probably will, that they are inspired by much the same ideas, are seeking much the same objects, and are pursuing much the same methods, they will come to a better appreciation of each other's motives and purposes. It is not an alliance that is needed—an alliance would be desirable for neither of us—it is simply a cordial and sympathetic relationship. Such a relationship would save the still barbarous regions of the globe for freedom and commerce—from the fate of Madagascar in the hands of France and the fate of the Chinese provinces in the hands of Russia."

The anti-British feeling here is attributed chiefly to "Irish

THE TIGELA PROBLEM

THE LOSS: "Come out!"

THE OOM TORTOISE: "Come on!"

—*Westminster Gazette.*

malcontents," and "Dutch and German Creoles"—the latter term referring to the descendants of Germans and Dutch.

In the *Toronto Weekly Sun*, Goldwin Smith, who is opposed

to the war, expresses delight over the waning of the "alliance" sentiment. He says:

"British reverses seem to have cooled the friendship of President McKinley and thrown him back into an attitude of rigorous neutrality. For this let us be thankful. Great Britain is well able to do her sinister work alone. Entanglement with Mr. McKinley and his game could only add to the darkness of a business which, unless the sympathies of the whole world are at fault, is dark enough already."

The *Toronto World* argues that the interest of the United States is involved on the British side because British reverses depreciate our stock values; and where would the American farmer be if he did not have the British markets? The *Toronto Evening Telegram* thinks that Uitlanders who obtain wealth from Canadian mines are very ungrateful if they side with Britain's enemies. It says:

"Public opinion ought not to be hostile to Great Britain in a State benefited as largely as the State of Washington has benefited by the liberality of the laws which have made so many of its citizens rich with the wealth of British Columbia's gold-mines. Senator Turner was practically snatched from the jaws of the poor-house by the wealth of a mine in Canadian territory. He of all men ought to have been ashamed to rise in the United States Senate and proclaim his sympathy with the Boers and his hopes for the defeat of the nation whose flag sheltered his successful pursuit of wealth."

Many British and Canadian papers appeal to us on the score of Anglo-Saxon civilization, which they regard as superior beyond comparison. "Happily one old friend, 'manifest destiny,' seems to be on the side of better relations," remarks the *Toronto Globe*, and the *Montreal Daily Witness* says:

"Orators knowing the sentiments and prejudices instilled into their hearers in youth by the school-books, draw an inspiring analogy between the American colonists fighting for freedom against British tyranny and the simple, heroic farmers of South Africa now arrayed in the same cause against the same old tyrant. With impassioned eloquence they appeal to the instincts

of American free-men to repudiate an Administration and a party which, as they allege, has taken sides with the oppressor against a people fighting for freedom. Unfortunately for the Republicans, the policy to which they are committed in the Philippines and the feeling of obligation which the Administration seems to entertain for Great Britain on account of her attitude during the war with Spain, give point and emphasis to these attacks. . . . The fate of Anglo-Saxon progress seems to hang in the balances. Should

ROBERTS: "Let's bash in his hat!"
KITCHENER: "But suppose he has a brick in it?"
—*Humoristische Blätter, Vienna.*

the United States once more in the day of Great Britain's extremity assail her from behind, all the races of earth would rejoice, but the shadow would go back on the world's dial many degrees."

On the Continent of Europe the opinion is frequently expressed that many Americans have no wish to see their country follow

closely in the footsteps of England. The *Paris Journal des Débats* says:

"We have no means for ascertaining what is passing through President McKinley's head. . . . But, not to speak of the Irish, Germans, and other strangers who have gone to the great republic to become Americans, yet do not intend to become bottle-holders of aggressive England, it is sufficient to remember that

THE LATEST TOY.

—*Vitenspiegel, Amsterdam.*

the Americans have not forgotten their own struggle for independence. This will convince them that they ought not to do anything likely to prevent the independence of the Transvaal."

The *Berlin Tageblatt* points out that the Americans are not greatly impressed with the military efficiency of the ally who was to join them in conquering the world, as the comments of *The Army and Navy Journal* show. The *Vossische Zeitung* thinks that the newspapers in England are inclined to underrate the power of the non-English element in the United States, and to overrate the influence of the journals manipulated for the benefit of the great capitalists. The *Kölnische Zeitung* remarks that even the attempts to obtain the good will of America by inciting her against Germany are failing now, as is shown by the reception given a recent article in *The Spectator* in which America is advised to increase her navy, as Germany will sooner or later attempt to establish herself in South America, where already large German settlements flirt with the mother country. The *Amsterdam Handelsblad* says:

"Numerous pro-Boer meetings show that the people are not in sympathy with their administration in the matter. The people endeavor to impress the Government with the fact that they do not, as Mr. Chamberlain thinks, give their moral support to his policy. Even the unfairness of the great journals can not prevent this."

The same paper publishes a letter from a Mr. George Wilson, of Lexington, Ky., to the effect that only a few rich persons in the East side with England; but that these, owning newspapers, can make themselves heard unduly. He explains further that the English and their descendants are not in the majority, and he doubts that more English is spoken throughout the country than German and French. Not without interest is a theory set forth at length in the *St. Petersburg Zeitung*, which we summarize as follows:

The United States did not show as much firmness in the matter of alleged contraband as did Germany; but there is no longer such warm friendship for England in the Administration at Washington. The American Government is not sentimental. Sentiment is, however, cleverly used to stir the masses. Thus in the Secessionist War, the negro question was made the outward cause of hostilities, and in the war against Spain the "lib-

eration" of Cuba formed a good rallying cry. If the Americans thought it would pay, the Government would be for the Boers at once. And that may happen. The Americans at first sided with the English; but now the Boers have shown their strength, and the Americans follow the lead of their mules. In Washington and in Pretoria strange things are going on. President McKinley says he is altogether innocent of them. Of course he is; he will not spoil matters by undue haste. Webster Davis is entirely "unofficial" in Pretoria, and Montagu White has no official standing in Washington. Wait and see! The cat is a cat, but what we innocently thought a she-cat can be conveniently discovered to be a tom-cat when the time comes. If the Boers lose, all America will talk of their wickedness and their barbarities, and of the chivalry of Buller and his men. If the Boers win, the boot fits on the other leg. But the United States will not be friends with a beaten state, that is certain. The news from the seat of war around Ladysmith will probably decide the matter. —*Translations made for THE LITERARY DIGEST.*

THE "PALACE REVOLUTION" IN CHINA.

ANOTHER "palace revolution" has taken place in China. Emperor Kwang-Su has appointed Prince Tuan, a nine-year-old child, as his successor. Whether Kwang-Su has acted of his own free will or under compulsion, it is not easy to determine. It is even surmised that the Emperor is no longer living, a rumor which has often before been set on foot. Emperor Kwang-Su is supposed to have offended many people by his desire to introduce Western reforms, after the manner of Peter the Great or Joseph II. of Austria. This, however, seems certain, that the Empress-Dowager is more firmly established than ever, and that Li Hung-Chang is again in power. This reduces Great Britain's influence, and increases that of Russia. The *Paris Journal des Débats* says:

"The Emperor favored the English, the Empress-Dowager the Russian, or, to be more correct, Franco-Russian parties. Hence the English were tempted somewhat to exaggerate the Emperor's efforts in the direction of Western civilization. . . . As for ourselves, we frankly confess that we would like nothing better than that the Chinese should cut their pig-tails and dress themselves in European fashion. But, after all, it is our own interests we have to attend to, and if these are better served by the old political school which leaves the Celestial his tresses and flowing gown, we do not complain."

There is, however, a third candidate for the position of tutor to the Chinese, and he seems likely to be accepted in the end. This is Japan. We condense the following from an article in the *Berlin National Zeitung*:

Altho the Japanese do not seem to use their advantageous position to the best effect, their influence in China is growing, and their leading papers, especially the *Nichi* and the *Jiji*, never tire in their efforts to awaken Japan to the realization of its advantages. The chief difficulty is to be sought in the fact that Japan since her victory has become more jingoistic and less enterprising. Yet the position of the Japanese in China is rapidly improving. The Chinese have many sympathies for the Japanese, while they have nothing but sovereign contempt for the European and his ways. The Japanese do not hurt the feelings of the Chinese. They do not interfere with their customs, and do not offend by introducing missionaries. The people of the far East are no fools. They know well enough that the stranger from the West hides in his phrases about the blessings of his morals, culture, and civilization nothing but the most sober selfishness, and that no one except the missionaries would go to the far East if he did not intend and hope to profit materially. The missionaries, of course, are rejected for different reasons. The often-mentioned and often-denied alliance between Japan and China may therefore become a fact when both countries fully realize what dangerous enemies threaten them. The Europeans can learn much from the Orientals; but, so far, only Russia is anxious to learn, and it is not impossible that Russia and Japan may settle their differences peaceably.

The *Ost-Asiatische Lloyd* reports that the Chinese Govern-

ment is gathering funds far in excess of needed expenditure. The rumor that China means to do something for her defense is, therefore, likely to have some truth in it. The *Westminster Gazette* relates that Japanese will be permitted to train the Chinese troops. At any rate, no serious opposition to their influence is expected just now by the Japanese. Some highly educated Japanese, we happen to know, left for South China late in January, and much Japanese money is invested in joint ventures with the Chinese. How this will influence Russia's attitude is a matter of speculation. Many Japanese think that sooner or later Japan and Russia must come to blows. We quote from the English section of the *Yorodzu Chōhō* (Tokyo, Japan):

"It can not be denied that a great majority of the Japanese people are not friendly disposed toward Russia. More than thirty years ago, this country was obliged to concede to Russia's claim to the Saghalien. Russia thereby sowed in the Japanese mind the first seed of antipathy against herself. It has grown steadily, in proportion with the development of Japanese interests in Korea, where they inevitably have come to collide with those of Russia. Then Russia intervened against this country at the close of the Japan-China War. All these events have fostered Japanese antipathy against the great Northern power to an almost bursting point. On the other hand, Russia views this country as a chief obstacle to her expansion in these parts of the world, and everything indicates to her harboring an intention to crush us before we are too strong to allow that. . . ."

"After all, then, those rumors of war are nothing greater or less than rumors. But as we have said before, the Japanese and the Russians look upon each other as their inveterate foes, and a war will break out between them sooner or later. If thus a Russo-Japan war must come at all events, it seems to us that *The Daily Mail* is quite right when it says: 'Japan knows that her time for striking is now—in the forthcoming spring, that is to say. She must assail Russia before the completion of the Trans-Siberian Railway, and while the hands of France are tied by the Paris Exhibition. If Japan takes her opportunity, war is likely to have but one result. Russia was never more heavily handicapped, and Japan will never be better equipped.'"

The *Calcutta Friend of India*, which hopes that while England is engaged elsewhere the United States may assist Japan, says:

"We do not grudge the Americans their new possessions, because there is a general harmony of ideals between them and us; but we do resent the advance of Russia into territories bordering upon our own, or into regions where our influence was beginning to be felt, because it means the aggrandizement of a power which we do not understand, and the extension of ideals which are repugnant to us. The struggle between England and Russia in its ultimate form is the struggle between despotism and liberty, and when the crash finally comes, there can be little doubt that we shall see the progressive and enterprising islanders of Japan fighting by the side of the islanders of Great Britain."

On the whole, the English papers of the far East fear that Great Britain can not use her powers to the best advantage while she is engaged in the Transvaal struggle. *Ost Asien*, a paper published by the Japanese in Berlin and supposed to be officially influenced from Tokyo, advocates an anti-Russian alliance between Japan and Germany, the latter being described as the coming naval power. The *Vossische Zeitung* has no objection to the most cordial relations with the "Prussia of the far East," but does not think it necessary that Germany should threaten any country, certainly not Russia. —*Translations made for THE LITERARY DIGEST.*

Some Fulfilled Predictions.—It is pointed out by Mr. R. E. C. Long in the London *Westminster Gazette* that M. Bloch, in his work on future wars, which is said to have influenced the Czar when he decided to call together The Hague congress, predicted what would happen if two white races opposed each other. Mr. Long reproduces that part of the prediction which relates particularly to tactics and strategy. Mr. Bloch's predictions were:

"That the war of the future would be a war of sieges and entrenched positions.

"That to carry out frontal attacks would be impossible without immense losses and great superiority in numbers, and that it would, therefore, seldom be resorted to.

"That with equality in numbers modern wars would last longer than past wars.

"That decisive victories would be rare, the beaten side immediately taking up fresh positions to the rear which would be prepared in advance.

"That artillery would be put out of action by sharpshooting riflemen who would kill off horses and men.

"That adequate reconnaissance would be almost impossible, and that an enemy's position would only be revealed by the volleys from their trenches.

"That even then, owing to the use of smokeless powder, it would be impossible precisely to locate them.

"That attempts to surprise an enemy would often result in counter-surprises.

"That entrenchments constructed for protection against modern artillery and rifle fire would be invisible.

"That the loss in officers would be abnormally large.

"That ambulance work, owing to the great range of modern weapons, would have to be carried on under fire, with the result of mutual accusations of abusing the Red Cross flag."

All these predictions, it is pointed out, have been fulfilled to the letter in the South African war.

GREAT BRITAIN AND THE FUTURE GERMAN FLEET.

KAISER WILHELM recently sent a telegram to the King of Württemberg which was as significant in its way as the famous message sent to President Kruger four years ago. "If Germany had an adequate fleet," said the Emperor, "none of her ships would be stopped." The British press, however, have received this message in a very different spirit from that in which the former message was received. Even the jingo papers, having in mind the Kaiser's plan to double his fleet, do not like to arouse the German people by further taunts. On the contrary, the effect of the seizure of German ships upon German public opinion has aroused serious misgivings in England. Speaking of the protracted examination of the *Bundesrath's* cargo, *The Standard*, London, says:

"The heavy guns, the cases of ammunition, and the consignments of military rifles, saddles, and the like appear to have existed only in the imagination of inventive reporters. Assuredly, if such articles as these had been on board they would not have escaped the notice of the Durban custom-house officers, who can not be said to have failed in their task through undue haste. . . .

"THE OPEN DOOR" (AND THE CLOSED EYE).

PORTUGUESE CUSTOMS OFFICER: "Anything to declare? Nothing contraband, I hope?"

BOER: "Oh dear me. No!"

—Punch.

At the same time, it is to be regretted that each of the first three seizures of German vessels turns out, on investigation, to be a case of unfounded suspicion. Such mistakes will occur from time to time when the right of search is exercised, for it is impossible for naval captains always to obtain such information beforehand as will prevent them from detaining a perfectly innocent vessel sailing under a neutral flag. But, considering the feeling which these arrests have aroused in Germany, it is a pity that a little more trouble was not taken to obtain trustworthy evidence in these test cases. The *Bundesrath*, like the *Herzog* and the *General*, must be released, with an apology, and we shall have excited the German public to fever heat for nothing."

The *Manchester Guardian* says:

"We call this disappointing, because one was really anxious

for proof that our action in seizing the *Bundesrath*, which was not an ordinary tramp but a liner subsidized by the German Government, had been perfectly regular. It would be better for the relations between this country and Germany if we could put ourselves in the right. . . . It has already supplied an argument to the 'big-fleet' party in Germany, the effects of which it can not undo. It can, however, prevent the feeling of resentment from gaining ground in Germany, and if the facts are against us it should frankly own its mistake and make ample, ungrudging, and, still more important, immediate amends. The amends will have double the political effect if made promptly, and it is to be hoped that the Foreign Office will in this matter be able to overcome its habitual dilatoriness."

It is realized that a powerful navy must arouse in the Germans a hope of acquiring territory healthy enough for their emigrants. *The Outlook* says the Germans can not build the ships. *The St. James's Gazette* believes they can not pay for them. *The Spectator* says:

"We realize the greatness of the Emperor's aspirations; we do not feel sure that they will be realized so early as he imagines. The wish is not father to the thought, for we have no feeling of jealousy or dislike in regard to Germany. Again, we recognize fully the many splendid qualities of the Germans—their love for and use of knowledge, their manliness, their courage, their sound morality, and their domestic virtues—and realize that these are among the qualities on which great empires are founded. The possession of these qualities is, however, not enough for empire of the enduring kind. Until the Germans can rise to a conception of personal freedom, and can organize for themselves free institutions, they will not be fit for empire—for *imperium et libertas* is no chance conjunction of words. A country ruled, as Germany is, by the despotic will of an hereditary monarch, may create an Asiatic empire which will last for a couple of generations, but world-power is not given to what is, after all, the most insecure of all forms of government. The Germans, if they want to govern a great piece of the world, must begin by learning how to govern themselves."

In *The Westminster Gazette*, Mr. W. J. Stillman warns Great Britain that it is not wise to treat Germany as if she were dependent upon English good will, and her Emperor as if he were a Caligula. "If William II. supports England in her crisis, it will be from the exercise of a magnanimity unequalled in this generation of European statesmen," says Mr. Stillman; "the evident hostility of the English Government to all his plans, and the animadversions of the English press during the bygone years would have made an implacable enemy of a lesser statesman." *The Daily Telegraph*, in a lengthy article, declares that a people like the modern Germans, willing to follow a leader like their Emperor, are serious competitors, and nothing but the spirit of emulation can save England from serious reverses.

It is reported in the German press that the East African Line has actually lost some shipping in Portugal, the Lisbon merchants giving their patronage to French steamers, in the belief that Great Britain will not dare to interfere with these. The advocates of a big fleet in Germany make the most of this circumstance, especially as Hamburg and Bremen shipowners openly declare that their ships were seized merely to hurt German business interests. The most influential German papers, nevertheless, advise their countrymen to "lie low" until their fleet is in a condition to meet a powerful enemy. The *Hamburg Correspondent* expresses itself in the main as follows:

Let us be sensible, and attempt nothing impossible. That is the lesson our great chancellor sought to impart to us. Bismarck ridiculed the Anglomaniacs, but he would equally ridicule the Anglophobes of to-day. It is not wise to taunt the English in their hour of adversity, nor is it noble to do so. Let us remember that England granted our merchants and our ships freedom and protection at least as long as we did not seriously compete with her own. Be it granted that she has since treated us badly; that she opposes our colonial policy by fair means and foul; that she did not intend the "Made in Germany" label to become a recommendation when she required its adoption; that she seeks to exclude our wares from her colonies—all that does not warrant our irritating the British. And it is uselessly irritating if our people regard every Boer as a hero, and every Englishman as a chicken-hearted boaster. Great Britain has the power still to seriously annoy us and cripple our trade, and there are others who would like to see it done. Let our interests be looked after in the most vigorous manner. Let us oppose Great Britain when we think it necessary. But let us, as a people, be at least polite to the British people. There are still international problems which we can solve better in harmony with England than in opposition to her.—*Translations made for THE LITERARY DIGEST.*

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5.

If you wish something decidedly new in a dress or skirt, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits, but we are the only house making fashionable garments to order at moderate prices.

Our Catalogue illustrates an exquisite line of exclusive designs which are shown by no other firm.

Tailor-Made Suits, \$5 up.
New Skirts in the latest Paris cut, \$4 up.
Wash Suits, \$4 up.
Wash Skirts, \$3 up.
Rainy-Day Suits and Skirts made of double-face materials.
Bicycle Suits, \$5.
Bicycle Skirts, \$3.50.

We also make finer garments and send samples of all grades. We pay express charges everywhere. If, when writing, you will mention any particular color of samples that you prefer, we shall be glad to send you an assortment of the kind you wish.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Goding writes from Newcastle, New South Wales, November 7, 1893:

"There is a great scarcity of steel and iron rails in this colony. Should our manufacturers look into the matter at once, I believe they could secure a large order—perhaps £50,000 (\$75,000) worth. The colonial authorities are very anxious to obtain rails, and I am led to think, may consider favorably orders from the United States."

The consul desires this notice to have the widest circulation possible, as he regards this as an excellent opportunity for American manufacturers.

Consul Bergh of Gothenburg writes November 14, 1893:

As far as I have been able to learn, no American-made shoes are sold at Gothenburg at the present time. Some time ago, a firm here imported and sold American shoes, but the firm failed, and to my knowledge no one has since taken up the trade. Most of the foreign shoes sold here are of English manufacture, small quantities coming also from France and Germany. I do not see any reason why a market for American shoes should not be opened in Sweden, if they are well made and prices not too high. The duty is, of course, an obstacle in the way; but this applies to English as well as to American shoes. I have reasons to believe that good American shoes could be sold at least in the three largest cities—Stockholm, Gothenburg, and Malmo. The shoes should not be too heavy; the shapes and sizes most in demand could be ascertained through correspondence with shoe dealers here. I think it would be well to send samples with price quotations, so that dealers could compare quality and price with the goods they now handle. The shoes sold here may be divided in three classes, as follows:

Class 1.—Men's high shoes, price \$4.00 to \$5.00; low shoes, \$3.00 to \$4.00 per pair, retail. The shoes imported belong to this class. The wholesale price of the English (men's) shoes is from 2s. 6d. to 3s. 6d. (\$1.00 to \$1.50) per pair. Ladies' shoes are cheaper.

Class 2.—Men's high shoes, price \$4.00 to \$4.50 per pair; low shoes, 30 cents to \$1.00 cheaper.

Class 3.—Men's heavy high shoes, retail price, \$1.50 to \$2.00; low shoes, \$1.00 to \$1.50.

These prices are only approximately correct.

The stock used is as follows:

Class 1.—Veal skin, calfskin, or goatskin, black or yellow. Russia leather is also used for the yellow, or tan-colored, shoes. Patent leather is used, but not much.

Class 2.—For men's shoes, mostly calfskin for the top part of high shoes, and "roadster" (a special kind of horse leather which takes a very high polish). It is obtained by splitting or trimming the horsehide from the hind quarters for the forward and lower part of the uppers. Calfskin is often used for the whole upper, and sometimes common horse leather is used.

Class 3.—Heavy split leather or cowhide, heavy soles. These shoes are probably too cheap and heavy for importation.

The following is the import duty:

Shoes made wholly or in part of silk and not otherwise specified, per kilogram (2.2 pounds), 40s. kronor (\$4.00); shoes made of other cloth than silk, with or without leather soles, per kilogram, 25s. kronor (\$2.50); shoes made of morocco, cordovan, colored, pressed, or lacquered leather, per kilogram, 20s. kronor (\$2.00); shoes with soles of wood, also heavy boots, per kilogram, 25 kronor (\$2.50); shoes, other kinds, per kilogram, 20s. kronor (\$2.00).

Ready-made uppers pay the same duty as finished shoes.

No deduction is allowed for the weight of the covering of the goods, such as paper, paper boxes, or the like.

MORE OR LESS PUNGENT.

With the Hat.—"There, sir!" said the hat dealer, surveying critically the ancient headgear of the inquirer. "Here is a hat that will fill a long-felt want." "It is undoubtedly," responded the intending purchaser, "a long-wanted felt!" In the attending excitement Weakly Tenplunks, the humorist, succeeded in making his escape.—*New York Press.*

Personal Equation.—TEACHER: "If one servant-girl could clean two rooms in two hours, how long would it take two servant-girls to do it?"

LITTLE GIRL: "Four hours."

TEACHER: "Wrong. It would only take one hour."

LITTLE GIRL: "Oh, I didn't know you were talking about servant-girls that wasn't on speaking terms!"—*Collier's Weekly.*

Slightly Confused.—A superintendent of a Congregational Sunday-school in England relates the following true incident: The title of the lesson was "The Rich Young Man," and the Golden Text, "One thing thou lackest." A lady teacher in the primary class asked a little tot to repeat the two, and looking earnestly in the teacher's face, the child unblushingly told her, "One thing thou lackest—a rich young man!"—*Ram's Horn.*

Her Protectors.—"I don't see why people growl so about the crowds of shoppers," she said. "I have had no trouble at all." "How do you manage it?" they asked. "I take my two boys with me." "And can they really help you?" "Can they really help me!" she exclaimed. "Well, I should say so. One of them played right tackle on his college football team and the other is champion catch-as-catch-can wrestler of his class."—*Chicago Post.*

They Both Thought Nothing of It.—On one occasion when the late Lord Bishop of Litchfield had spoken of the importance of diligent, painstaking preparation for the pulpit, a verbose young clergyman said: "Why, my lord, I often go to the vestry even without knowing what text I shall preach upon; yet I go up and preach an extempore sermon, and think nothing of it." The bishop replied: "Ah, well, that agrees with what I hear from your people, for they hear the sermon, and they also think nothing of it."—*Exchange.*

Current Events.

Monday, February 3.

—The Boers protest to Lord Roberts against uncivilized methods of warfare and the wanton destruction of property; Lord Roberts makes counter charges.

—General Wood and his party arrive at Havana, having completed a tour of the island.

—In Congress, a bill is introduced by Senator Furaker providing a form of government for Puerto Rico.

—The treaty with England, removing obstacles to the construction of an Isthmian canal by the United States, is signed by Secretary Hay and Ambassador Pauncefote.

—Ex-Consul Macrum of Pretoria arrives in this country, but refuses to make any public statement.

—Prospects for peace in Kentucky are more hopeful, and a conference of leading Democrats and Republicans is held at Louisville.

Tuesday, February 4.

—The bombardment of Ladysmith continues, and there is considerable fighting in the vicinity; Adelbert S. Hay, United States consul at Pretoria, presents his credentials.

—In the British House of Commons an amend-

HOLIDAYS IN ENGLAND.

A sixty-three page book entitled as above, profusely illustrated, has just been issued, describing a long list of the most interesting spots for the tourist. Copies of this interesting book can be secured by enclosing 3-cent stamp to H. J. KETCHAM, General Agent, Great Eastern Ry. of England, 362 Broadway, New York.

PRICES AS TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet

For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid. Alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

ONE-HALF THE FUEL

that all ordinary grates consume is required by the

Jackson Ventilating Grate

to produce the same amount of heat. Its perfect ventilating system is appreciated by all who consider pure air essential to health. The Ventilating Grate burns either coal, wood, or gas, and can be fitted into any ordinary fireplace. Write for descriptive catalogue "D," which contains our guarantee.

EDWIN A. JACKSON & BRO., 54 BECKMAN ST., N. Y.

ment to the address in reply to the Queen's speech, embodying censure of the Government's war policy, is defeated by 352 to 139.

—Skirmishes in the **Philippines** are reported; the natives making several attacks on United States troops.

—The President appoints **Judge William H. Taft**, of Cincinnati, head of a new Philippine commission which is to establish civil government in the islands.

—Governor Taylor of **Kentucky** makes no fresh move; the Republican members of the legislature meet at London and pass resolutions in honor of Goebel.

Wednesday, February 7.

—General Buller crosses the Tugela again at two points, and captures an unimportant kopje; General Gatacre again engages the enemy; Generals Roberts and Kitchener go to the front.

—Judge Taft confers with Secretary Root in Washington regarding the new **Philippine commission**.

—Governor Taylor still takes no decided action; arrangements are made for the funeral of Goebel.

—In the Senate, Mr. Depew and Mr. Pettigrew engage in heated controversy regarding the **Philippine question**.

—**W. J. Bryan** concludes a New England speech-making tour, and addresses a meeting in New York.

Thursday, February 8.

—Engagements continue in the **Transvaal** all along the fighting line; Generals Buller, Gatacre, and Macdonald are all in conflict with the Boers.

—In the House, the ways and means committee presents three reports on the **Puerto Rico tariff bill**.

—The body of **General Lawton** arrives at Washington, to be buried at Arlington National cemetery.

—The annual convention of the National American **Woman Suffrage Association** is opened in Washington.

Friday, February 9.

—General Buller's **third attempt** to relieve Ladysmith is a failure, and he is again compelled to retreat across the Tugela.

—Funeral services over the body of **General Lawton** are held in the Church of the Covenant, Washington, and the burial takes place at Arlington cemetery.

—Commander **Richard Wainwright** is appointed superintendent of the Naval Academy at Annapolis, to succeed Rear-Admiral E. McNair.

—Governor Taylor still refuses to sign the Kentucky agreement; the Republican legislators meet in London, and the Democrats in Louisville.

Saturday, February 10.

—The **British forces** engage at several points; General Gatacre wins some small victories, and Colonel Plumer meets with a slight reverse.

—Governor Taylor recalls the legislature to the capital and orders the troops home; the Democratic members of the legislature continue to hold sessions in Louisville.

—The State Department issues a statement explaining the effect of the **Hay-Pauncefote Treaty** on the Clayton-Bulwer convention.

—Professor Worcester and Colonel Denby are selected as members of the new **Philippine commission**, in addition to Judge Taft.

—In connection with the prolonged trial of **Mollinoux** in New York City, on charge of poisoning Mrs. Adams, the jury brings in a verdict of guilty of murder in the first degree.

Sunday, February 11.

—The Boers assume the aggressive in both Natal and Cape Colony; Lord Roberts assumes command of the forces at Modder River.

—Guerrilla warfare continues in several provinces of the island of Luzon in the **Philippines**.

—Quiet prevails at the capital of **Kentucky**, and the State troops are nearly all withdrawn.

—The report of the House committee recommends a territorial form of government for **Hawaii**.

**If you Feel Irritable
Take Horsford's Acid Phosphate.**

It makes a refreshing, cooling beverage, and is an invigorating tonic, soothing to the nerves.

**Duplicate
Whist
Tables...**

All the advantages of trays with a table to play on. Hidden pockets for cards to play sixteen hands. No lost or mixed cards. Each player has four leads in sixteen hands. No errors or confusion possible. The table is a substantial piece of furniture, in oak or mahogany. It folds when not in use. Price delivered \$7.00. Explanatory circular free.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4 1-2 x 10 1-2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00
Postage stamps received

CHARLES ELY, - 56 Warren Street, New York

Sample page which explains itself.

PHYSICIANS' EXPERIENCE.

Physicians have demonstrated the fact that it is not necessary to drug their patients in order that they may be well and strong. Nature will keep the body in a healthy condition if her laws are not disobeyed and the proper nourishment is supplied. Food to the body is as oil and fuel to the engine. Without these, the machinery will not run. The body requires proper food, and with it, all the organs do their work as nature intended. Without the requisite nourishment, the human machinery clogs, and an unhealthy state of the body is the result.

Nearly every family has some cereal food at the morning meal, but few indeed see that it is properly cooked. In most cases, the oatmeal is boiled for a few moments, and then served. Here lies the trouble. Oatmeal and all cereal foods should be cooked five hours; when undercooked, they form a sticky, starchy mass in the stomach, not only unduly taxing the digestive organs, but retarding the digestion of other foods. Wheat contains all the elements of nutrition necessary for the human system, but it must be properly prepared.

One of the most palatable and nutritious of foods that can be served at a meal is Granola. It is a combination of wheat and other cereals, carefully and thoroughly cooked, ready to be served with the addition of milk. The process it goes through in the manufacture gives it a rich, nutty flavor, and renders each pound as nutritious as three of beef.

A postal card from a reader of the LITERARY DIGEST bearing the name of the grocer who does not sell Granola, sent to the Sanitarium Health Food Co., Battle Creek, Mich., will bring a free sample.

Comments—"Ingenious, but perfectly simple"—M. W. H.; "Crisp and creditable"—J. W. B.; "Neat, pretty and easy"—E. S. F.; "Smart"—P. H. J.; "Nice and rather difficult"—M. M.; "Neat and economical"—W. K. C.; "Not difficult"—H. W. P.; "Pretty and very easy"—S. M. M.; "Very good key, poor variations"—S. the S.; "Neat, beautiful, strategic"—A. K.; "A conservative Bishop"—W. J. L.; "Simplicity itself"—A. De R. M.; "Very fair"—B. M.

H. P. Van W. and Dr. H. S. got 447 and 448; F. B. O., H. C. R., the Rev. F. W. Reeder, Irapuato, N. Y., and H. V. Fitch, Omaha, 449. L. L. Norwood, Elroy, Tex., and J. O. Villars, Wilmington, O., 444. "Meropé" got 445.

Solution of 445 will be held over, as there is something wrong with the problem.

It is interesting to know that twenty-five States and Canada are represented by the solvers of this issue.

Kind Words.

A correspondent in Iowa writes: "I took advantage of the opportunity for learning Chess given about a year ago in your Department of THE LITERARY DIGEST, and have become very much interested in the game. The Chess Department is alone worth the price of subscription." This correspondent has evidently made good use of the instruction, for he sent the author's solution of 445 and his notation is very neat and correct.

The Martinez Trophy.

In the Championship match of the Manhattan Chess-Club, New York City, Major Hanham and Eugene Delmar were tied for first place. In the play-off, first three games, Delmar won by the following score: Delmar, 3; Hanham, 1; Draw, 1.

Another Pillsbury Beauty.

Played *en passant* in St. Louis.

1 P-Q4	2 P-K4
3 P-QB4	4 B-Kt5
5 Kt-B3	6 B-Kt1
7 P-K4	8 Kt-K5
9 B-Q3	10 K-B4
11 P-B3	12 P-KR4
13 Q-Kt-Kt5	

White now forces the win in five style.

14 Kt-KR4	15 P-R4
16 P-Kt4	17 P-Kt4
18 P-Kt4	19 Kt-K5
20 R-R4	21 R-R4
22 R-Kt4	

The mate is now really forced in five moves as follows. Black must move K-B3; 23, Q-R5; B-Kt5; 24, K-Kt4; B-B3; 25, R-Kt5 ch; B-Kt5; mate in five.

The Marshall-Johnston Match.

The match between F. J. Marshall, the Brooklyn champion, and S. P. Johnston, the champion of Chicago, was won by Marshall by the close score of 7 to 5. The following game, the twelfth of the match, shows Marshall's skill, altho his opponent did not make a very strong fight:

Center Counter Gambit.

Notes by Emil Nimms, in The Press, Philadelphia.

1 P-K4	2 P-Q4
3 Kt-Q3	4 P-K4
5 B-Kt5	6 Kt-K4
7 P-Q4	8 B-Kt5
9 B-Kt5	10 Kt-K4
11 R-Kt4	12 Kt-K4

play for Black, Q-Q4; the move adopted is more conservative.

7 P-Q4. The play selected causes loss of time.

8 P-K4. If White answers B-Kt5 ch and Kt-Q4, Black may play P-K4 and B-Kt5. If White then continues Kt-K4 or Kt-Kt5, Black replies Q-Q4 and B-Kt5. With two chances to hold his own.

12 R-Kt5. To guard against the threatening B-Kt5 P followed by B-Kt5 ch, but the move does not prevent the continuation White had in view, nor was there any satisfactory defense for Black.

14 R-Kt5. White would have answered Q-Kt5 ch. Black must play Q-B4, for if Q-Kt5 White wins with B-Kt5 ch, B-Kt5 ch, and B-Kt5. The continuation would have been as follows: P-K4; 21 Q-Kt5 P ch; Q-B4; 22 Q-Kt5, R-Kt5; 23 B-Kt5, R-Kt5; 24 R-Q4, followed eventually by Q-Q4. The play would have been preferable to the one adopted, which caused a speedy loss of the game.

21 Kt-B3 ch. Which completely demolishes the Black game. If he moves Q-Kt5, White answers B-Kt5 P and Q-B4 mate will follow.

Resigns.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$5.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to renew before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE RELIEF OF KIMBERLEY.

GENERAL FRENCH, according to the despatches, accomplished last week with a loss of twenty men what General Methuen had failed before to accomplish with a loss of twenty hundred—the relief of Kimberley. Lord Roberts, with his rapid flanking movements, is generally given the credit for this important British success, and not a few critics on both sides of the Atlantic believe that the long-awaited second stage of the South African war has begun, and that it will end with the British flag waving over Pretoria. The first stage, lasting four months almost to a day, was marked by continual reverses for the British arms, and that, too, entirely on British territory; the second begins with a success won by maneuvering instead of by the previous costly method of frontal attacks, and Lord Roberts's despatch announcing the result was dated at Jacobsdal, a town in the Free State which only a few days before had been the headquarters of General Cronje, the Boer commander. Cronje's flight toward Bloemfontein, with Kelly-Kenny and Kitchener in hot pursuit, is a new phase of the war, and the newspapers hesitate to predict what its result may be. The *New York Tribune* says:

"The relief of Kimberley and the retreat of the Boer army have, in brief, completely transformed the whole aspect of the war. The entire Cape-Orange border, from the Orange River to the Vaal, has practically been cleared; for General Macdonald has gone around the west side of Kimberley to clear away any Boer forces that may be lurking in that quarter. In a short time, at the present rate, the line will be open from the Cape clear up to Mafeking and beyond. The fighting is now transferred from British to Boer soil. The invasion of the Orange State and the advance upon Bloemfontein have actually begun. Similar action toward the Transvaal and Pretoria may follow, or may be undertaken at the same time; for Mafeking would be the ideal place from which to start for Pretoria, and an army may be started thence and thither as soon as the railroad to Mafeking is reopened. . . . There is now little for the Boers to gain by pressing the siege of Ladysmith, and practically nothing to gain by cap-

turing the place. They could scarcely hope to advance south of the lines which General Buller has drawn below them. There is no profit in fighting in Natal when their own land behind them is being invaded and conquered. So we shall not be surprised to see the Boer retreat, presently assume larger proportions than the flight of General Cronje's army."

General French, who rode into the beleaguered town at the head of 6,000 troops, is almost the only British commander in South Africa who has participated in the fighting from the outbreak of the war whose record has not been marred by serious reverses. It was General French, under General White's command, who beat the Boers at Elands-laagte, and when General White was driven into Ladysmith, French and his men escaped. He then was given command of a small force at Colesberg, Cape Colony, and while Methuen, Buller, and Gatacre were suffering severe defeats, French was not only holding his own, but gaining some slight successes. Now that he has left Colesberg, news of considerable Boer victories begin to come in from that quarter. The Queen has promoted General French to be a major-general, and Lieutenant-Colonel Kerewich, the defender of Kimberley, to be a colonel. Heretofore General French has only been ranked as a colonel in the army, with the local rank of general. Mr. I. N. Ford, London correspondent of the *New York Tribune*, says of Generals French, Roberts, and Kitchener:

"General French, by leading the way to Kimberley, has become the Sheridan of this campaign, while 'Bobs,' halting in triumph at Jacobsdal before turning eastward, is in a fair way to win a dukedom if he goes on without check or reverse to Bloemfontein and Pretoria. Nor ought Kitchener be left out of view. He has transformed an immobile British force, which was tied up to railways, into an army remarkable for mobility, with a system of flying transport, and, if all goes well, he seems destined at the end of the campaign to succeed Lord Wolseley as commander-in-chief and to reorganize the military forces of the British empire. Lord Salisbury's intimate friends assert that this is what he intends as the sequel to a successful war, and that this was in the Prime Minister's mind when he sent Kitchener to South Africa. Lord Salisbury has considered Kitchener the greatest organizer in the military service, and expects that he will ultimately revolutionize both the War Office and the British military system."

The *New York Times* says that Cronje's hurried retreat, "in-

MAJ-GEN. GEORGE ARTHUR FRENCH.

stead of being a proof of the incapacity of the Boer commander "is really "an additional proof of his capacity," because—

"to recognize promptly, and without the recognition having been forced upon him by a bloody defeat, the limitation of his own powers, was a piece of sound judgment on the part of a general whose series of unbroken successes was thus shown not to have turned his head, nor induced him to tackle enterprises beyond his strength. Men are too precious to the Boers to risk the waste of them. And the Boer policy is evidently the Fabian policy pursued by Washington, the policy of husbanding their resources and not risking an engagement in which their superiority in position does not offset their inferiority in numbers."

The invasion of the republics, thinks the *Springfield Republican*, will be no light task. It says:

"Whatever route he may take, the invader seems sure to encounter difficulty in transport and commissariat. If Roberts marches to Bloemfontein from Jacobsdal he must depend upon wagon transport entirely. And whenever he strikes a railroad north of the Orange River he will find that it is a single-track affair. It is doubtful if a single-track road can begin to handle the traffic imposed upon it by an army of the size needed to invade the Transvaal. Lord Roberts's men can not live on the invaded country, as Sherman's men did in their march to the sea. Agriculturally speaking, the Boers' country is almost a desert, and in the dry season, now rapidly approaching, the section through which the invaders must pass will be at its worst. It follows that the larger the army of invasion the greater the difficulty of feeding it; the farther north it goes the more difficulty in protecting its communications; while without a large army for the firing line and flanking movements no invasion is possible.

"That the Boers have all these points well thought out, and have made their plans accordingly, can not be doubted. They may make great efforts to menace Lord Roberts's communications in Cape Colony from the beginning of his invasion; indeed, their recent successes at Rensburg point that way. The situation is such, indeed, that after eliminating Kimberley and even Ladysmith, serious students of modern military art, both in Europe and this country, are openly expressing grave doubts as to England's ability to carry the projected invasion through to a complete triumph. The Boers, on their part, may well refrain from offering the invaders opportunities to fight decisive battles until the foe has undergone the sweats of a long march in a dry,

burning country, far from their base of supplies. The invasion will be no such brilliant flight into Egypt as Kitchener had on his way to Khartum."

Lord Roberts seems to have inspired British sympathizers with something they have long been lacking—confidence. "The English need in South Africa," says the *Philadelphia Press*, "has been neither men nor courage, but a general," and the Kimberley campaign has shown "every evidence of sound generalship." The same paper continues:

"With a general in command it has been possible to force the Boer retreat by the use of superior numbers. With those superior numbers the English forces have during the conduct of the war thus far lost 9,308 men, 2,781 of them prisoners, for lack of a general. There has not in years been a better illustration of the final and fundamental fact in all war, that a general equal to the work before him is the one absolute necessity in warfare. Men, resources, and courage are wasted unless a general leads and directs them.

"As between nearly equal numbers or numbers up to two or three to one, the modern magazine small-caliber rifle has greatly increased the capacity of a smaller force to resist a direct frontal assault. But this is all that the improvement in weapons has done. It has changed none of the principles of military operations. These have remained unchanged from the days of the spear and the bow and arrow to the days of the Krupp and the Mauser. A superior force, mobile and well-directed, can by maneuvering force the retreat of an inferior, provided the men composing the two forces are nearly equal in arms, personal courage, and skill in using their weapons. But in order to make effective use of its superiority the larger force must have a general who can make his army mobile and can use its mobility.

"All military history shines with proof of this principle, and at the opening of every English and American war this principle is forgotten, as it has been in South Africa. General Roberts has but added one more illustration to many. He has massed his troops instead of dividing them. He has retreated from the Tugela and Rensburg without hesitation, to reach the main end in view. He organized under General French a strong, mobile cavalry force. He rapidly pushed this up the Riet River valley. He threatened Jacobsdal, through which the Boer communications ran, and straightway General Cronje has to retreat and General Roberts dates his bulletin of victory from Jacobsdal.

"A general is in the field at the head of the English forces.

UNCLE SAM'S NEW WHISKERS.

JOHN BULL: "Say, Brother Jonathan, seems to me you need a shave."
—*The Minneapolis Journal*.

WHEN THERE'S A DRAFT IN ENGLAND.

And all young men between 18 and 30 must either get married or enlist in the army.
—*The Minneapolis Tribune*.

AMERICAN INTEREST IN THE WAR.

That is the only change. It is enough. With Kimberley relieved, General Roberts is in a position to push along a short, straight path to Bloemfontein. The country is open. No serious natural defenses are in the way. General Roberts's force is large enough for flank movements. Each advance will bring him nearer Pretoria and force General Joubert to think of his base.

"The collapse of the Boer defense may be as sudden as British defeat hitherto has been unexpected."

The Philadelphia *North American* thinks that "if the situation is correctly presented by the British despatches, a staggering blow has been struck the Boers. They will fight hard and long, of course, but the tide has apparently turned against them." So, too, thinks the Brooklyn *Times*, which reminds us "that the Boers can not make good their losses in the field, as the British can, by calling out a large reserve force," and says, therefore, that "it need occasion no surprise, in view of the immense army which Great Britain has brought into the field, if the news from the scene of war is more favorable to England hereafter than it has been in the past." The Baltimore *American*, however, while admitting the sagacity of the new British leader, says that "opposed to him is just as great skill, a more thorough knowledge of the country, and a stern determination to resist to the bitter end."

COROLLARIES OF EXPANSION—III. A PACIFIC CABLE.

NO one seems to dispute the need of a cable across the Pacific. "Hawaii, the Philippines, Guam, and a Chinese program definitely place the United States in the far East, or the 'far West,' as you please," says the Philadelphia *Manufacturer*, "and whether we like it or not, the facts add great force to the demand for a cable. Hitherto the need of such a cable was urged for trade reasons; now the arguments are political as well as commercial." Indeed, thinks the Baltimore *Herald* (Ind.), the cable is "hardly less essential to our commercial development and the effective control of the islands over which we have acquired authority than a ship canal across Central America." The Providence *Journal* (Ind.) points to Great Britain, whose "foresight and energy," it says, "shown in covering the world with a network of telegraph lines, both over the lands and under the waters, must compel the imitation of all." In Britain's present emergency, it continues, we see the African continent completely encircled with cables, all of them under British control:

"The completeness of the system is absolute. Everywhere, on both coasts, the points where the lines converge are located in British territory; every message that passes over the system is under British observation and control.

"All this service, it should be noted, is furnished by private companies; but they are subsidized by the British Government, which exacts substantial returns for its assistance. The subsidies are granted upon conditions that give the Government nearly all the advantages of ownership without its responsibilities and difficulties. It is required that all the employees of the cable companies shall be British subjects; that the lines shall not pass under the control of any foreign government; that the subsidy shall run for twenty years, payable at the expiration of each year provided the service has been satisfactory and the lines kept in good condition; that the despatches of the British Government and of the British colonial governments shall have priority whenever demanded; that all government messages shall be carried at half rates, and that in case of war the British Government shall be entitled to take possession of all the stations in British territory, or territory under British protection, and to put in its own employees.

"The advantages which the British have in this ready and world-wide communication of course need no explanation."

Friends of the cable project point out that the War Department in Washington is paying a thousand dollars a day in cable tolls on its messages to Manila, and that the other departments combined are paying enough more to bring the total up to \$400,000

a year—a sum large enough, with the inevitable additional commercial messages, to insure the financial success of the enterprise from the start. Indeed, the House committee on interstate and foreign commerce decided last week, by a vote of 8 to 5, to report favorably a bill appropriating \$400,000 a year or less (the company making the lowest bid to receive the subsidy) for twenty years to a Pacific cable company, the company in return to transmit government messages free during that period and at half rates thereafter. Such a proposal, says Mr. Herbert Laws Webb in *Scribner's Magazine*, "does not contemplate a subsidy in the strict sense of the word, as the company would give the Government a very fair return for its money," and it is quite conceivable, he believes, "that the Government might have rather the best of the bargain." Mr. Webb thinks the direct route across the Pacific, by way of Hawaii and Guam, the best one. The proposed cable up the west coast of North America, across the Aleutian Islands and down the east coast of Asia, has some advantages, he admits, but he believes that such a route would be too roundabout, would be in too inclement a climate for repairs, and would have to traverse too much foreign territory.

The promoters of the Alaska plan, on the other hand, claim that their route is 1,500 nautical miles shorter than the Hawaii-Guam route, that the cost would be much less, and that because of its shorter links automatic high-speed instruments could be used that would materially increase the capacity of the cable. Moreover, the promoters of this plan ask for no subsidy, and offer to lay a cable from San Francisco to Honolulu, in addition to the northern one, if Congress will give up the plan for a southern cable. If this company is reliable, says the Buffalo *Express* (Ind. Rep.), "the Government would better keep out of the matter and let it go ahead." The Tacoma *Ledger* (Rep.), too, thinks that "in view of this proposition the necessity for the building of a cable by the Government has disappeared." The San Francisco *Call* (Ind.) thinks there will be business enough for both cables. It says:

"The northern line will doubtless prove so commercially profitable that the promoters can construct it without having to ask a subsidy, but that is no sufficient reason why the other line should not be constructed also. The land line would be subject to interruptions in the severe winters of the North, and might be cut in case of wars in which either Great Britain or Russia was engaged, but the ocean cable would be virtually secure at all times. Moreover, there is never any great harm done by competition in telegraphy, and to the public two cables are very likely to prove cheaper than one."

There appears to be a strong sentiment, however, against giving the control of the cable to any mercantile company at all. The United States Government, it is urged, should lay the cable and control it. The President, in a special message to Congress a year ago, said that the cable ought to be "wholly under the control of the United States, whether in time of peace or of war." Mr. Corliss, of the House Committee on Interstate and Foreign Commerce, told the Washington correspondent of the New York *Evening Post* that "all the government officers examined by the committee advocated government ownership. General Greely says that it would increase the power of the navy at least one third." One of General Greely's assistants in the Signal Service Department, Capt. George Owen Squier, says in an article in *The Independent*:

"I have the strongest conviction that the Government of the United States ought to lay and control the Pacific cable. It will furnish efficient service to commerce, and be very closely related to the mail service. The transpacific mail is run by the Post-Office Department, and this great public work should be operated in close connection with the transpacific mail system.

"Whether considered as an agent of diplomacy or of commerce, as an adjunct of our military service to guard us from sudden attack, as an auxiliary to the Weather Bureau to announce approaching storms, as a protection to the public health advising

us of plagues or pestilence, or as an important ally to the isthmus canal, the Pacific cable is of the greatest importance and should be under the control of the United States Government.

"In a recent visit to England in the service of the Government, it became the writer's duty to investigate the subject of deep-sea cables, not only from a technical standpoint, but also in relation to their uses for colonial service. It may be said that the English Government has practically come to the conclusion after much experience that such cables must be under government control. Let us profit by English example. This is not a matter for a day or a year. It is a matter for a long future. It is a great national question. We have now no cable ships flying the American flag. But we can build them, make a cable, lay it, operate it, and save to the American people millions of dollars that are spent abroad."

The *Detroit Journal* (Rep.) says:

"The Government has had plenty of disastrous experience with subsidized railways and government-aided enterprises to make it chary of donating any further sums to private corporations. If the cable will be a profitable thing for a private corporation it will be equally as profitable for the Government. What is the business sense of giving a private corporation millions of dollars to build a government cable line and vest in the corporation the title to it? There is none."

"Every economic and practical reason," says the *Newark Evening News* (Ind.), "favors the enterprise as a governmental one." The *Philadelphia Inquirer* (Rep.) says: "As the United States proposes to control the Pacific Ocean, as the United States will retain the Philippines, develop trade with China, and construct the Nicaragua canal, as the United States intends to build up a merchant marine and support that service with a great navy, is it not proper that the United States should lay down the Pacific cable? We think it is." The *Chicago Inter Ocean* feels confident that the cable "will be built, owned, and controlled by the national Government," and suggests that the coming anniversary of Admiral Dewey's victory "would be a fit and felicitous date for the President to affix his signature to such a bill made a law by the present Congress."

PROFITS OF \$40,000,000 A YEAR.

THE interesting revelation made by H. C. Frick, erstwhile manager of the Carnegie Steel Company, to the effect that the company's net profits for last year were \$21,000,000, and that the profits for this year will probably be twice as much, has drawn

HENRY CLAY FRICK.

several exclamations from the press. According to Mr. Frick, Mr. Carnegie is trying to make him surrender his shares to the company for about \$6,000,000—shares which Mr. Frick values at over \$16,000,000—and Mr. Frick has brought suit in the court of common pleas at Pittsburgh for an equitable accounting. In his bill in equity, Mr. Frick says:

"The business from 1892 to 1900 was enormously profitable, growing by leaps and jumps from

year to year until, in 1899, the firm actually made on low-priced contracts in net profits, after paying expenses of all kinds, \$21,000,000. In November, 1899, Carnegie estimated the net profits

for 1900 at \$40,000,000, and Frick then estimated them at \$42,500,000.

"Carnegie valued the entire property at over \$250,000,000, and avowed his ability in ordinarily prosperous times to sell the property on the London market for £100,000,000, or \$500,000,000."

"In May, 1899, Carnegie actually received in cash and still keeps \$1,170,000, given him as a mere bonus for his ninety-days' option to sell his 55.5 per cent. interest in this steel company for \$157,050,000. Frick's 6 per cent. on that basis, would be worth \$9,235,000."

Some of the press are interested in the spectacle of Mr. Carnegie in court as defendant in a case where he is charged with "illegal and fraudulent conduct," and where one of his business transactions is referred to as a "fraudulent scheme." The indications are,

remarks the *Minneapolis Times*, that Mr. Frick "will be able to drag the price of three or four libraries from the unwilling pockets of the canny Scot." Other papers take the opportunity for a fling at the tariff. Thus the *New York Times* says:

"Mr. Frick's terribly candid exposure of the extravagant bonuses which protection confers upon the manufacturer at the expense of the helpless consumer makes it impossible that the Republican Party or any other party should longer defend or maintain the barriers against competition which have made it easy for the Carnegie works to earn profits of from 80 to 100 per cent. upon a capital which appears to have been largely in excess of the actual cost of the plants engaged in the business."

If lower tariffs had cut down the price of steel, the same paper points out, it "would make a vast difference to the building trades, to the railroads, and to the general business of the country. . . . What a monstrous and wicked lie the plea for the protection of our infant industries appears to be in the light of these revelations!"

The *New York Press*, recalling Mr. Carnegie's remark of a few months ago that it is a disgrace to die rich, says that he seems to be doing all he can to save his partner, Mr. Frick, from this disgrace; and adds that as long as he continues his present methods, "there is no danger of the malison of a plethora of wealth being laid on any one with whom he does business."

More papers, however, are struck by the immense profits revealed by Mr. Frick's statement. "What are fairy tales, or the dreams of avarice, or men's boldest imaginings," says the *Boston Transcript*, "compared with these glittering actualities?" The *Chicago Evening Post* says:

"The figures given are fabulous. They are actually beyond the comprehension of the average mortal. It is estimated, for instance, that the profits for this year alone will be from \$40,000,000 to \$42,000,000. Think of it! Grasp the full import of it, if you can. Why, a corporation capitalized for that amount would be an unusually large one, and yet these figures represent only profits, to be divided among comparatively few men."

"The value of the plant and business good-will can only be estimated, of course, but Mr. Carnegie expresses a belief that in ordinarily prosperous times they could be sold in England for £100,000,000. In order to realize the full import of this most

ANDREW CARNEGIE.

men would have to take a few days off to think it over. If the plant and business were purchased at that price (\$500,000,000) and were paid for in United States gold coin (a preposterous supposition, of course), it would take more than half of all the gold coin in this country and more than three fourths of the total amount in circulation. It may interest silverites to know that if all the silver dollars in the country were gathered together it would not equal the price set, and that the total issue of national bank-notes would be less than half of it.

"This will give some idea of the magnitude of the business that has been built up. Indeed, it is only by comparison that one can really grasp the figures. They are simply amazing, so great that they read like an extract from a fairy-book."

The *Chicago Tribune* notes some other large profits, and asks where it is to end. Says *The Tribune*:

"The Carnegie Company made \$21,000,000 last year and yet Mr. Carnegie is not satisfied. He wishes to get possession of Mr. Frick's interest for less than its value.

"The Standard Oil Company has just declared a quarterly dividend of \$20,000,000, or at the rate of \$50,000,000 for the year, and yet its directors are not satisfied. They wish Congress to pay subsidies to the ocean-going vessels in whose earnings they have a share.

"If there are any other American corporations whose profits were \$20,000,000 last year or promise to be \$50,000,000 this year, it may be taken for granted that the men at the head of them are no more satisfied than the Carnegies and the Rockefellers, and are no more scrupulous as to the methods of adding to their possessions.

"There seem to be no limit to the capacity of corporations which have been built up at the expense of the public by excessive tariff protection, by illegal railroad discriminations, or official favoritism. The men who rule these corporations may not 'want the earth,' but they certainly want the United States and the abundance thereof.

"They and their allies on land and sea are working at the entire subjugation of the Government, so that they may add more millions to their present annual revenues of \$20,000,000 in the case of the Carnegie Company and \$50,000,000 in the case of the Standard Oil. They try to put their creatures in all official places which touch their interests at any point.

"They demand subsidies for their ships.

"They insist that the money of the Government be deposited in banks in which they are heavily interested, so they may be able to control the stock markets and to lend to the taxpayers the money which the latter have contributed to defray governmental expenses. Their demands are usually complied with.

"There are three things that are never satisfied; yea, four things say not 'It is enough.'"

"That may have been the case in the old Hebrew days.

"To-day there are the Standard Oil Company, the Carnegie Company, the sugar trust, the International Navigation Company, the National City Bank, and other colossal corporations which overshadow the Government itself and are never satisfied.

"When will they have enough?"

According to Mr. Frick's estimate it will be seen that Mr. Carnegie's income this year from this source would be about \$64,000 a day. "No wonder Andrew Carnegie can toss off a library whenever he feels like it," says the *Chicago Record*. According to *The Library Journal* (New York), Mr. Carnegie's gifts to libraries last year aggregated \$3,503,500, distributed as follows:

Washington, D.C.	\$150,000	Conneaut, Pa.	\$1,000
Atlanta, Ga.	125,000	Oakland, Cal.	50,000
Pennsylvania State College	100,000	Prescott, Ariz.	4,000
Hazlewood, Pa.	4,000	Tyrone, Pa.	50,000
Connellsville, Pa.	50,000	Duluth, Minn.	50,000
McKeesport, Pa.	50,000	Racynus, Ohio	500
Seaboard Air Line	1,000	Clarion, Pa.	50,000
Pittsburg, Pa.	1,750,000	Guthrie, Oklahoma Ter'y.	25,000
Virginia Mechanics' Inst.	1,000	Louisville, Ky.	125,000
Fort Worth, Texas	50,000	Newport, Ky.	25,000
East Liverpool, Ohio	50,000	Oklahoma City, O. T.	25,000
Steubenville, Ohio	50,000	Sandusky, Ohio	50,000
Beaver, Pa.	50,000	Sedalia, Mo.	50,000
Beaver Falls, Pa.	50,000	Tucson, Ariz.	25,000
San Diego, Cal.	50,000	Lincoln, Nebr.	75,000
Dallas, Texas	50,000	Cheyenne, Wyo.	50,000
Alameda, Cal.	25,000	Oil City, Pa.	50,000

MR. MACRUM'S COMPLAINTS.

MOST of the interest in Mr. Macrum, the United States consul at Pretoria who left his post at the outbreak of war and started home, seemed to arise from the supposition that he had a secret message for the Government, too important to be entrusted to the telegraph or the mails. This belief was strengthened when he refused to be interviewed at any of his landing-places along the trip home. Last week, however, after he had visited the State Department, he gave out a statement outlining his reasons for his return. These reasons, in brief, were that he was instructed to take charge of British interests at Pretoria, a duty which, as a Boer sympathizer, he felt that he could not conscientiously undertake; that his official mail from Washington was opened and read by the British censor at Cape Town, and that his despatches to Washington were delayed for weeks by the British censor at Durban. He also hints at a "secret alliance" between England and the United States. The State Department in Washington, when questioned by press representatives as to the truth of the allegations touching mail and telegraph

interference and the "secret alliance," gave out a statement saying that the charges "are not believed by this department," that they "will certainly not be referred to the British embassy with a view of getting any explanation," that Mr. Macrum laid no such charges before the department, that he is "not an official now of the State Department," and that "it is a question if he should make or repeat these statements to

CHARLES E. MACRUM.

the department whether they would be given official consideration." The department also pointed out that the Constitution forbids a secret alliance with another power. Representative Wheeler, of Kentucky, introduced a resolution in the House on Thursday of last week calling on the State Department for information about these charges, and it was referred to the foreign affairs committee.

Few papers treat Mr. Macrum seriously. Most of them think that he is suffering from an exaggerated idea of his own personal importance which led him to believe that a delay of the mails justified him in quitting his post just when there was the most to do. The *New York Times* asks: "Why was a boy sent to do a man's work?" The *New York Press* considers Mr. Macrum a powerful argument for the reform of our consular service, and says: "It is a pretty hopeless comment on the sense of decency of the present Congress when the House committee on foreign affairs kills the Consular Reform bill while the Macrum case is actually, if not officially, before it." A good example of the comment on the case may be seen in the following paragraphs from the *New York Tribune*:

"Briefly stated, Mr. Macrum has come home to teach the Washington Administration how to run the government of this country. For that, no doubt, the Administration will be duly grateful. Incidentally, he reports that the British censors have been opening his official correspondence and 'holding up' his

official cable despatches. The Belgian and German consuls have been treated in the same scandalous manner, but apparently are poor, mean-spirited things, with not enough spunk to protest or to report the matter to their home governments, and probably are too impecunious to skip out and run home with their tales of woe, as Mr. Macrum has done. That, however, Mr. Macrum expressly tells us, is a minor matter, which, presumably, is why he never gave the Government a hint of it before, tho he could easily have done so, and tho it was his duty to do so. He could have put up with a mere violation of the sanctity of his Government's official mails. The important points were that he sympathized with the Boers, and he wanted this Government to know it; that various other Americans were actually joining the Boer army, and, finally, that it went against the grain of him, as a Boer sympathizer, to take charge of the interests of Great Britain. It was his first duty, as a man and a brother, to lay these impressive facts in person before the Government at Washington. Thus he hoped to open its eyes to its true duty, and to teach it how very improper a thing it was for it to make a 'secret alliance' with the British Government without his knowledge or consent.

"One other point in Mr. Macrum's explanation is worthy of notice, and of most cordial approval. He says that 'American interests in South Africa were in that condition which demanded that the Department of State should be cognizant of them.' Yes, they undoubtedly were, so long as they were in the hands of Mr. Macrum."

THE CHICAGO ANTI-TRUST CONFERENCE.

THE gathering of anti-trust agitators in Chicago last week is regarded by most of the press as a conference of radical thinkers whose plans are not likely to materialize in the near future. The platform adopted declares for government ownership and control of railroad, telegraph, and telephone lines, and all other public utilities and natural monopolies, for government money for the referendum and direct legislation, and for the withdrawal of all protective tariffs from all articles controlled by trusts. Some papers regard this platform and the speeches of the leaders as wild and whirling words that merit nothing but ridicule. Thus the *Baltimore American* says:

"Among the leaders of this conference are ex-Governor John P. Altgeld, of Illinois, one of Bryan's right-hand men, who, when in office, pardoned anarchist murderers, and set at defiance the very laws he had sworn to enforce; George F. Williams, of Massachusetts, Bryan's leader in New England, who has succeeded in wrecking the Democratic Party in his own State, and who only holds his position as a leader because no one else will have it; Ignatius Donnelly, the cryptographic freak of the Northwest; Sockless Jerry Simpson, the reinducted Populist of Kansas, and others of the same ilk. In such men as these the people have no confidence. They can keep on orating against trusts till the crack of doom without contributing one iota to the solution of the problem."

The views of some of the speakers at the conference are thus summarized by the *Boston Transcript*:

"President Lockwood said that the true remedy for trust evils is in government ownership of those prime factors of all trusts, the railways; Captain Black, of Illinois, declared that the adoption of the initiative and referendum would do away with the trusts; Governor Lee, of South Dakota, would utilize the machinery of the trusts by simply substituting public for private ownership, whenever they got large and ripe enough to pick; Mr. Miller, of Chicago, found a remedy in the establishment of a 'just land tenure'; Mr. Spelling, of San Francisco, would amend the Sherman act, prohibiting trusts under severe penalties; Mr. Elliott, of Kansas, again, would have trusts under government control; Mr. Matthews, of Buffalo, wanted direct legislation and the granting of franchises only by popular vote; Mr. Bigelow, of Cincinnati, would prevent land monopoly and have government ownership of railroads; Congressman Sulzer thought the present anti-trust laws adequate if they are enforced; Mr. Strong, of

Chicago, would do away, through severe penalties, with railroad blacklisting of individual merchants and shippers."

The declaration of the conference for the government ownership of railroads as a remedy for trust evils has attracted considerable notice. Many papers, however, believe that the time for such action is not yet ripe. The *Chicago Record* says:

"Government ownership of the railroads of this country may come in the future—tho such an outcome is open to serious doubt—but it would be a mistake to raise the question for practical consideration at this time. The majority of the people, if given a chance to express themselves, no doubt would receive the proposition with disfavor. The practical difficulties in the way of an attempt to take over the railroad properties of the country would be very great; the difficulties of operation, when the roads were once acquired, would be even greater. The tremendous addition to the pay-roll of the nation which such a policy would entail alone would be sufficient reason for disputing the wisdom of the course suggested. The country is not ready for such a step, and any attempt to put the policy into effect almost certainly would be attended with costly and vexatious blundering. Besides, it is altogether improbable that government ownership and operation of railroads are necessary to cure the evil complained of, which is discrimination in rates. The policy of regulation has not yet been fairly tried, and until it is so tried and found wanting the people will not favor the more radical remedy."

The *New York Journal of Commerce*, altho a strong opponent of trusts, thinks that the proposed remedy would be as bad as the disease. It says:

"If anything were calculated to reconcile the people of the United States to the existence of the great monopolistic trusts, it would be the character of the substitutes for them that are proposed by some of their opponents. The National Anti-Trust Conference, the other day, lent its approval to theories of government which are manifestly more destructive of individual initiative than any system that the ingenuity of the trust lawyer has yet devised. In fact, the conference was somewhat of a misnomer, inasmuch as the advocates of state socialism, who apparently constituted the majority of the gathering, have been accustomed to hail the trust organizers as their most effective allies. It would be so much simpler for the State to take over great departments of industry already combined under a single head than to go through the process of dealing with a number of separate concerns. The trusts are, by most of the European Socialists, regarded as the first step toward government ownership of all great industrial activities. To those who see in the preservation of individualism the first essential for the continuance of free government, that fact constitutes the most serious danger of the trust system. The Chicago conferees began by denouncing the trusts, and ended by declaring for government ownership of all public utilities and 'natural monopolies,' and for the issue of paper money exclusively by the Government. The conference seemed to be quite oblivious of the fact that it was merely proposing to take the second step, of which the trust system is the first, toward crushing private enterprise and eliminating the play of competition from the field of human activity. In the motley assemblage of Democrats, Populists, Socialists, and Single-Taxers assembled at Chicago, it did not seem to occur to anybody to propose a vote of thanks to the trust magnates for bringing the work of industrial combination to the point where state ownership could most easily be applied. That, however, would have been a much more logical method of procedure than that which was actually followed."

"The only logical ground of opposition to the trust system is that it tends to paralyze individual effort, and the only rational way to break it down is to give as free play as possible to the application of the natural law of competition."

The *Philadelphia North American*, however, believes that the agitators who met at Chicago are performing a useful and important public service. It says:

"The Chicago Conference adheres to the true principle. It strikes at the root of the trust tree instead of concerning itself with the branches. The partnership between the railroads and the trusts is at the bottom of most of the monopoly which piles

up such fortunes as Mr. Rockefeller enjoys. That neither Mr. Carnegie nor Mr. Rockefeller is in need of any Government protection is as clear as daylight.

"The country, however, is not yet ready to withdraw protection from the trusts, lest others who do need protection may be injured. Nor is the country ready for Government ownership of the railroads. Nor for direct legislation.

"Herein we see the use of our radical friends. They keep far in advance, and tho they startle and alarm the conservative, they compel discussion, discussion leads to understanding of and familiarity with ideas, and by the time the stage of familiarity has been reached by the mass, the radicals are away out on the front breaking new ground. They are pioneers who become uncomfortable when they have too many neighbors, and move on.

"The Standard Oil dividend and the disclosure of Mr. Carnegie's income of more than \$2,000,000 a month, together with the revelation of Mr. Rockefeller's still more magnificent harvesting of the fruit of monopoly, come opportunely to give point to the proposals of the Anti-Trust Conference. Those proposals are radical. So are those dividends and those monstrous incomes—every dollar of which empowers the holders to command a dollar's worth of the labor of their fellow citizens."

GOVERNOR ROOSEVELT AND THE VICE-PRESIDENCY.

GOVERNOR ROOSEVELT'S public declaration that he will under no circumstances accept the Vice-Presidential nomination has aroused a volume of comment, especially in the Republican press, that is in itself significant of the unique position in the national eye which he occupies to-day. His statement has also led to much discussion as to the probable candidate

for the honor which he has refused; but on this point there is no approach to unanimity. It is generally conceded that Governor Roosevelt's refusal is largely due to the fact that he expects to be the Presidential candidate of 1904, but the reason he himself gives is that great problems await solution in his own State, and that he hopes successfully to conclude, during coming years, the work he has begun.

Many of the Republican papers will not accept the governor's refusal. Says the *Philadelphia Evening Bulletin* (Rep.):

"The Republican Party has given Roosevelt a large measure of its confidence and esteem. If its representatives in the national convention here should draft him into its service, he could hardly refuse. In the absence of other promising candidates for the Vice-Presidency, his present utterance can not be accepted as conclusive."

The *Washington Evening Star* (Rep.) also insists that "the party's national commands are paramount," and that "his personal wishes are subject to revision by the party." The *Newark Evening News* (Rep.) declares that "he would be the ideal mate of President McKinley." The *Providence Journal* (Ind.) says:

"He is probably, next to Mr. McKinley, the most popular Republican leader, and there has been a genuine desire throughout the country that he should allow the use of his name in connection with the second place on the ticket; but he knows, himself, that two years more in an executive position like that at Albany

will fit him better than he is now fitted to occupy the larger executive office at Washington."

The *Baltimore Sun* (Ind.) takes a different view of the governor's action:

"It is possible that in declining to save his country at this critical period in its history Governor Roosevelt may have concluded that it is past salvation with Mr. McKinley in the White House. He may hesitate to go down with a sinking ship, and, therefore, may be displaying the highest order of political sagacity in rejecting the Administration's overtures."

The *Boston Advertiser* (Rep.) states that Mr. Roosevelt "has proved as balky as a bucking bronco," and that "it is quite safe to say that he will not be on the national ticket with Mr. McKinley next November."

The *Buffalo Express* (Rep.) and *Brooklyn Times* (Rep.) heartily indorse Governor Roosevelt's decision, but the *New York Tribune* (Rep.) takes advantage of the occasion to admonish the governor for his shortcomings in the following words:

"It must be acknowledged that less has thus far been accomplished under his administration than a prevalent estimate of his character and talents had led the people to expect. He would probably say this was his misfortune, but there are many good Republicans who think it is partly his fault. His position at the beginning of his term was exceedingly strong, and he might have made it impregnable. Doubtless he has meant to do so, but he has not succeeded. He has rendered himself liable to attacks which it will not be the easiest thing in the world to repel, and is now forced to admit that he needs another term to finish the work which his own indiscretions have made unnecessarily difficult."

The *Minneapolis Times* (Ind.) speaks of his "boom" being "engineered by the Platt machine for the purpose of getting him out of the way," and adds:

"It is explained that Governor Roosevelt has been causing the machine to cut strange capers. He has run it sideways and backward, even when Mr. Platt was looking. He has disarranged some of its most delicate wheels, springs, and levers. Certain parts considered essential to its perfect working are missing altogether. It has been charged by Democratic papers that Roosevelt has become one of the chief cog-wheels in the machine itself, but independent sheets with anti-Republican leanings tell us the opposite story. Senator Platt, they say, has chosen one B. B. Odell for governor—Mr. Odell being 'a straightforward politician'—and in order to make Mr. Odell's pathway clear, Governor Roosevelt must be 'kicked upstairs.'"

The *Kansas City Times* (Dem.) declares that Mr. Roosevelt has "dropped to the realization that the 1904 nomination which Hanna promised him was the brassiest sort of a gold brick, and has suddenly determined to create all the trouble he can for McKinley's ratification meeting by jumping upon the latest monument to the major's un-American foreign policy, the Hay-Panamafoote treaty."

MR. JUSTICE BROWN AND LIBERTY OF THE PRESS.

IN an address on "The Liberty of the Press" delivered before the Bar Association of New York, Associate Justice Brown, of the United States Supreme Court, altho taking strong ground for freedom of public discussion, pointed out some instances in which this freedom is, as he thinks, abused. Referring to a portion of the daily press, he said:

"We are confronted by the fact that in this free country there has grown up a despotic, irresponsible power which holds our reputations completely at its mercy. No man occupies a political position by executive appointment and few by election who can not be driven from it by a combined attack of two or three influential journals, whose cue the minor papers are only too ready to take up. Under such circumstances, what possible course have

Senator Platt "cordially acquiescing" in its views.
—The New York Tribune.

we except to make the best terms with this power, and if we can not obtain justice, to crave its mercy."

This judgment has not been permitted to go unchallenged, and has called forth much criticism, some of it even bitter. For instance, the *St. Louis Republic* says:

"Taking as the confessed basis of his unwarranted attack upon the integrity and sense of decency of the American press the vague charge that, as he himself expresses it, 'ugly stories are told of the methods resorted to to create a sensation or to advertise a paper,' Justice Brown proceeds to indict all American newspapers by innuendo and assertion not supported by his own definite knowledge or the testimony of credible witnesses. He charges them, still failing to furnish proof of the truth of his charges, with a systematic blackening of the character of public men on manufactured evidence, with the sale of editorial space 'at so much a line,' with the degradation of women by unworthy and scandalous assignments for the manufacture of sensational articles, with assaults on private character and an infamous espionage of private houses, with the deliberate persecution of men holding political office."

"Not once in his address does this Supreme Court justice give the authority for his shameful assertions. . . . It is astounding that in the wildest license of bitter prejudice, a justice of the federal Supreme Court should be willing to go before the country in the prosecution of an alleged evil against which he has failed to present one valid indictment."

The *Indianapolis News* is less sweeping in its judgment:

"Of course it can not be denied that there are some newspapers in the United States that grossly abuse the privileges which are granted to the press in free countries. It is not simply that they offend against good taste and good morals, but that they are entirely reckless in the way in which they deal with the reputations of both public men and private citizens. Nothing is sacred in the eyes of those that conduct these papers. The only purpose they have is to sell their wares."

"This is all the more to be deplored because the press is such a power in American civilization. Only the other day one of the worst of these journals congratulated the country on the supposed fact that the coming century would see even more of a newspaper government than that which had marked the present century. If that is true, it is full time to insist that there shall be some improvement in the character and methods of our rulers. One would think that the consciousness of power would have a sobering effect on the men who wield it. We believe it does in most cases, and that there are really few newspapers that are fairly open to the criticisms of Justice Brown. We shall probably have to trust to the restraining influence of this feeling of responsibility more than to anything else. For, as the speaker of yesterday pointed out, it is doubtful if any legislation is practicable which shall tend to restrict the excessive license indulged in by newspapers. Censorship is out of the question, of course."

"But we would remind the people that there is another side to the question. In the first place the remedy is in the hands of the men and women who read newspapers. They alone can discipline the offenders. If people quit buying a sensational journal, and refuse to give it their advertising patronage, it would soon understand that it was not a dictator, after all, but the servant of the community. The trouble is that most of us have an insane love of gossip, and the more scandalous it is the more warmly it is welcomed. Thus, the fault is in the readers. The responsibility for present conditions is a divided responsibility."

TOPICS IN BRIEF.

It's all over in South Africa but the fighting.—*The New York Mail and Express*.

The politicians are slowly beginning to develop that great anti-election love for the farmer.—*The Minneapolis Journal*.

PERHAPS it is just as well for Kentucky to have two governments on hand in case of accident to either one.—*The Detroit News*.

We have long thought there has been a little too much bragging about the boys of the old Kentucky home.—*The Hutchinson Globe*.

"DID you hear that General Buller had been arrested by the British Government?" "No, why?" "For running a ferry without a franchise."

OF course if the Constitution doesn't distinctly prohibit us from squeezing and oppressing the colonies, it is perfectly right and high-minded to do so.—*The Detroit News*.

ACCORDING to a scientific sharp whiskers are fairly reeking with life-destraining microbes. Perhaps this will interest the British in South Africa.—*The Hutchinson Globe*.

"TRUST" Roosevelt has positively refused to be a candidate for Vice-President. Perhaps he might be induced to accept first place if McKinley and Hanna should both implore him to do so.—*The Chicago Record*.

THE Chicago editors who are engaged in doing business in the twentieth century should write occasionally to those of us who are still plodding away in the closing year of the nineteenth.—*The Atlanta Constitution*.

A Cask which has come under the notice of an English charity organization society deserves international veneration. His misfortunes within the space of fifteen months are thus tabulated:

Wives died.....	3
Children died.....	17
Fathers died.....	4
Members died.....	2
Bankruptcies caused by a treacherous brother.....	4
Situation lost because a staunch Protestant.....	1
Situation lost because a staunch Catholic.....	1
Shipwreck, with total loss of effects.....	1
Total.....	33

—*Charities, New York*.

WHERE WILL THE OLD WORLD BREAK OUT NEXT?
FUTURE TIME: "I guess it's about time to call out the Fire Department!"
—*The Minneapolis Journal*.

PRONUNCIATION OF WORDS IN CURRENT HISTORY.

IN indicating the pronunciation of words given in this department, use is made of the system of diacritical marks known as the "Standard Phonetic Alphabet," adopted by the American Philological Society, and used in the various editions of the Standard Dictionary; also, with slight modifications, employed by the Royal Geographical Society of England and the United States Board on Geographic Names.

Among the proper names connected with the Philippine war which are likely to cause trouble are these:

Emilio Aguinaldo.....	é-mí-llé-ó a-gí-noí-dó.
Del Pilar.....	dél pí-lar.
Luzon.....	lú-thón or lú-són.
Iloilo.....	í-ló-í-ló.

KEY TO PRONUNCIATION: papá, yak; at, ā (air); element, tháy, uséce; it, í, i (wet); o, ō (oh); eastern, ēr; full, rôle; but, ū (ur); flūtīōre (future); utable; au (out); oil; c (k); chat; dh (the); go; sing, ipk; thin; F., boh, dhne.

Following are some of the names lately prominent in letters, art, religion, and politics:

Mrs. Cholmondeley.....	chom'-li
(Author of "Red Pottage")	
Janice Meredith.....	jan'-je mer'-e-dith
Isabel Haruto.....	ha'-rum.
Vin Crucis.....	vin'-a crū'-sis (English method)
(By F. Marion Crawford)	vī'-a crū'-sis or crū'-sis (Continental)
Mrs. Burnett.....	börn'-et.
(Author of "The De Willoughby Case.")	
Archbishop Chapelle.....	sha-pel'.
St. George Mivart.....	miv'-ert.
Andrew Carnegie.....	cār-nē'-gi.
President Schurman.....	shūr'-man.

LETTERS AND ART.

REVIVAL OF ETHICAL MOTIVES IN EUROPEAN FICTION.

A DISTINCT revival of moral and altruistic tendencies is declared by a Russian critic to be observable in Russian and German fiction of the present day. There are, it is asserted, unmistakable signs of a reaction from decadence and cynical or pessimistic realism on the one hand, and, on the other, from the "joy of living" in the animal sense which was inculcated by the conscious or unconscious followers of Nietzsche, the destroyer of morality and sympathy, the glorifier of physical force, and the inventor of the "aver-man," the man who regards pity as weakness and charity as the blunder of a false, servile system of ethics. According to this critic—whose name is L. E. Obolensky—Le Bon, the French sociologist, has noticed and commented upon the same phenomenon, and has accounted for it by the infectiousness of the great labor and social movement, which has taught the literary artist to respect the human dignity and moral worth of the average workman. This explanation is deemed insufficient by Obolensky, but he dwells upon the fact itself as possessing exceptional significance. He points to three new novels from eminent artists in which the same new type is portrayed. Two of these are by Russians, the third is by the veteran German novelist, Friederich Spielhagen. The Russians are Count Tolstoy and P. D. Boborikin, the latter a distinguished author who has always been able to seize and sympathize with the symptoms and spirit of the time.

From the long review in the St. Petersburg *Novosti* we translate the following comparison and reflections:

"Have readers been struck by the curious fact that the new novel of Spielhagen almost literally reproduces the essential theme of Tolstoy's 'Resurrection'? If there are differences, they relate to details which indicate the differences between German and Russian life, and also, to some extent, the dissimilarity between the creeds of the two artists. In both novels, a rich aristocrat of mature years, about to marry a high lady, suddenly becomes conscious of the emptiness of fashionable life and fashionable marriage, and decides to 'go among the masses,' to live the life of the lowest hard-working people. This metamorphosis is produced in the Russian novel by the accidental meeting of the aristocrat with a girl whom he had seduced years before, and who had landed in the prisoners' dock and then in the Siberian mines.

"In the German novel, the accident is not so extraordinary and peculiar. The hero who seeks to render aid to a child injured on the street is led into the house of a workman's family. There he is struck by the terrible poverty of the lower classes, where shame and degradation are found side by side with crystal purity of soul hidden under filthy rags. In the German novel, the purity and the degradation are distributed among different characters. The workman and his elder daughter personify the latter, while the younger daughter is an embodiment of the former. The Russian artist does not hesitate to unite purity and degradation in one character—the fallen girl Katusha. This is due to the conviction of the Russian idealists that devilry and divinity may coexist in the same creature, a belief which the Germans do not accept.

"Further, the Russian hero goes to Siberia with the convicts and becomes acquainted with new types of men; the German hero attends workmen's meetings and goes to workmen's clubs and there learns to know the representatives of the lower classes. Spielhagen's hero commits suicide, realizing that his habits and inborn traits must always prevent a real union with the masses, whose life he can not share, and that a return to the hollow and immoral life of the aristocracy is impossible for him."

The writer had no opportunity, when drawing this parallelism, to carry it to the end, for Tolstoy's "Resurrection" was still unfinished. It has been concluded since, and we find that Tolstoy's hero offers to marry the poor girl after procuring her pardon, but she refuses him in obedience to her sense of duty, tho loving him, because she does not think herself fit to be his wife and capable

of making him happy. He turns for consolation to religion, and for the first time perceives the beauty of Biblical teaching and the perfection of the true Christian character and conduct.

In Boborikin's novel, a young Russian prince leaves the aristocratic society of Italy and identifies himself with the life of the masses, determined to do something useful and worthy of a thinking and self-respecting man.

The use of this theme, Obolensky holds, in three important books of art published almost simultaneously, can only point to a general social tendency. A spiritual aristocracy, he thinks, is being formed, and the injustice and immorality of our present civilization are being recognized. The "aver-man" is indeed coming, but he is not the brutal aver-man of Nietzsche that repudiates moral obligation and social solidarity, but the aver-man inspired by religious or ethical principles. Aristocracy is being transformed, and the highest seek their own happiness and salvation in caring for the lowest. Nietzsche taught the joy of selfish existence, of the exercise of power; while the real aver-man is he who finds joy and freedom in the service of others.—*Translation made for THE LITERARY DIGEST.*

ONE VIEW OF RUSKIN'S MARITAL EPISODE.

A STRIKING, almost startlingly frank, description of Ruskin's personality is given in a recent article by Mr. Julian Hawthorne. Ruskin was unlike all other men, not so much in intellect as in nature, says Mr. Hawthorne (in *The North American*, January 24):

"Looking him in the eyes, you saw light, inspiration, insight, fancy, fanaticism, genius, and the incarnation of all these things, and none like them. But what you did not see was the incarnation of a normal, natural man or woman. Male nor female was he, but something of another genus altogether, as we might suppose an inhabitant of Mars or Mercury would be, could he visit us. Some impassioned and companionless elf left over after the others departed, together with faith and belief and the sense of justice, and other good lost things; seeing with the intensity of a fairy our lacks and misfortunes, and zealous to cure and reform us; weaving marvelous spells of words and paces to that end, but finding always a stolid wall of selfishness and blindness resisting all efforts either to scale it or trample it down."

Ruskin's marriage, his failure to realize happiness from it, and the subsequent love of his wife for Sir John Millais, to whom Ruskin, with what appears to some a sublime self-abnegation, relinquished her, are referred to by Mr. Hawthorne in terms not altogether flattering to any of the three persons involved. The very idea of Ruskin posing as a domestic character is a "transcendental absurdity," one of the "jests of the ages":

"A woman, one would think, would as soon undertake to become the wife of a perfume, a cloud, a metaphysical abstraction, a wandering zephyr, a ray of moonlight, a bit of blue sky, as of him. There was fire in him—abundance of it—but not of the sort that warms the family hearthstone. Whosoever would seek to thaw his fingers over the flames of a will-o'-the-wisp might hopefully expect husband comforts from Ruskin. Nevertheless, one of the most beefy, unspiritual, unintellectual women in England did marry him, with what result the world knows. It was, of course, as much Ruskin's fault as hers. He had a tongue which could, like the fiddle of the youth in the fairy tale, 'draw water from a stone, or milk out of a maiden's breast that bairn had never none.' Bairns indeed, and the conditions cognate therewith, formed no part of Ruskin's matrimonial program; but he easily persuaded the foolish little knot of jelly which stood the Fair Maid of Perth instead of a brain that they would have a lovely time together notwithstanding. They were married accordingly, and then along came the most material, fleshly, stupid artist of genius that ever lived perhaps, and, of course, he and the Fair Maid—a maid still willy-nilly—fell in love, as they would call it. It was as far from true love in one way as the feeling between her and Ruskin was in another. Of course, too, Ruskin acted in a manner entirely different from what any one

else would have done in the circumstances. Most of the published accounts of the affair are wrong. It was neither so fine nor so shabby as they would have us believe. But the two animals had their way, and Ruskin went his. It may be well to observe in passing that Mrs. Ruskin was not the model who stood for the girl in 'The Huguenots.' That was a Miss Ryan, a beautiful creature enough, whose subsequent career was tragic, like that of many another beauty.

"Connubial jealousy Ruskin was incapable of feeling, because he was as incapable of sustaining the relations upon which that passion is founded. A sort of transcendental, abstracted, atmospheric regret and mourning was the most he could accomplish, but he soon ceased to think of the matter at all. He was a bodyless intellect, a disembodied emotion. I remember seeing him coming along the pavement of Piccadilly. He drifted from side to side of the pavement, with his eyes seeing things invisible. In his faded brown clothes he resembled an autumnal leaf, blown hither and thither by a light breeze. He was not like a person. Had I walked straight at him I should have passed through him, neither of us feeling anything."

MME. SERRAO'S "CONQUEST OF ROME."

THE Parisian triumph which Mme. Serrao enjoyed last year with her novel "Il Paese di Cocaigna" ("The Country of Cocaigna"—see THE LITERARY DIGEST, October 7) has been more than equaled by the reception which has been accorded to the

newly made translation of her latest story, "The Conquest of Rome." French taste is yearly becoming more cosmopolitan; and, since Turgenev's time, the Parisians have welcomed not only Tolstoy but a number of writers belonging to the new Italian school of "veristi." This group has drawn its inspiration from French naturalistic sources, and boasts that it is devoted to truth in fiction, and to truth only. Among its members are Verga, regarded as the flag-bearer, Luigi Capuana,

MME. MATHILDE SERRAO

Cameroni, Ciampoli, De Robertis, and—last and most brilliant of all—Mme. Mathilde Serrao, who has been compared in genius to George Eliot and George Sand. The Paris correspondent of the New York Evening Post (February 3) gives the following account of Mme. Serrao's new book:

"There is no exaggeration in saying that, in the opinion of French readers, the every work of art loses immensely in a translation. Mme. Serrao has placed herself on the level of the greatest novelists of our time. She, too, represents the genius of south Italy, so full of life, of animation, of passion, rather than the more cold and prudent spirit of northern Italy. But she may be said to be a product of the revolution which has unified the North and the South; and her great novel, 'The Conquest of Rome,' is, consciously or unconsciously, symbolic of this great revolution. I have seldom received so vivid a literary impression, I might almost say sensation, as on reading the beginning of 'The Conquest of Rome,' describing the journey from Capua to Rome of a newly elected young deputy of the southern province of the Basilicata."

"This hard, stern, severe young man [San Giorgio, the deputy] is doomed to fall under the soft, gentle, winning influence of a woman. Rome's first impressions on the young deputy, his walks among the ruins in the Forum, in the Coliseum, in St. Peter's, are well described; but San Giorgio is not a dreamer. The Chamber, the deputies, his new colleagues, absorb him; he studies the faces of the ministers. 'Why should he not become minister? Is it so difficult?' There is a description of a great session, a great parliamentary tournament in Monte Citorio, which is so alive that you seem to be a witness of it. This extraordinary power of description is one of the great merits of Mme. Serrao; it is found also in the account of a grand soirée at court. Photographs, cinematographs, can hardly equal the descriptive powers of the Italian writer, but she adds to her descriptions the dramatic, the psychological element.

"San Giorgio is eloquent, naturally eloquent, as frequently happens in the meridional races. He has made his mark in Parliament; the party chiefs court him, dread him. He is bidding his time; does not at first know well on which side of the House he will sit. His fate is decided by accident more than by any great convictions. The minister is an old, very old man with a very young wife. San Giorgio met her first at the railway station, on his arrival. He has seen her since continually; has taken long walks with her; has become intimate with her; she likes him, feels drawn to him, but she does not love. She is incapable of love, in the material sense; she is a creature of a superior sort, an idealist, ignorant of everything that goes under the name of passion. Nobody knows this better than her husband, the minister, whom she regards more as a father than as a husband. The situations created by the contrast of the ardent San Giorgio and the pure Angelica Vargas give a singular psychological interest to 'The Conquest of Rome.' The devouring passion, which is never quite satisfied, finally destroys all the energy of San Giorgio; an absorbing torpor incapacitates him for the political work which was and ought to be the object of his ambition. Before Angelica, all is forgotten—so much so that the personality of San Giorgio effaced itself more and more. Angelica finally conveys to him, by the mouth of the minister, her old husband, her desire that he would leave Rome. The minister says to him: 'Man, this great thing, this power, this force, is subjected to a supreme law which tells him, "You must do this and nothing else if you do not wish to be useless and mediocre; you must have but one passion, one ideal. Love, science, politics, art—these forms of passion and of the ideal are exclusive sentiments." 'What,' inquires San Giorgio, 'is Mme. Vargas's desire?' 'That you will leave Rome.' 'I will go; I will resign.' And he does resign. He returns to his Basilicata. He was to make the conquest of Rome, but Rome has vanquished him. His dream is finished."

English Music and Musicians of To-Day.—A scathing arraignment of contemporary British musicians appears in *The Saturday Review* (London, January 13). The writer says:

"I am sorry to have to say that the English musicians of to-day remind me chiefly of a pack of querulous, gossiping, after-noon-tea old ladies. They have no higher ambition than to make money, to be applauded at a country festival, to become conductor of a festival or the Philharmonic Society. To gain the lovely objects of their ambition they intrigue against each other and grow to hate each other; and, without a noble aspiration in them, their vanity makes them so restlessly sensitive to criticism that they become furious when they are reminded that their aspirations are not noble. There are a few exceptions, naturally—thank heaven that one can say naturally!—but those of my readers who know of the intrigues that have disgraced the musical life of England during the past few months, that have even led one popular musician to resign a festival conductorship, will not wonder any more than I do why we produce no great music. Our men have nothing to say—such men have never anything good to say; the really great men are not pettish, querulous, vain, and given to intrigue—and I go so far as to question whether they could say it if they had."

"Meantime, it must be owned that the history of English

music in the nineteenth century is a blank page. Whether that page will be covered with some one's gorgeous handwriting during the twentieth century is a thing that no man can tell."

OLGA NETHERSOLE IN "SAPHO": A DRAMATIC "SENSATION."

THE dramatic pool has been perturbed for some weeks in anticipation of Miss Olga Nethersole's production of "Sapho," a dramatization by Clyde Fitch of Daudet's novel of that name. Owing to Miss Nethersole's illness in Washington, the play was postponed from week to week, and in the mean time a number of the New York papers succeeded in creating something of a sensation out of the alleged immorality of Miss Nethersole's interpretation of the rôle of the Parisian *coquette*. It was announced that Chief Devery and Anthony Comstock would probably interfere and stop the performance. One evening journal even went so far as to say that any man who should take a lady to see the play would *ipso facto* announce that he had no respect for her, and hinted that it "would take note" of every man thus accompanied. Under all this stimulus public expectation was keyed high, and copies of Daudet's novel, hawked about the streets at five cents, were sold in large numbers.

After the initial performance of the play, the New York *Journal* called the attention of the police to the play in a heading they could not fail to find legible, and Mr. Alan Dale of that paper thus summed up the particular wickedness of the play in his eyes:

"No task of civilization," says somebody, "has been so painfully laborious as the subjugation of lasciviousness." "Sapho" makes a big effort to undo this task. It is never human, but it is always lascivious. . . . This particular *Sapho* was indeed a study for the psycho-pathologist. And it was this utter lack of real, honest, human, normal feeling that ruined her effect upon thinking people. It was the unthinking people who professed to think this natural and sentimental."

Other dramatic critics of New York take much the same view. *The Evening Post* does not regard either the art or the moral treatment of the play as wholesome, but adds: "Vice when fascinating is dangerous, and perhaps it is in the interests of morality that the actress insists so much upon the hideous side of it. Certainly her *Sapho* is much more tedious than seductive." Mr. William Winter, in *The Tribune*, is more emphatic. Referring in his critique to "the morbid trash . . . of such authors as Ibsen, Maeterlinck, and Shaw," he remarks that the defense of such literature "always comes from weak sisters of the male sex or of no sex at all, emasculated puppies, sucking collegians, and the like, who are trying to cut their teeth on the coral of irresponsible newspapers." He adds:

"It is not necessary to soil the columns of this paper with a particular account of the sickly sentimentality of Mr. Daudet's book or the reeking compost of filth and folly that the crude and frivolous Mr. Clyde Fitch has dug out of it, with which to mire the stage. The commodity of the scavenger requires no description. It is enough to say that this heavy and foul rigmarole of lust, sap-headed sentiment, and putrid nonsense tells a vulgar, commonplace, and tiresome story about a harlot and a fool, showing how, in a carnal way, they fascinated each other, how the fool gave to his folly, and how the harlot, having bamboozled the fool, went away with a criminal rogue just out of prison. Into detail of the relations between these cattle those commentators may enter who have a taste for muck and who can deliver expert opinions upon it."

On the other hand, *The Press* says that "Sapho" is "not wicked" and "fails to shock its audiences," while *The Commercial Advertiser* speaks of it as "a fairly good play, acted with distinguished power by Olga Nethersole." The latter paper continues:

"There is nothing shocking in it, and the rush to see it may

stop when this fact is discovered, but it deserves some support for its own sake. . . . We see [in the original story] how a warm-hearted, thoroughgoing slave of passion wrecks and empties the life of a healthy and happy boy by loving him; and this moral is told with sympathy for her as well as for him, but with inexorable understanding that his interests are those of humanity, while hers, whoever is to blame for it, are against the common good. In place of this wholesome theme, painfully, delicately, and honestly worked out, this version gives us the old, weak story of a woman, singularly, ideally noble, like most stage courtesans, suffering through the cruelty of man. The body of the story is about the same—the soul infinitely lowered."

THE MOST POPULAR NOVEL OF THE DAY IN ENGLAND.

ALTHO published as late as last October, Miss Cholmondeley's "Red Pottage" has already taken the lead of all other novels in England, succeeding to the place occupied by Miss Fowler's "The Double Thread" earlier in the year; and its wide popularity in America also appears assured. *The Academy* (London) regards "Diana Tempest" as still Miss Cholmondeley's best and most typical work, and compares the two novels as follows:

"Miss Cholmondeley has two rather distinct faculties—not often united—the faculty of telling an exciting story, and the faculty of wittily observing character. In 'Diana Tempest' neither of these faculties is allowed to interfere with the other. The reader is consistently kept on tenterhooks concerning the safety of the hero's life from his mysterious trackers, and at the same time the author's power of witty and even humorous observation is maintained in full play. And there is more than wit and more than excitement in 'Diana Tempest'; genuine imagination has gone to the fashioning of the figure of the heroine; Diana is a charming and authentic creation. For the rest, you may observe in 'Diana Tempest' some of the faults of exaggeration and incongruity which, to our thinking, are emphasized in 'Red Pottage.' Miss Cholmondeley suffers from no lack of inspiration, and tho she views the world with certain easily defined social prejudices, her sense of the ridiculous will save her from that narrowness into which only too many novelists—especially women novelists—have fallen step by step while catering for a large audience. The risk which she runs—and it is a serious one—lies in her apparent contempt for the value of form in art. Her novels are not well constructed, and at least one of them is notably weak in that regard. Moreover, she seems to have little ear for the music of words, or feeling for the dignity of the English tongue. Instances by the score might be brought forward, but this is scarcely the moment for them. We merely refer to them in passing. Gifted with plenty of invention, plenty of wit, some humor, some imagination, and a fresh touch of originality which lends allurements to everything she writes, Miss Cholmondeley has an excellent chance of taking rank with the novelists whose work is worthy of serious consideration and serious praise. It is greatly in her favor that she imitates no one. She has her own plots, her own manner, and, in a certain degree, her own attitude toward life."

The *Chicago Dial*, in the course of a discriminating review, says:

"The situations outlined seem strained, and the style is far

From Harper's Weekly. Copyright 1901 by Harper & Brothers.
MISS CHOLMONDELEY.

from impeccable. Moreover, the interest, which at first is sharply focused upon a certain character, becomes diverted into numerous secondary channels, and the reader grows singularly impatient. But as the story is pursued to the end, and the threads so long left loose are gathered up into a single tragic knot, and the writer's powers of characterization become more and more firmly established, and a relentless destiny finally asserts its controlling and implacable claims upon all the lives concerned, a revision of the earlier opinion is forced upon us; we are compelled to recognize the strength of the work, and its success is made rationally intelligible. The point of honor upon which the plot all hangs is an artificial one, and it may be held that fate deals too harshly with the hero for his sins; but according to the conventional code of the society in which he lives, there is no other possible outcome. . . . We would not convey the idea that the novel is all gloom. So far from having this exclusive attribute, it is enlivened to a notable degree with flashes of quiet humor and gentle touches of social satire. And it is a book which engages the closest attention, whether for its minor incidents or for the larger lines upon which it is constructed.

A MAGAZINE PRINTED WITHOUT INK.

THE only magazine in America printed without ink or visible type is called *The Point Print Standard*, and is published in Philadelphia. Its white pages might be scanned for hours without conveying any impression to the mind, for it is not intended for those who have eyes to see. From *The North American*, Philadelphia, we quote the following account of this unique publication:

"*The Point Print Standard* is a magazine for the blind. For two years it flourished and brought happiness and entertainment to thousands of sightless folk throughout the land. Then its brilliant founder died. Himself a blind man, he had devoted his life to supplying literature in such form as to open its delights to the similarly afflicted. For the last half year the many blind men and women have found their blighted lives duller than ever because the monthly visitor, with its bright pages, failed to arrive. But that is over now, and the plain white pages, rough with points, again find their way to the eager fingers of the blind. A woman sits in the editorial chair of the revived magazine, and from the demand for this month's issue it would seem that she is going to be highly successful.

"There are two methods by which the blind may read. The old-fashioned way is simply by raised letters. Some years ago Dr. Witte, of New York, invented the 'point system.' In the alphabet only six points are used, but these are arranged in so many combinations that with them the entire alphabet has been formed. To be sure, it is more difficult to learn to read with the point system, but, once acquired, a blind man disposes of a page almost as quickly as a man with sight can go over the same amount of matter in the ordinary magazine. Then Mr. Kneass began the publication of *The Point Print Standard*. However, he did not discontinue the journal printed on raised letters. This he kept up for the benefit of the old-fashioned blind, who could not be expected to master the new system.

"The sanctum and composing-room of the magazines was in a little room in a building in North Fourth Street. Kneass had for an assistant Miss Josephine B. Cobb. At her employer's death, about a year ago, Miss Cobb, who had been devoted to him, felt that she would like to continue the splendid work which he had been doing. But for several months she received little encouragement to go on. However, she did not despair, and after about six months' effort she secured such assistance as was necessary to continue the publication of the magazines. And so *The Point Print Standard* and the old *Philadelphia Magazine for the Blind* are again finding their way to the afflicted and gladdening their hearts. . . .

"These publications for the blind are all of a religious nature. But *The Point Print Standard* reproduces the best in literature and tries to mirror important public events of the times. The last number leads off with Edwin Markham's 'The Man with the Hoe,' contains a description of Puerto Rico, an account of Dewey's return, of the Dreyfus trial, and of the Transvaal affair."

THE BOOK PRODUCTION OF GERMANY.

THE annual output of books in Germany is equivalent to the combined "crop" of England, France, and the United States. The most reliable source of information on this subject has for a generation been the *Bericht*, a report published quarterly by the famous house of Hinrichs in Leipsic. According to the latest issue of this work, Germany has during the year 1898 (the report for 1899 will not be forthcoming for months yet) shown a small decrease compared with preceding years. The grand total for 1897 was 23,861, while for 1898 it was 23,739. The general character of German publication interests is indicated by the rubrics and their statistics, viz.:

General bibliography, encyclopedias, etc., 426; theology, 2,144; legal and political sciences, 2,078; medicine, 1,572; natural sciences and mathematics, 1,275; philosophy, 283; educational, school-books, and juvenile literature, 3,633; languages and their literatures, 1,406; history, 1,054; geography charts, maps, etc., 296; military science, 555; trade economics and commerce, 1,409; architecture and engineering, 706; domestic economy, agriculture, and forestry, 869; polite literature, plays, popular tales, etc., 3,061; arts, 711; directories, calendars, year-books, 631; miscellaneous, 636.

The Germans themselves, however, are not convinced that this superiority in number also signifies a superiority in quality. At any rate, this is not the case in the department of fiction. We quote from the pen of Dr. Hans Fischer, a noted litterateur, who writes in the *Christliche Welt*, of Leipsic:

"In the year 1898, Germany published 23,739 works, which means about 65 for every day of the year. Of these, 3,063 belonged to the department of *belles-lettres*, or an average of 8½ volumes per day of epic, dramatic, and lyrical productions. It is not to be wondered at that in view of this productiveness books have lost their influence and their dignity. They are becoming as multitudinous as old coats (*Jacken*), and book-sellers are beginning to dispose of them by the pound as tho they were beefsteaks. And of all these books in the department of *belles-lettres*, there are exceedingly few that have any worth or value, the majority of them being more than objectionable either from a literary or from a moral point of view."

The literary output of Germany, as a rule, stands high. Yet certain kinds of literary rubbish flourish in the Fatherland as nowhere else. A prominent literary journal of that country recently stated that certain specimens of the so-called "Hintertreppepenromane," so called because generally sold at the back-steps to servants, and practically equivalent to our "blood-and-thunder" type of fiction, have been issued and sold in editions of a million and a half.—*Translation made for THE LITERARY DIGEST.*

Another Musical Prodigy.—From Spain comes an account of a boy by the name of Pepin Rodriguez Arriola, who is said to be, without exception, the most wonderful example of musical precocity ever known. He is just at the end of his third year, and surprised his family six months ago by being found at the piano playing a dance. Mozart, Monasterio, and the other well-known prodigies were at least seven. The child was presented, says *La Escuela Moderna*, before a great number of critics and professors of music in the Montano Hall in Madrid on December 4, and was placed by his mother at the piano with the utmost confidence in the result. "La Marcha Real," "La Gallegada," "Moraima," and some dances by Gigantes and Cabezones were "skillfully interpreted by this phenomenon with exact modulations and the most perfect expression." The child has never had any instruction whatever. When he was applauded, he had no idea of being praised, but clapped his little hands with the others, exclaiming in child dialect, "Baca! baca!"—*Translation made for THE LITERARY DIGEST.*

Within the past twelvemonth, four great art exhibitions have been held in Europe, making the year one of capital importance in art history through a renaissance of interest in the old masters. These were the Rembrandt exhibition at London, the Velasquez at Madrid, the Cranach at Dresden, and the Van Dyke at Antwerp.

SCIENCE AND INVENTION.

A MATHEMATICAL THEORY OF HEREDITY.

THEORIES of heredity have a fascination for the biologist, and no less for the thoughtful general reader. Mathematics bears no small part in most of them, but it is usually applied to the statistical treatment of the subject. To find an analogy between the laws of heredity and those of analytical geometry is a novel proceeding, and this is what is done by Dr. Felix Le Dantec in a recent lecture at the Sorbonne, in Paris, which is published as a leading article in the *Revue Scientifique* (January 13). Dr. Le Dantec is not the discoverer of the interesting analogy that he treats of, but he has applied it in an entirely new and fruitful way to explain the laws of heredity, or rather, perhaps, to indicate the line along which we must seek to elucidate those laws. In the first place the author makes this striking statement of the complexity of the animal body, which is built up by natural growth in a few years:

"Suppose that you had to describe minutely a given man; and when I say 'minutely' I mean with such minuteness that the person to whom you describe him could reconstruct him identically, as a man is built up from the ovum—as heredity reconstructs, in short.

"To make this description complete, you may divide the body of an individual into small cubes, a millimeter [$\frac{1}{2}$ inch] on each side, and if you have made a complete description of all these cubes, it will be sufficient, in order to reconstruct a man similar to the original, to make as many cubic millimeters, similar and similarly arranged. The volume of a man being about 80 liters, you will have to define the location and structure of 80,000,000 of these cubes. This seems a somewhat complicated matter; but within each cubic millimeter you will find a complexity almost as great, for . . . each contains not less than a million of cells. That makes at least 80,000,000,000,000 cells whose structure and location you will have to define. And note that a cell is far from being a simple element, and that even if you know exactly the molecular structure of its different constituent elements it would be no small task to describe them exactly.

"This gives some idea of the work that you would have in giving the elements indispensable to the construction of a man similar to your model. It is true that these indispensable elements would be sufficient, and that the man thus described would be described fully; in other words, your description would embrace all the characteristics of the person described; for altho it would not include explicitly the length of his neck, the shape of his nose, etc., it includes implicitly all these larger characteristics. . . .

"But altho these elements are sufficient, it must not be forgotten that they are indispensable, and that the absence of a single one of them would suffice to make it impossible for the manufacturer to fulfil his task!

"And, nevertheless, the egg reproduces all this; the microscopic egg contains all this information within itself! All these characteristics are represented therein, since we know that if a single one of them is wanting, the man can not be completely constructed."

Dr. Le Dantec then proceeds to unfold his mathematical analogy. Mathematicians, he reminds us, can not represent algebraically any arbitrarily drawn curve; but, given an algebraic equation, it can be interpreted to mean certain space relationships, and a curve can therefore be drawn to represent it. Moreover, this particular curve represents this particular equation and no other, and the equation corresponds to every minute section of the curve. Two different equations can not represent two curves that have any finite section in common, no matter how small this may be. If the equation be altered in such a way that a small section is changed, the whole curve changes with it. Now what bearing have these mathematical facts on biology? Let us hear M. Le Dantec again. He says:

"Is there not in all this something distantly comparable to the

phenomena of heredity? An egg, a simple cell, is sufficient to determine an agglomeration formed of 80,000,000,000,000 cells, just as a finite, very small segment of a given algebraic curve is sufficient to determine the whole curve, infinite in extent.

"We shall abuse this comparison if we consider as rigorously determined in the egg the adult that develops from it, since it is certain that the environment will have a profound influence on its structure. I shall not fall into this fault of reasoning, but I shall draw from the preceding comparison a very important conclusion, by comparing the algebraic curve not, as has been done by some, to the evolutionary history of man, but rather to the man himself, considered at a given moment, with his 80,000,000,000,000 cells.

"The curve under consideration has the following properties:

"(1) All its segments, in whatever place, are different, at least in position; but

"(2) Nevertheless, each of them is sufficient to determine the entire curve; and

"(3) If one of them varies, all the others vary correspondingly.

"It would not be unreasonable to apply rigorously to man the three preceding propositions:

"(1) All his cells are different; but

"(2) Nevertheless, each suffices to determine the whole man; and

"(3) If one of the cells varies all the others vary in corresponding fashion. . . .

"It is not owing to my faith in a simple mathematical comparison that I announce the principle: 'Each cell of man's body suffices to determine the whole man'; on the contrary, my conviction of its truth, acquired in advance, has led me to make the present use of the comparison, and has shown me how valuable this comparison is."

But M. Le Dantec pushes this interesting analogy still further. Mathematicians recognize what they call "families" of curves (the very name implies the dim recognition of a biological likeness). Such, for instance, would be all the circles having a common center, all the ellipses having a common axis, or any group of curves of the same type having some feature in common. These may be regarded as developed from one typical member of the family by varying some one feature. To such a family of curves M. Le Dantec likens man at his different ages. One variable feature in this case is the time; and as this flows on, the curve corresponding to a man at one age passes gradually into that of another age, without ever losing continuity. Another variable feature is that introduced by environment, which likewise modifies the curve.

Now, says M. Le Dantec, does a segment of one of these curves resemble or represent the corresponding segment of another? Assuredly not. They are related; they correspond, and one is developed from the other; but they do not necessarily look at all like one another. The corresponding segments of a family of concentric circles have totally different lengths and curvatures. In like manner, he says, it is absurd to say, as some do, that adult characteristics such as the curvature of the nose or the length of the neck are represented in the egg, as those assert who put forward the theory of "representative particles." The whole man is defined by any one of his cells and by any one of his parent cells; but there is no representation about it. The relationship in the case of the mathematical curve is defined algebraically by an equation. He who shall tell us what corresponds to this equation in biology will have solved the mystery of heredity.—*Translation made for THE LITERARY DIGEST.*

Visibility of Smokeless-Powder Discharges.—

Since the use of smokeless powder in warfare, much has been said of the difficulty of locating an enemy's guns. This has been noticed specially in the present war in South Africa, where the Boers' guns, which are served with smokeless powder, can rarely be located except at night-time. "The flash of such explosion," says *The Scientific American*, "is practically invisible at the usual distance, the pale, mauve-tinted flame of each discharge

being effectually stopped or masked by the yellow color of the sunshine or ordinary daylight. The flame color itself is chiefly due to the presence of metal potassium in the powder, and is powerfully marked when potassium picrate or nitrated gun-cotton, or trinitrocellulose, subsequently treated with a solution of potassium nitrate, is an ingredient in the powder. Mr. W. Lascelles-Scott, an English chemist, has recently given considerable attention to the subject, and states that such explosion-flashes can be readily seen if care be taken to cut off all light proceeding from the red and yellow rays of the solar spectrum (and especially those of or near the so-called "D-line" of the sodium flame). This can be accomplished by looking through a piece of blue glass of a certain shade. The blue glass of commerce is of two kinds, but only the one colored by cobalt oxide is of any practical utility. It is of a blue-violet tint, and a disk of it hung in front of a good field-glass will enable a smokeless-powder flash to be easily located at the longest range. Hoffmann's violet and anilin color can also be used to tint a thin sheet of gelatin or mica. The front combination lenses of the field-glass can be removed and the posterior surface colored with the transparent dye and then replaced. The instrument will then show the invisible flash without the necessity of adjusting a separate piece of cobalt glass, and, being inside, the film of color is not liable to be wiped off when cleaning the lenses."

THE BOERS' ARTILLERY.

THE South African war has been fertile in sensations and surprises; but nothing has been more astonishing than the success and superiority of the artillery brought into the field by the allied republics. It is now known that the Boers had been

PREPARED BY THE BOERS.

buying guns of the best French and German makers for several years before the war, but they did this so quietly that, only a few months ago, we were assured, by way of London, that they were not only poorly supplied with field, siege, and defense artillery, but that what guns they did have were old and practically worthless. The Paris correspondent of the *St. Louis Post-Dispatch* (January 28) gives the following information about the Boer artillery:

"It is not sufficient to say that the Boers possess first-class guns, but rather that they possess the very latest and most advanced type of field ordnance turned out in Europe.

"Without doubt the most effective field-piece of to-day is the 75 millimeter [2.94 inch] gun made by the firm of Canet-Schneider, of Creusot. The first complete battery of six guns of this style was purchased by the Boer Government in 1896. . . .

"This gun is wonderfully simple in construction, and for its caliber and length of barrel is probably the lightest known. So strongly built is its carriage and so effective is its recoil attachment that it is found possible to fire shells under service conditions at the high-muzzle velocity of 1,968 feet per second.

"The brake, or attachment for absorbing the recoil of the gun,

is a prominent feature of all modern rapid-fire field-pieces. Before rapid fire can be secured with a field-gun the weapon must be held so as to move but little out of place. Recourse is therefore had to various contrivances for anchoring the piece. The devices now in use comprise, for the most part, a spade fitted to the end of the trail, and a hydraulic cylinder attached to some part of the carriage. The spade is driven into the ground at the first discharge, and each successive recoil is absorbed by the hydraulic brake. Heavy springs, which are compressed with each discharge, serve to run the gun forward on its carriage.

"In the case of the Canet field weapon, the carriage is fitted with an elastic trail-piece, which latter telescopes when the gun is fired, allowing a recoil of about 11½ inches. At the end of the trail is the inevitable spade, which at the first recoil takes a firm hold on the ground. Each successive discharge, following the first, is absorbed by the telescoping trail-piece. The action of the trail is automatic, for after the absorption of each recoil the gun is returned to position. Not only is the system simple—it is secure. In the majority of devices the recoil mechanism and buffers are greatly exposed.

"The advantage of recoil brakes for field-guns can not be over-estimated. A gun unsupplied with a checking-device will jump to the rear at every discharge. The gunners must then run the piece by hand into position, all of which militates greatly against rapid fire.

"This gun is provided with one row of sights, and with the maximum elevation of 20° the range is said to be 8,700 yards. . . . The piece is served by six gunners only, two of whom are employed in the service of the ammunition, while one member is detailed to set the time fuses only. A rate of fire from eight to ten rounds per minute can be kept up for a considerable length of time. The battery of six guns carries 144 rounds per gun or 864 per battery, so that when this phenomenal rate of fire is maintained the ammunition has to be frequently replenished.

"This gun is greatly feared by the British soldiers, and is referred to by them as the long-long gun."

But Germany as well as France has been laid under contribution to furnish means for fighting the Transvaal's hereditary enemy. The guns called in the British despatches "Long Toms" are Krupp siege guns made by the famous German founder. Says the writer:

"[The] Krupp 15 centimeter (4.13 in.) siege gun . . . is a remarkably fine weapon. When imparting a muzzle velocity of 1,856 foot-seconds to its 35.27-pound shell a range of 11,260 yards is attained. . . . The weight of the Krupp 4.13-inch guns is 1,156 tons. The carriage weighs an additional 1,417 tons. When en-

gaged in siege work the practise is to build a heavy timber structure to support the carriage. The recoil is absorbed by a hydraulic brake, the cylinder being pivoted to the foundation, and the ram attached to the trail-piece. The ease with which the Boers have transported these siege pieces, representing over two and one-half tons weight, over rough country has been one of the surprises of the campaign."

It was to match these siege-guns—pieces in which General White's force was deficient—that the naval guns were brought to Ladysmith from the cruisers at Durban.

Electrical Anesthesia.—This name is given to a new process described by the inventor, Dr. Scripture, of Yale, at the meeting of American scientists recently held in New Haven, Conn. "He has invented a delicate piece of electrical apparatus," says *Electricity*, "by which he applies a current of high frequency to the nerves. He sends the current longitudinally along the nerves. He has been able to put a man's arm to sleep so that he can stick pins in it, but has not been able to apply this sort of anesthesia to dentistry. Dr. Scripture uses a high-

speed Kennelly alternator and hopes to perfect his treatment before long."

SOME WONDERFUL CALCULATING MACHINES.

THE ancient abacus and its variant, the Chinese swanpan, are rude calculating machines. So, after a fashion, is a handful of beans or a pile of counters. But the first real attempt at calculation by a mechanical appliance was made about 1650 A.D. by the French philosopher Pascal, then a lad of nineteen. His machine, working by a series of gear-wheels with numbers on them, could add and subtract, but was of little practical use. Better machines were made by the German philosopher Leibnitz and by Professor Saunderson of Cambridge University, and these led up to what is still regarded as the prince of calculating machines—that of Charles Babbage. A writer in *The Pall Mall Gazette* (London), to whom we are indebted for the foregoing facts, has the following to say of Babbage's invention:

"To describe it in full, and tell the story of its manufacture, so far as it went, would take several volumes, since even a large quarto volume, devoted entirely to the subject, leaves out a great deal about it that it would be interesting to know. Babbage's machine was designed to calculate elaborate tables and automatically set them up in type, or else supply a mold in which stereotyped plates of the tables could be cast. After many experiments, he constructed his first difference engine, as he called it, for the reason that he employed the method of differences as a general principle on which to base the calculations. As soon as the first machine was completed, Babbage received instructions from the British Government to construct another and more comprehensive one at their expense. Six years after this order was given, the Treasury appointed a very strong committee to examine and report upon the portion of the machinery then executed and the design for the whole engine. The result was a very strong expression of opinion in favor of the machine, but the expense was enormous. The Government finally declined further supplies, and in 1833 the construction of the engine was relinquished. The second difference engine was a huge instrument of marvelous power, and an illustration, that Babbage himself uses as a kind of illustration of a miracle, shows one feature of its performances in an interesting way. He said that his machine could go on for years working by the same formula. It could then change without human intervention to another formula for a single calculation, and subsequently resume working by the original formula.

"But, great as were the powers of this second difference engine, Babbage had conceived an even more elaborate machine, which he called the analytical engine, which would completely supersede the difference engine, on which, in its incomplete state, the Government had already spent £17,000. It is not wonderful that the Chancellor of the Exchequer declined to supply any more funds under these circumstances."

The Babbage completed neither of his great machines, two practically useful ones were built on the same principle by Scheutz, a Swede, one of which is now in the Dudley Observatory at Albany, N. Y., and the other is owned by the English Government. Each of these is about the size of a piano, and is worth \$5,000 to \$6,000. They contain over 4,000 pieces each, and weigh about 1,000 pounds. They will calculate and stereotype without chance of error two and a half pages of figures in the same time that a skilful compositor would take merely to set up the type for a single page. The writer goes on to say:

"Since Babbage's day many small calculating machines of various kinds have been invented, and when the present writer searched the records of the Patent Office to see if an invention of his own had been anticipated, he was surprised to find that an enormous number of patents for such instruments had been taken out. . . .

"There are practically only five of these machines that are worth mentioning. One of these, invented during the past few years, is Burroughes's registering accountant, which performs addition by striking keys like those of a typewriter, and at the same time types on a strip of paper the amounts that have been

added. This machine seems to be mechanically successful, but, so far as the writer is aware, it is not now commercially obtainable. It is somewhat heavy and cumbersome, requiring ten keys for every column in a row that it is desired to add. . . .

"Another moderately practical machine is an American invention called the comptometer. This also is actuated by keys like those of a typewriter, and, by means of it, it is simple to add, feasible to subtract, and within the bounds of possibility to multiply or divide; for the latter purposes it is altogether inferior to Tate's arithmometer. A machine that has much that is pleasing about its design is the Brunsviga, but its workmanship is not sufficiently good to stand much wear and tear. The writer obtained one about five years ago and has long since worn it out.

"The only really satisfactory machine for multiplication and division was invented by Thomas de Colmar about 1850. This was subsequently improved in design and workmanship, without being altered in principle, by an Englishman named Tate, and years of hard work at one of these machines has led to the keenest appreciation of its powers. It never makes a mistake, it practically never gets out of order, it performs multiplication and subtraction with ridiculous ease, it makes the abstraction of the square root quite a fascinating operation, and for many purposes can be used by an unskilled operator with entire confidence that the calculations will be correctly performed. The arithmometer is largely used by life assurance companies, and any one whose work consists to any great extent of calculations can scarcely be too thankful that it was invented. It is contained in a box about 2 feet long and 6 inches high."

Commenting on this article in *The Pall Mall Gazette*, *The American Machinist* notes that still another calculating machine of great ingenuity has been invented by George B. Grant of gear-wheel fame. This machine, it says, has "many excellent features, especially as a multiplier":

"This operation it performs with great facility and absolute accuracy. It also adds, subtracts, and divides. In this machine there are a number of small gear-wheels with numbers on them which are revolved by movable racks, each rack being set by means of pins to figures indicating the amounts to be handled. After that a revolution of a crank adds the amount, or continued turning of it multiplies the amount, and the device for 'carrying' from one wheel to another is particularly ingenious."

A CORONA WITHOUT AN ECLIPSE.

MANY astronomers have tried, and are still trying, to see the solar corona without the aid of the intervening moon's disk. When that disk gets in front of the sun in a total eclipse,

the glory of the solar atmosphere shines out all around it, and those who have seen the sight testify that it is well worth the fatigue and expense of a long journey. But a few seconds every few years is not much to devote to the study of such a phenomenon, and astronomers would like to observe it at leisure. Hitherto it has eluded all their attempts. Every now and then some

one announces that he has succeeded in making it visible, or at least in photographing it; but the news turns out to be a mistake (or a plain unvarnished lie) with mortifying regularity. Now

OBSERVATION OF SUPPOSED CORONA OF THE SUN WITHOUT AN ECLIPSE.
Courtesy of Popular Astronomy.

comes Mr. E. Miller, of the University of Kansas, who believes that on May 3, 1899, he saw the corona in ordinary daylight. The editor of *Popular Astronomy* has published his account in that magazine, and it would be unsafe to wager that the problem has not been solved, altho it is not probable that astronomers will regard it in that light until some one has confirmed Mr. Miller's observations. His method is one that has been tried many times—that of making a sort of eclipse to order by placing an artificial moon in front of the sun. The "moon" in this case was a cardboard disk about six inches across, held in front of the telescope by wooden strips. For several hours, Mr. Miller tells us, he gazed at this disk, but could see nothing but "brassy streamers" caused by reflection from the interior of the telescope. What followed he tells in these words:

"More than two hours had passed, and the goal to be reached was apparently as far off as ever. The observer was quite disheartened and discouraged, and about ready to give up in despair. In such a frame of mind, and quite willing to give it up as a bad job, suddenly and unexpectedly the false moon, for some reason or other, changed its position slightly, so that apparently its surface and the surface of the object-glass were no longer parallel to each other. Whether the lack of parallelism was a fact or not, can not now be determined. The effect produced was that the barrel of the telescope seemed to be completely filled with absolute darkness, the brassy streamers vanished, and along the upper right-hand limb of the false moon appeared in all their beauty and soft light the coronal streamers. There was no mistaking the vision. It was the genuine corona itself, 'a thing of beauty,' and a glorious recompense for the time and labor that had been expended.

"An attempt to change the position of the telescope so as to hold the sun in the field resulted in destroying the vision, and the coronal streamers disappeared from view. The figure [p. 245] is a facsimile of a hand-made drawing of the corona as seen on the afternoon of May 3, 1899. It is not a complete coronal form, for the reason that the cardboard disk extended beyond the limb of the sun, and prevented a view of the streamers other than as represented."

The sight of the corona (if, indeed it really was such) was vouchsafed to Mr. Miller only once, but he thinks that he was not mistaken, altho he admits that such an explanation is possible. He says:

"That the corona of the sun was seen on the 3d of May, 1899, a day upon which there was no eclipse of the sun, either partial or total, can scarcely admit of doubt. There is a possibility that it may have been a vision of something else, an optical illusion, an 'ignis fatuus,' or a dream.

"At the moment when the picture was sketched, the 'apparition' was situated in the vicinity of one of the poles of the sun, and not in the plane of the sun's equator, and so clear and well-defined was the shape, and so different from all other appearances, that the conclusion reached by the observer was that it was the corona itself. To be sure, he may have been mistaken, but he thinks not, and it is unfortunate that the observation of May 3 has not as yet been corroborated by other observations. The work will be resumed in the near future."

The trouble in the method, Mr. Miller asserts, lies merely in the difficulty of keeping the light out of the telescope. This he proposes in future to do by a conical projecting hood. He is confident that in this way astronomers will soon be able to observe and study at leisure what he calls "the greatest mystery of the sun."

Red or White Meat?—"White meat for women, red for men" has been the carver's unwritten law for generations. A recent editorial in *The Journal of the American Medical Association* seems to throw new light on the subject. Says the writer: "There is a rather general impression that red meats are richer in nitrogenous elements, and particularly the extractives, than the so-called white meats, altho exact chemical analyses appear hitherto to have been wanting. In the hope of reaching some definite conclusion in this connection, Offer and Rosenquist, on

the suggestion of Professor von Noorden, undertook a series of observations to determine the total amount of nitrogen, and the proportion of extractives and of bases, in various kinds of meat from fish, fowl, cattle, fresh and smoked. It was found that the comparative results were so variable as to be without practical utility. Fish and deer alone always contained the smallest amounts of nitrogenous matters. There thus appears to be no justification for the clinical distinction that is often made between red and white meats, and we are therefore compelled to surrender another unsustained medical tradition."

AN ANGLO-AMERICAN ELECTRICIAN.

PROF. DAVID E. HUGHES, F. R. S., whose death is announced, is widely known as the inventor of the Hughes system of type-printing telegraphy, and of the microphone, the principle of which is utilized in the form of telephone transmitter now used. From a sketch in *The Electrical World and Engineer*, we learn that he was of Welsh descent, and was born in London in 1831, but when seven years old was brought by his father to Virginia, where the boy grew up and developed a great gift for music. When only nineteen years of age Mr. Hughes was appointed to the professorship of music in the college at Bardonia, Ky., and soon after, having devoted his leisure to science, he also assumed the chair of natural philosophy. Says the writer of the sketch:

THE LATE PROF. DAVID E. HUGHES, F. R. S.

"About this time, the period of rapid telegraphic development, Professor Hughes became deeply interested in the nascent art, and began to develop his printing-telegraph, and in 1855 his first patent on it in this country was taken out. It soon went into practical use in the hands of such men as Peter Cooper and Cyrus W. Field, and was rapidly improved, especially by the late G. M. Phelps, Sr., passing ultimately into the control of the newly formed Western Union Telegraph Company."

Professor Hughes lived abroad after 1860, and his system of telegraphy was specially successful in the various European countries. In France, it was adopted by the government telegraphs, and he was made a Chevalier of the Legion of Honor. In Italy the apparatus was adopted on the report of a commission after a trial of six months, and Professor Hughes was decorated again. In 1863 the system was taken up in England, and later it was adopted in Russia, Prussia, and Austria. At the Paris Exposition of 1867 he was awarded a grand gold medal. By 1875, Holland, Bavaria, Switzerland, and Spain had adopted his system and it had come into general use in England. Professor Hughes again distinguished himself by his beautiful original work in connection with the microphone and the induction balance. It is said that his income from his inventions averaged \$200,000 a year, and that he has left \$1,600,000 from his fortune to be divided among four of the London hospitals."

RAINBOW PHOTOGRAPHY.—A photograph of a rainbow (not the political kind), taken on June 1, 1898, shows that the inside of the bow is much brighter than the outside—a difference not always appreciable to the naked eye. "This difference," says *L'Éclair* (Paris), "is due to the existence of secondary bows, unaccounted for in the explanations of Descartes and Newton, but explained by Young on the principle of the interference of light. The necessary condition for the appearance of these secondary bows is that the drops should be of nearly equal dimensions; otherwise there is a confused superposition of the various colors, which are masked in white light."—Translation made for THE LITERARY DIGEST.

THE RELIGIOUS WORLD.

EXPERIMENTAL KNOWLEDGE OF GOD'S EXISTENCE.

PROFESSOR ROYCE, of Harvard, has said that in physical science it is "useless to try to do without assumptions, and equally useless to undertake the demonstration of these assumptions by experience alone"; and that "unless you make these assumptions, the spirit of science is not in you." Similarly, says Emma Marie Caillard (in *The Contemporary Review*, December), "developed religion has its assumptions, and unless we can make them, the spirit of religion is not in us." She continues:

"The great special postulates of science are for the satisfaction of the intellect. The great special postulates of religion (and we shall refer to both sets more particularly before long) are for the satisfaction of what Scripture calls the 'heart'; and it is mere cant, and very mischievous cant, to say that either heart or intellect has more right to satisfaction than the other. Both equally enter into the constitution of man, and their rights are equal. That being so, we should perhaps expect to find what, in fact, we do find—that their special postulates have a fundamental trait in common. Both alike imply the existence of external reality. To any reader even slightly versed in philosophy it would be superfluous to insist on the fact that external reality is not a direct datum of consciousness. It is a commonplace that we can only directly experience our own subjective states. These lead us to infer something outside ourselves to which they are due; and they may be broadly divided into two classes: (1) Those which are sense-impressions and which lead to the universal yet individual belief in an external sensuous world; (2) those which Lotze calls 'emotions of the mind, attitudes of longing, of devotion, or enthusiasm,' which lead to an equally universal and individual belief in an external supersensuous world. Since these beliefs are due to the 'combining and comparing power of reason' working on impressions in the one case physical, in the other metaphysical, it is obvious that in both cases the kind of world believed in must, in its details, largely depend on culture, age, environment, and personal capacity. Certain broad features are, of course, unalterable. Thus the sensuous world is conceived by all men as subject to the limitations of space and time, the supersensuous world as independent of such limitations."

This fundamental postulate of religion the writer calls the primary "venture of faith." "It is a venture, because, tho the postulate of a supreme and eternal righteousness may well be capable of verification, it is exceedingly doubtful whether by us as we are, under our actual conditions, with our present limitations, the method of such verification is discoverable." She continues:

"The postulate of supreme and eternal righteousness excludes the conception of an entirely impersonal universe where the only relations are between *things*, and can be expressed in terms of so-called natural laws. Such a universe has no place for righteousness, supreme or subordinate. It is neither moral nor immoral, but non-moral, just as is inorganic nature, considered simply as such, and not in connection either with sentient or self-conscious beings. These latter are indispensable in a moral universe, and if it is to be indeed a cosmos, and not a chaos where each individual asserts his own independent ideal, then there is needed a moral standard, one by which all other standards are to be tested, and all moral judgments themselves appraised. Such a standard must be personal, or it is no criterion for personal beings; and supreme, or it is of no value to them. To postulate that infinite goodness is at the heart of things is, therefore, to postulate a supreme moral personality. In other words, it is to postulate God. . . ."

"Put in other words, the suggestion is that those who are uncertain what mental attitude to take up toward this supreme question, and who yet feel that it is supreme, should adopt the divine personality as a working hypothesis, and put it to the crucial test of experiment."

"A fair-minded survey of history is the best justification of the attempt here suggested. However we may account for the fact,

there is no doubt that *character*, more than intellect, more even than genius, has been the controlling force in the checkered career of our race. To recognize this, however, is to recognize the ascendancy of the moral over all other characteristics of mankind, and such an ascendancy is hardly compatible with a non-moral constitution of the universe unless we regard man as an abnormal and unimportant excrescence on the cosmic order, toward the understanding of which a study of human nature can give no help. A moral constitution implies, however, as we have seen, a supreme moral personality."

The hypothesis of the divine Personality, says the writer, is to be verified by the test of personal, subjective communion—which is the second great venture of faith. It is to be through a revelation of "the divine spirit to our spirit, of whose reality and significance we can not stand in doubt." Individual certitude "can only be attained by direct individual experiment, made in purity of purpose and in singleness of heart."

WHAT IS A HERETIC?

AFTER several years of comparative peace in the ecclesiastical world, the gates of Janus have again been opened, and within a space of twelve months we have had three conflicts over heresy—that of Dr. Briggs in the Protestant Episcopal Church, that of Dr. McGiffert in the Presbyterian Church, and that of Prof. St. George Mivart in the Roman Catholic Church in England. There is a bacillus of heresy in the air, apparently; and perhaps with a view to finding a way to destroy it, Dr. James M. Buckley, editor of *The Christian Advocate* (Meth. Episc.) is writing a series of articles in that paper upon heresy. His first article (February 1) might appropriately be entitled "A Gallery of Heretics." In it figure some of the leading religious personages of the day, including the editors of several prominent religious papers. Dr. Buckley begins by an examination of the word "heresy":

"That odious word 'heresy,' in the sense of this term as used in the history of organized Christianity, signifies the holding and avowing or propagating of an opinion contrary to the established creed of an organized church. It is an error held by a professed believer in Christianity. Some persons mistakenly speak of Paine and Ingersoll as heretics. This is entirely wrong. They are infidels. Blackstone stated the official signification under the law of England: 'The second offense is that of heresy, which consists not in a total denial of Christianity, but of some of its essential doctrines publicly and obstinately avowed.' It is similarly used in philosophy and science. As schism is an uncharitable division in a church, so heresy is the setting up of false doctrines by members of the church. The two may very easily run together."

"Luther became a heretic to the Roman Catholics, and was excommunicated. A Roman Catholic detected in the Lutheran ministry to-day would be promptly expelled for heresy."

"To the Presbyterians early Methodists were heretics, and many Presbyterians who adopted Arminian Methodist views were excluded because they rejected the Calvinistic views of predestination, election, and reprobation. Whitefield and his Calvinistic followers denounced Wesley, and would not affiliate with his organization. Among Methodists to-day those who hold and propagate high (not moderate) Calvinistic views with vigor would be counted heretics were they within the Methodist body. . . ."

"For a minister to maintain the Deity of Jesus Christ in a regular Unitarian congregation would be heresy. With their views they would probably not take the trouble to turn such a man out, for they would be liable to be taxed with inconsistency (with their latitudinarian principles); but they would freeze him out."

"Among the Baptists the local congregation is supreme. If a person should boldly and continually deny any one of three distinguishing doctrines of the Baptists (that church-membership depends upon personal profession of faith, thus excluding infants; that the only true baptism is by immersion; and that none should be invited to the communion who have not become members of the church by baptism—that is, by immersion—thus excluding infants and all unimmersed adult professors), he would be ex-

cluded from the church. If any local church were to adopt such a heresy, it would be disfellowshipped by the association, and by all other Baptist associations and individuals holding the regular Baptist principles.

"The Congregationalists, having practically no controlling organization, admit of more modifications than any other body.

"The Protestant Episcopalians, with their boasted liberty, which, if it has fewer short chains than some others, has heavier long chains than other Protestant bodies, would silence any minister who refused to use the prayer-book, and exclude any one who would invite ministers of other denominations to assist in the administration of the Holy Communion, or would participate with them in so doing; and also would silence any minister who would preach in the pulpits of that church that the present exclusive system of the church is wrong, whether he in practise violated the order of the church or not."

But of all Protestant religious bodies of importance, says Dr. Buckley, the Presbyterian Church is the most thoroughly organized, and expresses itself with the most minuteness in matters of discipline and doctrine. Now, from the disciplinary point of view, Presbyterianism within the past forty years "has suffered greatly from an infusion of Congregationalism":

"The difference between the principles of government of these two bodies is radical. It is the difference between government by presbytery, synod, and general assembly, and the independency of the local church. It is as great as that between a single state and a federal republic. Every Congregational minister who has entered Presbyterianism without coming to the conclusion that Congregationalism is inferior to the Presbyterian form of government, has in spite of himself carried into Presbyterianism, and often exerts unconsciously, a relaxing and sometimes a disintegrating influence upon Presbyterian discipline. The relation of these men to the body is most interesting. One who knows their history and training can foreknow with almost absolute certainty their attitude on most questions before they speak or vote."

Still another "very curious influence" has been exerted upon Presbyterianism by two undenominational papers and by the secular press:

"When Henry Ward Beecher was the editor of *The Christian Union* [now *The Outlook*], and during his entire career, religious matters, freedom, heresy, and so forth, were discussed from the point of view of Congregational liberty. His own exigencies drove him into the equivalent of English independency, resulting in the establishment of two Congregational associations, that for a quarter of a century had little fellowship with each other. Dr. Lyman Abbott, the senior and master mind of *The Outlook*, tho not to the limitation of his accomplished associate, Hamilton Mable, writes entirely from a Congregational point of view, and where the letter of his discussions is not antagonistic to denominational organization, the spirit of them would dissolve any and all restrictions. In what we here say there is no desire to be offensive to a Christian minister whom we can not but admire, or to misrepresent him. In church government, as in theology, his activities, ability, and the peculiar manifestations of his personality entitle him, much more than even Henry Ward Beecher was entitled, to the distinguishing term, 'The Great Unsettler.'"

"*The Independent* has had mysterious vicissitudes of doctrine. About eighteen years ago it began to show extraordinary tendencies toward what may be called the latitudinarian view in theology usually spoken of as liberal. But suddenly it turned about, and in all the controversies growing out of the sending out by the American Board of orthodox ministers as missionaries it supported the conservative majority. For several years *The Independent* was recognized as being as conservative as *The Observer*. This was attributed to Mr. Bowen, editor and proprietor, who, as years advanced, appeared to become convinced that the prevalent tendencies were in the wrong way. As soon, however, as he died, *The Independent* seemed as tho arraying itself for a competition with *The Outlook*, to see which could travel faster toward the utmost margin in the direction of diminishing the number of fundamentals and allowing the greatest latitude even in handling those that are left.

"These two papers are a great help to the Congregational party in Presbyterianism. Dr. Briggs was suspended. He treated the suspension with a mixture of respect and contempt. The respect

was exhibited in the fact that he did not participate in the administration of the sacraments; the contempt, in that he appeared in many pulpits, telling the people that they might consider the address of the nature of a lecture. There was no reason constitutionally, from the point of view of his heredity or of the Westminster Confession, to believe that he would ever retract or change on this subject. By the Presbyterian standards it would have been proper to depose him from the ministry, and it is strange that the majority of the denomination did not see that it was done.

"If the views of Dr. Briggs were in harmony with Presbyterian standards, or if those standards allowed liberty of teaching to those who held such views, he should have been acquitted. If he was wrong, he should have been deposed. Either result would have made a rallying point. In case of deposition doubtless some would have left the church, but those who remained would have known why they stayed.

"So soon as Dr. McGiffert's book reached our table we gave it a careful reading, and saw that the same views and course which led to the condemnation of Dr. Briggs would require the suspension of Professor McGiffert. No one who justifies the treatment of Dr. Briggs can consistently take any other ground. Those who favored acquittal of Dr. Briggs are consistent with themselves in opposing a similar course with regard to Dr. McGiffert, but not with Presbyterian standards."

THE RITUAL CONTROVERSY IN ENGLAND.

THE distant thunders from South African battle-fields do not make the ecclesiastical foemen in the English Church less eager for the religious fray. The much-heralded protest against the archbishops' recent decision adverse to incense and processional lights has at last been presented to Archbishop Temple at Lambeth. The document, signed by nearly fourteen thousand communicants, was handed to the archbishop by a delegation headed by the Duke of Newcastle and Lord Edward Spencer Churchill. From the London correspondent of the *Philadelphia Church Standard*, writing under date of January 23, we take the following account of the protest and of Dr. Temple's reply:

"The objectors complain that, firstly, Dr. Temple 'has not merely attempted to define by a new and autocratic exercise of power the ceremonial practise of the church in this land,' but also to press upon dioceses of which he is not the ruler such definition. That tho his Grace's suffragans may submit to this, they, 'as Catholic lay-people, most strenuously protest and will resist to the utmost a precedent which may lead us into a position differing but little from that against which the church rightly protested three hundred years ago'; secondly, they protest against the archbishop's 'attempt to foist upon the church, as her rule of ceremonial, a penal act of Parliament, passed in days of regal autocracy, and intended to meet circumstances entirely different from those of to-day.'"

"The Duke of Newcastle agreed that a general council only had power to forbid the use of incense and lights. Lord Edward Spencer Churchill believed that in Disestablishment only could be found a remedy for their grievances. Dr. Temple's reply was both dignified and masterly. He asserted that his 'opinion' was not such a departure as the protesters alleged, that the question was not one of doctrine but simply of ceremonial, and that his action was entirely based on the Book of Common Prayer. Being an officer of the church, he was bound to interpret what she had done, whether rightly or wrongly, and if it seemed to him that the Church of England had removed the ceremonial use of incense from the worship of her members, it was not for him to say she did not mean what she had said. Neither was it fair to say he relied only on an act of Parliament. He laid before the deputation the form in which the prayer-book was finally submitted to the King, and showed that the act was included in its title. It was open to the objectors to say the church did wrong, but if they said that, their business was to go out of it. It was a very serious thing for men to claim that they might pick up here and there from the history of the early church practises they approved and then insist on making them part of the public worship of the Church of England. His Grace reminded them that obedience was unquestionably a Catholic principle, and objected to their

use of the word 'foisted' as disrespectful as applied to the action of an appointed head of the church. Dr. Temple deprecated the idea of Disestablishment as a settler of these disputes, a measure he described as sure to disappoint even those now trying to accomplish it."

In the mean time, the situation remains unchanged. The bishops met in council in mid-January to consider future action as to the clergy who refuse to obey, but as yet nothing has been announced concerning their decision. The tendency of the episcopate is, perhaps naturally, to scout Disestablishment. The opinion appears to be growing that no new departure, toward either Rome or Geneva, will be made, but that remedial legislation, designed to strengthen the church through greater participation of the laity in its government, will be adopted, thus keeping the English Church true to its ancient doctrine of *via media*.

THE SECRET OF MR. MOODY'S POWER.

THE almost unexampled success which attended Mr. Dwight L. Moody's evangelistic labors has moved to wonder many Christians and non-Christians; for Mr. Moody apparently lacked many of the qualifications usually regarded as necessary for such success. Dr. Lyman Abbott (in *The North American Review*, February) says:

"Without office in church or state; without theological, collegiate, or even the better Sunday-school education; without a church or society behind him to support him, or a constituency, except such as he himself created, to afford him moral support; without any of the recognized graces of oratory, and without any ambition to form a new ecclesiastical organization or a new school of theological thought, and perhaps without the ability to do so; nevertheless, Dwight L. Moody probably spoke to a greater number of auditors than any man of his time in either Europe or America, unless possibly John B. Gough may be an exception, and he spoke on spiritual themes to audiences which were less prepared therefor by any previous spiritual culture than those addressed on such themes by any preacher since Wesley and Whitfield."

What is the secret of this extraordinary power? asks Dr. Abbott. Many persons would reply that it was some personal quality or magnetic power in Mr. Moody which enabled him to appeal directly to men's souls and lead them to any form of creed or life to which his environment and nature had predisposed him; similar in its fundamental principle to the wonderful success of Zarathustra, Paul, Mohammed, Ingessoll, or numberless other men in the history of religion. Dr. Abbott, however, believes that Mr. Moody's power was due to the substance of his teaching; that he drew men to him because he preached Christianity, not as a theory of ethics, or a form of worship, or a philosophy, but as a life and a principle which would free men from remorse for past sin and satisfy their aspiration for the future. Peace and hope are what all men desire, and these Mr. Moody promised and brought to countless thousands. Dr. Abbott says:

"Mr. Moody belonged to a denomination which discards all notion of the priesthood, whose ministry are only laymen performing a special function in a church without orders. In this church he never had such ordination as is generally required of those who desire to exercise ministerial functions. His services were attended neither by baptism nor by the Lord's Supper. He believed that the latter was a memorial service, not a bloodless sacrifice; that any Christian, whether lay or clerical, was equally a priest; to him the church was a meeting-house and the altar a communion-table or table of meeting; and most of his services were held in unconsecrated halls. But never did a High-Church priest of the Anglican Church believe more profoundly that to him had been given authority to promise the absolution and remission of sins, than did Mr. Moody believe that he possessed such authority. Rarely, if ever, did priest, Anglican or Catholic, hear more vital confessions or pronounce absolution with greater assurance. The High Churchman thinks that he derives such power through a long ecclesiastical line; Mr. Moody believed that

he derived it through the declarations of the Bible; but both in the last analysis obtained it by their faith in 'one Lord Jesus Christ, . . . who for us men and for our salvation came down from heaven.' The one no less than the other spoke, or claimed to speak, by authority; both derived their authority from the same great historic fact; and the attractive power which drew unnumbered thousands to the preaching of Mr. Moody was in its essence the same as that which draws unnumbered thousands to the altar and the Eucharist.

"For myself I believe neither in the authority of the ecclesiastical organization with the churchman, nor in the infallibility of the Book with Mr. Moody. The authority to pronounce absolution and remission for the sins that are past and to proffer this gift of life to fulfil the aspirations of the soul for the future, I take to be spiritual, not ecclesiastical nor traditional, and to belong equally to every one who has received such absolution and remission, and such gift of spiritual life. But I am sure that if we of the so-called liberal faith hope to retain in these more liberal days the attractive power of the church, we can do it only by holding fast to the great historic facts of the birth, life, passion, and death of Jesus Christ essentially as they are narrated in the Four Gospels, and to the great spiritual fact that in the God whom He has declared to us, there is abundant forgiveness for all the past, and abundant life for all the future; and we must declare this, not as a theological opinion, to be defended by philosophical arguments as a rational hypothesis, but as an assured fact, historically certified by the life and death of Jesus Christ and confirmed out of the mouth of many witnesses by the experience of Christ's disciples and followers in all churches and in every age. If we fail to do this, men will desert our ministry for Romanism, Anglicanism, and Evangelism, or, in despair of spiritual life in any quarter, will desert all that ministers to the higher life, and live a wholly material life, alternating between restless, unsatisfied desire and stolid self-content. And the fault and the folly will be ours more even than theirs."

"CATHOLIC AND PROTESTANT INTOLERANCE."

BISHOP MONTGOMERY, of the Roman Catholic diocese of Monterey and Los Angeles, in a lecture recently delivered before the Newman Club of the latter city, attempted to answer the question as to whether Catholics or Protestants have been most to blame in religious persecution. He begins with a frank "confession of the sins of my own religious denomination," and then states that his object is "simply to show that wrong has been done on both sides, and that we, the children of those who did the wrong, should now endeavor by mutual consent to blot out the very memory of it." He continues (we quote from a report in *The New World*, Rom. Cath., January 6):

"The confession I wish to make is, that in that past for which none of us are responsible many in my own denomination greatly sinned in religious intolerance, and so used the name of the church as to bring shame and discredit upon the whole body—for, there is no tenet of the faith that warrants persecution for religious opinions, or of coercing conscience in religious belief. The witnesses called to show that sins of the same nature were committed likewise by others shall be in every instance non-Catholic. And I will say once for all I shall quote them solely for their historical value. I do not here subscribe to their views other than historical, and I adduce them simply because they reflect the consensus of historians on the question, and because, being non-Catholic, they can not be partial to the Catholic Church as against other denominations. Moreover, it will be seen that the arraignment they make is against both Catholic and non-Catholic. . . ."

"Lecky, in his 'Rationalism in Europe,' vol. i., p. 51, says:

"These considerations would not make the Roman Catholic Church blameless, but it would palliate her guilt. But what shall we say of a church that was but of yesterday? A church that had as yet no services to show, no claims upon the gratitude of mankind; a church that was by profession the creature of private judgment, and was in reality generated by the intrigues of a corrupt court . . . and which the first explosion of private judgment had shivered into countless sects; which was never-

theless so pervaded by the spirit of dogmatism that each of these sects asserted its distinctive doctrines with the same confidence and persecuted with the same unhesitating violence as a church which was venerable with the homage of twelve centuries."

"In the same, vol. ii., pp. 49, 50, he [Lecky] testifies: "When the Reformation triumphed in Scotland one of its first fruits was a law prohibiting any priest from celebrating mass, or any worshiper from hearing mass, under pain of confiscation of goods for the first offense, or exile for the second, and of death for the third."

"In 'Macaulay's Essays' (Hamplden) the writer says: "It required no great sagacity to perceive the inconsistency and dishonesty of men who, dissenting from almost all Christendom, would suffer no one to dissent from themselves; who demanded freedom of conscience, yet refused to grant it; who execrated persecution, yet persecuted; who urged reason against authority of one opponent, and authority against the reason of another."

"Guizot, 'History of Civilization,' p. 261, says: "The Reformation was not aware of the true principles of intellectual liberty. On the one side it did not know or respect all the rights of human thought; at the very time that it was demanding these rights for itself it was violating them toward others."

"Hallam, in his 'Constitutional History of England,' vol. i., chap. ii., p. 105, declares: "Persecution is the deadly original sin of the reformed churches, that which cools every honest man's zeal for their cause in proportion as his reading becomes more extensive."

A better spirit has now seemed to take possession of the world, says Bishop Montgomery, tho its progress has been gradual and its mission is by no means fully accomplished.

WHAT A LEADER OF THE JEWS THINKS OF JESUS.

THE recent Dreyfus case and the growing antisemitism of France have called forth two interesting letters exchanged between the champion of Old Catholicism, Père Hyacinthe, and Dr. Max Nordau, the champion of Zionism. The former opens the correspondence by a warm advocacy of the claims of the Jews to the favor of modern nations; but declares that even as official France had condemned Dreyfus solely because he was a Jew, so official Judaism had in its day condemned the innocent Nazarene; and now the time has come for Israel to undo this wrong, and to declare that it does not approve what its forefathers did in this matter. He closes with these words (*Paris Siglet*):

"Do you not believe as I do that the hour has come when this great revision should take place, namely, of the trial at Jerusalem, and that Jesus, the great Jew, should receive the honor he deserves at the hands of his people?"

To this inquiry Dr. Nordau gives the following significant answer:

"It is not my purpose to investigate whether Jesus is an historical personage or only a mythical synthesis of several persons, or even a mythical embodiment of the thoughts and feelings of that age in which tradition has placed his life. At any rate, the picture of Jesus as we have it given by the synoptic gospels is a vague outline and is a typical and ideal Jewish character. He observed the law; he taught the morality of Hillel—love thy neighbor as thyself—he constantly occupied himself with matters of eternity; he felt himself in spiritual communion with God; He despised that which was mortal in his being and all the accidental things of this life on earth. All these are characteristic peculiarities of the best Jews of the time of the Roman supremacy, especially of the Essenes. And as to his origin and his ethical physiognomy, there, too, the language of Jesus was throughout Jewish. For all of his parables, parallels can be found in greater or less abundance in the Talmud. His prayer, the most beautiful that a believer has ever formulated, is the quintessence of Jewish ideas concerning the relations between man and his Creator. The Sermon on the Mount is the substance of rabbinical ethics; its figures and comparisons are common among the rabbis.

"Jesus is soul of our soul, as he is flesh of our flesh, and

who, then, could think of excluding him from the people of Israel? St. Peter will continue to be the only Jew who will say of this descendant of David, I know not the man! If the Jews have not to the present time paid that tribute of public honor to the exalted moral beauty of the character of Jesus, the ground for this is to be sought in the fact that those who tormented them did so in his name. The Jews concluded what the Master was from the doings of the disciples. This was a wrong, but it was pardonable on the part of those who were eternally the objects of the never-ending hatred of so-called Christians. But every time that a Jew went back to the original sources concerning Jesus and learned to study Christ without regard to his followers, he was compelled to exclaim in amazement: Without accepting his Messianic claims, this man is of us! He honors our race and we claim him as our own, as we also claim the synoptic gospels as examples of genuine Jewish literature.

"And the revision of his trial? This has been done long since. The most learned specialists in the department of Jewish legal procedure have proved beyond the shadow of a doubt that the trial of Jesus, as tradition reports it, could never have taken place before a Jewish court of law. If Jesus was condemned to death, it was done by the Roman judge, and no Jew, faithful to his law, had the least thing to do with it.

"Jesus would never have been condemned to death on the cross before a Jewish court, as this method of punishing criminals was not allowed by the Jewish law; and it never could have taken place on a Friday, the evening before the Passover, as the law stringently forbade any execution on that day. If the Jews had condemned Jesus after the manner reported by tradition, then they would have committed a series of crimes, each of which would have been severely punished by the Jewish law. It is accordingly certain that the whole story of the trial of Jesus can be nothing but an act of vengeance intended to punish the Jews for not having recognized the divine mission of Christ.

"And permit me, my honored pater, to add that you are, according to my convictions, greatly mistaken if you think that the Antisemites persecute us for religious reasons. If every Jew in the world could be baptized, their hatred would nevertheless pursue us as long as we are different from other Europeans."—*Translation made for THE LITERARY DIGEST.*

LARGEST THEOLOGICAL SCHOOL IN THE WORLD.

THE greatest institution of learning in the world, from a numerical point of view, is neither the University of Berlin nor the University of Paris, each with an attendance ranging from five to ten thousand. It is the famous El-Azhar, the great institution of the Mohammedan world, in Cairo, which claims twenty thousand students, and in which the Koran is the sole basis of education. This school was recently visited by a German scholar, Dr. Krumm, from whose description in the *Christliche Welt* (No. 1) we reproduce the following particulars:

For hundreds of years, El-Azhar has been the central seat of the system of education common throughout Mohammedan countries. The university and the mosque belong together; the teaching is purely religious. All science, according to Mohammedan scholars, is based upon the Koran. The latter is used not only as a text-book for grammatical study, but for all branches of learning: all that needs to be known in the department of jurisprudence, history, natural sciences, or geography can be directly or indirectly learned from the Koran! In all matters of learned inquiry this is the last court of appeal, in which God has deposited all the secrets of science. Substantially the same views obtain here that actuated the Calif Omar at the conquest of Alexandria, when, in answer to the question of his general, Ibn-el-Asi, what should be done with the five hundred thousand Greek manuscripts in the Alexandrian library, replied, that if these books contained anything in agreement with the Word of God in the Koran they were superfluous, and if they contained heretical matters they were dangerous. Accordingly the command was given that they be destroyed, and the four thousand public baths of the city were for six months supplied with burning material from this invaluable collection!

The Koran is all sufficient for the teachers of El-Azhar. The

Professor, still tells his students that the earth is a level disk. The teaching in other departments is of equal scientific value. Yet this school is a power in the East, and probably more than any other single agency, keeps the Mohammedan world impenetrable to any influence from Western civilization. The entire Moslem world is represented in the student body: those of various nations occupying separate portions of the buildings. One teacher is found surrounded by young men from Java; in the next apartment are East Indians; then Persians; then Syrians; then Turks; near by are found representatives from the West, Tripoli, Tunis, Algiers, and Morocco; near these the sons of the South, from the coast districts of Arabia and the oases of the great desert. Many of these students remain in the Azhar for years and do not leave till they are gray.

Recently the writer became acquainted with a sheik in Alexandria who had studied for twenty years in this university. Many enter when they are mere boys and remain to manhood. There are in attendance fully two hundred boys less than ten years of age. Their chief purpose is to memorize the Koran, and when the little black-eyed fellows are slow in this task, they are severely whipped by the masters. The manner of instruction is unique. The teacher sits on a mat among a group of scholars, who also sit with crossed legs, and, accompanied by a regular swing of the body, endlessly repeat one sura or chapter of the Koran after the other.

Are there any forces counteracting this tremendous agency of sterile conservatism? Only a beginning has been made in this direction. The Egyptian public schools, maintained by the state, have done something. The effendis (young men) who have been educated in Europe or by European teachers naturally despise the antiquated wisdom of the Azhar students. Then, too, the state has ordered special examinations of the Azhar men before giving them an appointment in the civil service, the examinations of the institution itself not being recognized by the authorities. Times are changing, and religious opinion is no longer subject to persecution in the Nile land. This will eventually doom Islam, and, with it, the University of El-Azhar.—*Translation made for THE LITERARY DIGEST.*

CARDINAL VAUGHAN AND THE SOUTH AFRICAN WAR.

THE Roman Catholic press in the United States is almost, if not quite, a unit in its support of the Boers in the present war; but that this is not a religious prepossession is evident from the fact that the Roman Catholic press in the British provinces of Canada and in Great Britain itself is strongly pro-British. Cardinal Vaughan, the head of the Roman Catholic Church in England, in the course of a recent pastoral letter, said:

"This British empire has been raised up by the same Providence that called the Roman empire into existence, and as God used the one toward the attainment of His own divine purposes of mercy, so does He seem to be using the other. In spite of the blunders and crimes committed by many of her sons in building up the empire, the empire has made for peace, for liberty, for law and order. An empire that has power to establish these conditions, which are preliminary to the spread of Christianity, is possessed of a great and sacred trust, not to be surrendered until God Himself shall demand the surrender."

The cardinal adds that millions of human souls in the Dark Continent depend for their temporal and eternal salvation upon the establishment of the reign of law which will follow upon British supremacy. Justice is on the side of England, he says, and in conclusion he orders his clergy to pray for the success of the British arms.

The New Era (London, Rom. Cath.) resents the utterances of the *Observatore Romano* (Rome), to the effect that "the downfall of England would mean the downfall of the greatest of Protestant powers, and hence this should be desired by Roman Catholics." *The New Era* further points out that the aims of Roman Catholics in England are purely religious, and that, in matters of loyalty and public policy, men of that faith are simply

Englishmen, and have no intention of being made instruments of political schemes by foreigners, whether Roman Catholic or not.

The cardinal's pastoral, however, has met with outspoken criticism in Ireland and America. *The Freeman's Journal*, Dublin, reminds him that Henry VIII., Queen Elizabeth, and Cromwell were among the most eminent of British empire-builders, and says that Irish Roman Catholics, at least, are not ready to admit that the deeds of Cromwell, for instance, were "designed by God for His own wise purposes." A clergyman, said to be Father Barry, author of the recent novel called "The Two Standards," writes thus to the *London Times*:

"Sir: I do not understand why private persons, even if they happen to be priests in charge of missions, should be called upon either to express an opinion regarding the justice of this unhappy war in South Africa, or to pray for the triumph of the British arms. I must frankly declare that I shall do neither. To me it seems that for an individual, ignorant of the state of the case and dependent wholly on newspapers, to decide between the parties at issue would be little less than insane. And if I do not know—as I for one certainly do not—which of these parties is in the right, I am scarcely in a position to call on the Supreme Judge as if I did know, and implore Him to give England the victory. I can pray for peace, and I do so; I can ask that all suffering may be spared which is not requisite to teach men a lesson, to correct or to warn them against the vices now rampant among us of money-worship and luxurious self-seeking; I can pray heartily in the only fit language: 'God defend the right.' But as a Christian, a Catholic, and a priest, how shall I take upon myself the burden of dictating to the Almighty what issue He shall give to a combat like this? I do not understand the patriotism which makes to itself a national God, English, Dutch, or African; and accordingly I decline to lay upon the altar my personal prejudices in the shape of a petition for victory to the side where birth or position happens to have placed me."

Later, however, Cardinal Vaughan appears to have slightly modified his position under stress of the continued British defeats, in which he hears the voice of Providence making plain a great lesson to the British people. He says, in another letter to his clergy, setting apart the feast of the Holy Name as "a day of special prayer": "There can be no doubt that when God by means of a small people holds in check for months, as He has done, the army of the richest nation in the world, He is speaking to that nation in language we can not fail to hear."

The Catholic Standard and Times (Philadelphia, January 17) thus comments on the second letter:

"This change of tone is so significant that none can overlook it; neither can any one avoid wondering how it comes that nothing less than a series of the most awful reverses in the field can avail to show even a distinguished theologian the right and wrong in a quarrel whose facts are patent to the whole reading world."

RELIGIOUS NOTES.

THE meeting of the Ecumenical Missionary Council in Carnegie Hall, New York, from April 1 to May 1, is to be an event of very considerable importance. The conference is to be wider and more representative than any other previously held. All the chief Protestant denominations are to send prominent delegates.

THERE seems to be no question that the Church of the Latter-Day Saints is increasing in membership. The *Philadelphia Press* (January 3) prints the following statistics showing the work already accomplished by the missionary department of that church:

State.	Converts.	Elders Working.
Illinois	256	51
Missouri	466	29
Iowa	100	15
Indiana	375	42
Michigan	75	10
Wisconsin	400	20
Minnesota	78	17
Dakotas—North and South	100	20
Nebraska	60	18

This does not include the missionary work in the Southern States, which is said to be still more successful.

FOREIGN TOPICS.

RUSSIA AND BRITAIN IN CENTRAL ASIA.

IT is thought in Europe that Russia will now attempt to extend her empire on the road to British India, and especially that she will endeavor to acquire a port on the Persian Gulf. "Without a port, we can not remain predominant in Persia," says the *Turkestaniskija Vedomosti*. The *Noroye Vremya* thinks that Great Britain need not seriously be feared. It says:

"The bogey of British power has been flouted in the face of the civilized world once too often, and a small but resolute nation has accepted the challenge. England has claimed to be predominant everywhere. The nations are tired of her pretensions, and as soon as diplomacy has been forced to act in accordance with public opinion, there will be an end to this tyranny of the seas. We would be very tame if we did not endeavor to obtain a port in the Persian Gulf at this juncture."

The *Vestnik Evropy*, however, thinks it would be wisest to act only in friendship with Great Britain. We summarize its remarks as follows:

If we acquire Herat, Great Britain may endeavor to destroy our power in the far East, and it is not at all certain that she would not succeed. As for the Persian Gulf, it is much to be questioned that we can establish ourselves there in opposition to Great Britain. Moreover, there is no real need for an expansion policy. We have much arable land, our population is not crowded, and we do not need India and her starving millions. Russia has advocated lasting peace at The Hague; how is peace possible if every state endeavors to make use of the difficulties of its neighbor for its own selfish ends?

The *Svict* would prefer another attack upon Turkey, and even a war against Germany, "as Russia can not enjoy India in comfort unless the power of the Germans is broken." The *Breslau Schlesische Zeitung* doubts that Russia is quite ready to advance upon India, altho an attack upon Britain's favorite possession would be very popular. The railroad is finished only to Kusk, says the paper. It is now intended to carry it to Karki before warlike operations are risked, unless Russia is forced to undertake them. Col. York von Wartenburg, according to the *Berlin Militar Wochenblatt*, expressed himself to the following effect before the Military Society:

The Russian occupation of Herat will most likely be followed by an English occupation of Candahar. Then follows the struggle for the possession of Kabul. In this it will be of utmost importance which side the Emir of Afghanistan chooses, as he commands 37,000 men. It is, therefore, most likely that a diplomatic struggle will precede the military one, and the winner in the former will precipitate the latter. Russia's chances are not bad. The Emir cares less about Herat than Candahar. Candahar is more closely bound up with the rest of Afghanistan. Once the Russians reach Kabul, India is seriously threatened. If Russia can be forced to evacuate Herat, then everything remains unchanged. The Emir will probably be influenced by the fact that Russia has always gained her point, while Great Britain has often been forced to come to terms. Great Britain is not able to drive the Russians out of Samarkand and Merv. Russia, therefore, risks only part of her power and prestige. Great Britain risks all.

The Vienna *Neue Freie Presse* considers outside help for Great Britain altogether out of the question, if the struggle between the English and Russians begins in Central Asia. "Great Britain has never shown consideration to others," says the paper; "she must rest content in her splendid isolation." The *Frankfurter Zeitung* says:

"The way Russia has shown how she can handle her troops will doubtless make a deep impression upon the natives. How far Russia will go just now depends doubtless upon circumstances. . . . The mobilization of Russian troops may not be a

direct invitation to revolt, but it certainly is a hint to the Indians that Russia would intervene if a revolt did occur."

Mr. Demetrius C. Boulger, in *The Contemporary Review*, advises Great Britain to temporize and above all not to prevent by force the Russian occupation of a Persian port, as this would cause needless trouble. We summarize his remarks as follows:

Worse than the occupation of a Persian port by Russia would be the establishment of a Russian embassy at Kabul. Great Britain has hardly any influence in Kabul. The Emir has always refused to admit a British officer as resident, and Britain's representative is a native. Now it is given out that the Emir will admit foreign emissaries. Imagine Kabul as the gathering-ground of Russian, French, and German officers! It would destroy the hope of the Government of India as regards its own influence in the choice of a new Emir.

The writer closes his article as follows:

"We will not have our hold on Afghanistan weakened or undermined by any insolent proposal to have it placed on the basis of Abyssinia, and we will encourage the Ameer, and after him the chiefs and tribes of Afghanistan, to cling to their cherished independence by showing ourselves the most studious regard for it. The Ameer's vanity may have impelled him to listen to a project for being received in the circle of majesties, but His Highness requires our cooperation to give it effect, and that will certainly be withheld. We are willing to make every reasonable concession to Russia, and if there is any solid basis for Count Cassini's assurance to the American people that 'Russia is becoming more and more of a commercial nation,' then she ought to take the substance in the Persian port and consent to lose amiably the shadow in 'the permanent resident at Kabul.'"—*Translations made for The Literary Digest*.

WHY THE ENGLISH ARE UNPOPULAR.

ENGLISH journals and speeches by English statesmen give abundant evidence of late that they realize and in many cases keenly deplore the fact that as a nation and as a people they are exceptionally unpopular, especially in Europe. Presumably the discovery is not pleasant; but the majority of English journals find explanations which are not displeasing to their readers nor humiliating to the national pride. The *London Times*, for instance, explains the fact about as follows: Great Britain in general and Englishmen in particular have aroused widespread jealousy by reason of their superiority. The English are rich and happy, prosperous and powerful beyond precedent. They are the leaders of the highest civilization, and the world would retrograde if the unpolished England gives it along the path of progress were to cease. England is hated for her virtues and for the success they have brought to her.

Such reflections, however, do not satisfy everybody in England, and *The Westminster Gazette* has taken the trouble to inquire among other nations for an explanation of this aversion. We give a few of the results of this inquiry, which are published in a series of articles. Mlle. Claire de Pratz speaks for French society thus:

"They [Englishmen] probably mean well, but their manners are shockingly uncivil to the neat waitress at the Bouillon or to the jovial omnibus conductor. The English abroad, both among the upper and lower middle class, are rather inclined to think, if they pay well, everything is right. But that is not so in France, where the manners and speech of the simpler classes, which Englishmen call the lower classes, are as good as those of the more educated. If the English residents and tourists in France were a little more courteous in their behavior to them, it would be appreciated and would earn for the Englishmen in Paris a better reputation. I am afraid that feeling of caste will never entirely be eradicated from the English race. The contempt of the upper middle class for the working-class is terribly evident to the observer who stays some time in England. '*La vraie politesse vient du cœur*' ['True politeness comes from the heart'] is an old French proverb well ingrained into the whole of the

French nation, and it is because the middle-class Englishman does not seem to know that proverb that he makes himself unsympathetic to the average French person. Therefore, why do English men and women put on their very worst manners and ugliest clothes when they come to France? It is, to say the least, impolite in a country where politeness is so much esteemed."

Another writer, speaking for the Germans, says:

"The primary reason [for the dislike], I fancy, is a difference in temperament. The average German compared to the average Britisher does not, at first sight, cut a good figure. He has no idea of being dignified; of reserve he knows nothing at all. In fact, a certain degree of childish simplicity clings to him all his life. The Britisher appearing upon the scene with proud reserve and stony stare at so much *abandon* impresses the German profoundly, and inclines him at the outset to admire this grave, intelligent, superior being. But as he finds that his genial advances are repelled, that his manners are plainly considered bad, and that he is treated *de haut en bas*, his admiration is dipped in the bucket; for, with all his child-like frankness, he is observant and reflective above his fellows, and it does not take him long to discover that, in the matter of culture and intelligence, he, in nine cases out of ten, is superior to the average Briton. Then the Englishman detests the German's free-and-easy manners, which he considers bad; while the German holds that it is a mere matter of opinion whether English or German manners are best."

Victor de Brohl declares that the Hungarians are, politically, the friends of England; socially, they detest Englishmen. He gives ten reasons for this detestation, of which the last three are as follows:

"8. John Bull, when traveling at home, contents himself with the limited sitting accommodation the railway or bus companies allow him; when traveling abroad, he always somehow manages to appropriate a space of two seats for himself.

"9. John Bull's politeness in Austria is not proverbial. On entering the elegant shops in Vienna or Prague or Budapest he does not uncover his head, according to Austrian custom; or he will raise his hat to a lady, but not bow to her; or he will enter the opera-house in his cycling suit.

"10. Finally—which I should have included in the category of his political transgressions—John Bull is accused by the Austrians of entertaining a strange predilection for waging war with small nations and savage peoples, in which, as a rule, all the odds are in his favor. In connection with this, however, I may terminate with an Austrian proverb:

"Der Krug (no allusion to Krugger's gold) geht so lang zum Brunnen, bis er doch endlich bricht."

"Anglicer: 'The jug goes so long to the well, until it finally breaks.'"

In Italy, in Spain, and especially in Portugal, the same sentiments seem to prevail. Greece, Bulgaria, and other Eastern states, where English tourists are comparatively little known, are lately mentioned as favorable exceptions.

This state of things does not fail to arouse misgivings. *The Daily Telegraph*, which warns especially against the manner in which the Germans are treated, fears a *déboîcle* unless Englishmen mend their ways, and expresses a fervent hope that the small nation in South Africa may teach Britons to be more respectful to other people.

Political as well as social reasons are assigned. Paul de Cassagnac, in answer to an Englishman's question, "Who is France's hereditary enemy?" said: "England, of course; every time we have tried to be on good terms with her, we have been cheated." *The Amsterdam Nieuws van den Dag* says that Chamberlain's "new diplomacy" makes England hated everywhere. This continual abuse of other nations and of foreign statesmen, it thinks, is tiresome. Spain has been called by the English a dying nation; Germany, a country of less importance than the Australian colony of Queensland; the Czar is the devil; the Transvaal, a vassal state. As Lord Rosebery justly remarks, such freedom of expression sometimes makes unpleasant explanations necessary.

THE FAMINE IN INDIA.

A FAMINE is raging in India such as even that starving country has rarely witnessed. Much is being done to relieve suffering, and yet much less than on former occasions, for, as Lord Curzon remarked, "All the energies of Britain are engaged in the South African war." We quote the following from the Government circular published in Calcutta:

"Already the ratio of persons relieved to the population in a number of districts exceeds the standard of fifteen per cent. laid down by the Famine Commission in 1878, as the maximum for the worst months of the year. When this is the case at the very outset of the famine, it is impossible to predict to what height the numbers may rise in succeeding months. The assurance hitherto entertained as to the financial soundness of the famine relief system is thus gravely shaken. The question necessarily arises whether there are not undue prodigality and profusion in the relief at present being dispensed, and whether proper care is being exercised to confine it to the absolutely destitute section of the population."

The suggestion that any one not in direct need has applied for work under the famine regulations is indignantly resented in the Indian papers. *The Bombay Guardian* says:

"This is the first time we have heard it suggested that those accepting famine relief works and famine relief wages were reposing in the lap of luxury. The normal condition of the poorest in this country is terrible, and the condition on relief works is yet worse, so that 'prodigality' and 'profusion' as applied to relief operations can refer only to the numbers admitted to the coveted position, and not to the position of individuals so admitted. But we see in such words an acknowledgment on the part of the Government of the uncontrollable proportions to which the acute distress is likely to attain, so that relief on the usual famine scale would exhaust the Government resources."

The Calcutta Friend of India points out that the cattle have nearly all died, and that classes of the population which hitherto did not apply for relief are now compelled to do so. In the Government report all these facts are admitted, yet misgivings are expressed as to the distress of the people who apply for relief work. *The Friend of India* says:

"As a further justification of their mistrust, the Government of India gravely cites the fact that the proportion to population of persons in receipt of relief in certain districts already exceeds that which the Famine Commission of 1898 thought likely to be so in the worst months of the year; as if nature could be tied down by the opinion of the commissioners, or conditions which the Government admits to be unprecedented could be deprived of their natural effects by the fact that the commissioners had not anticipated them."

Allison Gattahol, who has visited the famine districts for the *London Morning Leader*, writes to the following effect:

The authorities doubt that twenty per cent. of the cattle can be saved, and animals worth fifty to one hundred rupees are offered for sale for one rupee. Even then no one will buy them. There are not even draft oxen enough to transport the skins. This is a very serious loss, for the ryots depend upon their cattle when tilling the fields. Before the middle of June no rain can be expected. Children are sold by their parents for five to ten annas [ten to twenty cents] apiece. Some mothers are willing to give them away for nothing, fearing to see them die before their eyes. The Government does its best, but that is little compared with the needs of the population. It is reckoned that four cents a day will keep body and soul together in the case of a Hindu, yet even at this low rate all can not be looked after. Over \$8,000,000 had been expended in January.

Frederick Greenwood, in *The Westminster Gazette*, writes as follows:

"Lord Curzon was right when he said, 'If the war absorbs all interest, so does it exhaust all generosity.' All or nearly all generosity is exhausted by the war, no doubt. Open a public subscription list for the Indian calamity, and partly, perhaps,

because it is so enormous a misfortune, so entirely beyond all hope of adequate relief, little success should be expected. Then, irregular as the proceeding may be, and signally inconvenient with the prospect of a shilling income tax, the Treasury must 'part.' Why, when we are spending millions by the score, thousands and thousands for the mere mistaken detention and overhauling of foreign ships—why may we not add to the bill of the year a million or so for so good, so dutiful, so wise a purpose as this? Sixty millions added to the debt, or sixty-one, does it matter so much? Does it matter so much when we think of the purpose to be served or the duty to be shirked? Few of us out of the offices of Her Majesty's Treasury can think so."

THE PLIGHT OF AUSTRIA.

MINISTRIES have been supplanting each other of late almost as quickly in Austria as in France. The Wittek cabinet has given place to a Koerber cabinet, and still there is no certainty of a reconciliation of the contending races. But it is evident that the Emperor is aroused to the necessity of exercising firmness, if the unity of his empire is to be preserved. For some time past the Czechs have been using the army as a theater for their demonstrations. In the army all orders are given in German, and replies must be made in German. Thus it has been for centuries. The Czechs now, in order to emphasize their nationality, have begun to answer "*Zde*" instead of "*Hier*" at roll-call. The Emperor, however, has made it clear that he regards this as a serious breach of discipline. According to the Vienna *Freie Presse*, the following colloquy occurred between him and Dr. Strausky, a German Jew who has become one of the leaders of the Czechs:

"Let me tell you [said the Emperor] that I am irreconcilable in this *Zde* question, and that I will proclaim martial law, if necessary. The people must obey. In army matters I understand no joking, and I can tell you now that I will pardon no one punished in connection with this matter. . . . It is evident that the better educated have instigated the masses." Dr. Strausky replied: "It is true, Your Majesty, that the better educated have taken the lead. But the educated can read the law, and the law says nothing of either *Hier* or *Zde*; it requires that the reservists merely have to hand in their passes, when called." The Emperor: "Tut, tut, doctor, these are lawyer's quibbles. I tell you that in all service matters German is the only language of the army."

The Emperor said he should be sorry if serious riots occurred, but he was determined to remain firm. In the mean time, the Czechs and their friends are charged with seriously endangering the union of Austria and Hungary. The Berlin *National Zeitung* says:

"The Emperor has personally interested himself in the settlement of the *Ausgleich* [agreement regarding the share each half of the empire is to bear in the joint expenses]; but the Czechs endanger it by their obstruction. In this they are secretly assisted by the Clericals, Poles, South-Slavs, and the feudal lords. The Czechs themselves are not strong enough to obstruct the passage of any laws; but through the duplicity of the other parties they get their way. This means practically the break-up of the Austro-Hungarian empire. No wonder that the Hungarians are somewhat worried."

The *Tägliche Rundschau*, however, thinks the Czechs will temporarily give in, and for the following reasons:

The *Zde* question would never have arisen had not the Government continually petted the Czechs. It appears impossible to preserve German as the language of public service and yet please the Slav federation in everything else. That the Emperor realizes the contradiction is doubtful. He is chiefly concerned for the army, and the *Zde* question is in his opinion a danger to army discipline. That his personal intervention will be effective is quite possible. The Czech leaders have now for some time been away from the Government crib. They may give the signal to drop these unprofitable *Zde* demonstrations, and pass the *Ausgleich*. In this way they can pose as the loyal supporters of the

throne. The result will be new concessions to them, rather than a strengthening of the Germans.

The Germans evidently despair of keeping the empire together. Excesses formerly confined to the Czechs are now committed by them. Thus at Linz a German-speaking soldier publicly sang the "Wacht am Rhein," and a riot between the citizens—all Germans—and the Czech soldiers was the result. The Moscow *Udenost* admits that the army must become ineffective unless it has one language, but fears that grave complications may follow. The introduction of another language seems out of the question, as the Germans are still numerically much stronger than any other nationality in Austria. The London *Morning Post* says:

"The power of the Austrian Parliament, which has many and important functions to perform, has been exhausted by constant and fruitless struggles. Every few months there is talk of compromise, but when details are approached neither party will give way. To the Czechs nothing is sacred. They are in practical alliance with the Clerical Party, whose one endeavor is to depress Austria-Hungary till the Triple Alliance breaks down, the Italian monarchy goes overboard, and the temporal power of the Pope is revived. The army is not an anti-Czech institution, but it is the great unifying influence in the country and the guaranty for the maintenance of Austria-Hungary's important place in Europe. The army is not large viewed from the modern standpoint, but those who know say that it is on the whole honestly governed, and consequently efficient. A country like Austria-Hungary can not afford to sacrifice such an important asset. The Emperor-King is quite right when he says that separatism in the military fabric is a thing which he deems it impossible to discuss."

MISCELLANEOUS.

CORRESPONDENTS' CORNER.

Martin Luther Not the Father of Mormonism.

Editor of THE LITERARY DIGEST. Your reprint in part of an article from *The Catholic Mirror* of December 23, 1899, demands a reply; said communication being an assault not only on Luther and the church bearing his name, but upon the entire body of Protestant Christians. . . . Pages could be filled with extracts from Luther's works to show how strictly and strenuously he insisted on monogamy. Even the letter to Landgrave Philip, which the writer to *The Catholic Mirror* turns to his use, shows Luther to be an anti-ambrosian monogamist. He therein expressly takes the ground that "God has so instituted marriage that it is to be a society between two persons only, and no more, as long as they both do live. . . . And whereas ever since the beginning and conformably to creation it has been so held that one man (to be sure one wife) no more than one woman, such law is a praiseworthy one, and the churches so receive it; and a contrary law is not to be made or enacted. For Christ (Matthew xix.), citing the passage 'And the two shall be one flesh,' reminds us how marriage was constituted before the fall, and that thus it should be now." Besides, an honest use of this same letter demands a restatement showing how earnestly the authors therein plead and reiterate with the landgrave not to carry out his determination to take to himself a second wife, while bound to another. Every conceivable argument is urged to dissuade him from the act; and it is only under the stress of circumstances that the writers make the concession that, should Philip insist on his course, they would defend him as best they might. In this one instance, then, Luther and his collaborators went astray; he felt it, and subsequently deplored his weakness, as the entire Lutheran Church from that day on to this may be said to have deplored it. . . .

While Luther maintained that marriage in order to be Christian in its character and appointments must be sanctified by the word of God and with prayer, he held that in its essence it is a purely civil relation of one man to one woman, and that as such it belongs within the sphere of nature and not of grace. He therefore denounced the theory that marriage is essentially and specifically a Christian institution, a sacrament of the church, and subject primarily to churchly jurisdiction. . . .

Luther charges one Lamech, by name, to be the father of polygamy; and giving Genesis iv. 23 for authority, he discusses the innovation in terms by no means flattering to the son of Methusael. Moreover, the writer for *The Mirror* evidently does not know, as charity bids us to assume, that Luther has written a paper of some length expressly directed against bigamy (see Works, Erl. Ed., vol. 62, p. 706); and a severer denunciation of plural marriage than this can not be found in all literature. Reviewing a pamphlet or booklet endorsing polygamy and unscriptural grounds for divorce by some unknown author, signing himself Neh. Tolchius, he says: "Whoever would have my opinion of this book, let him hear. Thus says Dr. Martin of Neuhall book: he who follows this varlet and his book and thereupon takes to himself more than one wife, insisting such to be his right, for him may the devil season a bath in the pits of hell. Amen!" Then, having repeated his protest against every attempt to legalize such acts, he continues: "And much less will I consent to establishing the right of divorce for any man (unless his wife have by open adultery already divorced herself)—a view (of divorce) this same varlet is also bent on promulgating."

H. L. SCHUEYER.

COLUMBUS, O., February 1, 1900.

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5.

If you wish something decidedly new in a dress or skirt, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits, but we are the only house making fashionable garments to order at moderate prices.

Our Catalogue illustrates an exquisite line of exclusive designs which are shown by no other firm:

- Tailor-Made Suits, \$5 up.
- New Skirts in the latest Paris cut, \$4 up.
- Wash Suits, \$4 up.
- Wash Skirts, \$3 up.
- Rainy-Day Suits and Skirts made of double-face materials.
- Bicycle Suits, \$5.
- Bicycle Skirts, \$3.50.

We also make fine garments and send samples of all grades. *We pay express charges everywhere.* If, when writing, you will mention any particular color of samples that you prefer, we shall be glad to send you an assortment of the kind you wish.

Write to-day for Catalogue and samples—you will get them free by return mail.

THE NATIONAL CLOAK COMPANY,

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul King, of Bangkok, writes, November 2, 1899:

Nearly all of what can be properly termed public works that exist to-day in Siam have been constructed during the last ten years. Prior to that time, only a few canals, a very few streets, and a limited extent of telegraph line existed in the country.

The construction of railroads began in 1891, although a horse-car line has been started in Bangkok in 1884. The first line of railway was about 15 miles in length, narrow gauge, and running from Bangkok, the capital, to Pak Nam, the port at the mouth of the Menam River. This enterprise is called the Pak Nam Railway Company, Limited, and pays 7 per cent. dividends regularly. The second was the Government line, from Bangkok to Korat, a distance of 163 miles. This line, which was begun in 1892 and is standard gauge, is now nearly completed and will cost the Government nearly \$1,000,000 gold per mile. All the materials for this line have been manufactured in England, Germany, and Belgium.

A line from Ban Mayee to Chiengmai, a distance of about 400 miles, has been started, and the first division of about 50 miles is under construction. This line will also be standard gauge. No manufactured materials to speak of have as yet been purchased for this line.

A line of meter gauge (39.37 inches) will possibly be started next year, running to Ratburi, 45 miles, and Petchaburree, 75 miles, from Bangkok toward the Burmese frontier. The survey only is completed, and no materials for construction have yet been ordered.

The King has just granted a franchise to Prince Chow Sai to build 20 miles of light railway from the Menam River to the Nakawn Noyoke River, with several branches. This passes through a rich rice country, where there is a large population. The King has also a railway program consisting of lines east and west aggregating more than 500 miles of additional railways; but the revenue of the country is not sufficient to carry out all these works at one time. For this purpose, it is not unlikely that the Government may negotiate a loan in the near future.

A private syndicate in 1897 obtained a concession for street-railway lines in Bangkok. These were built for horse-cars in 1899 and changed to an electric-trolley system in 1900. This line is crowded with passengers all day long and pays 12 per cent. on the investment. The rolling stock, machinery, and wire for this road have all been bought in America; the rails in Europe. It is probable that this line will be extended in the near future, and that another similar system will be built.

Vice-Consul-General Reinberg, of Guayaquil, on November 24, 1899, reports that on November 27 a fire broke out in the center of the city and within a few hours an entire block, comprising some of the most important public buildings, was destroyed. These included the theater, the San José Church, the San Vincente College, and the main office of the custom-house, in the warehouses of which was stored upward of \$500,000 worth of merchandise; there were besides several stores and private residences, and it is estimated the total loss will pass \$1,000,000. None of the buildings and only an insignificant part of the merchandise were protected by insurance. Only by extraordinary exertions was the fire confined to this block. Mr. Reinberg adds: Nearly all Guayaquil edifices are of pitch pine, and the water-supply is defective. The members of the municipal fire brigade, aided by steam fire-engines (the best of which are American), distinguished themselves by preventing a repetition of the memorable calamity of 1896, when in less than twenty-four hours

No Interest.

All who purchase lots at the special large discount offer in Westborough (Prohibition Park), New York City, will have no interest to pay. Every dollar paid will be a direct payment on the lot. See "New York City Investment," page facing reading in front.

HYOMEI SKIN SOAP,

made from the fresh, green leaves of the Yamanian Blue Green Tree. No harsh oils, dandruff fats, or dangerous alkali.

Best and Cheapest

That food which keeps brain and body in best condition, which least taxes digestion, and contains the most nutriment in least bulk, is best and cheapest.

Cream of Wheat

an almost entire gluten food meets these requirements. You use much less of it than of other foods, to feed a like number of persons.

Cream of Wheat Co. Minneapolis, Minn.

WATCH THE COOK.

The selection and preparation of our food has more to do with our health than many suppose. The great American disease, dyspepsia, originates in a majority of cases in the kitchen. The food is poorly prepared, improperly cooked, and the stomach can not digest it.

Take, for instance, oatmeal: few cooks take the trouble to cook it five hours, most of them only boil it a few moments, and consider it ready to be served. The result is that when taken into the stomach in this condition, it forms a starchy, sticky mass, and not only is a burden for the stomach to handle, but retards the digestion of other foods. It has been stated by prominent physicians that oatmeal and other cereal foods that were not properly cooked were one of the prime causes of dyspepsia. Always cook cereal breakfast foods five hours.

The safest and most economical food to serve is Granola. This is a combination of wheat and other cereals that have been carefully and thoroughly cooked, thus turning the starch into dextrin, and rendering it easy of digestion and assimilation, making it the most nutritious of foods. A careful analysis by an expert chemist shows that one pound of Granola equals, in food value, three of beef.

Granola not only appeals to the good judgment of those who would preserve their health, but to the thrifty housewife, for all it requires is a little milk poured over a few teaspoonfuls, and it is ready to be served. The rich, nutty flavor obtained by the process of manufacture makes it delicious. Leading grocers sell it. The package bears a picture of the famous Battle Creek, Mich., Sanitarium. A postal card from a reader of the LITERARY DIGEST, bearing the name of the grocer who does not sell Granola, sent to the Sanitarium Health Food Co., Battle Creek, Mich., will bring a free sample.

eighty-three blocks of the best part of the city were swept away. The loss of the statistical information which was on file in the custom-house (and was especially valuable when this consulate-general was called upon for information of a commercial character) will seriously affect the completeness of future reports. There is some talk of replacing the old-fashioned hand machines with steam fire-engines, a water-tower, etc., and, in view of the serious menace to property interests, it is probable that steps may be taken, and perhaps the superior merits of American appliances will be borne in mind.

Vice-Consul-General Hanager writes from Frankfurt, November 15, 1899:

During late years, Warsaw has become the center of the watch trade in Russia. The dealing between foreign and Russian merchants are concentrated here, these parties meeting once a year for the transaction of business in this line. At this time, the Russian buyers from Moscow, Tula, Saratow, and Siberia give orders for the next twelve months, and settle for past purchases. This trade is quite important. A few Geneva watch-making firms sell over six hundred rubles' worth here annually. Swiss watch manufacturers purpose now to establish an extensive depot of goods in their line at Warsaw, to increase the sales and monopolize the Russian watch market. They have applied to the Swiss consul in Warsaw to furnish them detailed information. Our expert associations would do well to obtain similar data from our consuls.

PERSONALS.

MISS RICHARD M. TAYLOR, a graduate of the Boston University Law School and a member of the Suffolk bar, has been appointed a regular member of the legal staff of the city of Boston, and is the first woman lawyer ever employed by that city. Her work will be entirely in commercial work and titles, and she will have nothing to do with court practice.

SOME time ago John L. Sullivan appeared before a New York judge in a suit brought by a creditor. The case established the fact that the once premier pugilist of the world had absolutely no tangible assets. Sullivan claims to have earned over \$1,000,000 in the last twenty years. He is not certain how he spent it all. He estimates that he has given away \$500,000, and spent \$500,000 for liquid refreshment and some \$50,000 in gambling. His legitimate living expenses he figures at \$50,000, his training at \$50,000, and unfortunate business ventures at \$50,000. He also claims the honor of having built a court-house in Purvis, Miss. It happened in this way: When he fought Jake Kilrain in 1893, the Mississippi State officers were hot on his trail. They caught him after the fight in Nashville, and brought him to Purvis. Purvis needed a court-house, and John L. gave up \$50,000, and the temple of justice was built.

If we may believe one of the audience at the Navy League meeting at Rottingdean whereat Mr. Kipling made a speech, that author is not built for an orator, says the *New York Tribune*. "When," writes his hearer, "he showed face in the schoolroom—it was crowded—his Rottingdean neighbors cheered him mightily, and he blushed like a great kid. When he got upon the platform to speak he was as white as a ghost. He had evidently learned his little speech off by heart, and spun it out as a terrific raig. Of course, that was nervousness. It struck me that he felt if he were to hesitate he would be lost. The Big Englanders will never get Kipling as a platform speaker. He'd collapse at the end of his third meeting. After he

Phenomenal Improvements.

More than \$100,000 were spent during 1899 in improvements in Westerleigh (Prohibition Park, New York City; more than \$4,000 added in new sidewalks, \$50,000 to Westerleigh Collegiate Institute, etc. See "New York City Investment," page facing reading in front.

Cod Liver Oil is a food

and the greatest care should be exercised in its selection.

Peter Moller's Cod Liver Oil

is the best oil that fifty years of continued scientific research has produced. By the process now employed the oil is kept from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Give this new oil a trial. Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agents. Notice the date in perforated letters at bottom of the label.

Schleffelin & Co., New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

they were told that a person went to sleep in Boston and woke up in Philadelphia?"

JONES: "I presume they would want to know what it was that woke him up."—*Exch.*

Reminiscent of Shakespeare.—VISITOR: "What a racket the steam makes, clanking through the pipes!"

FLAT-DWELLER (shiveringly): "Yes. It reminds me of one of Shakespeare's plays."

VISITOR: "Which? 'The Tempest'?"

FLAT-DWELLER: "No. 'Much Ado About Nothing.'"—*Brooklyn Life.*

Another Plan.—AGRIC. ADJUTANT: "Think of all the luxuries a rich husband like me could give you!"

MISS DE VINTAGE: "Oh, a rich father would do just as well. Marry my mother."—*New York Weekly.*

A Complete Education.—"Oh, yes?" said Mrs. Smith whose husband had become suddenly rich by a find of ore on his land. "I want Maud to make a special study of music. If she gets on well this year I want to send her to the Smithsonian Institution next year, and I want her to finish at the Boston Conservatory."—*Exchange.*

It Hadn't Worked with Him.—"Dere's me t'ing about me," said Meandering Mike. "I ain't superstitious." "Don't you believe in no lucky signs?" asked Hocking Pete. "Nary. I know by experience dey's nothin' in 'em. I've traveled he reads from Maine to California. Jes' look at me. I don't look lucky, do I?" "Not a bit." "An' yet I'm willin' to bet I've found more horse-shoes than any other man in de world."—*Pittsburgh Star.*

Moses Was an Exception.—George Q. Cannon, the Utah statesman, once attended an irrigation congress, at which a drowsy delegate read a paper on irrigation wells, which he declared always brought water except where they struck rock. He repeated this statement several times. At the fourth repetition he closed any case to deny the proposition. Whereupon Cannon looked up and, in his full, manly voice, asked: "How do you account for Moses's success?"—*Exchange.*

What She Wanted on Her Grave.—A subject in a *Temple* novel relates that he once witnessed a conversation between his cook and a nurse, who were discussing a recent funeral of a member of their race, at which there had been a great profusion of flowers. The nurse said: "When I die, don't plant no flowers on my grave, but plant a good old watermelon vine, and when it gets ripe you come day, and don't you eat it, but jes' run it in de grave and let dat good old juice dribble down through de ground."

Irish Confusion.—Mr. Bruce Glasser, who is lecturing in Ireland for the Pagan Society, mentions a striking incident in *Pagan Ages*, of the middle of the war is creating in the minds of the nation. At Kildare station, as a detachment of soldiers was being entrained for South Africa, an old peasant was intemperately talking good by to his son—a fine young fellow, who was drunk. "An' sure I know ye'll do your duty, me boy, and fight like the devil an' the rest of them; but sure an' I'll never see ye again—I know that for my own an' your mother's sorrow." Then as the train was moving off the old man roused himself up for a last encouraging word, and waving his hat above his head he cried: "Goodbye an' God bless you—an' three cheers for the Boers."

Current Events.

Monday, February 12.

—General Buller attacks Naal Kranz, but is compelled to retire; the Boers near Colesberg assume the offensive.

—The *Princeton* takes possession of the Ratan and Calayan islands, at the Philippine group.

—Governor Roosevelt positively states that he will not consent to become a candidate for the Vice-Presidential nomination.

—Lincoln Day dinners are held in most of the large cities, and addresses made by prominent public men.

—An anti-trust conference, convened by M. L. Lockwood and others, opens its second day at Chicago.
